(c) *Nondirectional radio stations, compass locators, and fan type marker stations* shall be utilized as holding points only if the facility is associated with a course of a radio range station or ILS localizer by means of which the holding pattern may be accurately established, unless the aircraft is equipped with a radio compass or other equipment which may be utilized to definitely establish the desired holding pattern.

(1) *Nondirectional radio stations, compass locators, fan type marker stations, and any other type of facility* which is not constantly monitored shall not be utilized for control purposes if failure of the pilot definitely to identify the facility would result in inadequate separation or endanger the safety of aircraft.

(d) *Long-range flights.* Caution must be exercised when issuing holding clearances to long-range flights. Consideration should be given to the aircraft's fuel reserve and to the fact that pilots of such flights are subject to a greater degree of fatigue than pilots of short-range flights, and it may not be advisable, therefore, to require long-range flights to hold for an extended period.

(e) *Standard holding flight path.* The standard holding flight path of an aircraft is to follow the specified course in-bound to the holding fix, make a 180-degree standard rate (3° per second) turn to the right, fly a parallel straight course out-bound from the holding fix for 2 minutes, make another 180° standard rate turn to the right, and again follow the specified course in-bound.

(1) *Deviation.* A pilot's request to deviate from the standard holding flight path may be approved if known traffic conditions permit.

(f) *Vertical separation from other traffic.* When aircraft are being held in flight, the appropriate vertical separation minimums shall be provided between holding aircraft and en route aircraft while such en route aircraft are within 5 minutes' flying time of the holding aircraft's flight path.

[Supp. 1, 14 F. R. 3330]

§ 26.26-27 *Control procedures (CAA rules which apply to § 26.26)*—(a) *General.* If a position report is not received within a reasonable length of time after the estimated time over a reporting point, subsequent control shall not be based on the assumption that the estimated time is accurate. Action shall be taken to obtain the report no later than

5 minutes after the estimated time over the reporting point, when the report has any bearing on the control of aircraft.

(b) *Flight conditions.* Pilots may be requested to forward specific information on flight conditions which might be useful to Air Traffic Control.

(c) *Weather report.* Where necessary, specific flights may be requested to forward a complete weather report with each scheduled position report.

(d) *Alternate procedures.* When an IFR traffic clearance authorizes VFR operation during climb or descent, alternate clearance shall be issued if there is a possibility that VFR flight may become impracticable.

(e) *Center coordination.* Centers shall forward appropriate flight plan data and control information pertinent to all instrument flights from center to center as the flight progresses except that flight plans on flights specifying VFR for the first portion of the route and IFR for a latter portion, beginning in another control area, shall be forwarded by the flight plan station direct to the center in whose area IFR flight will be commenced, via Service "B" (air-carrier communications channels, in the case of scheduled air-carrier aircraft).

(1) The appropriate flight plan data and control information shall normally be transmitted via Service "F" and in sufficient time to permit reception of the data by the adjacent center not later than 30 minutes prior to the time the flight is estimated to enter the adjacent center's area. If, in the opinion of the controller on duty, Service "F" facilities are inadequate, the data shall be transmitted in the form of a control message via Service "B". The control message shall be transmitted by the originating center to the associated communication station via Service "F". The communication station associated with the center to whom the control message is addressed will forward the message to the appropriate center sector via Service "F".

(2) The following data shall be forwarded from center to center as an IFR flight progresses:

(i) Flight identification and type of aircraft.

(ii) Estimate and altitude over the last fix within the control area and the altitude of entry into the adjacent center's area if different from the altitude over the last fix.

(iii) Actual ground speed, if determined; or, estimated ground speed (the estimated ground speed used in calculating the estimate over the last fix).

(iv) Point of departure; the remaining portion of the route of flight, as specified in the original or amended clearance, and the point of first intended landing.

(v) The estimated time of arrival as specified in the flight plan (time of departure plus elapsed time) based on the time zone of the departure point.

(a) The information contained in this subdivision (v) shall not be forwarded on scheduled air-carrier or military aircraft. If required, the center controlling the point of destination may secure the estimated time of arrival from the air-carrier operator, the appropriate flight service center, or the flight plan station serving the point of departure. Information concerning any other information specified in the flight plan may be similarly obtained.

(vi) Clearance information:

(a) Clearance limit, if other than the airport of destination.

(b) Special information, if issued.

(vii) Altitude(s) requested by the pilot (as specified in the flight plan or subsequently requested en route).

(a) The information contained in this subdivision (vii) need not be transmitted if agreements between adjacent centers permit deletion of this information. If information concerning the altitudes requested by the pilot is deleted by agreement between any two centers along the route of flight, centers controlling subsequent portions of the route shall not request the information.

(3) When 5-minute longitudinal separation in accordance with § 26.26-22 (b) (1) (ii) is utilized and less than the minimum longitudinal separation for the route will exist at the time the aircraft enter the area adjacent to the area of departure, the adjacent center shall be advised of the separation being used.

(4) Whenever it is necessary to issue clearances requiring a change in the operation of an aircraft within another center's control area, before such aircraft enters the control area of the center issuing the clearances such instruction shall be routed through the center concerned for approval and transmission to the aircraft.

[Supp. 1, 14 F. R. 3330]

§ 26.26-28 *Control of long-range flights (CAA rules which apply to § 26.26)*—(a) *General.* Commensurate with the orderly flow of long-range traffic, every effort should be made to permit departing aircraft to proceed on course with as few turns or other maneuvers as possible. Heavy take-off loads make the early portion of flight very critical, and this factor should be considered in the control of departing aircraft. When it is determined beforehand that it will be necessary to delay the departure of a flight, the operator thereof will be notified as soon as possible to avoid the necessity of holding aircraft on the airport with the engines running for extended periods of time.

(b) *Position reporting.* Within the limits of the available communications facilities, the minimum number of position reports necessary for adequate control should be required. Due to extreme unreliability, dead reckoning position reports are unsuitable for normal air traffic control purposes. Control should be based only on celestial, radio, radar, or Loran fixes or on a fix obtained by a combination of two or more of these methods. Any limitation imposed by delays inherent in the available communications system must be considered in the issuance of clearances. Control shall be based on the assumption that a subsequent position report will be promptly received.

[Supp. 1, 14 F. R. 3331]

§ 26.26-29 *Departures and arrivals (CAA rules which apply to § 26.26).* The following restrictions are in addition

to separation minimums specified in §§ 26.26-22, 26.26-23, and 26.26-24:

(a) *General.* When control is based thereon, the clearance shall specify direction of take-off and turn after take-off, track to be made good before proceeding on desired course, altitude to maintain before continuing climb to assigned altitude, time or point at which altitude change shall be made, and any other necessary maneuver.

(b) *Minimum time separation; take-off.* (1) Five-minute separation at the time altitude levels are crossed if a departure will be flown through the altitude level of a preceding departure and both departures propose to follow the same course. Action must be taken to insure that the 5-minute separation will be maintained or increased when altitude levels are crossed.

(2) Three-minute separation at the time courses diverge if aircraft propose to fly the same course immediately after take-off and then follow different courses, provided aircraft will follow diverging courses within 5 minutes after take-off. Action must be taken to insure that the 3-minute separation will be maintained or increased during the period the aircraft are following the same course.

(3) One-minute separation if aircraft propose to fly different courses and lateral separation is provided immediately after take-off. This minimum may be reduced when aircraft are using parallel runways provided operations letters covering the procedure have been approved by competent authority.

(c) *Direction of take-offs.* Departures may be expedited by suggesting a take-off direction when the wind velocity does not exceed 10 miles per hour. It is the pilot's responsibility to decide between making such take-off or waiting for normal take-off in a preferred direction.

(d) *VFR departure.* Departures may be cleared to maintain VFR until a specified time or to a specified location if reports indicate that aircraft can continue with 3 miles' visibility and can remain 500 feet vertically and 2,000 feet horizontally from all clouds.*

(e) *Special reports.* Arrivals may be requested to report when leaving or passing a reporting point, starting procedure turn on final approach, or other information required by the controller to expedite departures.

(f) *Take-off limitations.* When take-off clearance is based on the position of an arrival the following shall apply:

(1) If the arrival will make a complete instrument approach (initial and final approach) a departure—

(i) May take off in any direction until arrival has started procedure turn on final approach;

(ii) May take off in a direction which is different by at least 45° from the reciprocal of the direction of approach after arrival has started procedure turn leading to final approach, provided that

* Caution should be exercised when using this procedure whenever a ceiling exists in that it may require the pilot to violate terrain clearance regulations in order to maintain 500 feet vertical separation from clouds.

the take-off will be made at least 3 minutes before the arrival is estimated over the airport.

(2) If the arrival will make a straight-in approach (final approach only) a departure—

(i) May take off in any direction until 5 minutes before the arrival is estimated over the airport;

(ii) May take off in a direction which is different by at least 45° from the reciprocal of the direction of approach of the arrival until 3 minutes before the arrival is estimated over the airport.

(3) The above take-off limitations need not apply when, at the discretion of an approach controller, take-off is authorized under the following conditions:

(i) When the arrival is sighted by the controller;

(ii) When the arrival, making a ground contact approach, reports over a visual reporting point not less than 2 minutes from the airport, and reasonable assurance exists that the approach can be continued by visual reference to the ground; or

(iii) When the arrival, in radar contact and positively identified, is observed to be not less than 3 miles from the airport.

(g) *Approach clearance.* Except at locations where approach control is in operation, succeeding aircraft shall not be authorized to commence final descent for a landing until the first aircraft is in communication with and is sighted by tower personnel and reasonable assurance exists that normal landing can be accomplished.

[Supp. 1, 14 F. R. 3331]

§ 26.26-30 *Expected approach time* (CAA rules which apply to § 26.26)—(a) *Expected approach time.* The time at which it is expected that an arrival will be cleared to commence its approach procedure preparatory to landing.

(b) *Issuance to aircraft.* Expected approach time shall be issued and currently revised. Approach control shall issue revised expected approach time to aircraft under their jurisdiction.

(1) If the aircraft is within the control area of intended landing when determination of delay is made, the expected approach time shall be issued as soon as practicable. If aircraft approaching the area are expected to be delayed 1 hour or more, the expected approach time shall be issued immediately through the adjacent center.

(c) *Excessive delays.* ATC should advise aircraft operators and Military Flight Service when excessive delays to arrivals and departures are anticipated. If departures are delayed to avoid excessive holding at destination, ATC shall normally clear such flights in the order in which the flight plans are filed.

[Supp. 1, 14 F. R. 3331]

§ 26.26-31 *Approach sequence* (CAA rules which apply to § 26.26)—(a) *Approach sequence.* An approach sequence is established as follows:

(b) *Priority.* The first aircraft estimated to arrive over the point from which approaches are commenced will normally be the first aircraft to approach. Other aircraft will normally

have priority in the order of their estimated arrivals over such point.

(c) *Altitude assignment.* Altitudes at holding points shall be assigned in a manner that will facilitate clearing each aircraft to approach in its proper priority. Normally the first aircraft to arrive over a holding point should be at the lowest altitude, with following aircraft at successively higher altitudes.

[Supp. 1, 14 F. R. 3332]

§ 26.26-32 *Approaches* (CAA rules which apply to § 26.26)—(a) *Approaches.* Specific approaches may be required to expedite traffic.

(b) *Instrument approach.* The initial approach altitude, the point (in minutes or miles from the appropriate reporting point) at which procedure turn will be started, the procedure turn altitude, and the final approach course shall be specified. The missed-approach procedure shall be specified when deemed necessary.

(1) The provisions of this paragraph need not be applied where a standard instrument approach procedure is established and pilots are known to be familiar with the procedure, including the missed-approach procedure as specified in an air-carrier company manual or an official tabulation of instrument approach procedures.

(2) When the reported ceiling is below the initial approach altitude authorized over the radio navigation facility at point of intended let-down, the reported ceiling, visibility, and altimeter setting shall be transmitted in the approach clearance to other than air-carrier aircraft. The center shall effect transmission by requesting the communications station to "give current weather." At locations provided with approach control, this information shall be transmitted by the tower to all aircraft, including air carrier, on the initial transmission to such aircraft. Subsequent changes shall be forwarded to the aircraft as they become available.

(3) If visual reference to the ground is established before completion of the approach procedure, it is expected that the entire procedure will nevertheless be executed unless the pilot requests and is granted clearance to proceed directly to the airport.

(c) *Contact approach.* An aircraft may be authorized to execute a contact approach if requested by the pilot. Standard separation shall be effected between aircraft so cleared and between such aircraft and other arriving or departing aircraft.

(d) *No specified approach.* Traffic permitting, a specified approach shall not be required.

[Supp. 1, 14 F. R. 3332]

§ 26.26-33 *Coordination between centers and towers* (CAA rules which apply to § 26.26)—(a) *General.* Coordination between centers and towers will be effected as follows:

(b) *Authority.* Towers will observe such instructions as are issued by the appropriate center.

(c) *Towers providing approach control service.* A tower may issue clearances to any aircraft released to tower

control without reference to the center, except that when an approach has been missed the center will be advised immediately and subsequent action coordinated between the center and tower.

(1) *Clearing departures.* The center clearance shall include crossing altitudes at adjacent reporting points, cruising altitudes, and any other requirements pertinent to the flight. Time of take-off shall be specified by the center only if necessary to coordinate the departure with traffic not released to tower control. If time of take-off is not specified the tower shall determine the take-off time when necessary to coordinate the departure with traffic released to tower control. A clearance void time shall be specified by the center if a delayed departure would result in conflict with traffic not released to tower control. A clearance void time determined by the tower shall not be later than that issued by the center.

(2) *Clearing arrivals.* The center will clear aircraft to the holding point, including holding information and expected approach time in such clearance. If the approach sequence is such that succeeding arrivals would be required to hold at high altitudes, such arrivals should be cleared to other points until lower altitude levels are vacated in the approach sequence.

(i) After coordination with the tower, a center may clear the first arrival to the tower rather than to a holding point.

(ii) After coordination with the tower, a center may clear arrivals to the tower to hold at visual holding points until further advised by the tower.

(3) *Aircraft movement data; approach control towers.* Approach control shall keep centers promptly advised of pertinent data on IFR traffic such as—

(i) Highest altitude in use by approach control at the holding point.

(ii) Average time interval between successive approaches as determined by the tower.

(iii) Revision of the expected approach time issued by the center when the tower calculation indicates a variation of 10 minutes or more.

(iv) Arrival times over holding point (when required).

(v) Departure times of departing aircraft.

(vi) Available information relating to overdue or unreported aircraft.

(4) *Aircraft movement data; centers.* Centers shall keep approach control promptly advised of pertinent data on IFR traffic such as—

(i) Identification, type, and point of departure of arriving aircraft.

(ii) Estimated time and proposed altitude of arriving aircraft over holding point or actual time if aircraft is released to approach control after arrival over the holding point.

(iii) Expected approach time issued.

(iv) Statement that aircraft has been cleared to the tower, or that approach control shall assume control.

The information in (i), (ii), and (iii) of this subparagraph shall be transmitted as follows:

"(Identification), (type) from (point of departure) cleared to the tower" (see sub-

paragraph (2), (1) and (11) of this paragraph, or

"(Identification), (type) from (point of departure) estimated (holding point), (time), (altitude), expected approach clearance (time). Tower control."

(v) Anticipated delay to departing IFR traffic due to airway congestion.

(vi) Identification and destination of proposed IFR departures.

(5) A tower may authorize flight in a control zone in weather conditions lower than the VFR minimums after coordination with the center.

(6) *Traffic information.* When necessary to issue detailed traffic information to departures, a center may request a tower to forward such information, in standard phraseologies, by reference to flight data possessed by the tower.

(7) Any additional procedures necessary for proper coordination of approach control at individual airports shall be contained in operations letters approved by competent authority.

(d) *Towers not providing approach control service.* The tower may authorize VFR flight in a control zone in weather conditions lower than the VFR minimums after coordination with the center.

(1) *Division of control.* The center shall retain control of arriving aircraft until such aircraft have been cleared to the tower and are in communication with the tower. Not more than one arrival shall be cleared to the tower during IFR conditions.

(2) After coordination with the tower, a center may clear arrivals to visual holding points to hold until further advised by the tower.

(3) *Aircraft movement data; Towers.* Towers shall keep centers promptly advised of pertinent data on IFR traffic such as—

(i) Arrival and departure times.

(ii) Available information relating to overdue or unreported aircraft.

(4) *Aircraft movement data; Centers.* Centers shall keep towers promptly advised of pertinent data on IFR traffic such as—

(i) Identification, estimated time of arrival and proposed altitude of arrivals over holding point or airport at least 15 minutes prior to estimated arrival.

(ii) Clearance of arrivals to the tower.

(iii) Anticipated delay to departing IFR traffic due to airway congestion.

(iv) Identification and destination of proposed IFR departures.

[Supp. 1, 14 F. R. 3332]

§ 26.26-34 *Clearances (CAA rules which apply to § 26.26)*—(a) *General.* Clearances are based solely on expediting and separating air traffic and do not constitute authority to violate the regulations in this chapter. Clearances authorize flight within control zones and control areas only; no responsibility for separation of aircraft outside of these areas is accepted.

(b) *Application.* Clearances shall be issued prior to IFR flight within a control area.

(c) *Broadcast.* A clearance shall not be "broadcast" unless a center or tower so directs. A relay of a clearance over any communications channel which

could be intercepted by the pilot is considered a "blind broadcast."

(d) *Clearance limits.* The center shall normally clear an aircraft from the point of departure to the airport of first intended landing.

(e) *Assignment of altitudes.* (1) A center shall normally authorize only one altitude beyond its control area, i. e., that altitude at which the aircraft will enter the adjacent area. Phraseology shall normally be in accordance with § 26.26-35 (e) (1). For example, a flight from Chicago to LaGuardia would be cleared by the Chicago center to the LaGuardia Airport to maintain the altitude at which the aircraft will enter the Cleveland area. Any additional altitudes desired by the pilot will be requested by him en route. In this connection, pilots will be advised "Request further altitude change en route."

(2) The phraseology contained in § 26.26-35 (e) (7) shall be used in clearances to aircraft operating on direct routes which cross civil airways. If more than one altitude is specified, the phraseology in § 26.26-35 (c) (4) shall be used with the phrase "At (altitude)".

(3) When a flight has been cleared into a center's control area at an altitude which is below the established minimums for a subsequent portion of the route, action should be initiated by that center to issue a revised clearance to the aircraft even though the pilot has not requested the necessary altitude change.

(4) The center responsible for control at the point of first intended landing shall clear the aircraft to the tower or issue other appropriate clearance as required. If a control tower is not in operation, the center shall clear the aircraft to the airport, even though it is a repetition of the initial clearance limit.

(5) The airport of intended landing shall still be the clearance limit even though such airport is outside of a control area. If it is necessary for the center controlling the last control area through which the aircraft passes to issue a clearance, such clearance shall include clearance out of the control area. If an amending clearance is not required, it will not be necessary to clear the aircraft out of the control area.

(f) *Clearance procedures.* (1) Pilots filing flight plans specifying VFR within the control area of origin and IFR for a later portion shall not be cleared by the center of origin but shall be advised to contact the appropriate communication facility for clearance. Pilots specifying an instrument altitude for the first portion of a flight and VFR for a later portion shall normally be cleared to the fix at which the instrument portion of the flight terminates, to maintain cruising altitude. Phraseology shall be in accordance with § 26.26-35 (e) (1).

(2) Whenever possible, a combined clearance should be issued by the center adjacent to the area within which landing will be made. If weather and/or traffic conditions require, the center controlling the point of intended landing may request an adjacent center to clear aircraft to a specific point during a specified period. Such clearances shall normally be issued to an aircraft only when

within the control area adjacent to the area within which landing is to be made.

(3) Aircraft operating on an established schedule may be cleared through intermediate stops within a control area; however, if the proposed route of flight is through more than one control area, scheduled aircraft may be cleared through intermediate stops within other control areas only after coordination between the centers concerned.

(4) If aircraft are cleared to a point in another control area which is other than the airport of first intended landing, the center responsible for control at such clearance limit will authorize flight to the airport of first intended landing, if practicable.

(5) After the initial clearance has been issued to an aircraft at departure point, it will be the responsibility of the appropriate center to issue an amended clearance to eliminate traffic conflict, and issue traffic information if required.

(6) If the point of departure is not at a sufficient distance from the boundary of an adjacent control area to permit transmission of the necessary flight plan data to the adjacent center and allow adequate time for posting and analysis, coordination between centers shall be effected prior to departure of the aircraft.

(g) *Composition.* Clearances shall be composed as follows:

(1) Flight or aircraft identification.

(2) Clearance limit and route.

(3) Altitude, approach, or departure procedure.

(4) Any special information.

(5) Message delivery information and/or cancellation time if necessary.

(h) *Description.* Clearance items shall be described as follows:

(1) A clearance limit shall be described by specifying the name of the appropriate reporting point, tower, or airport.

(2) The route of flight shall be included in each original clearance when deemed necessary.

(3) Altitude information shall consist of:

(i) The cruising altitude or altitudes.

(ii) Altitudes over those reporting points which are to be crossed at other than the cruising altitude.

(iii) The place or time for starting climb or descent, when necessary.

(iv) Detailed procedures concerning departure or approach altitudes, when necessary.

(i) *Issuance and delivery of clearances.* Clearances shall be issued as follows:

(1) *Departures.* The center shall forward a clearance to the tower with the least possible delay after receipt of request made by the tower, or prior to such request if practicable.

(2) *En route.* When an aircraft is cleared to a clearance limit and requires further clearance beyond that point, the clearance shall be issued at least 5 minutes before the aircraft is estimated over the reporting point where delivery is to be made.

(3) *Responsibility for clearance delivery.* It is the responsibility of the communications agency or aircraft operator to whom the clearance is issued to trans-

mit it to the aircraft immediately when received unless an attempt delivery time is included in the clearance. The center or tower shall be notified if the clearance is not delivered within 5 minutes after receiving the clearance or the attempt delivery time when one is specified. When notification of nondelivery is received, the center shall advise the communication agency of further action to be taken.

[Supp. 1, 14 F. R. 3333]

§ 26.26-35 *Standard phraseologies* (CAA rules which apply to § 26.26)—(a) *General.* Clearances shall be issued in accordance with the phraseologies herein. It is expected that personnel receiving a clearance for transmission to an aircraft will transmit such clearance in the exact phraseology in which it is received. It is essential that each clearance contain positive and concise data, phrased in a standard manner. Each traffic clearance shall be prefixed with the phrase "ATC clears (identification)" whenever a clearance limit is contained in the clearance.

Example: "ATC clears Eastern four to the Richmond airport. Cruise six thousand..."

The phrase "ATC advises (identification)" shall be used whenever information such as expected approach time, undetermined delay, and essential traffic is issued.

Example: "ATC advises Eastern four to expect approach clearance at"

The phrase "ATC clears (identification)" shall be used for all other transmissions.

Example: "ATC clears Eastern four to descend to five thousand immediately"

These phrases are to be used only when the clearance will be relayed from a center or tower to a pilot through any communications agency such as an air-carrier radio operator, military communications station, or CAA communications station. Towers shall use the phrases whenever a clearance is received from a center for transmission to a pilot. Clearances initiated by tower personnel and issued directly to pilots shall conform to standard tower phraseologies.

(b) *Clearance limit.* The initial clearance shall specify a clearance limit phrased as follows:

"ATC clears (identification)—"

1. "From to" ("from") may be eliminated if clearance is understandable without it); or
2. "Through to" (if aircraft is cleared through an intermediate stop to a point beyond the intermediate stop); or
3. "Out of control area zone (number of) miles (direction) of (reporting point). Phraseology (3) will normally be used as a clearance limit only when the flight will not again enter a control area.

(c) *Route of flight.* The route of flight, when included in a clearance, shall be specified immediately after the clearance limit. The following phraseologies, or combinations thereof, shall be used:

1. "Direct";
2. "Via (reporting point) and (reporting point)";
3. "Via (color) airway (number)";
4. "Cross/join (color) airway (number) (number of) miles (direction) of (reporting point)."

(d) *Local flight.* A clearance for local flight on specified courses of a specified radio facility:

"ATC clears (identification) to fly (location(s)) courses and/or quadrants (name of facility) within radius (number of) miles from station."

(e) *Maintaining altitude.* Clearances requiring that an aircraft maintain a specified altitude, a specified altitude in relation to an overcast or other well-defined formation, or altitude separation from another aircraft.

"Maintain—"

1. "(Altitude)"; or
2. "(Altitude) to (reporting point)"; or
3. "(Altitude) until past (reporting point)"; or
4. "(Altitude) until (time)"; or
5. "(Altitude) until advised by (name of) tower"; or
6. "(Altitude) until further advised"; or
7. "(Altitude) while in control area"; or
8. "At least 500 feet above all clouds, haze, smoke, or fog level"; or
9. "(Number of feet) above/below (aircraft identification)."

(f) *Climb or descent.* Clearances requiring that an aircraft climb or descend to a specified altitude:

"Climb to (altitude)—"; or
"Descend to (altitude)—"

1. "Immediately"; or
 2. "Immediately after passing (reporting point)"; or
 3. "At (time)."
- "Climb" or "descend—"
"So as to reach (altitude) at (time)"; or
"At (reporting point)."

(g) *Clearance authorizing an aircraft to descend or climb between specified altitude levels in accordance with VFR.*

"Climb VFR from (altitude) to (altitude)"; or
"Descend VFR from (altitude) to (altitude)"; or
"Climb VFR above (altitude)"; or
"Descend VFR below (altitude)."
"If not possible (alternate procedures) and advise."

(h) *Change of altitude.* Requiring that an aircraft remain well to the right of a course during altitude change:

"Climb/descend well to right of course."

(i) *Cruising and crossing altitudes.* Clearances requiring that an aircraft cruise at or cross a reporting point at a specified altitude with no specific time for altitude change:

"Cross (reporting point) at (altitude)."
"Cross (reporting point) at or above (altitude)."
"Cruise (altitude)."

(j) *Reporting levels.* Clearances requiring an aircraft to report on leaving or reaching specified altitude levels:

* Color and number of airway may be omitted if only one possible airway route exists.

"Report leaving (altitude level or levels)."
"Report reaching (altitude level or levels)."

(k) *Specific instrument approach.* Clearances specifying instrument approach utilizing a radio range:

"Initial approach at (altitude), procedure turn at (altitude) (number of) minutes or miles (direction), and/or final approach on (location) course of (name of) range"; or
"Standard range approach"; or
"Straight in approach to airport."

(l) *Contact approach.* Authorization at a pilot's request for a ground contact approach:

"Contact approach approved; if not possible, (alternate procedures) and advise."

(m) *Any approach.* The omission of specific approach procedures will indicate any type of approach may be used at the discretion of the pilot.

(n) *Departure procedures.* Clearances specifying direction of take-off and/or direction of turn after take-off:

"Take-off (direction) and/or turn (right or left) after take-off."

(o) *Release.* Instructions authorizing a tower to release an aircraft for take-off subject to the discretion of the tower with respect to arriving aircraft:

"Release subject your discretion with respect to (identification/s)."

(p) *Special procedures.* Clearances requiring that an aircraft follow a specific course:

"Make good a track of (number of) degrees magnetic until (time, location, or altitude)"; or

"Make good a track bisecting (location) quadrant of (name of facility) until (time, altitude, or location)."

(q) *Holding.* Procedures requiring that aircraft be held in a specified direction from a specific holding point:

(1) *Standard pattern.*

"Hold (direction) of (holding point)—"

"Until (time)"; or

"Until advised by (name of) approach control on (blank) kilocycles/megacycles."

(2) *Published nonstandard pattern.*

"Hold (direction) of (holding point) non-standard pattern—"

"Until (time)"; or

"Until advised by (name of) approach control on (blank) kilocycles/megacycles."

(3) *Detailed holding instructions:*

1. "Hold on (specified) course of (name of facility) between (location) and point (number of minutes and direction)—"

"Until (time)"; or

"Until advised by (name of) approach control on (blank) kilocycles/megacycles."

* "Altitude level or levels" shall include either the desired numerical values or "even" or "odd" thousand-foot levels.

* In utilizing these procedures, caution should be exercised to insure aircraft will clear all obstructions and terrain in accordance with specified minimums, and to insure that the desired track can be accomplished effectively, considering wind direction and velocity.

* The phrase "on (blank) kilocycles/megacycles" need not be used when issuing holding instructions to scheduled air-carrier aircraft.

2. "Make all turns (direction) of course;"
3. "Make all turns in (direction and quadrant identification) quadrant."

(4) Detailed holding instructions shall normally be issued:

(i) When assigning nonstandard patterns which are not depicted on United States Coast and Geodetic Survey radio facility charts; or

(ii) On pilot's request; or

(iii) When deemed necessary by the controller.

(r) *Visual holding.* Instructions requiring that an aircraft be held at a specific location by visual reference to the ground or water:

"Hold at (location)

"Until (time); or

"Until advised by (name of) tower."

(s) *Expected approach time.* Clearances relative to expected approach time:

"Expect approach clearance at (time)"; or
"No delay expected."

(t) *Indefinite delay.* Delay not determined. (Revised expected approach time shall be forwarded as soon as determination can be made.)

"Delay indefinite expect approach clearance not later than (time)."

(u) *Longitudinal separation clearances.* Clearances requiring that an aircraft lose time to establish longitudinal separation from another aircraft, or to maintain longitudinal separation from another aircraft:

"Lose time so as to arrive over (reporting point) at (time)."

"Maintain (number of minutes) separation from (aircraft identification)."

(v) *Essential traffic information.* Phraseologies to be used in connection with the issuance of essential traffic information:

"Traffic is (essential traffic information); or
"Additional traffic is (essential traffic information)"; or

"No essential traffic reported."

(w) *Approach control.* The following shall constitute the last item of the center clearance when an aircraft, previously issued a holding clearance, is to contact a tower for further clearance. For example, this phraseology will apply when an aircraft holding at a higher altitude than "over traffic" is subsequently cleared to a lower level and released to Approach Control:

"Contact (name of) Approach Control on (blank) kilocycles/megacycles for further clearance."

[Supp. 1, 14 F. R. 3333]

§ 26.26-36 *Traffic information (CAA rules which apply to § 26.26)*—(a) *Essential traffic.* Essential traffic for a particular aircraft is same-direction IFR traffic on the same or converging courses which is, or will be, 1,000 feet or less vertically and within less than minimum longitudinal separation from such aircraft; and opposite-direction IFR traffic on the same or converging courses which is, or will be, within less than the minimum

*The phrase "on (blank) kilocycles/megacycles" need not be used in clearances issued to scheduled air carrier aircraft.

time separation for altitude change (§ 26.26-22 (d)) and occupies, or will pass through, the altitude of such aircraft.

(b) *Detailed traffic information.* Direction of flight and estimated time and altitude over the reporting point nearest the point at which the aircraft which are essential traffic should pass, overtake, or approach; this information and any alternate procedures issued shall be given when an aircraft will pass through the altitude level of other aircraft concerned.

(c) *General traffic information.* Direction of flight and cruising altitude shall be given when the aircraft which are essential traffic are at different constant altitudes.

(d) *Issuance.* Traffic information shall be issued to aircraft:

(1) When deemed necessary by the controller;

(2) When right-side separation is effected;

(3) At any time if requested by the pilot; or

(4) At any time if requested by the aircraft operator for a specific flight or for more than one flight.

(e) Traffic information issued to aircraft separated by 5 minutes in accordance with § 26.26-22 (b) (1) (ii) shall include the filed air speed of the aircraft concerned.

[Supp. 1, 14 F. R. 3335]

§ 26.26-37 *Emergency procedures (CAA rules which apply to § 26.26)*—(a) *General.* The various circumstances surrounding each emergency situation preclude the establishment of exact detailed procedures to be followed. The procedures outlined herein are intended as a general guide to air traffic control personnel. Centers and towers shall maintain full and complete coordination, and personnel shall use their best judgment in handling emergency situations.

(b) *Emergency descent.* Upon receipt of advice that an aircraft is making an emergency descent through other traffic, immediate steps shall be taken to minimize conflict with other aircraft. ATC personnel shall immediately broadcast by means of the appropriate radio facility or, if not possible, request the appropriate communications station to immediately broadcast the following:

"Emergency to all concerned: Emergency landing at (name of) airport. All aircraft below (number of) feet within (number of) miles of (name of radio facility) leave (location) course(s) immediately."

(1) *Action by pilot.* It is expected that pilots receiving such broadcast will clear the specified areas, maintaining the last assigned altitude and stand by on the appropriate radio frequency for further instructions from the center or tower.

(2) *Subsequent action by Air traffic control.* Immediately after such emergency broadcast has been made the center or tower concerned shall forward further instructions to all aircraft involved as to additional procedures to be followed during and subsequent to the emergency descent.

(c) *Two-way radio failure.* If two-way radio communication between an

aircraft and the ground fails prior to the aircraft establishing communication with the tower, the center may issue an appropriate clearance to be broadcast over suitable radio facilities. If failure occurs after the aircraft and tower are in communication, the tower may broadcast any necessary clearance to the aircraft.

(1) *Pilot actions.* (i) The pilot will observe one of the following procedures:

(a) If operating under VFR conditions, proceed under VFR and land as soon as practicable; or

(b) Proceed according to the latest air traffic clearance.

(ii) If the pilot proceeds according to the latest traffic clearance but has not received and acknowledged a clearance to the tower and if other instructions to the contrary are not received, he shall be expected to observe the following and control will be effected accordingly:

(a) If the pilot has received and acknowledged a clearance to the destination airport or the radio facility serving that point, he shall continue flight at the altitude(s) last assigned by air traffic control, or the minimum instrument altitude,* whichever is the higher, to the radio facility serving the destination airport.

(b) If the pilot has received and acknowledged a clearance to a point other than the destination airport or the radio facility serving the destination airport, he shall continue flight at the altitude(s) last assigned by air traffic control or the minimum instrument altitude,* whichever is the higher, to the radio facility serving the destination airport.

(c) If holding clearance has been received, the pilot shall comply with the clearance until such time as it will be necessary to continue flight so as to arrive at the radio facility serving the destination airport at the expected approach time last received and acknowledged, maintaining the last assigned altitude or the minimum instrument altitude,* whichever is the higher.

(d) If holding clearance has been received, but no expected approach time has been received, the pilot shall comply with the clearance until the time air traffic control has specified that further clearance may be expected. He shall then continue, maintaining the last assigned altitude or the minimum instrument altitude,* whichever is the higher.

(iii) *Approach.* Descent from the altitude maintained to the radio facility serving the destination airport shall be made on the final approach course and shall start at the expected approach time last received. If no expected approach time was received, descent shall be started at the last estimated arrival time specified by the pilot, or as soon as possible thereafter. A full standard instrument approach should be executed unless a VFR approach can be made.

(iv) *Alternate airport.* If approval of the aircraft operator is obtained, a center

*The minimum instrument altitude referred to is the minimum established for that portion of the route over which the operation is conducted, regardless of the direction of flight.

may request a clearance to be broadcast to the pilot to proceed, at the minimum instrument altitude, to the alternate airport specified in the flight plan.

[Supp. 1, 14 F. R. 3335]

§ 26.26-38 *Unreported aircraft* (CAA rules which apply to § 26.26)—(a) *Unreported aircraft.* To minimize any possibility of collision with unreported aircraft, the center or tower shall restrict other traffic which may conflict until 30 minutes after whichever of the following is applicable: The time at which approach clearance was delivered to the pilot; the expected approach time last delivered to the pilot; the arrival time over the radio facility serving the destination airport; or the current ATC or pilot estimate (whichever is the later) of initial arrival over such radio facility.

(b) *Resumption of normal traffic.* If the aircraft is still unreported after the above period, pertinent information concerning the aircraft shall be forwarded to operators and pilots of the aircraft concerned and normal control resumed if they so desire. It is the responsibility of such operators and pilots to determine whether they will resume normal operations or take other action.

[Supp. 1, 14 F. R. 3335]

Airport traffic control procedures.

§ 26.26-61 *General* (CAA rules which apply to § 26.26). (a) *Responsibility of airport traffic control towers:*

(1) An airport traffic control tower is responsible for the issuance of clearances and information to pilots of aircraft for the purpose of preventing collision between:

(i) Aircraft operating on the ground at the landing area.

(ii) Aircraft and vehicles operating on the landing area.

(iii) Aircraft in the traffic pattern, and landing and taking off at the landing area.

(iv) Aircraft operating under instrument flight rules after control of such aircraft has been delegated to the tower by the appropriate air route traffic control center.

(2) An airport traffic control tower is also responsible for the issuance and relay of information and clearances which will prevent unnecessary delays to aircraft using a landing area, and which will permit the proper use of the landing area by aircraft.

(b) *Responsibility of pilots.* (1) When flying in VFR weather conditions it is considered the direct responsibility of the pilot to avoid collision with other aircraft. Under such conditions, the information and clearances issued by the control tower are intended to aid pilots to the fullest extent in avoiding collisions.

(2) When flying in IFR weather conditions it is obviously impossible for the pilot to assume the responsibility of avoiding collision with other aircraft except as directed by the ground control agency. Therefore, it is of the utmost importance that all clearances issued by a control tower to pilots of aircraft under its jurisdiction be adequate, concise, and definite, inasmuch as the pilot has no

other means of ascertaining the proximity of other aircraft.

[Supp. 1, 14 F. R. 3335]

§ 26.26-62 *Control of traffic on and in vicinity of landing area* (CAA rules which apply to § 26.26)—(a) *General.* Airport traffic controllers shall maintain a continuous watch on all visible flight operations in the control zone, including aircraft, vehicles, and personnel on the landing area, and shall control such traffic in accordance with the procedures set forth herein and all applicable air traffic rules. If there are other landing areas within the zone, traffic at all landing areas within the zone shall be coordinated so as to eliminate any hazardous conflicts of traffic patterns.

(b) *Critical positions of aircraft in the traffic and taxi patterns.* The following positions of aircraft in the traffic and taxi patterns (illustrated in fig. 1) are the positions where the aircraft normally receives airport traffic control clearances. The aircraft should be watched closely as they approach these positions so that proper clearances may be issued without delay. Where practicable all such clearances should be issued without waiting for the pilot to initiate the call.

(1) Pilot initiates call to taxi for departing flight. Runway-in-use information and taxi information given.

(2) If there is conflicting traffic the departing aircraft will be held at this point. The pilot will normally run up motors here.

(3) Take-off clearance is issued here, if not practicable at position 2.

(4) Clearance to land or landing sequence number is issued here.

(5) Clearance to taxi to hangar line or parking area is issued here.

(6) Parking directions issued here if necessary.

(c) *Determining proper runways to use for landings and take-offs.* (1) When surface wind velocity is 6 miles per hour or more, aircraft shall ordinarily be authorized to use the runway most nearly aligned into the wind and the tetrahedron shall, if controllable, be set so as to indicate such runway. (See fig. 2 (b).)

(2) The tetrahedron, if controllable, will release automatically and swing into

the wind when the velocity reaches a predetermined value. Ordinarily this will be between 10 and 15 miles per hour.

(3) When the surface wind velocity is less than 6 miles per hour, aircraft shall be authorized to use the runway which has been designated as the "calm wind" runway. This shall normally be the runway having the most advantages such as greater length, shorter taxiing distance, better approach, etc. The tetrahedron shall, if controllable, be set so as to indicate such runway under these conditions. (See fig. 2 (a).)

(4) If the runway in use is not considered suitable for the operation involved, the controller may offer a choice of runway or the pilot may request clearance to use another runway.

(d) *Control of taxiing aircraft.* (1) The importance of issuing definite, concise directions to pilots of taxiing aircraft cannot be overemphasized. The visibility problem in an airplane is most acute when taxiing. Very few aircraft afford any forward vision for several yards directly in front of the airplane, and the pilot must depend to a large degree upon the control tower to issue necessary information which will assist him in determining the proper taxi route and preventing collision with other aircraft or objects.

(2) It is particularly hard for the pilot to determine the best taxi route on a strange airport. Clearances and information to pilots concerning taxi routes should be simple and direct such as "Turn left at first intersection, taxi straight ahead to the end of the runway, then turn right," etc. The pilot should also be warned of parked aircraft or other objects along or near his taxiing route.

(3) Aircraft should not be permitted to taxi on the runway if at all possible to provide other taxiing routes. The guiding principle in handling taxiing traffic is "keep the runway-in-use ready for use as much as possible."

(i) Aircraft shall not be permitted to hold on the end of the runway-in-use whenever another aircraft is effecting a landing except at those airports where there are no intersecting taxiways. At such airports the aircraft shall be held clear of the edge of the runway and at

FIGURE 1—Critical positions of aircraft from an airport traffic control viewpoint.

FIGURE 2—Method of determining runway to use.

an angle of 90 degrees from the landing direction until cleared to take-off position. (See fig. 3.)

(4) The direction of taxiing aircraft and avoidance of collision within loading and parking areas is considered the primary responsibility of the aircraft operator and/or airport management, as well as the pilot.

(e) *Control of traffic in the traffic pattern.* (1) Aircraft in the traffic pattern shall be controlled to provide the separation minimums outlined below except that:

(i) Formation flights of aircraft are exempted from the separation minimums with respect to separation from other aircraft of the same flight.

(ii) Aircraft operating in different areas or lanes on airports equipped with runway or mat facilities suitable for simultaneous landings or take-offs are exempted from the separation minimums.

(iii) Separation minimums shall not apply to aircraft operating under military necessity as determined by competent authority.

(2) Sufficient separation shall be effected between arriving aircraft to insure that the succeeding landing aircraft on the same runway will not cross the airport boundary in its final glide until the preceding aircraft has cleared the runway-in-use. (See fig. 4.)

(3) Sufficient separation shall be effected between the departing aircraft to insure that an aircraft will not commence take-off until the preceding departing aircraft has crossed the end of the runway-in-use.

(4) Sufficient separation shall be effected between arriving and departing aircraft to insure:

(i) That a landing aircraft will not cross the airport boundary in its final glide until the preceding departing aircraft has crossed the far end of the runway-in-use.

(ii) That an aircraft taking off will not commence take-off until the preceding landing aircraft has cleared the runway-in-use.

(5) Sufficient separation should be effected between aircraft in flight in the traffic pattern to allow the spacing of arriving and departing aircraft as outlined in the foregoing. In no event shall separation between aircraft in flight be less than the minimums specified by Air Force, Navy, or Civil Air Regulations.

(i) At many airports the location of the control tower will not permit accurate determination of separation between the paths of successive aircraft in the pattern, landing, or taxiing on the same runway or taxiway, particularly when the movement of these aircraft is at an angle to the controller's line of vision. Extreme caution, therefore, should be exercised in the issuance of specific control instructions which are used to prevent collision. For example, when a succeeding aircraft is overtaking the aircraft ahead a specific control instruction might turn the preceding aircraft into the path of the other.

(f) *Control of other than aircraft traffic on the landing area.* (1) The movement of personnel or vehicles on the landing area proper shall not be per-

mitted unless permission has been granted for such movement by the airport traffic controller on duty in the control tower. Personnel, including drivers of all vehicles, shall be required to stop and wait for radio clearance or light signal from the control tower before crossing any runway or taxi strip unless on a portion of the landing area marked off by lights, flags, or other conventional warning signals. In radio conversations to pilots, the airport traffic controller shall identify personnel or vehicles on the landing area as distinctly as possible.

(2) The maintenance of any landing area requires considerable use of vehicular traffic, such as snow plows, tractors, mowers, maintenance trucks, official cars for inspections and miscellaneous other equipment in addition to the working parties and other personnel required for maintenance. Considerable care and judgment must be exercised in the dispatch of personnel or vehicles on any portion of the landing area since a collision with a fast-moving aircraft would be disastrous. At certain points during the take-off and landing of aircraft, a change of direction to avoid an obstacle will almost certainly result in ground-looping or overturning the aircraft with probable serious results. Another difficulty connected with the dispatch of personnel and vehicular traffic on the landing area is that the operators of the equipment and the personnel on foot are not always aware of the difficulties and limitations of handling heavily loaded aircraft and may be inclined to fail to surrender sufficient right-of-way for safe operation.

(3) In a few cases commanding officers or airport managers require all vehicular traffic to be equipped with radio receivers so that they may receive control tower signals, but in the majority of instances all pedestrian and vehicular traffic are controlled by light signals.

(4) Where continuous vehicular movement is involved over limited portions of the landing area, such as mowing the grass, the mowing is usually accomplished in a portion of the field not being used for landing operations with the particular wind condition at that time. The mowing equipment is marked with appropriate flags or lights, and the mower may not cross the taxi strips or runways without receiving the proper light signal.

(5) When construction work is in progress, the normal procedure is to close the entire construction area to aircraft operations and permit pedestrian and vehicular traffic to move at will within the marked-off area. Construction areas are usually marked off with appropriate flags in the daytime and appropriate lights at night.

(g) *Authorizing use of landing area by pilots of arriving aircraft.* (1) If a pilot enters a control zone without proper authorization, he shall be permitted to land if his actions indicate he so desires. If circumstances warrant, an airport traffic controller may ask pilots of aircraft with whom he is in contact to give way so as to remove as soon as possible the hazard introduced by such unauthorized operation. In no

case shall permission to land be withheld indefinitely.

(1) In cases of emergency, such as loss of radio communication, a pilot may be required, in the interests of safety, to enter a control zone and effect a landing without proper authorization. Airport traffic controllers should recognize the possibilities of emergency action and render all assistance possible. The entire concept of air traffic control is service to the flying public. While it is true that in some isolated instances a pilot might deliberately disregard regulations

(a) INCORRECT METHOD

(b) CORRECT METHOD

FIGURE 3—Method of holding aircraft.

FIGURE 4—Separation between successive landing aircraft.

and enter a control zone in an unauthorized manner while not under stress of an emergency, the airport traffic controller should assist the pilot and take steps toward possible disciplinary action after the pilot has landed. Under no circumstances should discussions which have no relation to traffic control be carried on over the radio.

[Supp. 1, 14 F. R. 3836]

§ 26.26-63 Visual signal procedures (CAA rules which apply to § 26.26) —(a) Portable traffic light. The portable traffic control light is a directive light which emits an intense, narrow beam of light. The color of the light (white, green, or red) is controlled by the operator through a system of levers and triggers in the two handles. Signals are readily discernible to the pilot of any aircraft visible to the operator.

(b) Advantages and disadvantages of the portable traffic signal light. (1) The controller should be thoroughly familiar with the limitations of the traffic control light, and evaluate its capabilities in connection with its use.

(2) The portable traffic light has the following advantages:

(1) No radio equipment is required in the aircraft and therefore all aircraft can be controlled whether or not they possess radio.

(2) The traffic light provides an emergency method of control in the event of radio failure—either in the tower or the aircraft.

(3) The disadvantages are:

(1) The pilot may not be looking at the control tower at the time a signal is directed toward him.

(2) The information transmitted by a light signal is limited. One may only transmit an approval or disapproval of the pilot's anticipated actions to him. No explanatory or supplementary information can be transmitted.

(c) Operation of portable traffic light. (1) The portable traffic light shall be used to control the movement of personnel and vehicles on the landing area and the landings and take-offs of any aircraft not equipped with radio unless such movements or landings and take-offs have been prearranged with the traffic controller.

(2) Signals from a portable traffic control light shall mean the following:

Color and type of signal	On the ground	In flight
Steady green.....	Clear for take-off.....	Cleared to land.
Flashing green.....	Cleared to taxi.....	Return for landing (to be followed by steady green at proper time).
Steady red.....	Stop.....	Give way to other aircraft and continue circling.
Flashing red.....	Taxi clear of landing area (runway) in use.	Airport unsafe—do not land.
Flashing white.....	Return to starting point on airport.....	
Alternating red and green.....	General warning signal—Exercise extreme caution.	

(See figs. 5 and 6.)

VISUAL SIGNALS

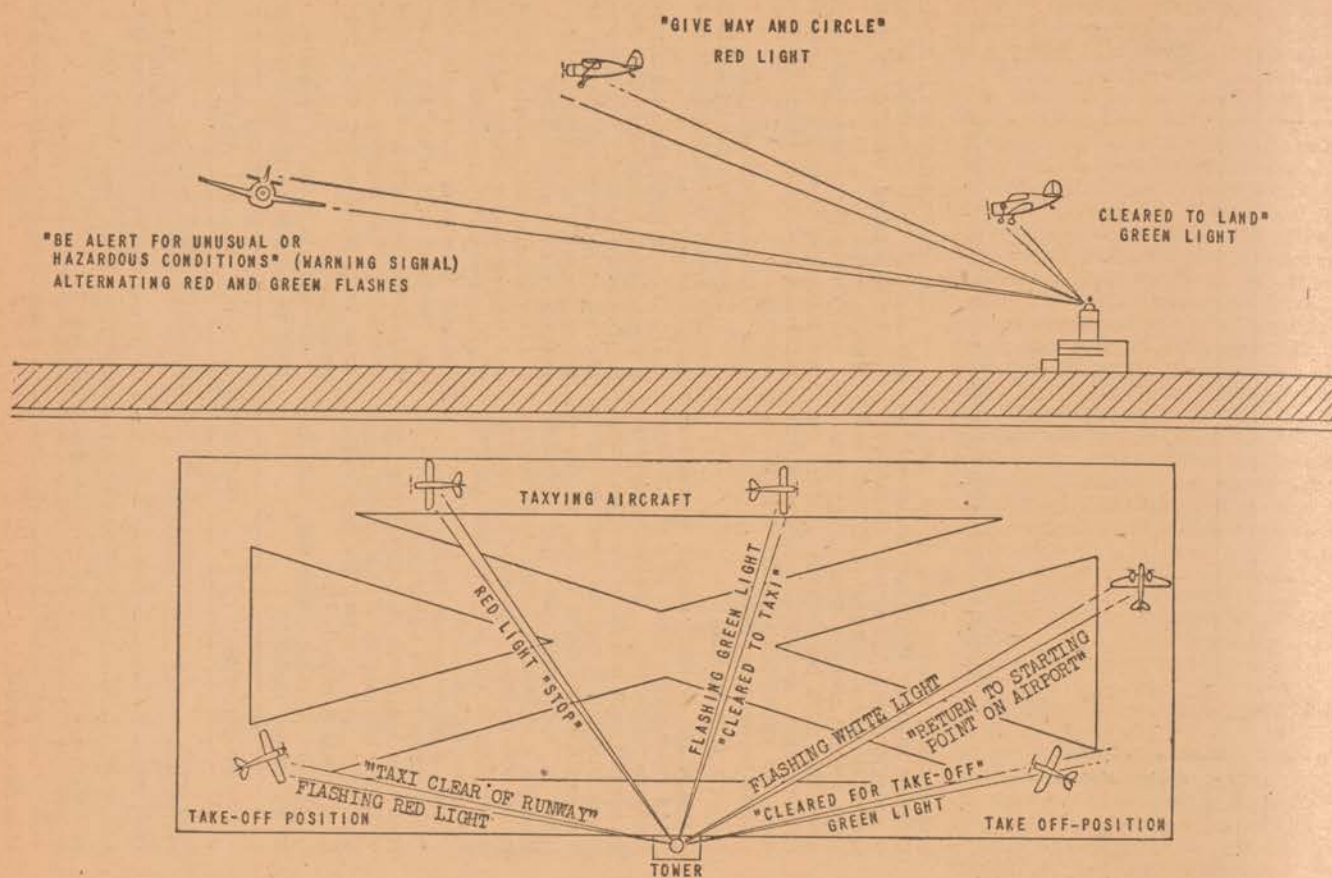

FIGURE 5.

(1) *General warning signal.* A series of alternating red and green flashes from a directed traffic control light shall be used as a general warning signal to advise a pilot or driver of a vehicle on the landing area to be on the alert for hazardous or unusual conditions. As an example, the warning signal may be directed to a pilot in flight to indicate a

change of runway since this can prove hazardous if the pilot attempts to land cross-traffic or cross-wind.

(a) In controlling airport traffic by means of visual signals, the general warning signal shall be directed to pilots of the aircraft concerned as follows (see fig. 6):

FIGURE 6—Example of the use of general warning light when two airplanes are on converging courses.

(1) When aircraft are converging and there is a possibility of collision.

(2) When hazardous conditions are present and the pilot must be unusually alert in order to complete the operation safely. Such conditions include obstructions, soft field, ice on runway, and many others.

(3) When mechanical trouble is apparent to the controller and he has reason to believe that the pilot may not be aware of it.

(4) At any other time when believed necessary in the opinion of the controller.

(b) Attention is directed to the fact that the warning signal is not a prohibitive signal and may be followed by either a red or green light as circumstances warrant.

(c) A pilot wishing to attract the attention of the airport traffic controller during the hours of darkness may turn on a landing light and taxi the aircraft in a position so that the light is visible to the airport traffic controller. The landing light should remain on until appropriate signals are received from the tower, after which acknowledgment may be expected from the pilot as provided for in non-radio-equipped aircraft. Pilots of aircraft not equipped with landing lights may blink their navigation lights to attract the attention of the tower.

(d) *Light signals to indicate restriction of VFR operations in the control zone.* (1) During the hours of daylight, the rotating airport beacon shall be op-

erated to mean that the ground visibility in the control zone is less than 3 miles and/or the ceiling is less than 1,000 feet and that a traffic clearance is required for landings, take-offs, and flight in the traffic pattern. (See fig. 7.)

(2) Between sunset and sunrise, flashing lights outlining the traffic direction indicator shall be operated to mean that ground visibility in the control zone is less than 3 miles and/or the ceiling is less than 1,000 feet and that a traffic clearance is required for landings, take-offs, and flight in the traffic pattern.

(e) *Light signals to indicate clockwise (to the right) flow of traffic.* (1) A flashing amber light shall be operated to mean that a clockwise flow of traffic around the airport is required unless otherwise authorized by the control tower. (See fig. 7.)

(f) *Use of flag signals.* (1) Flag signals are used by the military and naval services for special signals which usually apply only to the local activities at a particular landing area. Since these signals

are not standard and usually have a special meaning at a particular location, it is not expected that an itinerant pilot will know their meaning or be guided by them. Accordingly, flash signals may be used for special local activities (such as primary or secondary training flights) as directed by the local commanding officer, but should not be used to govern flight of other than local aircraft unless it is known that the itinerant pilot is familiar with the flag signals and their meaning.

(g) *Special light signals.* (1) Some military and naval establishments have special light signals, such as "course lights," which indicate landing direction, runway-in-use, traffic pattern to use, and other similar information for local activities. These lights are to be used as directed by competent authority, but as in the case of flag signals are to be confined to direction of pilots known to be familiar with the meaning of the special light signals.

[Supp. 1, 14 F. R. 3338]

ROTATING BEACON (day only)

Ceiling less than 1000 feet and/or ground visibility less than 3 miles. Traffic clearance required for landings, take-offs, or flight in traffic pattern in a control zone.

FLASHING AMBER LIGHT

CLOCK-WISE FLOW OF TRAFFIC

FLASHING LIGHTS OUTLINING TRAFFIC DIRECTION INDICATOR (night only)

Ceiling less than 1000 feet and/or ground visibility less than 3 miles. Traffic clearance required for landings, take-offs, or flight in traffic pattern in a control zone.

FIGURE 7—Light signals used in airport traffic control.

§ 26.26-64 *Radiotelephone procedure and technique (CAA rules which apply to § 26.26)*—(a) *General.* The operation of the radiotelephone facilities of an airport traffic control tower shall be accomplished in accordance with procedures outlined herein.

(b) *Calls and replies.* (1) Airport traffic control towers shall be identified during radiotelephone communications by the name of the airport followed by the word, "Tower."

Examples: "Washington tower," "Meacham tower," "Bolling tower."

(2) It is expected that aircraft pilots will call, for example, "Washington tower" when they wish to establish communications with the Washington Airport Traffic Control tower and, for example, "Washington radio" when they wish to establish communications with the Washington airway communications station.

(3) Aircraft shall be identified during radiotelephone communications in the following manner:

(i) *Military aircraft*—by the name of the service followed by the last four digits of the service serial number, as

"Air Force seven eight two nine."

"Navy four three six one."

"National Guard two one six one."

(ii) *Civilian aircraft*—by the aircraft type,* if known, followed by the last four digits of the certificate number, as

"Waco A. R. C. D," or where necessary,

"Stinson three seven two Y."

(iii) *Aircraft of foreign registry*—by the aircraft type,* if known, followed by the last four digits or letter of the license or certificate number or registry, as

"Waco two one six eight."

"Waco, able roger charlie dog."

(iv) After radio contact has been established, the last half of the aircraft radio identification may be reduced to not less than two digits or letters, provided there is no possibility of error, as

"Waco six eight."

(v) The abbreviated name of the air-carrier operator and trip number shall be utilized when calling air-carrier aircraft. Air-carrier trip numbers are spoken as a group figure (instead of as a serial figure) in accordance with the following examples:

"United fifteen."

"American six."

"Eastern twenty-two."

"TWA four thirty-six."

(4) The name of the pilot should not ordinarily be utilized in routine two-way radio communication.

(5) The call-up procedure to be utilized in airport traffic control radiotelephone communications shall consist of the following:

Item	Example
1. Designation of the station called.	"Waco one eight one four."
2. "This is" -----	"This is."
3. Designation of the calling station.	"Cleveland tower."
4. Invitation to reply.	"Over."

* Until the aircraft type is determined the whole certificate number or registry should be used.

(6) The reply to an initial call-up shall consist of:

Item	Example
1. Designation of the station called.	"Cleveland tower."
2. "This is" -----	"This is."
3. Designation of the answering station.	"Waco one eight one four."
4. Invitation to reply.	"Over."

(7) Communication shall be initiated by call-up and reply when:

(i) Communication has not been established.

(ii) Previous contact has been terminated.

(c) *Exchange of communications.*
(1) After contact has been established in accordance with the above, the airport traffic control tower should make a second call-up followed immediately by the message in accordance with the following:

Item	Example
1. Designation of the station called.	"WACO one four."
2. Body of the communication.	(Message).
3. Invitation to reply.	"Over."

When no chance of mistaking identity of the tower is likely, the "This is" and name of the tower shall be omitted after original contact has been made.

(2) If it is reasonably certain that the aircraft will receive the initial call-up the tower may follow the first call-up with the message without waiting for the reply from the aircraft.

(3) After communication has been definitely established, it may be continued without further call-up or identification other than preceding the message with the identification of the aircraft until termination of the contact.

(d) *Termination of communication—*
(1) *Acknowledgement of receipt.* A receiving station (either tower or aircraft) shall acknowledge receipt of a radiotelephone message by transmitting the aircraft identification followed by the word "roger," or other applicable procedure word. Example:

"Stinson two three one five, roger."
"Air Force six seven two four, roger."

The examples given above could be transmitted by either the tower or the aircraft since the object is to identify the aircraft concerned and to acknowledge the message received. It is usually unnecessary to identify the tower concerned as no mistake in tower identity is likely, but the aircraft concerned should be identified in every instance to prevent any possible mistake in aircraft identity.

[Supp. 1, 14 F. R. 3339]

§ 26.26-65 *Standard traffic clearances and phraseologies* (CAA rules which apply to § 26.26)—(a) *Traffic clearances—*(1) *General.* An airport traffic controller shall issue such traffic clearances and other information as are necessary for the prevention of collisions between aircraft under his jurisdiction. (See Fig. 8.)

(2) A clearance issued by an airport traffic control tower is similar to a clearance issued by an air route traffic control center in that it is authority for a pilot to proceed only insofar as known air traffic conditions are concerned and

does not constitute authority for a pilot to violate any provision of Air Force, Navy, or Civil Air Regulations. The relay of advice to pilots from the airport management is permitted. When such relay of advice is undertaken by controllers, the pilot shall be informed that the information is from the airport management. However, denial of clearance for take-off shall be based only on considerations of safety. No violations of § 60.19 of this chapter shall be reported unless a take-off is made contrary to a controller's clearance based solely on safety.

(i) Clearances issued by airport traffic controllers are permissive in nature and predicated upon known traffic conditions which affect safety in aircraft operation. Such traffic conditions will include not only aircraft in the air within the control zone and on the landing area over which control is being exercised, but also any vehicular traffic or other obstructions not permanently installed on the landing area in use.

(ii) When it is stated that air traffic control clearances are permissive in nature, it is intended to convey the thought that such clearances are authority for a pilot to operate his aircraft in accordance with a predetermined plan. If the plan, as approved by the airport traffic controller, is not suitable to the pilot, he may request, and, if practicable, obtain approval of an alternate plan.

(iii) The clearances issued by airport traffic controllers relate to traffic and field conditions only, with the exception of relaying advice or information from the commanding officer or the airport manager with regard to use of the landing area. For example, a pilot may request and receive a traffic clearance while piloting an aircraft not properly equipped for the type of flight concerned. The mere fact that the pilot received a traffic clearance for the flight involved does not relieve the pilot of any responsibility whatsoever in connection with a possible violation of Air Force, Navy, or Civil Air Regulations.

FIGURE 8—Airport traffic control tower issues traffic clearances and advice to prevent collisions and expedite air traffic.

(b) *Standard phraseologies for traffic clearances.* (1) In order to reduce the transmission time for each tower message, and to decrease misunderstandings, phraseologies have been standardized for use in airport traffic control. However, unusual situations will occur and the controller will have to exercise his best judgment in the use of additional phraseologies. In such cases he should use supplementary rather than substitute phrases.

(i) The standard phraseologies and clearances are listed in accordance with the purpose phrased by them, such as "clearance to enter traffic pattern," "clearance to land," "clearance to taxi," and other similar authorizations.¹⁰

(2) *Clearance to enter traffic pattern.* (i) Clearance governing flight from a visual reporting point, holding point or fix, or other outlying point to the traffic pattern at the landing area shall be in the following form:

1. "(Flight identification)."
 2. "This is (name of tower) tower."
 3. "(Reporting point)."
 4. "(Time—minutes only)."
 5. "At (altitude in thousands and hundreds of feet)."
 6. "Cleared to enter traffic pattern."
 7. "At (specified altitude, if necessary)."
 8. "Runway (number of runways in use)."
 9. "Wind (direction and velocity)."
 10. (Any special information).
- Example: "Air force seven eight three four. This is Nashville tower, Lebanon, four six, at two thousand, cleared to enter traffic pattern, runway two seven, wind west eight."

When parallel runways are available, the runway in use shall be designated in the following manner:

Example: "Runway two three, left"; "Runway one eight, center."

(ii) The clearance to enter traffic pattern is issued to a pilot whenever it is desired that the aircraft approach the landing area in accordance with current traffic patterns. If clearance to enter traffic pattern is not appropriate for the existing traffic conditions, alternate clearance such as "cleared to land," or "cleared to (specified holding point)," may be issued at the discretion of the controller.

(iii) The clearance to enter traffic pattern should not be confused with the clearance to land since the former is issued when the aircraft is some distance from the field and traffic conditions will not permit the issuance of a landing clearance.

(iv) When it is desired to clear an aircraft to enter a traffic pattern which is not a conventional left-turn pattern, or where more than one pattern exists, the phraseology may be modified to include the designation of the pattern desired. An example for clearance into a right-turn pattern:

"Cleared to enter right traffic pattern."

(3) *Clearance to land.* A clearance to land shall be in the following form:

1. "(Flight identification)."
2. "This is (name of tower) tower."¹¹

¹⁰ Words in quotations shall be read as written, accompanied by values required by words in parentheses.

¹¹ May usually be omitted whenever the aircraft is under direct observation of the airport traffic controller.

3. "(Position)."
 4. "At" (altitude)."
 5. "Cleared to land."
 6. "Runway (number of runway in use)."
 7. "Wind (direction and velocity)."
 8. (Any special information).
- Example: "Navy seven eight four three cleared to land."

Another example would be when a pilot reports in the control zone as follows:

"Tulsa tower. This is Stinson one two three four, two miles south at eight hundred."

The tower would respond:

"Stinson one two three four. This is Tulsa tower, two miles south at eight hundred. Cleared to land, runway three, wind calm,"

since no previous information concerning traffic direction and runway had been transmitted to this pilot.

(4) *Clearance to taxi.* Clearance to taxi shall be in the following form:

(i) In-bound aircraft:

1. "(Flight identification)."
 2. "This is (name of tower) tower."¹²
 3. "Cleared to (gate, loading ramp, hangar, parking space, etc.)."
 4. (Any special information relative to the use of taxi strips, intersecting runways, obstructions, maintenance operations, or other field activity or condition).
- Example: "United seven cleared to gate five."

(ii) Out-bound aircraft:

1. "(Flight identification)."
 2. "This is (name of tower) tower."¹²
 3. "Cleared to runway (number of runway to be used)."
 4. "Wind (direction and velocity)."
 5. (Any special information relative to use of taxi strips, intersecting runways, obstructions, maintenance operations, or other field activity or field condition. Include under this item altimeter setting and time check unless an aircraft operator has indicated in writing to the chief airport traffic controller that this service is not desired.)
- Example: "Air force one five two seven cleared to runway three two. Wind north-west one five, altimeter three zero zero four. Time zero nine five six."

(iii) *Clearance to taxi from one point to another on landing area:*

1. "(Flight identification)."
 2. "This is (name of tower) tower."¹²
 3. "Cleared to (gate, loading ramp, hangar, parking space, etc.)."
 4. (Any special information)."
- Example: "United thirty-four cleared to hangar four."

(5) *Clearance for take-off.*

(i) Clearance for take-off shall be in the following form:

1. "(Flight identification)."
 2. "This is (name of tower) tower."¹²
 3. (Any special information)."
 4. "Cleared for take-off."
- Example: "Air Force six seven three four, cleared for take-off."

(ii) When an ATC clearance is required prior to take-off, the take-off clearance described above shall not be issued until such ATC clearance has been transmitted to and acknowledged by the pilot concerned.

(iii) The take-off clearance, as the name implies, is issued after the pilot

¹² May be omitted if the aircraft is in a well-defined traffic pattern.

¹³ May be omitted if previously given and no revision is necessary.

has taxied to the end of the runway in use, tested his engines, and is ready for take-off. The pilot has previously received information on the runway in use, wind direction and velocity, the altimeter setting, time check, and the appropriate air route traffic control clearance. He is now interested in obtaining authorization to commence his take-off, and he needs information on such local traffic as may affect his flight or which he may approach while in flight within the control zone.

(a) Immediately after take-off, many pilots want their time off the ground. When this is requested, it may be given separately in the following form, or combined with a clearance to leave tower frequency:

1. "(Flight identification)."
 2. "Off at (time—minutes only)."
- Example: "American six off at three one."

(6) *Clearance to change frequency.*

Normally the pilot of a departing aircraft will guard the control tower frequency until outside the control zone, at which time he may leave the tower frequency without further contact. If, however, a pilot requests approval to leave the tower frequency before he is out of the zone, or if an airport traffic controller desires to authorize a pilot to leave the tower frequency before he is out of the zone, a clearance to leave the tower frequency shall be transmitted in the following form:

1. "(Flight identification)."
 2. "This is (name of tower) tower."¹³
 3. "(Any supplemental information)."
 4. "Cleared to leave tower frequency."
- Example: "Eastern five, this is Washington tower, American seven reported over Mount Vernon four six at two thousand, cleared to leave tower frequency."

(7) *Special clearances.* (1) Clearance to engage in other than routine operations in the control zone shall be in the following form:

1. "(Flight identification)."
2. "This is (name of tower) tower."¹³
- 3a. "Cleared to make right turn."
- 3b. "Cleared to practice low approach to airport."
- 3c. "Cleared to Columbus Navy GCA," etc.

Special clearances are provided so that unusual situations, as well as routine range practice, etc., may be properly handled.

(a) Phraseologies for certain frequently used special clearances are as follows:

(1) Clearance for right turn after take-off shall be at the discretion of the controller. In the event it is not possible to approve the right turn when issuing clearance for take-off, and the pilot has requested such right turn, the following phraseology will be used:

"Will advise later, cleared for take-off."

(2) In the event right turn can be approved at the time of issuance of clearance for take-off, the following phraseology will be used:

"Right turn approved. Cleared for take-off."

(3) Whenever it is desired that a pilot make a straight-in approach, although

he cannot yet be cleared to land, the following phraseology will be used:

"Cleared to make straight-in approach."

(4) In the event aircraft are landing and taking off at an airport without coming to a stop during their landing roll, such operations shall be described as "touch and go" landings. Pilots shall be required to request approval of same by at least the time they are turning on their final approach leg. Approval for such operation shall be issued by use of the following phraseology:

"Cleared to make touch and go landing."

(5) In the event it is not possible to approve such an operation due to other air traffic, the following phraseology shall be used:

"Make full stop landing."

(6) If an aircraft cannot be cleared onto the runway in use or whenever otherwise desired that the aircraft not move, the following phraseology shall be used:

"Hold your position."

(7) If an aircraft can be cleared onto the runway in use but not cleared for take-off, the following phraseology will be used:

"Cleared into position and hold."

(8) When it is desired that a taxiing aircraft hold at a specific position, the following phraseology will be used:

"Hold clear of (position)"; or
"Hold on taxi strip."

(9) Whenever pilots have indicated that they are not ready for take-off, although they have taxied onto the landing area, possibly due to their engine temperature being too low, etc., the following phraseology will be used:

"Advise when ready for take-off."

(10) Whenever it is desired that a pilot shorten the downwind leg, the following phraseology will be used:

"Make short approach."

(11) Whenever it is desired that the pilot lengthen the downwind leg, the following phraseology will be used:

"Make long approach."

(12) In the event it is desired to indicate to pilots in the traffic pattern which aircraft they are to follow in the landing sequence, the following phraseology will be used:

"Number (number) to land, follow (type of aircraft) (location of aircraft to follow)."

(13) In the event an aircraft is on final approach and there is still sufficient time to clear a departing aircraft for take-off, the following phraseology will be used:

"Cleared for immediate take-off."

(14) In the event an aircraft is on final approach and there is still sufficient time to clear a departing aircraft which

¹¹ When describing location, description such as "to your right," "above you," "one mile ahead of you," etc., is much more satisfactory than "north of you," "one mile east of you," etc.

is in take-off position, but some doubt exists as to whether or not the departing aircraft will take off immediately, the following phraseology will be used:

"Take off immediately or clear the runway."

(15) In the event it is believed desirable to advise landing pilots of other aircraft in close proximity to the runway in use, the following phraseology will be used:

"Aircraft to (right or left)," or on "both sides of runway (number)."

(16) In the event an aircraft has encountered landing gear difficulty and has proceeded to close proximity to the control tower for control tower personnel to observe the landing gear, the following phraseology will be used:

(i) If the gear appears to be in a normal position to the control tower personnel:

"Landing gear appears to be down and in place."

(ii) If it does not appear to be normal a description of the appearance should be given, such as:

"Right wheel is retracted"; or "Left wheel does not appear to be in place."

(17) If an aircraft cannot be cleared to land and it is desired that it continue to circle the field, the following phraseology will be used:

"Circle the field."

(18) When it is desired to delay an aircraft to effect separation and a circle of the field would take more than the required time, the following phraseology will be used if circumstances permit:

"Make a short circle to your (right or left) from present position."

(19) When an aircraft is on final approach and it becomes necessary to cancel the landing clearance, the following phraseology will be issued:

"Pull up and go around."

(c) *Description of essential local traffic.* Essential local traffic shall be described so as to facilitate recognition by pilots, as follows:

(1) Military traffic: Military traffic shall be described by one of the following service classifications: "Bomber," "Transport," "Observation," "Primary trainer," "Basic trainer," or "Fighter." When describing "Transport" aircraft the name of the service shall be used preceding the word "Transport," as for example, "Navy transport." Jet propelled aircraft shall be so described.

(i) Military traffic may be described by military type designation to military and other pilots known to be familiar with such designations. The military type designation of military aircraft shall be spoken as a group figure (instead of a serial figure) in radiotelephone communications in accordance with the following examples:

"P forty."
"B seventeen."
"C fifty-four."
"PBY."
"SNJ."
"TBF."

(2) Air-carrier traffic:

(i) Air carrier traffic shall be described to air carrier pilots by use of the abbreviated name of the air-carrier operator, followed by the trip number. Examples:

"American fifteen."
"United six."

(ii) Air-carrier traffic shall be described to other than air-carrier pilots as described above, except that the name of the aircraft shall be used in lieu of the trip number. Examples:

"American DC-4."
"Mid-Continent DC-3."

(3) Civil nonscheduled traffic: Civil nonscheduled traffic shall be described by at least the name of the manufacturer. The model, type, or color of the aircraft also may be used to facilitate identification. Examples:

"Waco-cabin."
"Beechcraft."
"Green Stinson," etc.

(d) *Phonetic alphabet.* (1) When necessary to identify any letter of the alphabet the standard phonetic alphabet is to be used. This alphabet is listed below:

Letter:	Spoken as	Letter:	Spoken as
A	"Able."	N	"Nan."
B	"Baker."	O	"Oboe."
C	"Charlie."	P	"Peter."
D	"Dog."	Q	"Queen."
E	"Easy."	R	"Roger."
F	"Fox."	S	"Sugar."
G	"George."	T	"Tare."
H	"How."	U	"Uncle."
I	"Item."	V	"Victor."
J	"Jig."	W	"William."
K	"King."	X	"X-ray."
L	"Love."	Y	"Yokey."
M	"Mike."	Z	"Zebra."

(e) *Statement of figures in radiotelephone transmissions.* (1) *Statement of figures to indicate ceiling heights, flight levels, and upper air levels.* These figures, in numbers smaller than 12,000, shall be spoken in even hundreds and thousands of feet. These figures in the number 13,000 and larger numbers shall be spoken as for example, "one three thousand." Examples follow:

Number:	Statement
500	"Five hundred."
1,300	"One thousand three hundred."
4,500	"Four thousand five hundred."
10,000	"Ten thousand."
12,000	"Twelve thousand."
13,000	"One three thousand."

(2) *Statement of serial figures.* All figures, other than the types listed in § 26.26-64 (b) (3) (i), (ii), and subparagraphs (1) and (4) of this paragraph, shall be spoken individually. Examples:

Number:	Statement
18143	"One eight one four three."
26075	"Two six zero seven five."

The above includes aircraft identification numbers. A Waco, NC1746 would be identified as, for example, "Waco one seven four six."

(i) The figure "0" shall be spoken "zero" when it occurs alone or in a group of figures other than those described in § 26.26-64 (b) (3) (i), (ii) and in subparagraphs (1) and (4) of this paragraph.

(3) Time shall be stated in exactly four figures (except as noted in (i) of this subparagraph) utilizing the 24-hour clock basis. The hour shall be stated by the first two figures and the minutes by the last two figures. Examples:

Time:	Statement
0000 (Midnight)-----	"Zero zero zero zero."
0920 (9:20 a. m.)-----	"Zero nine two zero."
1200 (noon)-----	"One two zero zero."
1643 (4:43 p. m.)-----	"One six four three."

(i) Time may be stated in minutes only (two figures) in airport traffic control radiotelephone communications when no misunderstanding is likely to occur.

(ii) Time shall be stated to the nearest minute unless a time check is required, in which case the time should be stated to the nearest quarter minute. Example:

11:05.17. "One one zero five and one quarter."

(iii) The 25-hour clock day begins and ends at 0000 (midnight). The last minute of the last hour begins at 2359 and ends at 0000, which is the beginning of the first minute ending at 0001 of the first hour of the next day.

(4) Field elevations shall be stated in feet in accordance with the following examples:

10 feet. "Field elevation one zero."
75 feet. "Field elevation seven five."
583 feet. "Field elevation five eight three."
600 feet. "Field elevation six zero zero."
1,850 feet. "Field elevation one eight five zero."
2,500 feet. "Field elevation two five zero zero."

(f) *Procedures, words and phrases.*

(1) The following procedure words and phrases, which have been adopted in the Combined United States-British Radio Telephone Procedure, shall be used in airport traffic control radiotelephone communication when applicable:

Word or phrase	Meaning
"Roger"-----	"I have received all of your last transmission." (Under no circumstances to be used as an affirmative.)
"Acknowledge"-----	Used by originator. "Let me know that you have received and understand this message."
"How do you hear me?"	Self-explanatory.
"Speak slower"-----	Self-explanatory.
"Stand by"-----	If used by itself means "I must pause for a few seconds." If the pause is longer than a few seconds, or if "Stand by" is used to prevent another station transmitting, it must be followed by the ending, "out."
"Repeat"-----	Self-explanatory.
"I will repeat"-----	Self-explanatory.
"Verify"-----	"Check coding, check text (subject matter) with the originator and send correct version."
"Affirmative"-----	"Yes."

Word or phrase	Meaning
"Negative"-----	"No."
"Message for you"-----	"I wish to transmit a message to you."
"Send your message."-----	"I am ready for you to transmit."
"Read back"-----	"Repeat all of this message back to me exactly as received after I have given 'Over'."
"That is correct"-----	Self-explanatory.
"Words twice"-----	(a) As a request: "Communication is difficult. Please send every phrase twice." (b) As information: "Since communication is difficult, every phrase in this message will be sent twice."
"Correction"-----	"An error has been made in this transmission (or message indicated). The correct version is-----."
"Wrong"-----	"What you have just said is incorrect. The correct version is-----."
"Break"-----	"I hereby indicate the separation of the text from other portions of the message." To be used only when there is no clear distinction between the text and other portions of the message.
"Over"-----	"My transmission is ended. I expect a response from you."
"Out"-----	"My transmission is ended. I do not expect a response from you."

(g) *Abbreviation for Air Route Traffic Control.* (1) The abbreviation "ATC" will be used to indicate Air Route Traffic Control and/or Air Route Traffic Control centers; example, "ATC clears Eastern four," etc.

(h) *Identification of aircraft at night.*

(1) In addition to the prescribed provisions for identification of aircraft in the radiotelephone procedure, further identification and location of aircraft may be established, during the hours of darkness, by requesting the pilot to show a landing light, as "TWA nine show a landing light."

(i) *Radio control of aircraft not transmitter equipped.* In addition to the prescribed radio operating procedure, the following procedure is established for use in connection with control of aircraft in which radio equipment is limited to receivers:

(1) Broadcasts of airport traffic control clearances or information to VFR traffic, requiring acknowledgment from the pilot, shall provide for such acknowledgment in the following manner:

(i) When the aircraft is on the ground within the range of vision of the controller, the pilot shall be requested to acknowledge receipt of the broadcast by movement of ailerons or rudder, whichever action may be observed more readily, as:

"Acknowledge by moving ailerons," or
"Acknowledge by moving rudder."

(ii) When the aircraft is in the air the same purpose will be achieved by including a request to acknowledge receipt

of the broadcast by rocking the wings, as:

"Acknowledge by rocking your wings."

(iii) When the aircraft is either in the air or on the ground, during the hours of darkness, the same purpose will be achieved by requesting the pilot to blink his landing lights, as:

"Acknowledge by blinking your landing or navigation lights."

[Supp. 1, F. R. 14, 3341]

§ 26.26-66 *Local traffic information* (CAA rules which apply to § 26.26)---(a)

Essential local traffic. (1) When operating under visual flight rules it is the responsibility of the pilot to avoid collision with other aircraft. However, due to the restricted space on and around landing areas, it is often essential that traffic information be issued to aid the pilots to avoid collision between aircraft. Essential local traffic shall be considered to consist of the following:

(i) Traffic within the control zone.

(ii) Ground traffic.

(2) Essential traffic within the zone shall include all known traffic in the control zone which might constitute a hazard to the operation of the aircraft concerned.

(3) Essential ground traffic shall include any aircraft, vehicle, or personnel on the landing area or in a designated loading or parking area which might constitute a hazard to the operation of the aircraft concerned.

(b) *Issuance.* (1) Detailed essential local traffic information shall be issued when, in the judgment of the controller, such information is necessary in the interests of safety, or when requested by a pilot.

[Supp. 1, F. R. 14, 3344]

§ 26.26-67 *Information on field conditions* (CAA rules which apply to § 26.26)---(a) *General.* (1) Essential information on field conditions is information, necessary to safety in the operation of aircraft, which pertains to the landing area or any facilities usually associated therewith. For example, construction work on a taxi strip not connected to the runway in use would not be essential information to any pilot except one who might wish to taxi in the vicinity of the construction work. As another example, if all traffic must be confined to runways, that fact should be considered as essential field information to any pilot not familiar with the airport. (See fig. 9.)

(2) The following field conditions shall be included as essential field information to all pilots:

(i) Construction work along or near the runway in use.

(ii) Rough portions of the landing area proper whether marked or not.

(iii) Any maintenance apparatus or workmen on or near any portion of the landing area a pilot might elect to use.

(iv) Slippery condition of runways or taxiways.

(v) Snow piled or drifted on the landing area proper, and width and length of cleared runway, if known.

(vi) Failure or irregular functioning of any portion of the field lighting system.

(vii) Aircraft parked close to runways or taxiways.

(b) *Responsibility for notification of field conditions.* (1) The agency which operates the airport shall be responsible for notifying the chief airport traffic controller of current field conditions.

(c) *Description.* (1) Information on field conditions shall be stated concisely and clearly. Examples:

1. "Mower on west side of field."
2. "Construction work on north end of field."
3. "Repair trucks near center of field."

(d) *Issuance.* (1) Essential information on field conditions shall be given to every pilot concerned, either directly or indirectly, in sufficient time for the pilot to make proper use of such information.

[Supp. 1, F. R. 14, 3344]

§ 26.26-68 *Preventive control* (CAA rules which apply to § 26.26)—(a) *Description.* (1) "Preventive control" may be defined as a system of control whereby useful preventive advice is given to pilots of aircraft in the air and a routine approval of the pilot's anticipated actions are eliminated. In other words, the pilot is expected to continue flight including landing in a normal manner unless otherwise advised by the airport traffic controller.

(b) *Control of ground traffic.* (1) The airport traffic controller is concerned with the movements of taxiing aircraft, personnel, and vehicular traffic in exercising ground control. Taxiing aircraft offer the greatest problems, due to the fact that the visibility is so limited in most aircraft while in a taxiing position that obstructions such as personnel, vehicles, or other aircraft may not be readily seen even by the most careful pilots. Therefore, the controller must issue explicit warnings as to the proximity of other obstructions for all taxiing traffic. This requires that the control of ground traffic be identical with the control of ground traffic previously outlined under § 26.26-62.

(c) *Control zone procedures.* (1) Procedures for controlling traffic within and entering the control zone may be subdivided as follows:

(i) *Traffic joining the traffic pattern:* Traffic joining the traffic pattern is primarily interested in obtaining information as to field conditions, runway-in-use, and the wind direction and velocity. This information should be given when the aircraft makes its initial radio contact at the contact reporting point, or approximately 15 miles from the airport. It is expected that the pilot of the aircraft joining the traffic pattern will properly space himself so that the proper separation will be maintained on the final glide for landing.

(ii) *Traffic in the traffic pattern:* The traffic in the traffic pattern must be properly spaced at all times. This may be accomplished by advising one pilot to make a wider turn, and another pilot to make a shorter turn, or any other pertinent information. The aircraft which are actually in the traffic pattern should be aware of the runway-in-use by the

time the traffic pattern is entered and, therefore, the only clearances which should be issued to such traffic are those necessary to obtain proper spacing.

(iii) *Landing traffic:* If the aircraft in the traffic pattern are properly spaced it will be unnecessary to issue detailed clearances to the landing traffic, such as "cleared to land." Rather, only prohibitive signals which will prevent collision will be issued. For example, one of two aircraft on final approach should be advised to "pull up and go around" if their separation is less than the prescribed minimum.

(iv) *Taking-off traffic:* All taking-off traffic shall be positively controlled inasmuch as such aircraft are taxiing traffic until the actual take-off is commenced.

(d) *Conditions under which preventive control may be applied.* (1) Preventive control has an immediate application at locations which have one or more of the following types of activities:

1. Air Force or Navy primary flying schools.
2. Air Force or Navy transitional training schools.
3. Locally based squadrons or groups of military aircraft.
4. Local civilian operators or schools.

(i) In such cases mutual agreements and arrangements must be made with the responsible heads of these groups prior to the inauguration of preventive con-

trol. Such control is not to be employed for transient aircraft.

[Supp. 1, F. R. 14, 3344]

§ 26.26-69 *Authorizing VFR operations in a control zone clear of clouds and/or when the ceiling or visibility is below basic VFR minimums* (CAA rules which apply to § 26.26). (a) VFR operations (flight "clear of clouds") will be authorized in a control zone if traffic conditions permit, when the official ground visibility is less than 3 miles and/or the ceiling is less than 1,000 feet. (The official weather observation for the airport about which the control zone is centered should be used where observations are made at more than one airport in the zone.)

(1) When ground visibility is less than 3 miles and/or the ceiling is less than 1,000 feet, a traffic clearance must be obtained before flying in the traffic pattern or landing or taking off at an airport in the control zone. When flight visibility is less than 3 miles and/or the ceiling is reported less than 1,000 feet, a traffic clearance must be obtained before flying in the control zone. As a guide for controllers in authorizing local VFR operations (shooting landings, etc.) under these conditions, provisions should be made for the recall of the aircraft flying locally if traffic conditions become too congested to permit continuance of the local flights. The most practical method of doing this is to require the locally fly-

FIGURE 9—Typical airport showing various field conditions.

ing aircraft to be equipped with a functioning receiver and require the pilot to guard the control tower frequency. Thus, the pilot can be recalled or directed away from other traffic as necessary.

(2) VFR operations clear of any cloud formation (less than 500 feet vertically and 2,000 feet horizontally) will be authorized in the control zone provided separation between the VFR aircraft and any IFR traffic flying in such cloud formation is maintained in accordance with IFR separation standards.

(b) *Operation of signal to indicate ground visibility of less than 3 miles and/or a ceiling of less than 1,000 feet.*

(1) The following procedures shall be observed when the ground visibility is officially reported to be less than 3 miles and/or the ceiling less than 1,000 feet.

(i) Operate the appropriate light signal.

(a) Rotating beacon during daylight hours.

(b) Flashing wind direction indicator lights between sunset and sunrise.

(ii) Recall all aircraft operating in the traffic pattern without a clearance.

(c) *Authority for issuance of traffic clearances to VFR operations.* (1) The airport controller shall coordinate with the appropriate center prior to issuing traffic clearances for VFR flight in a control zone at less than the basic VFR weather minimums (500 feet vertically and 2,000 feet horizontally from clouds and 3 miles visibility and a ceiling of 1,000 feet.)

[Supp. 1, F. R. 3345]

§ 26.26-70 *Operating instructions for airport traffic control towers* (CAA rules which apply to § 26.26)—(a) *General*—

(1) *Purpose.* The purpose of these instructions is to provide standard operating instructions for all airport traffic control towers. Only the broad phases of operation are included herein and it is expected that each operating agency will provide such additional detailed instructions as are necessary for efficient operation.

(2) *Supervision of towers.* Each operating agency shall establish and designate a person responsible for the supervision and operation of each airport traffic control tower. All other airport traffic control personnel, when on official duty in an airport traffic control tower, will be responsible to and governed by the person in charge. When more than one person is on watch in the tower, one controller shall be designated as the "supervising controller" in charge of the watch.

(b) *Positions of operation*—(1) *General.* Each person on duty in an airport traffic control tower shall, while controlling or aiding in the control of air traffic, occupy one or more positions of operation. These positions of operation shall be established for the purpose of defining specific duties and fixing responsibility for the performance of prescribed functions, and shall be defined as follows:

(i) *Local control position:* The following are specific duties of this position of operation in addition to such supplementary duties as may be assigned by the chief controller:

(a) To issue airport traffic control clearances and information, in accordance with applicable Civil Air Regulations, governing all air traffic and vehicular traffic on the landing area, air traffic departing from the landing area and air traffic operating in accordance with VFR in the control zone.

(b) To guard radio frequencies of all aircraft regularly using the landing area and such special frequencies as may be required from time to time.

(c) To issue essential local traffic information, as required, to pilots of aircraft taxiing on or in the vicinity of the landing area.

(d) To furnish to pilots of aircraft taxiing on, and in the vicinity of the landing area, information concerning field conditions, altimeter settings, and time checks as required.

(e) To forward to the local Weather Bureau office and the appropriate center pilot weather reports as received and reports based upon personal observation of weather conditions from the control tower.

(f) To notify operations offices, fire departments, police and ambulance services, as necessary, in the event of an accident or fire on or in the vicinity of the airport.

(g) To study and initial all weather reports, notices to airmen, and reports pertaining to the condition of the landing area or tower operating equipment.

(h) To operate the appropriate airport lighting facilities as required by aircraft using the airport.

(i) To perform the duties of approach control if personnel are not assigned to that position.

(ii) *Flight data position:* The following are specific duties of this position of operation in addition to such supplementary duties as may be assigned by the chief controller:

(a) To assist, as directed by the supervising controller in the issuance of airport traffic control clearances and information and in the operation of control tower equipment.

(b) To copy, and relay as necessary, all communication received over the interphone or telephone facilities.

(c) To relay air route traffic control clearances and other control messages as instructed by an air route traffic control center.

(d) To copy and relay, as directed, reports and information received by radio.

(e) To properly post all required flight plans, flight progress reports, arrival reports, and departure reports.

(f) To study and initial all weather information and notices to airmen and post such material on the designated board.

(g) To provide for the continuous recording of radio transmissions by changing voice records promptly, as they are completed, at locations where voice recorders are installed.

(h) To record air route traffic control messages and clearances on appropriate forms.

(i) To record flight plans received from pilots (either by radio, interphone, or telephone) on appropriate forms.

(j) To maintain airport traffic control operating forms.

(iii) *Approach control position:* The following are specific duties of this position of operation in addition to such supplementary duties as may be assigned by the chief controller:

(a) To direct, under the general supervision of the chief controller, the control activities of a control tower during a tour of duty.

(b) To supervise all positions of operation to insure adequate separation between air traffic under the jurisdiction of the tower.

(c) To issue air traffic control clearances and information in accordance with applicable Civil Air Regulations, to aircraft which are operating in accordance with IFR under the jurisdiction of the tower.

(d) To guard radio frequencies of all aircraft regularly using the landing area and such special frequencies as may be required from time to time.

(e) To furnish information concerning field and weather conditions, altimeter settings, and time checks to pilots approaching the landing area.

(f) To study and initial all weather reports, notices to airmen, and reports pertaining to the condition of the landing area, associated radio facilities, and tower equipment.

(g) To supervise, direct, and train assistant airport traffic controllers and other junior personnel on the same watch.

(iv) *Combining positions of operation:* When the number of personnel on duty is less than the number of positions of operation outlined above, positions of operation shall be combined in a manner prescribed by the chief controller so as to obtain the highest possible degree of efficiency in operation.

(c) *Radio procedures*—(1) *Guarding radio frequencies.* The supervising controller shall be responsible for maintaining a continuous guard of standard military, naval, and civil aircraft radio frequencies. He shall also maintain a guard, when necessary, on any special frequencies that may be required. The supervising controller shall also provide for the maintenance of a continuous guard of control tower transmissions from any other landing area in the control zone in which he is controlling traffic.

(i) Normally, the volume control on receivers guarding aircraft frequencies shall be adjusted so as to permit the easy reception of normal calls from aircraft over or in the vicinity of all contact reporting points. The volume shall not be reduced on any receiver on which a continuous guard is being maintained, except as follows:

(a) The volume on any receiver or speaker may be momentarily reduced to permit the separate reception of transmissions which might be otherwise unintelligible.

(b) The volume may be reduced momentarily when transmission from an aircraft might be annoyingly loud because of the nearness of the aircraft.

(c) The volume may be reduced when either local or general electrical disturbances make it advisable in order to hear any transmission at all but should

be increased to normal volume as soon as possible.

(i) Tower personnel should check the receivers at least once during each watch to ascertain whether they are operating since failure of this equipment may occur without the knowledge of the personnel on duty. The receiver check may be accomplished by turning the noise suppressor off and increasing the volume until background noise is heard.

(2) *Transmission of radiotelephone messages.* An airport traffic controller on duty shall be responsible for all radiotelephone transmissions emanating from the position, or positions, of operation under his jurisdiction.

(i) The following types of radiotelephone messages shall ordinarily be transmitted by the local control position:

(a) Airport traffic control clearances and instructions.

(b) Essential traffic information.

(c) Field conditions, altimeter settings, and time checks.

(d) Any message pertaining to safety of aircraft.

(e) Instructions to radio equipped vehicular traffic on the landing area.

(ii) The following types of radiotelephone messages may be transmitted by the flight data position at the discretion of the supervising controller:

(a) Relay of air route traffic control clearances and control messages.

(b) Acceptance and confirmation of flight plans filed by radio.

(c) Any other message authorized by the supervising controller.

(iii) The following types of radiotelephone messages may be transmitted by the approach control position to holding and approaching aircraft operating on an instrument flight plan after such aircraft have been assigned to the tower:

(a) Clearances and instructions.

(b) Essential traffic information.

(c) Field and landing conditions, altimeter settings, and time checks.

(d) Any message pertaining to safety of aircraft.

(3) *Relaying information or advice not directly associated with traffic control.* In addition to traffic control communications which are associated with prevention of collision between aircraft within the control zone, the following communications are authorized for handling by an airport traffic controller:

(i) Messages pertaining to the operation of the aircraft authorized for transmission by the commanding officer or the representative of the airport management.

(ii) Messages pertaining to the operation of the aircraft authorized for transmission by a representative of an aircraft operator to the aircraft of such operator.

(iii) Any message pertaining to safety of aircraft.

(d) *Operation of interphone facilities—(1) General.* Interphone facilities are maintained to provide rapid voice communications service between agencies for the exchange of information pertinent to the control of air traffic.

(i) The interphone system is divided into two categories: "local" circuits, which may consist of individual circuits between airport traffic control towers

and various agencies in the vicinity, or may consist of a single circuit connecting all the agencies in the immediate vicinity of an airport; and "long line" circuits, which may connect two or more widely separated communications stations, towers, operations offices, and air route traffic control centers.

(ii) An airport traffic control tower shall be the coordinating office of any local interphone system originating in the control tower. If such system also serves an airway communications station, coordination shall be effected jointly by both the station and tower.

(2) *Communications authorized for transmission on interphone systems.* Interphone systems are maintained to permit the rapid handling of communications required to effect the control of air traffic. Authorized communications are those required for the control and safety of air traffic. A partial list of authorized material follows in the general order of importance. Priority shall be determined by the relative importance of a message to the control of air traffic, rather than by strict adherence to the order as listed herein.

(i) Emergency communications are communications concerning accidents, suspected accidents, and situations directly endangering life and property. Communications relative to accidents may be continued until essential information has been transmitted to all concerned, but shall not receive emergency classification after the emergency period has passed.

(ii) Movement and control messages and plain English equivalents of "Q" signals pertaining to aircraft movements shall receive priority over other than emergency communications.

(a) When two or more movement or control messages are on hand for transmission their priority shall be in the following order, except that the order may be modified by consideration of the time element involved and their relative importance to the control of air traffic:

1. Clearances and control instructions.
2. IFR movement messages:
 - a. Flight plans;
 - b. Progress reports;
 - c. Arrival reports.
3. VFR movement messages.

(iii) Notices to airmen: Each control tower shall compile a list of local aids to air navigation which may affect its operations. Malfunctioning of such aids shall be reported to the appropriate communications station for issuance of a notice to airmen and to the appropriate center for information.

(3) *Interphone operating procedures.* Conversations shall be as brief and concise as possible without undue hesitation and in a uniform flow of language. Every effort shall be made to enunciate clearly and distinctly, paying special attention to numerals. Use of such words as "guess" and "think" is undesirable.

(i) When any doubt exists concerning the accuracy of a received message, the complete message or the essential parts should be repeated back to the sender for verification. Transmitting personnel may also request that a message be repeated back by the receiving personnel.

(ii) "Q" signals shall be transmitted by means of their plain English equivalents. Station identifications shall not be spelled, but the name of the location spoken.

(iii) Low priority traffic may be interrupted for the transmission of high priority traffic, not subject to delay. For example, the continuous transmission of a series of flight plans may be interrupted for the transmission of a traffic control clearance.

(iv) The domestic phonetic alphabet should be used to indicate single letters, initials, or for spelling words whenever similar sounds or difficulties in transmission make such use necessary.

(v) When the origin and destination of a message are on the same circuit, the message shall be filed with the air route traffic control center, which will then make delivery to all concerned. However, local arrangements may be made with the appropriate air route traffic control center to depart from this principle when desired.

(vi) Operating initials: All personnel using interphone circuits shall use two-letter operating initials. The first and last initials of the operator's name should be used when appropriate. Any two letters, however, may be used to avoid confusion due to similarity of sounds. Letters having similar sounds, such as "B" and "P" and letter combinations which are difficult to pronounce should be avoided.

(4) *Methods of originating and completing interphone contacts.* The following outlined procedures and phraseologies shall be used when initiating and completing contacts on standard interphone facilities:

(i) Voice calls and answers: Drops on the long-line interphone system shall be known by the name of the location followed by the name or standard abbreviation of the organization or facility. (On local interphone circuits, the "location" may be omitted.) Examples:

"Memphis control."
 "Westover tower."
 "Patterson operations."
 "Norfolk Navy tower."
 "Fort Wayne TWA."
 "Casper radio."

(a) Initiate the call by use of prescribed procedures. If voice signaling is used, state the voice call of the organization desired, followed by the word "from" and the voice call of the organization calling.

(1) All calls shall be answered by stating the voice call of the organization answering the call.

(2) Each communication shall be preceded by a term indicating the type of message to follow, such as "flight plan," "clearance," "arrival," "progress report," etc. Messages of an emergency nature shall be preceded by the word "emergency." In voice signaling the descriptive term shall be incorporated in the call, as the last item of the call.

(3) Each message shall be terminated by the operating initials of the transmitting personnel.

(4) Personnel shall acknowledge receipt of messages by stating their operating initials.

(5) All contacts are completed by air route traffic control center personnel, by stating the time in two figures to the nearest minute.

Example: (Mechanical signaling (in-bound to center)).

(Center): "Cleveland control (answering mechanical signaling)."

(Tower): "Buffalo tower, arrival report."

(Center): "Go ahead."

(Tower): "(Proceeds with message), JL".

(Center): "HN, four six."

(b) Except in the transmission of "emergency" messages, continuous calling should be tempered by good judgment. Stations should realize that air route traffic control centers often have only one person assigned to answer calls on two or more circuits. Air route traffic control centers should understand that communications stations, towers and operations office personnel are often engaged in duties such as weather observations, radio contacts, or outside telephone calls, which may delay the answering of interphone calls.

(5) *Connection of circuits.* Circuits will be connected only upon request or approval being received from an air route traffic control center, except that circuits may be connected at the request of a communications station or control tower adjacent to a control boundary, so located that a connection is necessary in order to communicate with the adjacent air route traffic control center.

(i) Request for connection of circuit shall be made in accordance with the following:

"Fresno radio. This is Burbank control; connect Oakland control."

(Fresno signals Oakland control and connects circuits. Message is completed in accordance with standard procedures.)

"Fresno radio. This is Burbank control; release Oakland control."

(Fresno disconnects circuits.)

(6) *Reporting arrivals and departures.* The times of arrival and departure of all aircraft for which flight plans or clearances have been received, shall be reported promptly to the appropriate air route traffic control center or communications station.

(i) The times of arrival and departure as required above shall be exact as established upon the following basis:

(a) Arriving aircraft shall be reported as "arrived" at the time the wheels touch the ground and it is apparent that the landing will be completed.

(b) Departing aircraft shall be reported as "departed" at the time the wheels leave the ground.

(7) *Relaying position reports from pilots of aircraft en route.* Normally, pilots of aircraft en route will make position reports to United States interstate airway communications stations, Air Force or Navy communications stations, or private facilities. While pilots should be encouraged to continue this practice, airport traffic controllers shall not hesitate to relay such reports when they are addressed to the control towers. Pilots shall be referred to other communications agencies only if the service they request or need can be obtained in no other manner.

(8) *Relaying reports on condition of field or associated facilities.* When ab-

normal conditions concerning facilities which are pertinent to safety in the operation or traffic control of aircraft are observed by an airport traffic controller or are brought to the attention of the controller, such information shall, if warranted, be forwarded to the appropriate operations office, Civil Aeronautics Administration communications station and, if advisable, to the air route traffic control center within whose control area the tower is located.

(e) *Operation of field lighting system.*

(1) Boundary and obstruction lights and the rotating airport beacon shall be lighted continuously between sunset and sunrise, and in addition, the rotating beacon shall be lighted as necessary during the hours of daylight to indicate restriction of VFR operations within the control zone. At airports where no boundary lights are installed (or when boundary lights are inoperative), runway lights on the runway most nearly aligned with the wind, or the "calm wind" runway when appropriate, shall be lighted between sunset and sunrise.

(i) The commanding officer of a military establishment may establish hours of operation of the field lighting system not in accordance with the above. In such cases the commanding officer shall assume the responsibility for such operations.

(2) *Floodlights and runway lights:* Floodlights and runway lights, except as outlined above, shall be used in accordance with the following:

(i) As soon as the pilot of an aircraft is cleared to taxi out, the taxiways which he is to use shall be illuminated and as the pilot approaches the take-off position, the runway lights for the runway in use shall be switched on. The floodlights shall not be turned on until the pilot has taxied onto the runway and is facing the direction for take-off. The floodlights and the runway lights shall not be turned off until the pilot has cleared the edge of the field or requests that they be turned off.

(ii) When a pilot is approaching to land, the runway lights shall be turned on as soon as the pilot reports in the control zone. The floodlights for the runway in use shall be lighted as soon as the aircraft is identified near the field unless the pilot requests that they be left off. In the latter event they shall be lighted briefly, before the aircraft enters the landing glide, to ascertain that the landing area to be used is clear of obstacles. If the floodlights are used for a landing, they shall not be turned off before the pilot has turned onto a taxi strip, or intersecting runway, unless it is necessary for the pilot to taxi toward an unshadowed floodlight unit.

(iii) As far as practicable, the airport traffic controller shall light only those portions of intersecting runways and taxi strips which the pilot must use in taxiing to the administration building, hangar line, or parking area.

(f) *Altimeter settings.*—(1) *Recording and using altimeter settings.* The "altimeter setting" issued by the weather reporting station at 0130, 0730, 1330, and 1930 eastern standard time shall be recorded on a suitable altimeter record form. Immediately thereafter, provided

that the average wind velocity does not exceed 45 miles per hour, the knob on the tower altimeter shall be turned until the reading on the barometric scale is exactly the same as the official altimeter setting. The "height setting" shall also be recorded and this will be used for reference data until the next official altimeter setting is received from the weather reporting station. In the event the average wind velocity at the stated hours exceeds 45 miles per hour, the instructions relative to turning the knob on the altimeter and determination of the height setting will not be effective and the previously determined height setting will remain in use until a height setting can be obtained when the average wind velocity is less than 45 miles per hour.

(i) When the existing altimeter setting is requested by a pilot, the airport traffic controller shall turn the knob of the altimeter until the hands of the instrument indicate the same altitude as the last determined height setting. The existing altimeter setting will then be indicated on the barometric scale of the altimeter.

(ii) Whenever adjusting the altimeter to obtain a reading, the vibrator shall be operated so as to eliminate any lag in movement of the altimeter needle.

(iii) *Pressure-altitude,* when required, shall be obtained from a table of altimeter settings and pressure altitudes compiled for the local landing area. If no such table is available, the pressure altitude may be obtained in the following manner:

(a) Determine the existing "altimeter setting."

(b) From NACA Report No. 538, *Altitude-Pressure Tables Based on the United States Standard Atmosphere*, or similar tables, obtain the altitude corresponding to the existing altimeter setting.

(c) Add the altitude obtained from the altitude-pressure table to the field elevation. The algebraic sum will be the "pressure-altitude."

(iv) At locations where approach control procedures have been established, the current altimeter setting shall be issued to the aircraft by the control tower in the initial contact if the aircraft is being controlled in accordance with the Standards for the Control of Instrument Flight Rule Traffic.

(g) *Visual reporting zone.* (1) It shall be the responsibility of all airport traffic controllers to be fully apprised concerning exact locations of prominent landmarks which may be used by pilots as visual reporting points upon entering a reporting zone of 15 miles radius surrounding the airport. (See Fig. 10.)

(h) *Reporting information concerning aircraft in difficulty, aircraft accidents, and known hazardous conditions of flight.* (1) Whenever information becomes available to an airport traffic controller concerning aircraft in difficulty, an aircraft accident, or known conditions which are or may be hazardous to aircraft operations, such information shall be reported immediately to the air route traffic control center within whose control area the tower is located, to the airway communications station at the same location as the tower and to the

local military offices if appropriate. The control tower shall render every possible assistance to the aircraft involved.

(1) In the event military aircraft are reported to be in difficulty, the airport traffic controller will also notify the local operations office and such other local military offices as the commanding officer may specify.

(2) *Local airport emergency procedures.* Appropriate written operations instructions covering in detail local airport emergency procedures shall be prepared by competent authority. These instructions shall clearly define the duties of airport traffic control personnel during emergency conditions, such as the invoking of crash procedures for an aircraft accident on the landing area, and shall be prepared in collaboration with a representative of the agency which operates the airport (airport manager or commanding officer, or both).

(3) *Reporting imminent and unexpected weather changes.* An airport traffic controller shall assist the local Weather Bureau observer by calling to his attention:

(i) Any differences between the actual weather conditions as observed from the tower and those indicated by the current report, and

(ii) Imminent changes in the weather whenever, because of their unexpectedness, there is some likelihood that they may not be observed immediately by the regular Weather Bureau personnel.

(4) *Dissemination of weather information observed by airport traffic control tower personnel.* Airport traffic control tower personnel may transmit to pilots and air route traffic control centers, without prior reference to the United States or service weather bureau, elements of weather information which can be directly observed in control tower by means of instruments, such as wind direction, wind velocity, and altimeter settings.

(i) The airport traffic control tower personnel may not transmit any observed elements of weather information requiring judgment of the observer, as to value, such as ceiling, amount of cloudiness, and visibility, unless such weather report has either been composed or verified by the United States or service weather bureau, or unless the controller is acting as an official weather observer and is properly certificated for the elements being reported.

(ii) Airport traffic control tower personnel may advise an air route traffic control center of observed weather information simultaneously with advising the Weather Bureau by means of conference on the interphone circuit.

(iii) The airport traffic controller may advise the appropriate center or pilots of observed weather in general terms, such as "thunderstorm east of the field," "large breaks in the overcast," "visibility is lowering to the west," or any other such general statements which do not give actual values of the elements. In such cases the United States or service weather bureau station shall also be advised of such information.

(iv) Airport traffic control tower personnel shall secure weather information, for use in responding to requests from

pilots, from the nearest Weather Bureau station or from official weather reports. In no case shall one tower request distant weather information from a distant tower via long line interphone for transmission to pilots when such information is available from an official source at the location desiring the information.

(v) In order that the best possible visibility reports may be given to pilots in the vicinity of an airport, visibility observations will be taken from the control tower during periods when the visibility is less than 3 miles. Such observations will be taken by Weather Bureau personnel when available, and by control tower personnel when Weather Bureau personnel are not available. Stations where airway communications station personnel make airway observations will be considered as stations where Weather Bureau personnel are not available for assignment to the tower.

(a) Control tower personnel who make official visibility observations must be properly certificated by the Weather Bureau.

(b) Whenever the visibility is reduced to less than 3 miles and this is first noted by control tower personnel, the Weather Bureau shall be notified immediately by interphone or other appropriate means.

(c) The Weather Bureau, upon notification or observation of a visibility of less than 3 miles, will assign an observer to the control tower if sufficient personnel are available. In the event that Weather Bureau personnel are not available, the Weather Bureau will notify the control tower to assume the duty of taking visibility observations.

(d) When the visibility has risen to 3 miles or more and indications are that it will remain 3 miles or more for an appreciable period, visibility observations shall revert to the Weather Bureau office. The Weather Bureau office shall be so notified by the Weather Bureau observer in the tower or the airport traffic controller.

(e) A record shall be maintained in the control tower on Weather Bureau Form 1130 of all visibility observations made from the control tower including the times of such observations. Each time observational duties are transferred from the Weather Bureau to the control tower or returned, or transferred from one observer to another in the control tower, the time and the initials of the observers involved shall be recorded on Form 1130 in the control tower and on the similar Form 1130 in the Weather Bureau. Completed Forms 1130 will be forwarded to the Weather Bureau office at the end of each month.

(5) *Reporting failure or irregularity of operation of equipment.* The airport traffic controller on duty shall immediately report any failure or irregularity of operation of any apparatus, light or other device, used in controlling airport traffic as directed by competent authority.

(i) Competent authority shall be responsible for the issuance, through the adjacent communications station, of a suitable notice to airmen relative to any failure or irregularity of equipment which affects operation of the airport traffic control tower.

(6) *Maintaining file of permanent records of tower transmissions.* A file of permanent records of control tower radio transmissions shall be maintained where permanent-type recorders are furnished for this purpose. Completed records shall be filed chronologically and indexed for easy reference. Records may be disposed of only as prescribed by the operating agency.

(7) *Maintaining traffic tabulation with mechanical traffic counters.* Mechanical counters are normally used to record the number of local aircraft operations. However, where sufficient counters are provided, a tabulation of other types of operation may be so maintained.

[Supp. 1, 14 F. R. 3345]

Approach control—Fan marker approach procedures.

§ 26.26-81 *General (CAA rules which apply to § 26.26).* (a) Approach control is a service whereby airport traffic control towers issue traffic clearances to aircraft being controlled in accordance with IFR standards by communicating directly with pilots over the voice feature of the radio range, ILS localizer, or over a very high frequency channel of the control tower. Direct communications between the approach controller in the tower and the pilot who is flying under instrument conditions eliminates the communications lag previously encountered, with a resultant saving in time for each instrument approach made. Coordination of traffic arriving and departing during adverse weather conditions is vested in the approach controller who is in a position to see the airport and aircraft in the vicinity and is therefore able to take advantage of every opportunity to safely expedite the flow of traffic on and around the airport. Control tower personnel can view the actual weather conditions and direct traffic to take advantage of breaks in clouds or other changes in weather conditions. (See fig. 11.)

[Supp. 1, 14 F. R. 3349]

§ 26.26-82 *Communications procedures (CAA rules which apply to § 26.26)*—(a) *Holding pattern.* (1) Under approach control procedures, aircraft will be cleared by the center to a holding fix (fan marker or other radio fix) with appropriate holding instructions. Instructions to hold "until further advised by (name of) approach control on (frequency)" are included so that the pilot will know on which frequency he will receive further clearances. The pilot is expected to establish communication with the approach controller when he arrives over the specified holding point, or at an earlier time if specified in his clearance.

(b) *Communications contacts.* (1) The following communications contacts are expected of the pilot under approach control procedures:

(i) Report to Approach Control the time and altitude of reaching the holding fix to which cleared by the center.

(ii) Report when vacating any previously assigned flight level for a newly assigned level.

FIGURE 10—Report over a contact reporting point, and clearance to enter traffic pattern.

(iii) Report when leaving the holding fix in-bound.

(iv) Advise Approach Control if contact approach is to be made.

(c) *Communications channels.* (1) When the voice feature of the radio range is being used for approach control communications and the pilot desires to listen to the navigational feature while executing an instrument approach, he may filter out the voice channel during his final approach. If the controller wishes to contact the pilot during this period, the attention signal of the range will be operated to indicate to the pilot that a message follows.

(2) Pilots should maintain communication by listening on the approach control frequency until cleared to change to the local control frequency (278 kc. or equivalent), or to the appropriate ground control frequency. (Note: VHF-equipped aircraft may be permitted to remain on the approach control frequency until landed, if the traffic load permits.)

(3) All clearances to departing aircraft (taxi clearances, wind direction and velocity, time check, altimeter setting, runway number, airway traffic control clearance, etc.) will normally be issued by the tower on the appropriate ground control frequency. If necessary, the tower may request the pilot to guard the approach control frequency after take-off for additional information.

[Supp. 1, 14 F. R. 3350]

§ 26.26-83 *Control procedures (CAA rules which apply to § 26.26)*—(a) *Control of holding aircraft.* (1) A fan marker (or other radio fix) located on the approach course of a radio range is utilized as a holding fix. Aircraft are stacked vertically at successive 1,000-foot levels, the lowest holding level being at

least 1,000 feet above terrain, or the minimum instrument altitude, whichever is higher.

(2) Altitude separation is maintained throughout the approach sequence.

(3) Arriving aircraft will be cleared by the appropriate center to hold at an assigned altitude at the holding fix on the approach course of the radio range serving the airport of intended landing. Thereafter the control tower concerned

will issue clearances to the pilots involved.

(4) In the event the holding fix is not received and the pilot has not received clearance for final approach, the last assigned altitude will be maintained to the radio range station and pilot should request further clearance.

(5) Each pilot in the approach sequence shall be given advance notice as to the time he should leave the hold-

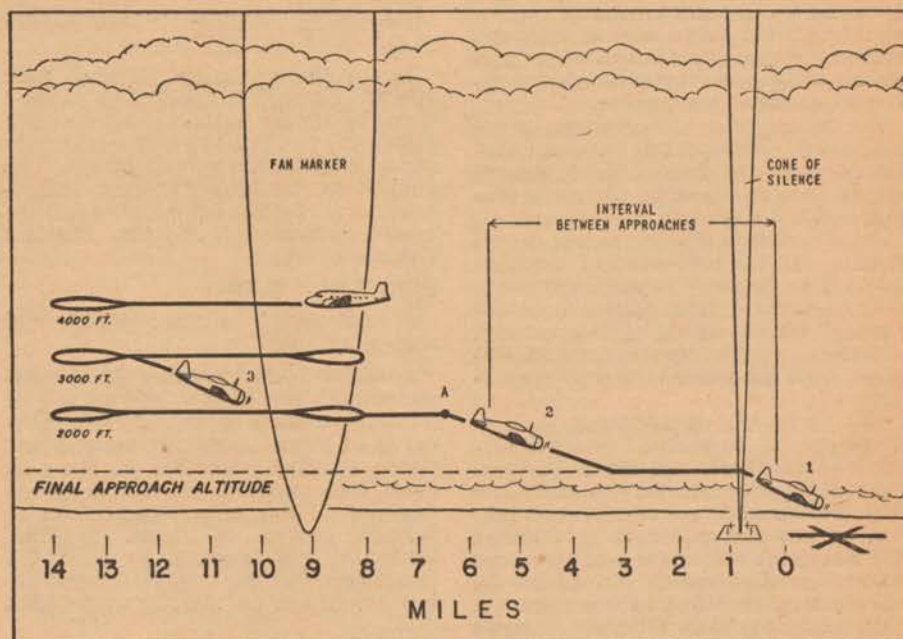

FIGURE 11.—Above diagram shows an aircraft holding at 4,000; No. 3 leaving 3,000 as instructed when No. 2 reported leaving 2,000; No. 2 has left fan marker at designated time maintaining 2,000 until approach clearance received (point A) where descent was started; No. 1 has been sighted, enabling the approach controller to clear No. 2.

ing marker on approach to the airport. The pilot should then arrange his flight path so as to leave the marker exactly at the designated time. Departure should be made at the designated time without further clearance from the tower, maintaining the last assigned altitude.

(6) When the reported ceiling is below the initial approach altitude authorized over the radio navigation facility at the point of intended let-down, the reported ceiling and visibility shall be included by the tower in the initial transmission to the aircraft and revised as necessary.

(b) *Control of approaches.* (1) The first aircraft will leave the holding fix at the time designated, and will commence descent when cleared for a straight-in approach to the airport. Normally the clearance to land will be issued at the time aircraft report contact or are sighted by the tower.

(2) The second aircraft will be instructed to descend to the altitude previously held by the first aircraft after the first aircraft has reported vacating that altitude.

(3) The second aircraft will be instructed to leave the holding fix at a specified time (determined by the shortest time interval between approaches the controller considers practicable), and to maintain the last assigned altitude. This aircraft will then be cleared for an approach (descent) when the preceding aircraft is sighted by the tower and reasonable assurance exists that a normal landing can be made. In some instances, approach clearance may be issued a minute or two after the aircraft has departed from the holding fix.

(4) The aircraft at the lowest holding altitude need not be held at the marker until the preceding aircraft is in sight, but should be given a departure time which will allow the pilot to proceed toward the range station (maintaining his altitude) and still be able to make a normal descent to the airport after approach clearance is received. This procedure will shorten the time interval between successive approaches.

(5) If clearance for approach is not received in sufficient time to permit normal descent, the last assigned altitude should be maintained to the range station and further clearance requested.

(c) *Determination of approach interval.* (1) Determination of the time interval to be used between successive aircraft making final approach is dependent on the speed of the aircraft, prevailing weather conditions and distance from the range station to the airport.

(2) Inasmuch as 1,000-foot vertical separation is maintained between aircraft at all times, the minimum time interval between aircraft cannot be less than 2 minutes if rate of descent is limited to not over 500 feet per minute. If the aircraft will arrive over the range station on instruments, an additional minute may be added to the minimum time interval to allow the pilot 1 minute of level flight prior to crossing the range station. If weather conditions are such that the pilot is liable to encounter difficulty in completing his landing, however, the time interval is increased suffi-

ciently to allow the first aircraft to land before the second aircraft is cleared for approach.

(3) Succeeding aircraft will be cleared to descend when the next lowest altitude level has been reported vacated.

(d) *Missed approaches.* (1) In the event of missed approach, the pilot should follow missed approach procedures, climbing to missed approach altitude on the appropriate course and request further instructions. Succeeding aircraft of the sequence which have departed from the fan marker would under these circumstances be required to maintain their assigned altitudes and hold between the range station and the holding fix. The center shall be immediately advised of the missed approach and subsequent action coordinated between the tower and center.

[Supp. 1, 14 F. R. 3350]

§ 26.26-84 *Examples of phraseologies (CAA rules which apply to § 26.26)*—(a) *Clearance to holding fix.* (1) Clearance of aircraft to a holding fix (Edgewood) by an airway traffic control center for approach control purposes would be given in the following manner:

Time	Identification	Instructions or reports
16:00	Approach control.....	"Navy 1615 cleared for straight-in approach to airport, report leaving 2,000 and Edgewood. Runway 36, wind north 8."
16:02	Navy 1615 (No. 1).....	"Leaving Edgewood and 2,000 at 02."
16:02	Approach control.....	"Air Force 1234 descend to 2,000 immediately, maintain 2,000, depart Edgewood in-bound at 16:07, report leaving 3,000 and Edgewood."
16:02	Air Force 1234 (No. 2).....	"Leaving 3,000."
16:03	Approach control.....	"Beechcraft 5678 descend to 3,000 immediately; maintain 3,000, depart Edgewood in-bound at 16:12, report leaving 4,000."
16:03	Beechcraft 5678 (No. 3).....	"Leaving 4,000."
16:07	Air Force 1234.....	"Leaving Edgewood at 07, maintaining 2,000."
16:08	Approach control.....	(Navy 1615 is sighted by tower and cleared to land.)
16:08	Approach control.....	"Air Force 1234, cleared for straight-in approach to airport, report leaving 2,000. Runway 36, wind north 8."
16:09	Air Force 1234.....	"Leaving 2,000."
16:09	Approach control.....	"Beechcraft 5678 descend to 2,000 immediately, maintain 2,000, report leaving 3,000 and Edgewood."
16:09	Beechcraft 5678.....	"Leaving 3,000."
16:12	Do.....	"Leaving Edgewood at 12, maintaining 2,000."
16:13	Approach control.....	(Air Force 1234 is sighted by tower and cleared to land.)
16:13	Approach control.....	"Beechcraft 5678, cleared for straight-in approach to airport, report leaving 2,000. Runway 36, wind north 8."
16:13	Beechcraft.....	"Leaving 2,000."
16:18	Approach control.....	(Beechcraft 5678 sighted by tower.)

In the above example, although each aircraft required 6 minutes to proceed from the marker to the airport (in sight of tower), the interval between successive approaches was only 5 minutes. The aircraft at the lowest holding altitude need not be held at the marker until the preceding aircraft is in sight. See text § 26.26 (b) (4).

[Supp. 1, 14 F. R. 3351]

Procedures for alerting search and rescue facilities.

§ 26.26-101 *Introduction (CAA rules which apply to § 26.26).* The purpose of including these procedures in this manual is to insure standard research and rescue alerting procedures on the part of air traffic control. Air traffic control facilities do not have either direct or indirect control of rescue facilities. Therefore, it is necessary to specify air traffic control functions, responsibilities and procedures for alerting such facilities.

(a) *General.* The center, by virtue of the information it possesses regarding movements of aircraft, shall serve as the central point for the coordination of flight data and dissemination of aircraft

"Cessna one two three four cleared to Edgewood; maintain three thousand; hold on west course of Smithville range between Edgewood marker and point two minutes west until further advised by Smithville Approach Control on two five four kilocycles. Expect approach clearance at one six one two."

(2) The pilot would report his arrival over the holding fix to the approach controller in the tower as follows:

"Smithville Approach Control. This is Cessna one two three four, over Edgewood one five five seven at three thousand. Over."

(3) The approach controller in the tower would acknowledge over the voice channel of the radio range (254 kcs.), giving current ceiling and visibility (if required), altimeter setting, time check, and further clearance as necessary.

(b) *Example of control problem.* (1) Assume that three aircraft, Navy 1615 at 2,000 (No. 1), Air Force 1234 at 3,000 (No. 2), and Beechcraft 5678 at 4,000 (No. 3), have arrived at the holding fix (Edgewood) and have reported to the approach controller. Final approach altitude is 1,000 feet. Instructions and reports would be as follows:

movement information regarding air traffic within flight advisory areas.

(1) *Search and rescue.* Search and rescue information shall be provided by air traffic control to assist the associated air rescue agency by advising of aircraft believed, or known to be in need of rescue assistance by supplying pertinent information in relation to last known position, estimated present position, radius of possible action, position of other aircraft along the route of flight, and by acting as clearing agency for assembling other necessary data.

[Supp. 1, 14 F. R. 3351]

§ 26.26-102 *Safety center (CAA rules which apply to § 26.26).* A safety center, where established, shall consist of an air route traffic control center and a rescue coordination center. The air route traffic control center administers air traffic control and traffic advisory information service, within the limits of its responsibilities, whereas the rescue coordination center will administer the search and rescue service. When not adjoining or when necessary, the air route traffic control center and the rescue coordination center must be connected by

telephone, interphone, teletype, or by other means of direct communication.

[Supp. 1, 14 F. R. 3351]

§ 26.26-103 *Alerting of organized search and rescue service (CAA rules which apply to § 26.26).* (a) Where an organized search and rescue service is in operation within a control area of flight advisory area, the notification regarding aircraft in distress shall be forwarded to the appropriate rescue agency by air traffic control. In flight advisory areas, where there is no air traffic control service established, similar action will be taken by the agency responsible for providing flight information service.

(b) Each air route traffic control center shall establish a coordinated plan, with the established rescue coordination center serving the control area of that center, to provide for the effective execution of responsibilities and procedures outlined below:

(1) When assistance to aircraft in distress is required, other than that provided by a flight information service, the rescue coordination center will be responsible for providing that assistance.

(2) When it is determined that an aircraft is in distress, the center having this information will be responsible for immediately notifying the appropriate rescue coordination center. In the event of an aircraft in distress being handled by airport traffic control or approach control, it will be the responsibility of such control to notify the air route traffic control center who will in turn notify the rescue coordination center. This shall not prevent airport traffic control or approach control from alerting local search and rescue agencies or notifying the rescue coordination center direct when the airport traffic control or approach control is not located within a control area.

(3) When an aircraft that is believed to be in distress is under the operational control of an operating agency, the air route traffic control center having this information will advise such operating agency and obtain concurrence that the aircraft is actually in need of assistance prior to notifying the rescue coordination center. However, if it is determined that an aircraft is actually in distress, such rescue coordination center may be advised before notifying the operating agency.

[Supp. 1, 14 F. R. 3351]

§ 26.26-104 *(CAA rules which apply to § 26.26). Alerting procedures.* (a) For purposes of alerting the rescue coordination center, Air Traffic Control will consider aircraft to be in distress under the following circumstances:

(1) When information is received that an aircraft has definitely made a forced landing or is about to do so.

(2) When information is received which indicates that the operating efficiency of an aircraft has been impaired to the extent that a forced landing is likely.

(3) When overdue as defined for the particular route or region concerned.

(b) *Alerting information.* The following information is to be included in

the alerting report to the rescue coordination center:

(1) Agency and person calling.
(2) Flight plan of aircraft and color, if known.

(3) Time last transmission received, by whom, and frequency used.

(4) Last position report, and how determined.

(5) Number of persons aboard.

(6) Time fuel expected to be exhausted.

(7) Whether or not two-way communication is available.

(8) Any action taken by reporting office.

(9) Other pertinent remarks.

(c) *Plotting aircraft in distress.* When an aircraft is in distress, the air route traffic control center shall plot the flight on a chart, utilizing previously reported positions and other available information. The probable future positions of the aircraft should be projected thereon as well as the radio direction finding fixes, if available. Positions of other known aircraft operating in the vicinity of the aircraft in distress and their probable future positions should also be plotted. Taking into consideration the known fuel supply, a maximum radius of action from the last known position shall also be plotted. All known information is to be forwarded immediately to the rescue coordination center.

[Supp. 1, 14 F. R. 3351]

§ 26.27 *Relaying information.* An operator shall not relay information or instructions received from airway traffic control personnel, airway communications, or United States Weather Bureau airport stations, otherwise than in the manner approved by the Administrator.

§ 26.28 *Maximum hours.* Except in case of an emergency, a certificated operator shall be relieved of all duty for not less than 24 consecutive hours at least once during each 7 consecutive days, and shall not serve, nor be required to serve as such:

(a) In excess of 10 consecutive hours;

(b) In excess of 10 hours during a period of 24 consecutive hours unless the operator is given a rest period of not less than 8 hours at or before the termination of such 10 hours of duty.

§ 26.29 *Display of certificate.* An operator shall keep his certificate readily available when he is on duty and shall present it for inspection upon request of any officer or employee of the Administrator or Board and of any State or municipal official charged with the duty of enforcing local laws or regulations involving Federal compliance.

§ 26.30 *Medical certificate.* A medical certificate issued by an authorized medical examiner of the Administrator or other evidence satisfactory to the Administrator that the air-traffic control-tower operator has met the physical requirements prescribed in this part shall be carried by such airman while on duty.

§ 26.31 *Equipment standards.* A certificated air-traffic control-tower operator shall not control air traffic with fa-

cilities which the Administrator has determined to be inadequate.

§ 26.32 *Inspection.* An applicant or a holder of a certificate or rating, upon reasonable request by any representative of the Administrator, shall cooperate fully in any examination which may be made of him.

§ 26.33 *Surrender of certificate.* Upon the suspension, revocation, or expiration of a certificate, the holder shall, upon request, surrender such certificate to a representative or employee of the Administrator.

§ 26.34 *Periodic physical examination.* The holder of an air-traffic control-tower operator certificate shall not exercise the privileges thereunder unless within the preceding 12 calendar months he has met the physical standards of the Second Class prescribed in Part 29 of this subchapter by passing an examination conducted by an authorized medical examiner of the Administrator.

[Amdt. 26-4, 7 F. R. 5038]

§ 26.35 *Operation during physical deficiency.* A certificated air-traffic control-tower operator shall not serve as such during the period of any known physical deficiency which would render him unable to meet the physical requirements prescribed for the original issuance of his certificate: *Provided*, That if the deficiency is of a temporary nature, he may perform any duties not affected thereby when there is present and on duty another certificated and properly qualified air-traffic control-tower operator.

[Amdt. 26-1, 7 F. R. 6943]

§ 26.36 *Recent experience requirements.* The holder of an air-traffic control-tower operator certificate shall not exercise the privileges thereunder unless:

(a) If rated as a junior air-traffic control-tower operator he has served for at least three months as an operator at the airport to which the rating applies during the twelve calendar months immediately preceding, or

(b) If rated as a senior air-traffic control-tower operator he has served for at least three months as an operator at the airport to which the rating applies during the six calendar months immediately preceding, or

(c) He has demonstrated to the satisfaction of the Administrator that he is able to meet the standards currently prescribed by the regulations of this subchapter for the issuance of the certificate and rating.

[Amdt. 26-4, 7 F. R. 5038]

§ 26.37 *Reports.* The holder of an air-traffic control-tower operator certificate shall furnish the medical examiner, at the time of each physical examination, to be forwarded by him to the Administrator, a report setting forth the amount and type of his aeronautical experience and such other pertinent data as the Administrator may require, since his last preceding medical examination.

[Amdt. 26-4, 7 F. R. 5038]

**PART 27—AIRCRAFT DISPATCHER
CERTIFICATES
REQUIREMENTS**

Sec.	
27.1	Aircraft dispatcher certificate requirements.
27.2	Age.
27.3	Character.
27.4	Citizenship.
27.5	Education.
27.6	Aeronautical knowledge.
27.7	Aeronautical experience.
27.8	Aeronautical skill.

AIRCRAFT DISPATCHER CERTIFICATE

27.10	Application.
27.11	Display.
27.12	Duration.
27.13	Temporary certificates.
27.14	Recent experience requirements.
27.15	Reports.
27.16	Expired certificates; special issuance.
27.17	Nontransferability.
27.18	Surrender.
27.19	Reexamination.
27.20	Revocation.

EXAMINATIONS AND TESTS

27.30	General.
27.31	Time and place.
27.32	Inspection.
27.33	Standard of performance.

AUTHORITY: §§ 27.1 to 27.33 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 52 Stat. 1007, 1008; 49 U. S. C. 551, 552.

SOURCE: §§ 27.1 to 27.33 contained in Amendment 46, Civil Air Regulations, 5 F. R. 1761, as amended by Amendments 75, 5 F. R. 3946, except as noted following sections affected.

REQUIREMENTS

§ 27.1 *Aircraft dispatcher certificate requirements.* To be eligible for an aircraft dispatcher certificate, an applicant shall comply with the requirements of §§ 27.2-27.8.

§ 27.2 *Age.* Applicant shall be at least 23 years of age.

§ 27.3 *Character.* Applicant shall be of good moral character.

§ 27.4 *Citizenship.* Applicant shall be a citizen of the United States or of a foreign government which grants or has undertaken to grant reciprocal aircraft dispatcher privileges to citizens of the United States on equal terms and conditions with citizens of such foreign government.

[Amdt. 27-2, 13 F. R. 4314]

§ 27.5 *Education.* Applicant shall be able to read, write, and understand the English language, and speak the same without any accent or impediment of speech that would interfere with two-way radio conversation.

§ 27.6 *Aeronautical knowledge.* Applicant shall be familiar with and shall accomplish a satisfactory written examination on:

(a) The provisions of Parts 40 and 61 and those parts of Part 60, of this subchapter, which apply to dispatching. In each case the applicant shall understand the relation of each provision to air carrier operation.

(b) The characteristics of at least one make and model of air carrier aircraft, with particular reference to performance, gross load, pay loads under conditions of

various fuel loads, fuel capacity, fuel consumption at specified power outputs at various altitudes, most economical speed at which level flight can be maintained, and loading charts.

(c) The general system of collection and dissemination of weather information.

(d) Weather map, forecast and sequence abbreviations, symbols, and nomenclature. The general principles of modern methods of weather analysis including the application of data obtained from airplane weather observations and meteorological data reported from observations made by pilots engaged in air carrier flights.

(e) Cloud forms, including average heights of their bases and approximate upper and lower limits within which their bases and tops respectively occur.

(f) Weather conditions adversely affecting aeronautical activities, the circumstances under which they occur, how such are ascertained and located, and principles of forecasting such conditions.

(g) The influence of terrain upon meteorological conditions and developments, and the relation thereof to air carrier flight operations.

(h) Elementary principles of radio range operation and radio communication, including weather conditions adversely affecting them and the communication procedures and practices used between airplanes and ground stations.

(i) Department of Agriculture Weather Bureau Circular N, Instructions for Airway Meteorological Service, and all amendments thereto.

(j) Air navigation facilities in use on the civil airways, including rotating beacons, course lights, radio ranges, radio marker beacons and intermediate fields.

(k) Principles of aircraft navigation, with particular respect to instrument operation and use of radio range and direction-finding equipment, including let-down procedures.

(l) Use and limitations of sensitive type altimeters, particularly with respect to barometric settings.

(m) Airway and airport traffic control procedures.

§ 27.7 *Aeronautical experience.* (a) Applicant shall have served in scheduled air carrier or scheduled military operations for 2 of the immediately preceding 3 years as:

(1) A pilot member of the crew; or
(2) A flight radio operator or ground radio operator; or

(3) A flight navigator; or
(4) A meteorologist in a dispatch organization dispatching aircraft; or

(5) A technical supervisor of aircraft dispatchers; or

(6) An assistant in dispatching of scheduled military aircraft; or

(b) Applicant shall have served for 2 of the immediately preceding 3 years as an air traffic controller; or

(c) Any combination of experience in paragraph (a), or in paragraphs (a) and (b) of this section, provided each is at least one year; or

(d) Applicant shall have served as an assistant in the dispatching of scheduled air carrier aircraft under the su-

pervision of a certificated aircraft dispatcher for at least one year within the immediately preceding 2 years; or

(e) Applicant shall be a graduate of an aircraft dispatcher course approved by the Administrator.

[Amdt. 27-3, 11 F. R. 1883, as amended by Amdt. 27-3, 13 F. R. 5329]

§ 27.8 *Aeronautical skill.* Applicant shall be able to:

(a) Make a reasonably accurate and intelligent analysis of a series of daily Weather Bureau maps, in accordance with modern methods, and forecast therefrom the subsequent weather conditions pertinent to air carrier flying operations.

(b) Make an accurate and detailed analysis, in accordance with modern methods, of weather conditions prevailing in the general neighborhood of a specified civil airway from a series of daily Weather Bureau maps and sequence reports, and forecast with a high degree of accuracy subsequent weather trends pertinent to air carrier flying operations, with particular reference to specified terminals.

(c) Be sufficiently familiar with the Morse code to be able to identify radio ranges by their identification signals.

(d) Prepare and use charts to determine the most economical fuel consumption settings of an aircraft at given altitudes, and

(e) Dispatch and assist a hypothetical flight under adverse weather conditions.

AIRCRAFT DISPATCHER CERTIFICATE

§ 27.10 *Application.* Application for an aircraft dispatcher certificate shall be made upon the applicable form prescribed and furnished by the Administrator.

§ 27.11 *Display.* An aircraft dispatcher certificate shall be kept readily available to the holder thereof at all times when he is on duty in connection with the dispatching of air carrier aircraft, and shall be presented upon the request of any authorized representative of the Administrator or Board or of any State or municipal official charged with the duty of enforcing local laws or regulations involving Federal compliance.

§ 27.12 *Duration.* An aircraft dispatcher certificate shall be of 60 days' duration, and unless the holder is otherwise notified by the Administrator within such period, it shall continue in effect thereafter until otherwise specified by the Board, unless suspended or revoked.

[Amdt. 27-8, 7 F. R. 5038]

§ 27.13 *Temporary certificates.* The Administrator or his authorized representative may issue a temporary aircraft dispatcher certificate for a period of not to exceed 90 days, subject to the terms and conditions specified therein by the Administrator.

[Amdt. 27-1, 12 F. R. 4433]

§ 27.14 *Recent experience requirements.* The holder of an aircraft dispatcher certificate shall not exercise the privileges thereunder unless, within the

preceding twelve calendar months he has either:

- (a) For at least three months,
- (1) Served as an aircraft dispatcher, or
- (2) Served as first or second pilot in scheduled air carrier operation, or
- (3) Been engaged in, (i) the technical supervision of aircraft dispatchers or air carrier dispatching systems, or (ii) the determination of competency or qualifications of aircraft dispatchers, or
- (4) Served in any combination of the duties described in subparagraphs (1), (2), or (3) of this paragraph; or
- (b) Demonstrated to the satisfaction of the Administrator that he is able to meet the standards currently prescribed by the regulations in this subchapter for the issuance of the certificate and rating.

[Amdt. 27-8, 7 F. R. 5038]

§ 27.15 Reports. The holder of an aircraft dispatcher certificate shall transmit to the Administrator, annually, during the month of January, a report for the preceding twelve-month period, setting forth the amount and type of his aeronautical experience and such other pertinent data as the Administrator may require.

[Amdt. 27-8, 7 F. R. 5039]

§ 27.16 Expired certificates; special issuance. The holder of an aircraft dispatcher certificate which has expired during the preceding twelve months may obtain a new certificate and the same rating theretofore held immediately prior to its expiration, upon application, by demonstrating to the satisfaction of the Administrator that he is able to meet the standards currently prescribed by the regulations in this subchapter for the issuance of the certificate and rating.

[Amdt. 27-8, 7 F. R. 5039]

§ 27.17 Nontransferability. An aircraft dispatcher certificate is not transferable.

§ 27.18 Surrender. Upon the suspension, revocation, or expiration of an aircraft dispatcher certificate, the holder thereof shall, upon request, surrender such certificate to any officer or employee of the Administrator.

§ 27.19 Reexamination. An applicant for an aircraft dispatcher certificate who has failed to successfully accomplish the prescribed theoretical or practical tests may apply for reexamination at any time after the expiration of 30 days from the date of such failure.

[Amdt. 46; 5 F. R. 1761, as amended by Amdt. 27-1, 10 F. R. 6831]

§ 27.20 Revocation. No person whose aircraft dispatcher certificate has been revoked shall apply for or be issued an aircraft dispatcher certificate for a period of 1 year after the revocation, except as the order of revocation may otherwise provide.

[Amdt. 87, 5 F. R. 5256]

EXAMINATIONS AND TESTS

§ 27.30 General. The examinations and tests prescribed in this part shall be conducted by an authorized representative of the Administrator.

No. 136—35

§ 27.31 Time and place. All examinations and tests will be held at such times and places as the Administrator may designate.

§ 27.32 Inspection. The applicant for an aircraft dispatcher certificate shall offer full cooperation with respect to any inspection or examination which may be made of such applicant upon proper request by any authorized representative of the Administrator prior or subsequent to the issuance of an aircraft dispatcher certificate.

§ 27.33 Standard of performance. All practical or theoretical examinations and tests shall be accomplished to the satisfaction of the Administrator and the passing grade in each subject shall be at least 70 percent.

PART 29—PHYSICAL STANDARDS FOR AIRMEN

- Sec.
- 29.1 Physical standards.
- 29.2 First class.
- 29.3 Second class.
- 29.4 Third class.
- 29.5 Waiver of physical standards.

AUTHORITY: §§ 29.1 to 29.5 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 52 Stat. 1007, 1008; 49 U. S. C. 551, 552.

SOURCE: §§ 29.1 to 29.5 contained in Amendment 29-0, Civil Air Regulations, 7 F. R. 3925, except as noted following sections affected.

§ 29.1 Physical standards. The physical standards for airmen shall be as set forth in §§ 29.2-29.4.

§ 29.2 First class—(a) Eye. Applicant shall have:

(1) A visual acuity of at least 20/20 in each eye separately without correction: *Provided*, That if the vision in either or both eyes is not poorer than 20/50 and is brought up to 20/20 or better in each such eye by glasses, the applicant may be qualified upon condition that correcting glasses be worn while exercising the privileges of his airman certificate.

(2) An average depth perception of 30 millimeters or less on a prescribed depth perception apparatus with or without correction: *Provided*, That if the depth perception is greater than 30 millimeters without correction, and is corrected to at least 30 millimeters average by glasses, the applicant may be qualified upon condition that such glasses be worn while exercising the privileges of his airman certificate.

(3) No diplopia in any meridian within 35 degrees from the point of visual fixation.

(4) Not more than one diopter of hyperphoria in either eye.

(5) Not more than 10 diopters of esophoria.

(6) Not more than 5 diopters of exophoria.

(7) An abduction of not less than 3 diopters nor more than 15 diopters.

(8) An adduction of 6 or more diopters.

(9) An accommodation of at least V=1.00 at 18 inches with each eye separately without the use of correcting glasses.

(10) Normal color vision.

(11) Normal visual fields.

(12) No acute or chronic pathological condition of either eye or adenexae, which may interfere with its proper function, may progress to that degree, or may be aggravated by flying.

(b) *Ear, nose, throat, and equilibrium.*

(1) Applicant shall be able to hear the whispered voice at 8 feet with each ear separately; shall have no acute or chronic disease of the middle or internal ear; no disease of the mastoid; no unhealed (unclosed) perforations of the ear drum; no disease or malformation of the nose or throat which may interfere with or be aggravated by flying; and no disturbance of equilibrium.

(2) If the hearing acuity for the whispered voice is less than 20 feet in either ear the applicant shall possess a hearing acuity of at least 50% of normal in each ear throughout the effective speech and radio range as demonstrated by a standard audiometer.

(c) *General physical condition.* (1) Applicant shall have no organic or functional disease or structural defect or limitation which would interfere with the safe piloting of aircraft, or other duties of his airman certificate.

(2) Reclining blood pressure shall not exceed 135 mm. systolic, nor 90 mm., diastolic.

(3) Applicants 40 years of age or over shall demonstrate a degree of circulatory efficiency compatible with the safe operation of aircraft at high altitudes.

(d) *Nervous system.* Applicant shall have no disease of the mental or nervous system and no abnormality of the personality.

§ 29.3 Second class—(a) Eye. Applicant shall have:

(1) A visual acuity of at least 20/20 in each eye separately without correction: *Provided*, That if the vision in either or both eyes is not poorer than 20/50 and is brought up to 20/20 or better in each such eye by glasses, the applicant may be qualified upon condition that correcting glasses be worn while exercising the privileges of his airman certificate.

(2) An average depth perception of 30 millimeters or less on a prescribed depth perception apparatus, with or without correction: *Provided*, That if the depth perception is greater than 30 millimeters without correction, and is corrected to at least 30 millimeters average by glasses, the applicant may be qualified upon condition that such glasses be worn while exercising the privileges of his airman certificate.

(3) No diplopia in any meridian within 35 degrees from the point of visual fixation.

(4) Not more than one diopter of hyperphoria.

(5) Properly balanced eye muscles with an abduction of 3 diopters or more, and adduction of six diopters or more.

(6) Sufficient accommodation to pass a test prescribed by the Administrator based primarily upon ability to read official aeronautical maps.

(7) Normal fields of vision; and

(8) No pathology of the eye.

(b) *Ear, nose, throat, and equilibrium.*

Applicant shall be able to hear the whispered voice at 8 feet with each ear separately; shall have no acute or chronic

disease of the middle or internal ear; no disease of the mastoid; no unhealed (unclosed) perforations of the ear drum; no disease or malformation of the nose or throat which may interfere with or be aggravated by flying; and no disturbance of equilibrium.

(c) *General physical condition.* Applicant shall have no organic or functional disease or structural defect or limitation which would interfere with the safe piloting of aircraft, or other duties of his airman certificate.

(d) *Nervous system.* Applicant shall have no disease of the mental or nervous system and no abnormality of the personality.

§ 29.4 *Third class—(a) Eye.* Applicant shall have:

(1) A visual acuity of at least 20/50 in each eye separately without correction: *Provided*, That if the vision in either or both eyes is poorer than 20/50 and is brought up to 20/30 or better in each such eye by glasses, the applicant may be qualified upon condition that such glasses be worn while exercising the privileges of his airman certificate.

(2) No serious pathology of the eye.

(b) *Ear, nose, throat, and equilibrium.* Applicant shall be able to hear the whispered voice at 3 feet; shall have no acute or chronic disease of the internal ear, no disease or malformation of the nose or throat which may interfere with or be aggravated by flying, and no disturbance in equilibrium.

(c) *General physical condition.* No applicant shall have an organic or functional disease which would interfere with the safe piloting of aircraft, or other duties of his airman certificate. Any structural defect or limitation shall be noted on the medical certificate.

(d) *Nervous system.* Applicant shall have no disease of the mental or nervous system and no abnormality of the personality.

[Amdt. 29-0, 7 F. R. 3925, as amended by Amdt. 29-2, 9 F. R. 11675, Amdt. 29-3, 10 F. R. 3795]

§ 29.5 *Waiver of physical standards.* An airman certificate shall be issued to an applicant, other than an applicant for the original issuance of an air-line transport pilot certificate, who does not meet the appropriate physical standards if his aeronautical experience, ability, and judgment compensate for his physical deficiency and he meets all other requirements for the issuance of said certificate. Any certificate issued under these circumstances shall state that the applicant does not meet the appropriate physical standards prescribed herein but that his physical deficiencies were found to be compensated by his demonstrated aeronautical experience, ability, and judgment. Such certificate may be limited as to type of operation, type of aircraft, or period of reexamination.

[Amdt. 29-1, 8 F. R. 16888]

PART 33—FLIGHT RADIO OPERATOR CERTIFICATES

REQUIREMENTS FOR CERTIFICATE

Sec.
33.1 Issuance.
33.2 Age.

Sec.
33.3 Citizenship.
33.4 Education.
33.5 Physical standards.
33.6 Experience.
33.7 Knowledge.
33.8 Skill.

CERTIFICATION RULES

33.10 Application.
33.11 Duration.
33.12 Temporary certificates.
33.13 Reexamination.
33.14 Certificate.
33.15 Medical certificate and renewal.
33.16 Certificate display.
33.17 Operation during physical deficiency.

AUTHORITY: §§ 33.1 to 33.17 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 52 Stat. 1007, 1008; 49 U. S. C. 551, 552.

SOURCE: §§ 33.1 to 33.17 contained in Amendment 33-0, Civil Air Regulations, 12 F. R. 3029, except as noted following sections affected.

NOTE: The following explanatory statement was issued as a part of Amendment 33-0:

In accordance with the provisions of Title VI of the Civil Aeronautics Act of 1938 (52 Stat. 1007; 49 U. S. C. 551-560) it is unlawful for any person to serve in any capacity as an airman in connection with any civil aircraft used in air commerce without an airman certificate authorizing him to serve in such capacity, or in violation of the terms of any such certificate. A flight radio operator falls within the definition of airman as defined in that act.

The purpose of this part is to provide a means for compliance with the airman requirements of Title VI of the act with respect to the use in air commerce of those types of aircraft which require the services of flight radio operators by providing the standards by which flight radio operators may be certificated as airmen.

REQUIREMENTS FOR CERTIFICATE

§ 33.1 *Issuance.* A flight radio operator certificate will be issued to an applicant who meets the following requirements.

§ 33.2 *Age.* Applicant shall be at least 18 years of age.

§ 33.3 *Citizenship.* Applicant shall be a citizen of the United States or of a foreign government which grants reciprocal flight radio operator privileges to citizens of the United States on equal terms and conditions with citizens of such foreign government.

NOTE: At the present time Federal Communications Commission radio operator licenses are issued only to citizens of the United States.

§ 33.4 *Education.* Applicant shall be able to read, write, and understand the English language and speak the same without accent or impediment of speech which would interfere with two-way radio conversation.

§ 33.5 *Physical standards.* Applicant shall meet the physical standards of the third class prescribed in Part 29 of this subchapter of this chapter.

§ 33.6 *Experience.* (a) Applicant shall hold a Federal Communications Commission radiotelegraph operator license of not less than second class.

(b) Applicant shall:

(1) Have had at least 12 months of satisfactory experience as a radio operator

in aircraft, maritime, or ground stations, commercial or military, including at least 4 months of experience as a radio-telegraph operator; and have had at least 50 hours of experience in the operation of aircraft radio during flight; or

(2) Be a graduate of a flight radio operator course approved by the Administrator.

§ 33.7 *Knowledge.* Applicant shall pass a written examination on the following subjects:

(a) Such provisions of the Civil Air Regulations (Parts 1-99 of this subchapter) as are pertinent to the operation of aircraft radio systems;

(b) Theory and operation of radio communication and radio navigational systems in general use on aircraft;

(c) Radio navigation of aircraft;

(d) Aircraft radio operating procedures.

§ 33.8 *Skill.* Applicant shall:

(a) Pass a practical examination on the operation, adjustment, and routine repair of aircraft radio communication and radio navigational equipment;

(b) Demonstrate his ability to send and receive International Morse Code at a speed of 20 words per minute code groups, and 25 words per minute plain language.

CERTIFICATION RULES

§ 33.10 *Application.* Application shall be made on a form and in the manner prescribed by the Administrator.

§ 33.11 *Duration.* A flight radio operator certificate shall remain in effect unless it is suspended, or revoked, or a general termination date for such certificate is fixed by the Board.

§ 33.12 *Temporary certificates.* The Administrator or his authorized representative may issue a temporary flight radio operator certificate for a period of not to exceed 90 days, subject to the terms and conditions specified therein by the Administrator.

§ 33.13 *Reexamination.* Applicants who have failed in any examination may apply for reexamination on the part failed after 30 days from the date of such failure.

§ 33.14 *Certificate.* No individual shall serve in the flight crew as a flight radio operator unless he has in his personal possession while so serving a valid flight radio operator certificate issued by the Administrator.

[Amdt. 33-1, 13 F. R. 4759]

§ 33.15 *Medical certificate and renewal.* No individual shall exercise the privileges of a flight radio operator certificate unless he has in his personal possession while so serving a medical certificate or other evidence satisfactory to the Administrator showing that he has met the physical requirements appropriate to his certificate within the preceding 12 calendar months.

[Amdt. 33-1, 13 F. R. 4759]

§ 33.16 *Certificate display.* A flight radio operator shall, upon request, present his airman and medical certificates for examination by any representative

of the Civil Aeronautics Board or Administrator or by any State or local law enforcement officer.

[Amdt. 33-1, 13 F. R. 4759]

§ 33.17 *Operation during physical deficiency.* No flight radio operator shall exercise the privileges of his airman certificate during any period of known physical deficiency or increase in physical deficiency which would render him unable to meet the physical requirements prescribed for the issuance of his currently effective medical certificate.

[Amdt. 33-1, 13 F. R. 4759]

PART 34—FLIGHT NAVIGATOR CERTIFICATES

REQUIREMENTS FOR CERTIFICATE

- Sec.
- 34.1 Issuance.
- 34.2 Age.
- 34.3 Citizenship.
- 34.4 Education.
- 34.5 Physical standards.
- 34.6 Experience.
- 34.7 Knowledge.
- 34.8 Skill.

CERTIFICATION RULES

- 34.10 Application.
- 34.11 Duration.
- 34.12 Temporary certificates.
- 34.13 Reexamination.
- 34.14 Certificate.
- 34.15 Medical certificate and renewal.
- 34.16 Certificate display.
- 34.17 Operation during physical deficiency.

AUTHORITY: §§ 34.1 to 34.17, issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 52 Stat. 1007, 1008; 49 U. S. C. 551, 552.

SOURCE: §§ 34.1 to 34.17, contained in Amendment 34-0, Civil Air Regulations, 12 F. R. 3029.

NOTE: The following explanatory statement was issued as a part of Amendment 34-0:

In accordance with the provisions of Title VI of the Civil Aeronautics Act of 1938 (52 Stat. 1007; 49 U. S. C. 551-560) it is unlawful for any person to serve in any capacity as an airman in connection with any civil aircraft used in air commerce without an airman certificate authorizing him to serve in such capacity, or in violation of the terms of any such certificate. A flight navigator falls within the definition of airman as defined in that act.

The purpose of this part is to provide a means for compliance with the airman requirements of Title VI of the act with respect to the use in air commerce of those types of aircraft which require the services of flight navigators by providing the standards by which flight navigators may be certificated as airmen.

REQUIREMENTS FOR CERTIFICATE

§ 34.1 *Issuance.* A flight navigator certificate will be issued to an applicant who meets the following requirements.

§ 34.2 *Age.* Applicant shall be at least 21 years of age.

§ 34.3 *Citizenship.* Applicant shall be a citizen of the United States or of a foreign government which grants reciprocal flight navigator privileges to citizens of the United States on equal terms and conditions with citizens of such foreign government.

§ 34.4 *Education.* Applicant shall be able to read, write, speak, and understand the English language.

§ 34.5 *Physical standards.* Applicant shall meet the physical standards of the second class prescribed in Part 29 of this subchapter.

§ 34.6 *Experience.* (a) Applicant shall:

(1) Have at least 200 hours of satisfactory flight navigation including celestial and radio navigation and dead reckoning: *Provided*, That a pilot who has logged 500 hours of cross-country flight, of which 100 hours shall have been at night, may be credited with not more than 100 hours toward this experience; and

(2) Have satisfactorily determined his position in flight not less than 25 times by night by celestial observations and not less than 25 times by day by celestial observations in conjunction with other aids; or

(b) Applicant shall be a graduate of a flight navigator course approved by the Administrator.

§ 34.7 *Knowledge.* Applicant shall pass a written examination on the following subjects:

(a) Those provisions of the regulations in this subchapter pertinent to the duties of a navigator in the navigation of aircraft;

(b) The fundamentals of flight navigation, including flight planning and cruise control;

(c) Practical meteorology, including the analysis of weather maps, weather reports, and weather forecasts; weather sequence abbreviations, symbols, and nomenclature;

(d) Types of air navigation facilities and procedures in general use;

(e) The calibration and use of instruments used in air navigation;

(f) Navigation by dead reckoning;

(g) Navigation by celestial means;

(h) Navigation by means of radio aids;

(i) Pilotage and map reading;

(j) Interpretation of navigational aid identification signals.

§ 34.8 *Skill.* (a) Applicant shall pass a practical examination in the operation of flight navigational equipment.

(b) Applicant shall accomplish practical tests in aircraft navigation by:

(1) Dead reckoning;

(2) Celestial means; and

(3) Radio aids to navigation.

CERTIFICATION RULES

§ 34.10 *Application.* Application shall be made on a form and in the manner prescribed by the Administrator.

§ 34.11 *Duration.* A flight navigator certificate shall remain in effect unless it is suspended, or revoked, or a general termination date for such certificate is fixed by the Board.

§ 34.12 *Temporary certificates.* The Administrator or his authorized representative may issue a temporary flight navigator certificate for a period of not to exceed 90 days, subject to the terms

and conditions specified therein by the Administrator.

§ 34.13 *Reexamination.* Applicants who have failed in any examination may apply for reexamination on the part failed after 30 days from the date of such failure.

§ 34.14 *Certificate.* No individual shall serve in the flight crew as a flight navigator unless he has in his personal possession while so serving a valid flight navigator certificate issued by the Administrator.

[Amdt. 34-1, 13 F. R. 4759]

§ 34.15 *Medical certificate and renewal.* No individual shall exercise the privileges of a flight navigator certificate unless he has in his personal possession while so serving a medical certificate or other evidence satisfactory to the Administrator showing that he has met the physical requirements appropriate to his certificate within the preceding 12 calendar months.

[Amdt. 34-1, 13 F. R. 4759]

§ 34.16 *Certificate display.* A flight navigator shall, upon request, present his airman and medical certificates for examination by any representative of the Civil Aeronautics Board or Administrator or by any State or local law enforcement officer.

[Amdt. 34-1, 13 F. R. 4759]

§ 34.17 *Operation during physical deficiency.* No flight navigator shall exercise the privileges of his airman certificate during any period of known physical deficiency or increase in physical deficiency which would render him unable to meet the physical requirements prescribed for the issuance of his currently effective medical certificate.

[Amdt. 34-1, 13 F. R. 4759]

PART 35—FLIGHT ENGINEER CERTIFICATES

REQUIREMENTS FOR CERTIFICATE

- Sec.
- 35.1 Issuance.
- 35.2 Age.
- 35.3 Citizenship.
- 35.4 Education.
- 35.5 Physical standards.
- 35.6 Experience.

- 35.16 Medical certificate and renewal.
- 35.17 Certificate display.
- 35.18 Operation during physical deficiency.

DEFINITIONS

- 35.30 Definitions.
- 35.31 Flight time.
- 35.32 Pilot in command.

AUTHORITY: §§ 35.1 to 35.32 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 52 Stat. 1007, 1008, 49 U. S. C. 551, 552; Pub. Law 872, 80th Cong.

SOURCE: §§ 35.1 to 35.32 contained in Amendment 35-0, Civil Air Regulations, 12

F. R. 41, except as noted following provision affected.

NOTE: The following explanatory statement was issued as a part of Amendment 35-0:

In accordance with the provisions of Title VI of the Civil Aeronautics Act of 1938 it is unlawful for any person to serve in any capacity as an airman in connection with any civil aircraft used in air commerce without an airman certificate authorizing him to serve in such capacity, or in violation of the terms of any such certificate. A flight engineer falls within the definition of airman as defined in that act.

The purpose of this part is to provide a means for compliance with the airman requirements of Title VI of the act with respect to the use in air commerce of those types of aircraft which require the services of flight engineers by providing the standards by which flight engineers may be certificated as airmen.

REQUIREMENTS FOR CERTIFICATE

§ 35.1 *Issuance.* A flight engineer certificate will be issued to an applicant who meets the requirements of §§ 35.2-35.9.

§ 35.2 *Age.* Applicant shall be at least 21 years of age.

§ 35.3 *Citizenship.* Applicant shall be a citizen of the United States or of a foreign government which grants reciprocal flight engineer privileges to citizens of the United States on equal terms and conditions with citizens of such foreign government.

§ 35.4 *Education.* Applicant shall be able to read, write, speak, and understand the English language.

§ 35.5 *Physical standards.* Applicant shall meet the physical standards of the second class prescribed in Part 29 of this subchapter.

§ 35.6 *Experience.* Each applicant for a flight engineer certificate shall:

(a) Have had at least 3 years of diversified practical experience in the maintenance and repair of aircraft and aircraft engines, of which one year shall have been in the maintenance and repair of multiengine aircraft of a type used in air carrier operations and having engines rated at least at 800 horsepower each; or

(b) Be a graduate of at least a two-year specialized aeronautical training course in the maintenance, repair, and overhaul of aircraft and aircraft engines, of which at least six months shall be in the maintenance and repair of multiengine aircraft of a type used in air carrier operations and having engines rated at least at 800 horsepower each; or

(c) Have had at least 100 hours of flight experience in the duties of a flight engineer; or

(d) Have satisfactorily completed a course of ground and flight instruction in at least the items specified in § 35.7 which the Administrator has found adequate for the training of a flight engineer; or

(e) Have had at least 200 hours of flight time as pilot in command of an aircraft having 4 engines or more.

[Amdt. 35-1, 14 F. R. 2196]

§ 35.7 *Knowledge.* Applicant shall pass a written examination on the following subjects pertaining to aircraft having 4 or more engines and certificated in the transport category or to aircraft having 4 or more engines and incorporating a flight engineer station:

(a) Responsibilities and limitations of a flight engineer as specified in the regulations of this subchapter.

(b) Theory of flight and elementary aerodynamics;

(c) Aircraft performance and aircraft engine operation with respect to limitations;

(d) Mathematical computations of engine operation and fuel consumption, including basic meteorology with respect to engine operations;

(e) Aircraft loading and center of gravity computations;

(f) Basic aircraft maintenance and operating procedures.

[Amdt. 35-1, 13 F. R. 2645]

§ 35.8 *Skill.* Applicant shall pass a practical test in the duties of a flight engineer during flight on an aircraft having 4 or more engines and certificated in the transport category or on an aircraft having 4 or more engines and incorporating a flight engineer station; and shall demonstrate competency with respect to:

(a) Normal duties and procedures relating to aircraft, aircraft engines, propellers, and appliances;

(b) Recognition of the malfunctioning of aircraft, aircraft engines, propellers, and appliances, and the taking of appropriate action thereon;

(c) Emergency duties and procedures relating to aircraft, aircraft engines, propellers, and appliances.

[Amdt. 35-1, 13 F. R. 2645]

§ 35.9 *Limited certificate.* (a) An applicant may be certificated as a flight engineer for an aircraft having less than 4 engines: *Provided*, That (1) the design of the aircraft incorporates a flight engineer station satisfactory to the Administrator, (2) the applicant meets the requirements of §§ 35.1 through 35.6, and (3) the applicant passes written and practical examinations respecting such aircraft on the subjects listed in §§ 35.7 and 35.8.

(b) A certificate issued under the provisions of this section shall contain an appropriate limitation which may be removed at such time as the holder of the certificate passes the written and practical tests prescribed in §§ 35.7 and 35.8.

[Amdt. 35-1, 13 F. R. 2645]

CERTIFICATION RULES

§ 35.10 *Application.* Application shall be made on a form and in the manner prescribed by the Administrator.

§ 35.11 *Duration.* A flight engineer certificate shall remain in effect unless it is suspended, or revoked, or a general termination date for such certificate is fixed by the Board.

§ 35.12 *Temporary certificates.* The Administrator or his authorized representative may issue a temporary flight

engineer certificate for a period of not to exceed 90 days, subject to the terms and conditions specified therein by the Administrator.

[Amdt. 35-1, 12 F. R. 1030]

§ 35.13 *Surrender.* Any flight engineer shall, upon request, deliver his certificate to the Administrator, if it has been suspended or revoked.

§ 35.14 *Reexamination.* Applicants who have failed in any examination may apply for reexamination on the part failed after 30 days from the date of such failure.

§ 35.15 *Certificate.* No individual shall serve in the flight crew as a flight engineer unless he has in his personal possession while so serving a valid flight engineer certificate issued by the Administrator.

[Amdt. 35-2, 13 F. R. 4760]

§ 35.16 *Medical certificate and renewal.* No individual shall exercise the privileges of a flight engineer certificate unless he has in his personal possession while so serving a medical certificate or other evidence satisfactory to the Administrator showing that he has met the physical requirements appropriate to his certificate within the preceding 12 calendar months.

[Amdt. 35-2, 13 F. R. 4760]

§ 35.17 *Certificate display.* A flight engineer shall, upon request, present his airman and medical certificates for examination by any representative of the Civil Aeronautics Board or Administrator or by any State or local law enforcement officer.

[Amdt. 35-2, 13 F. R. 4760]

§ 35.18 *Operation during physical deficiency.* No flight engineer shall exercise the privileges of his airman certificate during any period of known physical deficiency or increase in physical deficiency which would render him unable to meet the physical requirements prescribed for the issuance of his currently effective medical certificate.

[Amdt. 35-2, 13 F. R. 4760]

DEFINITIONS

§ 35.30 *Definitions.* (a) As used in this part the words listed below shall be defined as follows:

[Amdt. 35-1, 14 F. R. 2196]

§ 35.31 *Flight time.* Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight (block to block).

[Amdt. 35-1, 14 F. R. 2196]

§ 35.32 *Pilot in command.* Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

[Amdt. 35-1, 14 F. R. 2196]

PART 40—AIR CARRIER OPERATING CERTIFICATION

Sec.	
40.1	Provision for issuance.
GENERAL MINIMUM REQUIREMENTS	
40.5	Eligibility.
40.6	Economic strength.
40.7	Route.
40.8	Definition of route.
40.9	Aircraft.
40.10	Airmen.
40.11	Operations manual.
40.12	Maintenance manual.
40.13	Schedules.
PASSENGER MINIMUM REQUIREMENTS	
40.21	Qualifications.
ROUTE REQUIREMENTS: VISUAL-CONTACT DAY OPERATION	
40.26	Airway.
40.27	Airports.
40.28	Public protection.
40.29	Intermediate fields.
40.30	Refueling facilities.
40.31	Radio facilities.
40.32	Weather reporting.
ROUTE REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION	
40.36	Airway.
40.37	Airports.
40.38	Public protection.
40.39	Intermediate fields.
40.40	Refueling facilities.
40.41	Radio facilities.
40.42	Weather reporting.
ROUTE REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION	
40.46	Airway.
40.47	Airports.
40.48	Public protection.
40.49	Intermediate fields.
40.50	Refueling facilities.
40.51	Radio facilities.
40.52	Weather reporting.
AIRCRAFT REQUIREMENTS: VISUAL-CONTACT DAY OPERATION	
40.56	If single-engine operation over land.
40.57	If single-engine operation over water.
40.58	If multiengine operation over land.
40.59	If multiengine operation over water.
40.60	Number of aircraft.
40.61	Radio equipment.
40.62	Hangar facilities.
40.63	Shop facilities.
40.64	Inspection and overhaul organization and procedures.
AIRCRAFT REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION	
40.66	If operation over land.
40.67	If operation over water.
40.68	Number of aircraft.
40.69	Radio equipment.
40.70	Hangar facilities.
40.71	Shop facilities.
40.72	Inspection and overhaul organization and procedures.
AIRCRAFT REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION	
40.76	If operation over land.
40.77	If operation over water.
40.78	Number of aircraft.
40.79	Radio equipment.
40.80	Hangar facilities.
40.81	Shop facilities.
40.82	Inspection and overhaul organization and procedures.
AIRMEN REQUIREMENTS: VISUAL-CONTACT DAY OPERATION	
40.86	Number.
40.87	First pilots.
40.88	Second pilots.
40.89	Aircraft dispatchers.

AIRMEN REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

Sec.	
40.91	Number.
40.92	First pilots.
40.93	Second pilots.
40.94	Aircraft dispatchers.

AUTHORITY: §§ 40.1 to 40.205 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 604, 52 Stat. 1007, 1010; 49 U. S. C. 551, 554.

SOURCE: §§ 40.1 to 40.205 contained in Civil Air Regulations, May 31, 1938, as amended by Regulation 601-A-1, 3 F. R. 2056 and Amendment 129, 6 F. R. 4691, except as noted following sections affected.

NOTE 1: Special Regulations, Serial No. SR-331, 14 F. R. 3199, provides as follows:

Flights of scheduled air carriers while at altitudes in excess of 12,500 feet above sea level east of Longitude 100° W. and 14,500 feet above sea level west of Longitude 100° W. shall comply with the applicable provisions of the Civil Air Regulations except as follows:

(a) Such flights need not comply with the requirements of § 60.45 Right-side traffic, § 61.252 Deviation from route, or any other sections of Parts 40 and 61 of this subchapter concerning civil airways.

(b) Such flights need not comply with the requirements of § 60.43 Air traffic clearance, § 60.21 Adherence to air traffic clearances, § 60.47 Radio communications, and § 61.171 Weather reports, except to the extent which the Administrator may prescribe.

(c) Each first pilot engaged in these operations shall be qualified for the route, if he is qualified for operations over any regular authorized route for the air carrier involved between the regular terminals for such operation.

(d) Each dispatcher who dispatches aircraft on flights authorized by this regulation shall be qualified under § 61.154 of this subchapter for operation over an authorized route for the air carrier involved between the regular terminals of such operations: *Provided*, That when he is qualified only on a portion of such route he may dispatch aircraft only after coordinating the dispatch with dispatchers who are qualified for the other por-

tions of the route between the points to be served.

This regulation supersedes Special Civil Air Regulation Serial No. 323, as amended, and shall terminate December 31, 1949.

NOTE 2: Special Regulations, Serial No. SR-326, 13 F. R. 5208, provides as follows:

An air carrier operating certificate, or amendments thereto, may be issued by the Administrator to an air carrier holding a temporary certificate of public convenience and necessity issued by the Board, authorizing such carrier to engage in scheduled air carrier operations which do not fully meet the certification and operation requirements of Parts 40 and 61 of this subchapter if the Administrator finds that any of such requirements can be omitted or modified without adversely affecting safety. Such omissions or modifications, when approved by the Administrator, shall be listed in the air carrier operating certificate, and the Administrator shall promptly notify the Board of the omissions or modifications approved by him and the reasons therefor.

This regulation supersedes Special Civil Air Regulation Serial No. 396 and shall terminate August 31, 1949.

NOTE 3: Special Regulation SR-325, effective Aug. 27, 1948, 13 F. R. 5147, provides in part as follows:

Any air carrier authorized . . . to engage in scheduled air transportation of cargo may conduct such transportation under the air carrier certification and operation rules prescribed in Part 42 of this chapter.

§ 40.1 *Provision for issuance.* Pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended, empowering the Administrator of Civil Aeronautics to issue air carrier operating certificates and the Board to establish minimum safety standards for the operation of the air carrier to whom any such certificate is issued, the following regulations are prescribed for such certification of scheduled air carriers engaged in interstate air transportation within the continental limits of the United States, as to their competency.

[CAR, May 31, 1938, as amended by Amdt. 75, 5 F. R. 3946, and Amdt. 133, 6 F. R. 5038]

GENERAL MINIMUM REQUIREMENTS

§ 40.5 *Eligibility.* To be eligible for an air carrier operating certificate, an applicant shall meet and comply with the general minimum requirements of §§ 40.6-40.13.

§ 40.6 *Economic strength.* Applicant shall show economic and financial strength sufficient to establish a presumption of ability to operate the air carrier with reasonable safety as related to the service offered, for a period of at least 1 year.

§ 40.7 *Route.* Applicant shall show that the route over which it proposes to operate is, or prior to operation will be, equipped with such navigational facilities (including terminal and intermediate airports, emergency landing fields, and ground aids to air navigation) as are determined by the Administrator to be necessary for safe operation as related to the service offered.

[Amdt. 40-8, 11 F. R. 7033]

§ 40.8 *Definition of route.* A route is that portion of the navigable airspace designated by the Administrator which

is to be used by the air carrier in scheduled air transportation.

[Amdt. 40-3, 11 F. R. 5645]

§ 40.9 *Aircraft.* Applicant shall show certificated aircraft of a type and number found by the Administrator to be adequate for safe operation as related to the service offered, the route traversed, and the operating and maintenance procedures and techniques proposed. (See also §§ 40.21-40.102.)

[Amdt. 40-7, 11 F. R. 5996, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.10 *Airmen.* Applicant shall show certificated airmen (including both flight and ground personnel) of kind, grade, and number deemed by the Administrator to be necessary for safe operation as related to the service offered, the route traversed, the aircraft used, and the operating and maintenance procedures, and techniques proposed.

§ 40.11 *Operations manual.* Applicant shall show an operations manual, prepared for the use of its airmen, which fully details the operating and communications methods, procedures, and techniques proposed for its air carrier operations.

§ 40.12 *Maintenance manual.* Applicant shall show a maintenance manual or suitable equivalent prepared for the use of its airmen and other maintenance personnel which adequately defines the maintenance methods, procedures, and techniques proposed for its air carrier operation.

§ 40.13 *Schedules.* Applicant shall show proposed schedules set up with due regard for sufficient time for the adequate servicing with fuel and oil at intermediate stops, and to prevailing winds, and on the basis of a cruising speed of the aircraft at not to exceed the specified cruising power output of the engines as operated in the aircraft.

PASSENGER MINIMUM REQUIREMENTS

§ 40.21 *Qualifications.* (a) Aircraft certificated as a basic type after June 30, 1942, shall be certificated in accordance with Part 4b of this subchapter, or the transport category requirements of Part 4a of this subchapter, and shall meet the requirements of § 61.213 of this subchapter over each route to be flown.

(b) Aircraft certificated as a basic type prior to June 30, 1942, shall either:

(1) Retain their present airworthiness certification status and shall be operated in accordance with such operating limitations as the Administrator finds will provide a safe relation between the performance of the aircraft and the dimensions of airports and terrain; or

(2) Qualify by showing compliance with either the performance requirements contained in §§ 4a.737-T through 4a.750-T or the requirements contained in Part 4b of this subchapter, and when so qualified shall meet the requirements of § 61.213 of this subchapter over each route to be flown: *Provided*, That should any type be so qualified all aircraft of any one operator of the same or related types shall be similarly qualified and operated.

(c) Aircraft used after December 31, 1953, shall comply with all of the requirements of Part 4b of this subchapter or the transport category requirements of Part 4a of this subchapter and shall meet the requirements of § 61.213 of this subchapter over each route to be flown.

[Amdt. 40-2, 13 F. R. 746, as amended by Amdt. 40-6, 14 F. R. 2196]

ROUTE REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.26 *Airway.* Applicant shall show that the regular route over which the proposed operations will be conducted is, or prior to authorization will be, within the limits of a civil airway, or is otherwise deemed satisfactory by the Administrator for the operation proposed. (If applicant's proposed route does not lie within the limits of a civil airway, a petition requesting that a civil airway be designated to embrace such route may be made simultaneously with the air carrier operating certificate application.)

§ 40.27 *Airports.* Applicant shall show that the airports to be used as terminals and scheduled intermediate stops are deemed adequate by the Administrator for safe air carrier operation of the type proposed.

[Amdt. 51, 5 F. R. 1838]

§ 40.28 *Public protection.* Applicant shall show that reasonable and adequate facilities and safety devices (including protection from revolving aircraft propellers) are provided for the protection of the public at each terminal and scheduled intermediate stop.

§ 40.29 *Intermediate fields.* Applicant shall show intermediate fields or airports available for safe landings with the load authorized for the route, or part thereof, and located so that the aircraft, when flying along the proposed route, shall at no time be at a distance greater than 100 miles from an intermediate field or airport: *Provided*, That the Administrator may permit or require intermediate fields at greater or less distances if suitable or necessary to provide adequate safety along the proposed route.

[CAR, May 31, 1938, as amended by Amdt. 40-1, 8 F. R. 1334]

§ 40.30 *Refueling facilities.* Applicant shall show that adequate refueling facilities, including equipment to test gasoline storage tanks for the presence of water and to remove any water or condensation found therein, are provided at each terminal, scheduled intermediate stop, and intermediate field where refueling is contemplated.

§ 40.31 *Radio facilities.* Applicant shall show a two-way ground-to-aircraft radiotelephone communication system at such terminals and at such points as may be deemed necessary by the Administrator to insure satisfactory communications over the entire route under normal operating conditions. Such system shall be independent of radio facilities provided by Federal or other governmental agencies.

§ 40.32 *Weather reporting.* Applicant shall show weather reporting serv-

ices at the proposed terminals and en-route, adequate to insure sufficient weather reports prepared from observations made and released by the United States Weather Bureau or by a source approved by it.

ROUTE REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

§ 40.36 *Airway.* Applicant shall meet the requirements of § 40.26 and, in addition, shall show that the proposed route is equipped with such airway beacons and obstruction lights as are deemed by the Administrator to be adequate for safe air carrier operation at night.

§ 40.37 *Airports.* Applicant shall meet the requirements of § 40.27 and, in addition, shall show that the airport to be used at each proposed terminal and scheduled intermediate stop is equipped with such lighting facilities as are deemed by the Administrator to be adequate for safe air carrier operation at night.

§ 40.38 *Public protection.* Same as in § 40.28.

§ 40.39 *Intermediate fields.* Applicant shall meet the requirements of § 40.29 and, in addition, shall show that such intermediate fields are equipped with lighting facilities as required by § 40.37.

§ 40.40 *Refueling facilities.* Same as in § 40.30.

§ 40.41 *Radio facilities.* Same as in § 40.31.

§ 40.42 *Weather reporting.* Same as in § 40.32.

ROUTE REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

§ 40.46 *Airway.* (a) Applicant shall meet the requirements of § 40.26 for day operation, or of § 40.36 for night operation. In addition, for either day or night operation, applicant shall show that the proposed route is equipped with radio ranges (or equivalent facilities) adequate for safe air carrier operation, projecting courses over the proposed route. The applicant may show, in lieu of courses projected over the proposed route by such radio ranges or equivalent facilities, (1) that instrument navigation may be safely conducted over the proposed route by the use of radio direction finding equipment installed in the aircraft, and (2) that a practical alternate route, equipped with radio range stations (or equivalent facilities) projecting courses over such alternate route, exists between the terminals of the proposed route.

(b) Applicant shall also show such other radio navigational aids (including radio markers) as are necessary for safe air carrier operation.

[Amdt. 102, 6 F. R. 1159]

§ 40.47 *Airports.* For day operation applicant shall show that the airport to be used at each proposed route terminal, scheduled intermediate stop, and alternate terminal is deemed adequate by the Administrator for the service offered. For night operation applicant shall meet

the foregoing requirements and, in addition, shall show that the proposed terminal, scheduled intermediate stop, and alternate airports are provided with such lighting facilities as are deemed by the Administrator to be adequate for safe air carrier operation at night.

§ 40.48 *Public protection.* Same as in § 40.28.

§ 40.49 *Intermediate fields.* Same as in § 40.29 for day operation, and as in § 40.39 for night operation.

§ 40.50 *Refueling facilities.* Same as in § 40.30.

§ 40.51 *Radio facilities.* Same as in § 40.31.

§ 40.52 *Weather reporting.* Same as in § 40.32.

AIRCRAFT REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.56 *If single-engine operation over land.* Applicant shall show land aircraft of type and number necessary for safe operation, or applicant may show a similar number of water aircraft if the route to be flown over is such that the aircraft can, at all times, reach open water deemed suitable by the Administrator for a safe landing in the event of complete power failure. Single-engine aircraft may be operated over routes deemed by the Administrator to have suitable landing terrain.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.57 *If single-engine operation over water.* Applicant shall show water aircraft of type and number necessary for safe operation, or applicant may show a similar number of land aircraft if the route to be flown over is such that the aircraft can, at all times, reach land deemed suitable by the Administrator for a safe landing in the event of complete power failure.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.58 *If multiengine operation over land—(a) Qualification.* Applicant shall show aircraft of a type and number necessary for safe operation. Applicant shall also show:

(1) That such aircraft (other than those specifically listed as in scheduled air carrier service by the applicant prior to January 1, 1935) to be used on the proposed route or part thereof are capable, with any one engine inoperative, of maintaining level flight with authorized load for the route or part thereof at an altitude of at least 1,000 feet above the highest obstruction to flight on the valley level of the route or part thereof on which the aircraft will be operated; or

(2) Operating procedures which, in the opinion of the Administrator, will assure that such aircraft will be capable of effecting a safe landing at an airport or other suitable area in the event of the failure of any one engine at any point on the route on which such aircraft will be operated.

(b) *Engine rotation.* On and after July 1, 1941, applicant shall show that any aircraft to be used in air transportation which have engines with maximum

power ratings of 480 horsepower or more are so equipped that engine rotation may be promptly stopped during flight; and, on and after January 1, 1943, the same showing shall be made with respect to all other aircraft to be used in air transportation.

[Amdt. 29, 4 F. R. 4186, as amended by Amdt. 79, 5 F. R. 4261, Amdt. 40-10, 7 F. R. 2144, and Amdt. 40-3, 14 F. R. 2196]

§ 40.59 *If multiengine operation over water—(a) Qualification.* Applicant shall show aircraft of type and number necessary for safe operation. Applicant shall also show that such aircraft, which are to be used on the proposed route or part thereof are capable, with any one engine inoperative, of maintaining level flight with authorized load at an altitude of at least 1,000 feet above the water. No multiengine land aircraft shall be operated, over water, beyond gliding distance from shore without the aid of power, unless such aircraft is equipped with a retractable landing gear, with one or more suitable emergency exits located in the upper half of the fuselage, with life preservers or other adequate flotation devices readily available for each person on board, with a Very pistol and cartridges or equivalent signal equipment deemed suitable by the Administrator, and with radio equipment as required by § 40.79. The requirements of flotation devices and signal equipment do not apply where such operations consist only of landings, take-offs, or flights of short duration over water and the Administrator finds in each case that such equipment is unnecessary.

(b) *Engine rotation.* Same as in § 40.58 (b).

[CAR, May 31, 1938, as amended by Amdt. 79, 5 F. R. 4261, Amdt. 40-10, 7 F. R. 2144, and Amdt. 40-3, 14 F. R. 2196]

§ 40.60 *Number of aircraft.* Applicant shall show aircraft, certificated as provided in §§ 4b.547-4b.552, of a number sufficient to permit the maintenance of all schedules proposed, as provided for in § 40.13.

§ 40.61 *Radio equipment.* Applicant shall show that each aircraft is equipped with a type certificated two-way radiotelephone having sufficient power to permit communication, under normal operating conditions, with at least one ground station used or to be used by the applicant on the regular or alternate route, and capable of communication with other aircraft of the applicant in flight. In addition, each aircraft shall be provided with at least one type certificated radio receiving system capable of receiving radio range signals and weather broadcasts. Such receiving system shall include a type certificated audio filter system with suitable switching arrangements to be used in connection with the reception of simultaneous radio range and voice broadcasts: *Provided,* That such audio filter system will not be required if the airway or route traversed is not equipped with simultaneous type radio range stations.

[Amdt. 85, 5 F. R. 5145]

§ 40.62 *Hangar facilities.* Applicant shall show hangar or other facilities ade-

quate for the proper maintenance of the aircraft, engines, equipment, and parts.

§ 40.63 *Shop facilities.* Applicant shall show shop facilities (including facilities for servicing, repair, and overhaul) adequate for the proper maintenance of all aircraft, engines, and equipment used.

§ 40.64 *Inspection and overhaul organization and procedures.* Applicant shall show inspection and overhaul organization, procedures, and techniques adequate for the proper maintenance of all aircraft, engines, and equipment used.

AIRCRAFT REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

NOTE: Single-engine aircraft may not be used in night operation with passengers.

§ 40.66 *If operation over land.* Applicant shall show multiengine land aircraft, which meet the flight performance requirements of § 40.58 and of a number necessary for safe operation as provided for in § 40.60.

§ 40.67 *If operation over water.* Applicant shall show multiengine land aircraft, which meet the flight performance and equipment requirements of § 40.59, and of a number necessary for safe operation as provided for in § 40.60.

§ 40.68 *Number of aircraft.* Same as in § 40.60.

§ 40.69 *Radio equipment.* Same as in § 40.61.

§ 40.70 *Hangar facilities.* Same as in § 40.62.

§ 40.71 *Shop facilities.* Same as in § 40.63.

§ 40.72 *Inspection and overhaul organization and procedures.* Same as in § 40.64.

AIRCRAFT REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

NOTE: Single-engine aircraft may not be used in an instrument or over-the-top operation with passengers.

§ 40.76 *If operation over land—(a) Qualification.* Applicant shall show multiengine aircraft of type and number necessary for safe operation. Applicant shall also show:

(1) That such aircraft (other than those specifically listed as in scheduled air carrier service by the applicant prior to January 1, 1935) to be used on the proposed route, or part thereof, are capable, with any one engine inoperative, of maintaining level flight, with authorized load for the route or part thereof, at an altitude equivalent to 1,000 feet above the highest part of the terrain on the proposed instrument course of the route, or part thereof; or

(2) Operating procedures which, in the opinion of the Administrator, will assure that such aircraft will be capable of effecting a safe landing at an airport or other suitable area in the event of the failure of any one engine at any point on the route on which such aircraft will be operated.

(b) *Engine rotation.* Same as in § 40.58 (b).

[Amdt. 29, 4 F. R. 4186, as amended by Amdt. 79, 5 F. R. 4261, Amdt. 40-10, 7 F. R. 2144, and Amdt. 40-3, 14 F. R. 2196]

§ 40.77 *If operation over water.* Same as in § 40.67.

§ 40.78 *Number of aircraft.* Same as in § 40.60.

§ 40.79 *Radio equipment.* Same as in § 40.61 and, in addition, applicant shall show that there is installed in each aircraft to be used in instrument or over-the-top operation (during day or night) over the proposed route, or part thereof, one additional separate type certified radio receiving system capable of receiving radio range signals and weather broadcasts. Such receiver system shall normally operate from the main source of electrical supply of the aircraft but, in event of failure of the normal power source, shall be capable of being switched to operate from an independent power source. This system shall include an independent power source capable of operating such receiver continuously for a period of at least 4 hours. It is also required that such receiver operate from an independent antenna or from either of two antennas. Two sets of type certificated headphones and two type certificated microphones shall be carried in the aircraft at all times.

(a) *Radio direction finder.* Applicant shall show that there is installed in each aircraft a type certificated radio direction finder, covering at least the frequency range of 200 to 400 kilocycles. The design of the radio direction finder shall be such as to permit its regular operation in the taking of line bearings on any station to which the direction finder may be tuned without altering the course of the aircraft. The radio direction finder shall also be provided with means to eliminate, insofar as possible consistent with the advancement of the art, that type of interference commonly known as rain, snow, sleet, or dust static. The radio direction finder shall provide means for audible reception of radio range and weather broadcast messages. It may be installed in lieu of the emergency receiver required in this section provided that an independent power source equal to that described therein for such receiver is employed on either the radio range receiver required therein or on this radio direction finder.

(b) *Radio anti-static antenna.* Applicant shall show that there is installed in each aircraft a type certificated radio antenna system, which has for its purpose the collection of radio range signals, weather broadcast and emergency messages transmitted within the frequency range of 200 to 400 kilocycles. The design of this antenna system shall be such as to eliminate insofar as possible, consistent with the advancement of the art, that type of interference commonly known as rain, snow, sleet, or dust static. This antenna system shall be designed to operate efficiently when used in conjunction with a receiver installed aboard such aircraft which has for its primary purpose the reception of radio range signals, weather broadcast and emergency messages.

(c) *Marker beacon receiver.* Applicant shall show that there is installed in each aircraft a type certificated ultra-high frequency receiving system operating on the frequency of 75 megacycles.

The system shall provide means for the visual and aural indications of signals transmitted by ultra-high frequency positive-cone-of-silence and fan type marker stations. The design of the system shall preclude, insofar as possible, erroneous patterns of the transmitted signal caused by the receiving system. Such receiving system will not be required if the airway or route traversed is not equipped with ultra-high frequency positive-cone-of-silence or fan type marker stations.

[CAR, May 31, 1938, as amended by Admt. 85, 5 F. R. 5145]

§ 40.80 *Hangar facilities.* Same as in § 40.62.

§ 40.81 *Shop facilities.* Same as in § 40.63.

§ 40.82 *Inspection and overhaul organization and procedures.* Same as in § 40.64.

AIRMEN REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.86 *Number.* Applicant shall show airmen of a number sufficient to permit the maintaining of all schedules proposed, under safe operating conditions.

§ 40.87 *First pilots.* Applicant shall show that prior to the issuance of the air carrier operating certificate all persons employed to serve as first pilots for the air carrier meet the following minimum requirements for qualification as to aircraft and route competency.

(a) Each first pilot shall be possessed of a valid air-line transport pilot competency rating with specifications or ratings indicating competency to pilot aircraft of each type to be used by him in scheduled operation.

(b) *Requirements for pilot route qualifications.* The air carrier shall be responsible for qualifying each first pilot for the route over which he is to fly aircraft in scheduled air transportation as first pilot. Such qualification shall include a thorough knowledge of all of the instrument approach procedures, the terrain, any obstructions or congested areas, and the physical layout of the airport and approaches at each regular, provisional, refueling, and alternate airport approved for the route. It shall also include the navigational facilities, communications procedures, minimum safe flight levels, position reporting points, holding procedures, and all other traffic control procedures for the route. In complying with the foregoing requirements the air carrier shall establish a detailed qualifying procedure, including flight over the route, which shall be performed by the pilot qualifying for the route. Such procedure shall be submitted for the approval of the Administrator and when approved by him shall be made a part of the air carrier operating certificate. A pilot may be listed in the air carrier operating certificate as first pilot for the route when the air carrier has certified to the Administrator that the pilot has performed the qualifying procedures and is qualified for the route, and this certification is endorsed by the pilot.

(c) Each first pilot shall be familiar with the aircraft, and shall demonstrate to an authorized air carrier inspector of the Administrator, or to a check pilot of the air carrier duly authorized by the Administrator, satisfactory capability to maneuver such aircraft with the maximum authorized load for the route or part thereof; and, in addition, if the aircraft is multiengine, he shall demonstrate his ability to maneuver such aircraft with said load with any one engine fully throttled either:

(1) At an altitude equivalent to 500 feet above the highest part of the terrain on the proposed route or part thereof to be flown by the pilot in air carrier service, or

(2) At the one-engine-inoperative service ceiling.

[CAR, May 31, 1938, as amended by Amdt. 51, 5 F. R. 1838, Amdt. 40-2, 8 F. R. 3566, Amdt. 40-4, 11 F. R. 5645, and Amdt. 40-3, 14 F. R. 2196]

§ 40.88 *Second pilots.* Applicant shall show that each person employed to serve as a second pilot for the air carrier is possessed of at least a valid commercial pilot competency rating and before serving as second pilot in any aircraft in scheduled air transportation service shall have demonstrated, to an air carrier inspector representing the Administrator or to a check pilot of the air carrier duly authorized by the Administrator, his ability to take-off and land such aircraft in which he is to serve by making at least three satisfactory take-offs and landings in each type of such aircraft. On and after July 1, 1938, each applicant for or holder of an air carrier operating certificate will be required to show that each such person is possessed of a valid instrument rating, unless possessed of a valid airline transport pilot competency rating.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.89 *Aircraft dispatchers.* Applicant shall show that each person assuming aircraft dispatcher duties for the air carrier is familiar with the route or part thereof over which he will dispatch aircraft, the weather characteristics and phenomena peculiar to such route, the nature and peculiarities of the terrain and of obstructions to flight, the air navigation facilities available on the ground and in the aircraft, the contents of the operations manual of the proposed air carrier and the aircraft limitations specified in the certificates of the aircraft proposed for use. On and after July 1, 1938, each applicant for or holder of an air carrier operating certificate will be required to show that each such person is possessed of a valid and appropriate aircraft dispatcher competency rating.

AIRMEN REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

§ 40.91 *Number.* Same as in § 40.86.

§ 40.92 *First pilots.* Same as in § 40.87, except that at least one one-way trip of those trips required by § 40.87 (b) shall have been made during the period between 1 hour after sunset and 1 hour before sunrise.

[Amdt. 40-2, 8 F. R. 3566]

No. 136—36

§ 40.93 *Second pilots.* Same as in § 40.88.

§ 40.94 *Aircraft dispatchers.* Same as in § 40.89.

AIRMEN REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

§ 40.96 *Number.* Same as in § 40.86.

§ 40.97 *First pilots.* Same as in § 40.87 and, in addition, applicant shall show that each first pilot, for whom instrument authorization is sought, has demonstrated to an air carrier inspector representing the Administrator, or to a check pilot of the air carrier duly authorized by the Administrator, satisfactory capability with respect to the following:

(a) Familiarity with the aircraft, including demonstration of ability to maneuver such aircraft with the maximum authorized load for the route or part thereof, with any one engine fully throttled, either:

(1) At an altitude equivalent to 1,000 feet above the highest part of the terrain on the proposed instrument course of the route, or part thereof, to be flown by the pilot in air carrier service, or

(2) At the one-engine-inoperative service ceiling.

(b) Familiarity with the route and with instruments, including demonstration of ability, under actual or simulated conditions, to fly such route solely by instruments.

(c) Familiarity with procedures, including demonstration of ability to accomplish a let-down-through by instruments, according to the procedure specified in the appropriate competency letter, at one station at least, on the route, in each type of aircraft to be used by the pilot in air carrier operation. Such demonstrations as to the other stations as deemed necessary by the Administrator may be made to an air carrier inspector representing the Administrator, or to a check pilot of the air carrier duly authorized by the Administrator, under simulated conditions or by equivalent means approved by the Administrator.

[CAR, May 31, 1938, as amended by Amdt. 51, 5 F. R. 1838, and Amdt. 40-3, 14 F. R. 2196]

§ 40.98 *Second pilots.* Are required for all instrument operations and shall meet the minimum requirements of § 40.88.

§ 40.99 *Aircraft dispatchers.* Same as in § 40.89.

MISCELLANEOUS REQUIREMENTS

§ 40.101 *Weather minimums.* Authorization of ceiling and visibility minimums for purposes of flight clearance and for transition from instrument to visual-contact flights and vice versa will be made by the Administrator and will be based upon the following considerations affecting the clearance and completion of the flight:

(a) The terrain conditions affecting the flight area necessary for the working out of an approach and let-down-through procedure, or for a climb-up-through procedure; and

(b) The skill and experience of dispatcher personnel; and

(c) The skill and experience of pilot personnel; and

(d) The type and maneuverability of the aircraft; and

(e) The obstructions to flight, considered both vertically and horizontally, in the vicinity of the landing area; and

(f) The quality and quantity of meteorological service and of other ground aids to flight available.

§ 40.102 *Air carrier operating skill.* Applicant shall demonstrate to the satisfaction of the Administrator ability to conduct a safe operation over the entire route to be flown in air transportation. Such demonstration shall be by means of actual flights over each proposed route employing such of the proposed aircraft, airmen, and operating and maintenance procedures and techniques as the Administrator may deem necessary, unless the Administrator after investigation expressly finds (a) that the proposed route modification is minor and (b) that an actual flight is not essential to safety.

[Amdt. 51, 5 F. R. 1838, as amended by Amdt. 40-1, 12 F. R. 3933]

§ 40.102-1 *Route proving flights (CAA rules which apply to § 40.102)*—(a) *Introduction.* The Administrator has the responsibility of determining when route proving flights are necessary. When an air carrier believes that actual route proving flights are not required by the regulations in this subchapter, its officials must submit to the Civil Aeronautics Administration office handling the air carrier's operating certificate, a written request for elimination of such flights. The Administration will undertake an investigation, during which consideration will be given to the nature of the operation to be conducted, and the personnel, equipment, and facilities involved. After investigation, the air carrier will be advised by the Administration that the proposed route modification is minor, and actual route proving flights are not essential to safety, or that actual route proving flights will be required. (For example, a scheduled air carrier may have been granted a minor extension to an existing route, and the extension may be over an airway that is adequately implemented with conventional aids to air navigation. In many such instances, it might be obvious that the proposed operations could be conducted over such a route in accordance with existing safety standards, and in such cases the proving flights would serve no useful purpose.)

(b) *Purpose.* The purpose of route proving flights is to determine the air carrier's ability to conduct the proposed operation in compliance with applicable provisions of the regulations in this subchapter and in accordance with the minimum safety requirements of the Civil Aeronautics Administration. Such determination is predicated upon the adequacy of the facilities provided by, or available to, the air carrier, including, but not limited to, aircraft, airports, lighting facilities, maintenance facilities, communication and navigation facilities, fueling facilities, and ground and aircraft radio facilities, and upon the competency

of the pilot, dispatcher, and other airmen or personnel.

(c) *Application.* At least 15 days prior to the scheduling of route proving flights, officials of the air carrier shall submit to the Civil Aeronautics Administration office handling its operations specifications, a written request for the assignment of Civil Aeronautics Administration personnel to observe the flights. This request must be accompanied by an original application and copies of pertinent proposed amendments to the operations specifications, and must include sufficient data pertaining to the route to satisfy the Administrator that the air carrier is prepared for the route proving flights. This will allow sufficient time for making any necessary additions or corrections, thus preventing delays or misunderstandings.

(d) *Conduct.* After the air carrier has made all the necessary preparations to conduct the route proving flights, duly designated representatives of the Civil Aeronautics Administration will be assigned to observe them. All route proving flights shall be undertaken exactly as the operator intends to operate in scheduled air transportation when carrying passengers, property, or mail, or any combination thereof. However, passengers who are not essential to conducting the proving flights must not be carried during such flights. Air carrier personnel assigned to conduct the route proving flights shall be regular crew members who, it is anticipated, will be assigned to the route.

(e) *Duration.* Route proving flights shall continue until the air carrier has demonstrated to the satisfaction of the Administrator that it is competent to conduct a safe operation over the entire route to be flown in air transportation.

(f) *Conclusion.* On completion of the route proving flights, a reasonable period of time will be required in order that the information gained during the flights can be compiled by the field office and submitted, with recommendations regarding approval, to appropriate supervisory personnel of the Civil Aeronautics Administration.

[Supp. 1, 13 F. R. 3459. Correction noted at 14 F. R. 37]

GOODS MINIMUM REQUIREMENTS

§ 40.106 *Eligibility.* To be eligible for an air carrier operating certificate for the carriage of goods (including mail) in interstate air transportation within the continental limits of the United States, an applicant, in addition to meeting the minimum requirements provided for in §§ 40.6-40.13, shall meet and comply with the minimum requirements prescribed in §§ 40.111-40.187 for the particular kind of operation proposed.

[CAR, May 31, 1938, as amended by Amdt. 133, 6 F. R. 5038]

ROUTE REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.111 *Airway.* Same as in § 40.26.

§ 40.112 *Airports.* Same as in § 40.27.

§ 40.113 *Public protection.* Same as in § 40.28.

§ 40.114 *Intermediate fields.* Same as in § 40.29.

§ 40.115 *Refueling facilities.* Same as in § 40.30.

§ 40.116 *Radio facilities.* Applicant shall show an adequate two-way ground-to-aircraft communication system which, under normal operating conditions, shall be capable of maintaining communication with all aircraft of the applicant in flight over the proposed route.

[Amdt. 89, 6 F. R. 251, as amended by Amdt. 40-5, 11 F. R. 5646]

§ 40.117 *Weather reporting.* Same as in § 40.32.

ROUTE REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

§ 40.121 *Airway.* Applicant shall meet the requirements of § 40.26 and shall show that the proposed route is equipped with such obstruction lights as are necessary for safe air carrier operation at night. In addition, applicant shall show that the proposed route is equipped with such airway beacon lights and radio ranges (or equivalent facilities) as are necessary for safe air carrier operation.

[Amdt. 102, 6 F. R. 1159]

§ 40.122 *Airports.* Same as in § 40.37.

§ 40.123 *Public protection.* Same as in § 40.28.

§ 40.124 *Intermediate fields.* Same as in § 40.39.

§ 40.125 *Refueling facilities.* Same as in § 40.30.

§ 40.126 *Radio facilities.* Same as in § 40.116.

[Amdt. 89, 6 F. R. 251]

§ 40.127 *Weather reporting.* Same as in § 40.32.

ROUTE REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

§ 40.131 *Airway.* Same as § 40.46.

[Amdt. 102, 6 F. R. 1159]

§ 40.132 *Airports.* Same as in § 40.47.

§ 40.133 *Public protection.* Same as in § 40.28.

§ 40.134 *Intermediate fields.* Same as in § 40.29 for day operation, and as in § 40.39 for night operation.

§ 40.135 *Refueling facilities.* Same as in § 40.30.

§ 40.136 *Radio facilities.* Same as in § 40.31.

§ 40.137 *Weather reporting.* Same as in § 40.32.

AIRCRAFT REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.141 *If single-engine operation over land.* Same as in § 40.56.

§ 40.142 *If single-engine operation over water.* Same as in § 40.57.

§ 40.143 *If multiengine operation over land—(a) Qualification.* Applicant shall show aircraft of type and number necessary for safe operation. Applicant shall also show:

(1) That such aircraft to be used on the proposed route or part thereof are capable, with any one engine inoperative, of maintaining level flight with the authorized load for the route or part thereof at an altitude of at least 1,000 feet above the airport at each terminal and scheduled intermediate stop on the route or part thereof on which the aircraft will be operated; or

(2) Operating procedures which, in the opinion of the Administrator, will assure that such aircraft will be capable of effecting a safe landing at an airport or other suitable area in the event of the failure of any one engine at any point on the route on which such aircraft will be operated.

(b) *Engine rotation.* Same as in § 40.58 (b).

[Amdt. 29, 4 F. R. 4186, as amended by Amdt. 79, 5 F. R. 4261, Amdt. 40-10, 7 F. R. 2144, and Amdt. 40-3, 14 F. R. 2196]

§ 40.144 *If multiengine operation over water.* Same as in § 40.59.

§ 40.145 *Number of aircraft.* Applicant shall show certificated aircraft of a number sufficient to permit the maintenance of all schedules proposed, as provided for in § 40.13.

[Amdt. 40-7, 11 F. R. 5996]

§ 40.146 *Radio equipment.* Applicant shall show that each aircraft is equipped with a type certificated two-way radio telephone system having sufficient power to permit communication under normal operating conditions with at least one ground station used or to be used by the applicant on the route. Such system shall be capable of:

(a) Communication with other aircraft of the applicant in flight, and

(b) Satisfactorily receiving radio range signals and weather broadcasts. Such system shall also include a type certificated audio filter system with suitable switching arrangement to be used in connection with the reception of simultaneous range and voice broadcast if the airway or route to be traversed is equipped with simultaneous type radio range stations.

[Amdt. 89, 6 F. R. 251; as amended by Amdt. 40-5, 11 F. R. 5646]

§ 40.147 *Hangar facilities.* Same as in § 40.62.

§ 40.148 *Shop facilities.* Same as in § 40.63.

§ 40.149 *Inspection and overhaul organization and procedures.* Same as in § 40.64.

AIRCRAFT REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

§ 40.151 *If single-engine operation over land.* Applicant shall show aircraft of type and number necessary for safe operation, and in addition thereto, that the routes over which the proposed operation is to be conducted are deemed by the Administrator to have suitable landing terrain.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.152 *If single-engine operation over water.* Applicant shall show aircraft of type and number necessary

for safe operation. Applicant shall also show that the route to be flown over is such that the aircraft can, at all times, reach land deemed suitable by the Administrator for a safe landing in the event of complete power failure.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.153 *If multiengine operation over land.* Same as in § 40.143.

§ 40.154 *If multiengine operation over water.* Same as in § 40.59.

§ 40.155 *Number of aircraft.* Same as in § 40.145.

§ 40.156 *Radio equipment.* Same as in § 40.146.

[Amdt. 89, 6 F. R. 251]

§ 40.157 *Hangar facilities.* Same as in § 40.62.

§ 40.158 *Shop facilities.* Same as in § 40.63.

§ 40.159 *Inspection and overhaul organization and procedures.* Same as in § 40.64.

AIRCRAFT REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

§ 40.161 *If single-engine operation over land.* Same as in § 40.151.

§ 40.162 *If single-engine operation over water.* Same as in § 40.152.

§ 40.163 *If multiengine operation over land.* Same as in § 40.143.

§ 40.164 *If multiengine operation over water.* Same as in § 40.59.

§ 40.165 *Number of aircraft.* Same as in § 40.145.

§ 40.166 *Radio equipment.* Same as in § 40.79.

§ 40.167 *Hangar facilities.* Same as in § 40.62.

§ 40.168 *Shop facilities.* Same as in § 40.63.

§ 40.169 *Inspection and overhaul organization and procedures.* Same as in § 40.64.

AIRMEN REQUIREMENTS: VISUAL-CONTACT DAY OPERATION

§ 40.171 *Number.* Same as in § 40.86.

§ 40.172 *First pilots.* Applicant shall show prior to the issuance of the air carrier certificate that all persons employed to serve as first pilots for the air carrier meet the following minimum requirements for qualification as to aircraft and route competency:

(a) Each first pilot shall be possessed of at least a valid commercial pilot competency rating with specifications or ratings indicating competency to pilot aircraft of each type to be used by him in scheduled operation. Each first pilot shall also be possessed of a valid instrument rating, unless possessed of a valid air-line transport pilot competency rating.

(b) Same as § 40.87 (b).

(c) Same as § 40.87 (c).

[CAR, May 31, 1938, as amended by Amdt. 51, 5 F. R. 1838, Amdt. 40-6, 11 F. R. 5646, and Amdt. 40-3, 14 F. R. 2196]

§ 40.173 *Second pilots.* Applicant shall show that each person employed to serve as a second pilot for the air carrier is possessed of at least a valid commercial pilot competency rating and before serving as second pilot in any aircraft in scheduled air transportation service shall have demonstrated, to an air carrier inspector representing the Administrator or to a check pilot of the air carrier duly authorized by the Administrator, his ability to take-off and land such aircraft in which he is to serve by making at least three satisfactory take-offs and landings in each type of such aircraft.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.174 *Aircraft dispatchers.* Same as in § 40.89.

AIRMEN REQUIREMENTS: VISUAL-CONTACT NIGHT OPERATION

§ 40.176 *Number.* Same as in § 40.86.

§ 40.177 *First pilots.* Same as in § 40.172, except that each first pilot shall have logged at least 1,200 hours of certified flight time as pilot in command, and the trip required by § 40.172 (b) shall have been made between the hours of sunset and sunrise.

[CAR, May 31, 1938, as amended by Amdt. 40-3, 14 F. R. 2196]

§ 40.178 *Second pilots.* Same as in § 40.173 and, in addition, 6 months after the effective date of the regulations in this part (May 31, 1938), each applicant for or holder of an air carrier operating certificate will be required to show that each such person is possessed of a valid instrument rating, unless possessed of a valid air-line transport pilot competency rating.

§ 40.179 *Aircraft dispatchers.* Same as in § 40.89.

AIRMEN REQUIREMENTS: INSTRUMENT OR OVER-THE-TOP OPERATION

§ 40.181 *Number.* Same as in § 40.86.

§ 40.182 *First pilots.* Same as in § 40.172, except that each first pilot shall have logged at least 1,200 hours of certified flight time as pilot in command, and, in addition, applicant shall show that each first pilot, for whom instrument authorization is sought, has demonstrated to an air carrier inspector representing the Administrator or to a check pilot of the air carrier duly authorized by the Administrator, satisfactory capability with respect to the following:

(a) Familiarity with the aircraft, including demonstration of ability to maneuver such aircraft with the maximum authorized load for the route or part thereof; and, in addition, if the aircraft is multiengine, a demonstration of ability to maneuver such aircraft with said load, with any one engine fully throttled either:

(1) At an altitude equivalent to 1,000 feet above the highest part of the terrain on the proposed instrument course of the route or part thereof to be flown by the pilot in air carrier service, or

(2) At the one-engine-inoperative service ceiling.

(b) Familiarity with the route and with instruments, including demonstration of ability, under actual or simulated conditions, to fly such route solely by instruments.

(c) Familiarity with procedures, including demonstration of ability to accomplish a let-down-through by instruments, according to the procedure specified in the appropriate competency letter, at one station at least, on the route, in each type of aircraft to be used by the pilot in air carrier operation. Such demonstrations as to other stations as deemed necessary by the Administrator may be made to an air carrier inspector representing the Administrator, or to a check pilot of the air carrier duly authorized by the Administrator, under simulated conditions or by equivalent means approved by the Administrator.

[CAR, May 31, 1938, as amended by Amdt. 51, 5 F. R. 1838, and Amdt. 40-3, 14 F. R. 2196]

§ 40.183 *Second pilots.* Same as in § 40.88.

§ 40.184 *Aircraft dispatchers.* Same as in § 40.89.

MISCELLANEOUS REQUIREMENTS

§ 40.186 *Weather minimums.* Same as in § 40.101, giving consideration to the fact that no passengers are being carried in this operation and providing for the most rapid progress of the art of flying.

§ 40.187 *Air carrier operating skill.* Same as in § 40.102.

AIR CARRIER OPERATING CERTIFICATE

§ 40.191 *Application for and issuance of air carrier operating certificate.* (a) Application for an air carrier operating certificate shall be made upon the applicable forms prescribed and furnished by the Administrator.

(b) An air carrier operating certificate may be issued by the Administrator to an applicant after approval of application made and proof submitted in connection therewith, if the Administrator finds, after investigation, that such person is properly and adequately equipped and able to conduct a safe operation in accordance with the requirements of the act and the applicable rules, regulations, and standards prescribed thereunder for such operation.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.192 *Display.* The air carrier operating certificate shall be presented for inspection upon the request of any duly authorized representative of the Administrator or Board.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.193 *Duration.* An air carrier operating certificate shall be of indefinite duration unless canceled, suspended, or revoked.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.194 *Surrender.* Upon the cancellation, suspension, or revocation of an air carrier operating certificate, or part thereof, the holder shall, upon request, surrender such certificate, or part thereof, to any officer or employee of the Administrator.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.195 *Nontransferability.* An air carrier operating certificate is not transferable except with the written consent of the Administrator.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.196 *Inspection.* A duly authorized representative of the Administrator shall be permitted at any time and place to make such inspection or examination as may be deemed necessary to determine the operator's compliance with the requirements of the regulations in this subchapter and the Civil Aeronautics Act of 1938, as amended.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

§ 40.197 *Amendment.* Application by the air carrier to amend the air carrier operating certificate shall be made upon the applicable form prescribed and furnished by the Administrator.

[Amdts. 40-8, 40-9, 7 F. R. 1414]

DEFINITIONS

§ 40.201 *Definitions.* (a) As used in this part the words listed below shall be defined as follows:

[Amdt. 40-3, 14 F. R. 2196]

§ 40.202 *Category.* Category shall indicate a classification of aircraft such as airplanes, helicopter, glider, etc.

[Amdt. 40-3, 14 F. R. 2196]

§ 40.203 *Flight time.* Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight (block to block).

[Amdt. 40-3, 14 F. R. 2196]

§ 40.204 *Pilot in command.* Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

[Amdt. 40-3, 14 F. R. 2196]

§ 40.205 *Type.* Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

[Amdt. 40-3, 14 F. R. 2196]

PART 41—CERTIFICATION AND OPERATION RULES FOR SCHEDULED AIR CARRIER OPERATIONS OUTSIDE THE CONTINENTAL LIMITS OF THE UNITED STATES

CERTIFICATE

|-------|---|
| 41.23 | First-aid and emergency equipment. |
| 41.24 | Oxygen apparatus. |
| 41.25 | Instruments and equipment required for continuance of flight. |

Limitations

- | | |
|-------|--|
| 41.26 | Aircraft certification limitations. |
| 41.27 | Operating limitations upon airplanes certificated under transport category requirements. |
| 41.28 | General limitations. |
| 41.29 | Take-off limitations to provide for engine failure. |
| 41.30 | En route limitations. |
| 41.33 | Landing distance limitations. |
| 41.34 | Landing distance at alternate fields. |
| 41.35 | Definition of effective length of landing area. |

Maintenance

- | | |
|-------|---------------------------|
| 41.38 | Maintenance organization. |
| 41.39 | Alterations and repairs. |
| 41.40 | Inspection. |
| 41.41 | Maintenance manual. |
| 41.42 | Training program. |
| 41.43 | Records. |
| 41.44 | Cockpit check list. |

AIRMAN RULES

Pilot

- | | |
|-------|--|
| 41.48 | Certificate. |
| 41.49 | Number of pilots required. |
| 41.50 | Requirements for pilot route qualification. |
| 41.51 | Maintenance of pilot route qualification. |
| 41.52 | Maintenance of pilot technique. |
| 41.53 | Periodic flight checks and instruction. |
| 41.54 | Flight time limitations for aircraft having a crew of one or two pilots. |
| 41.55 | Flight time limitations for aircraft having two pilots and one additional flight crew member. |
| 41.56 | Flight time limitations for aircraft having three or more pilots and an additional flight crew member. |
| 41.57 | Flight time limitation for pilots not regularly assigned. |
| 41.58 | Deadhead transportation. |
| 41.59 | Other commercial flying. |
| 41.60 | Logging flight time. |
| 41.61 | Logging instrument flight time. |
| 41.62 | Pilots at controls. |
| 41.63 | Pilot in command rules. |
| 41.64 | Compliance with foreign air traffic rules and local airport rules. |
| 41.65 | Composition of flight crew. |

Flight Radio Operator

- | | |
|-------|--|
| 41.68 | Flight radio operator; when required. |
| 41.69 | Certificate. |
| 41.70 | Flight time limitations. |
| 41.71 | Other flight crew members to be qualified. |
| 41.72 | Qualification for duty. |

Flight Engineer

- | | |
|-------|--|
| 41.73 | Flight engineer; when required. |
| 41.74 | Certificate. |
| 41.75 | Qualification for duty. |
| 41.76 | Flight time limitations. |
| 41.77 | Other flight crew members to be qualified. |

Flight Navigator

- | | |
|-------|----------------------------------|
| 41.80 | Flight navigator; when required. |
| 41.81 | Flight time limitations. |
| 41.82 | Qualification for duty. |

Dispatcher

| 41.137 | Definitions. |
|--------|--------------|

AUTHORITY: §§ 41.0 to 41.137 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 602, 604, 52 Stat. 1007, 1008, 1010; 49 U. S. C. 551, 552, 554.

SOURCE: §§ 41.0 to 41.137 contained in Amendment 41-0, Civil Air Regulations, 10 F. R. 8528, except as noted following sections affected.

CROSS REFERENCE: For Special Air Regulation Serial No. SR-325, with respect to temporary authorization for scheduled air trans-

portation of cargo under Part 42, see Note 3 to Part 42 of this subchapter.

CERTIFICATE

§ 41.0 *General.* The regulations in this part are prescribed for scheduled air transportation operations conducted by air carriers between a place in any State of the United States, or the District of Columbia, and any place in a Territory or possession of the United States; or between any place in a Territory or possession and a place in any other Territory or possession of the United States; or between places in a Territory or possession, except the Philippine Islands; or between any place in the United States and any place outside thereof; or between any two places outside the United States.

§ 41.1 *Issuance.* An air carrier operating certificate prescribing the type of operation, the routes over which such operation may be conducted, the airports which may be used, and such other specifications and restrictions as may be reasonably required in the interest of safety shall be issued by the Administrator to an applicant who demonstrates that he is capable of conducting the proposed operations in accordance with the applicable regulations specified in this part.

(a) *Alaskan air carriers.* Whenever, upon investigation, the Administrator finds that the general standards of safety required for air carrier operations within the Territory of Alaska require or permit a deviation from any specific requirement of this part for a particular operation or a class of operations for which an application for an air carrier operating certificate has been made, he may issue an air carrier operating certificate with appropriate changes, specifying therein the period during which such deviations may be permitted. The Administrator shall promptly notify the Board of any deviations included in the air carrier operating certificates and the reasons therefor.

[Amdt. 41-0, 10 F. R. 8528 as amended by Amdt. 41-7, 12 F. R. 4932, and Amdt. 41-2, 13 F. R. 6554]

§ 41.2 *Compliance.* All operations shall be conducted in accordance with the specifications of the air carrier operating certificate and the rules contained in this part.

§ 41.3 *Duration.* An air carrier operating certificate will continue in effect until canceled, suspended, or revoked, after which it shall be surrendered to any officer or employee of the Administrator upon request.

§ 41.4 *Display.* The air carrier operating certificate shall be available at the appropriate operations office for inspection by any authorized representative of the Administrator or Board.

§ 41.5 *Inspection.* An authorized representative of the Administrator shall be permitted at any time and place to make inspections or examinations to determine the operator's compliance with the appropriate requirements of the regulations in this subchapter and the Civil Aeronautics Act of 1938, as amended.

PASSENGER OPERATION RULES

ROUTE REQUIREMENTS

§ 41.10 *Airport spacing.* In the case of operations employing aircraft having two engines, airports adequate for the aircraft used shall be located so that the aircraft, when flying along the route, will at no time be at a greater distance therefrom than 45 minutes flying at normal cruising speed, except where the Administrator finds that because of the character of the terrain, the type of operation, and the performance of aircraft used adequate safety will be provided with airports spaced at greater distances.

§ 41.11 *Communications facilities.* A two-way ground-to-aircraft radio communications system shall be available at such points as are necessary to insure adequate communication between plane and ground over the entire route.

§ 41.12 *Weather reporting services.* Weather reporting services shall be available at such points along the route as are necessary to insure sufficient weather reports prepared from observations made and released by a source acceptable to the Administrator.

§ 41.13 *Navigational facilities—(a) Short distance operation.* Except in the case of a day contact operation where the characteristics of the terrain are such that navigation can be accomplished by reference to landmarks, each route shall be equipped with radio navigational facilities so located as to permit navigation by such facilities over the entire route. For instrument operation a facility shall be so located with respect to each scheduled stop and required alternate airport as to provide adequate means for making an instrument approach. In day instrument operation such a facility is not required at an alternate used only when the weather conditions are as good as or better than: broken clouds, ceiling 1,000 feet, visibility 2 miles, with conditions stable or improving.

(b) *Long distance operation.* Each route shall be equipped with radio navigational facilities so located as to permit the obtaining of reliable radio bearings when within 200 miles of any regular or approved alternate airport and a facility shall be so located with respect to each such airport as to provide adequate means for making an instrument approach: *Provided,* That the Administrator, at particular airports, may approve facilities which provide less coverage than that required in this section if he finds that adequate safety is provided.

§ 41.14 *Airport lighting facilities.* For night operation each scheduled stop and required alternate airport shall be equipped with adequate lighting facilities.

AIRCRAFT REQUIREMENTS

§ 41.20 *General.* (a) Aircraft shall be certificated and equipped in accordance with the airworthiness requirements of this subchapter applicable to the type of operation conducted.

(b) Airplanes not certificated under the transport category requirements

shall have such characteristics as to permit safe operation over the routes on which such airplanes will be operated.

(c) Land aircraft operated over water beyond gliding distance from shore without the aid of power shall be equipped with retractable landing gear.

(d) Multiengine airplanes shall be so equipped that engine rotation may be promptly stopped during flight.

(e) Operations which do not comply with the requirements of this part will be permitted to continue for the duration of the war and 12 months thereafter if the Administrator finds that such continuation is necessary to the maintenance of an established service and that it will create no undue hazard under the particular conditions existing.

(f) Irrespective of the basis for certification, all aircraft possessing engine(s) rated at more than 600 h. p. (each) for maximum continuous operation shall comply with the following, except that, if the Administrator finds that in particular types of existing aircraft literal compliance with specific items of these requirements might be extremely difficult of accomplishment and that such compliance would not contribute materially to the objective sought, he may accept such measures of compliance as he finds will effectively accomplish the basic objectives of this part:

(1) Sections 4b.58 and 4b.447 (a) of this subchapter.

(2) At the first major fuselage overhaul subsequent to May 1, 1947, but in any case not later than November 1, 1948, §§ 4b.442, 4b.445, 4b.447 (b), (c), (d), 4b.448 (b), and 4b.448 (c) of this subchapter.

(3) At the first major wing centersection overhaul subsequent to May 1, 1947, but in any case not later than November 1, 1948, §§ 4b.478, 4b.484, 4b.503, 4b.516 through 4b.518, 4b.556, 4b.557, 4b.560, 4b.561, 4b.586 and 4b.621 through 4b.624, 4b.651 through 4b.655, 4b.661 (a) and (c), and 4b.662 through 4b.676 of this subchapter.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 11 F. R. 11354, SR-385, 12 F. R. 408, Amdt. 41-18, 13 F. R. 1898, Amdt. 41-3, 14 F. R. 2196]

NOTE: Special Regulation Serial No. SR-329, effective Nov. 1, 1948, 13 F. R. 6537, provides as follows:

Notwithstanding the provisions of §§ 41.20, 42.10, and 61.30 of this subchapter establishing certain fire prevention standards requiring compliance on or before November 1, 1948, no air carrier shall be held in violation of these requirements prior to December 1, 1948. Upon application by the air carrier prior to December 1, 1948, the Administrator may further authorize an air carrier to operate without full compliance with these requirements where the Administrator finds that the air carrier has made a diligent effort to meet these requirements by November 1, 1948, and that the air carrier has shown that it will comply with these requirements by a date certain: *Provided,* That no air carrier shall be required to install or maintain smoke or fire detectors, other than heat detectors, unless otherwise directed by the Administrator.

Instruments and Equipment

§ 41.21 *Radio equipment; short distance operation.* (a) For day contact

operations over routes on which navigation can be accomplished by visual reference to landmarks, each aircraft shall be equipped with such radio facilities as are necessary to accomplish the following:

(1) Transmit communications and meteorological information to at least one ground station from any point on the route and transmit, from a distance of not less than 25 miles, to airport traffic control towers located at airports approved for the route;

(2) Receive communications at any point on the route;

(3) By either of two independent means, receive meteorological information at any point on the route and receive instructions from airport traffic control towers located at airports approved for the route.

If appropriate, one of the means provided for compliance with subparagraph (3) of this paragraph may be employed for compliance with subparagraph (2).

(b) For day contact operations over routes on which navigation cannot be accomplished by visual reference to landmarks and for night contact, day or night instrument operations, each aircraft shall be equipped with such radio facilities as are necessary to accomplish the following:

(1) Transmit communications and meteorological information to at least one ground station from any point on the route and transmit, from a distance of not less than 25 miles, to airport traffic control towers located at airports approved for the route;

(2) Receive communications at any point on the route;

(3) By either of two independent means, receive meteorological information at any point on the route and receive instructions from airport traffic control towers located at airports approved for the route;

(4) By either of two independent means, satisfactorily receive radio navigational signals from any radio aid to navigation required by § 41.13 (a).

If appropriate, one of the means provided for compliance with subparagraph (3) of this paragraph may be employed for compliance with subparagraph (2) of this paragraph or the means provided for compliance with subparagraph (4) of this paragraph may be employed for compliance with subparagraph (3) of this paragraph.

§ 41.22 *Radio equipment; long distance operation.* Each aircraft shall be equipped with such radio facilities as are necessary to accomplish the following:

(a) By either of two independent means, transmit communications and meteorological information to at least one ground station from any point on the route and transmit, from a distance of not less than 25 miles, to airport traffic control towers located at airports approved for the route;

(b) By either of two independent means, receive communications at any point on the route;

(c) By either of two independent means, receive meteorological information at any point on the route and receive instructions from airport traffic

control towers located at airports approved for the route;

(d) By either of two independent means, satisfactorily receive radio navigational signals from any radio aid to navigation required by § 41.13 (b).

If appropriate, equipment provided for compliance with paragraph (c) of this section may be employed for compliance with either paragraph (b) or this paragraph.

§ 41.23 *First-aid and emergency equipment.* Each aircraft shall be equipped with a conveniently accessible first-aid kit adequate for the type of operation involved. Aircraft scheduled over routes requiring flights for long distances over uninhabited terrain must carry such additional emergency equipment as the Administrator designates for the particular operation involved. All aircraft operated over water shall be equipped with life preservers or flotation devices readily available for each person aboard and with a Very pistol or equivalent signal equipment, except that this requirement will not apply when such operations consist only of landings, take-offs, or flights for short distances over water and the Administrator finds in each case that such equipment is not necessary. In addition, all aircraft operated for long distances over water shall be equipped with a sufficient number of life rafts to accommodate adequately all occupants and such additional emergency equipment as may be required by the Administrator.

§ 41.24 *Oxygen apparatus.* (a) Aircraft not having pressurized cabins and operated at an altitude exceeding 10,000 feet above sea level continuously for more than 30 minutes or at an altitude exceeding 12,000 feet above sea level for any length of time shall be equipped with effective oxygen apparatus and an adequate supply of oxygen available for the use of the operating crew. Such aircraft shall also be equipped with an adequate separate supply of oxygen available for the use of passengers when operated at an altitude exceeding 12,000 feet above sea level.

(b) Unless oxygen is supplied in accordance with paragraph (a) of this section, aircraft having pressurized cabins shall not be operated with a pressure within the cabin less than that corresponding to a pressure altitude of 10,000 feet. Aircraft having pressurized cabins and operated at altitudes in excess of 18,000 feet above sea level shall be equipped with an adequate emergency supply of oxygen available for the use of the flight crew.

§ 41.25 *Instruments and equipment required for continuance of flight.* If any required instrument or item of equipment in an aircraft becomes unserviceable in flight, a landing must be made at either the nearest suitable landing area or at the next point of intended landing whichever, in the opinion of the pilot, is the safer procedure, unless the equipment specified in this section for the type of operation indicated is in serviceable condition, in which case the flight may continue as scheduled to the nearest

point where repairs or replacements can be made.

The items listed in this section are required for all types of operation unless otherwise specified:

(a) One air-speed indicator and one sensitive type altimeter (contact operation); two air-speed indicators and two sensitive type altimeters (instrument operation);

(b) One approved compass;

(c) A tachometer for one engine, one fuel pressure gauge with warning indicator, one oil pressure gauge with warning indicator, and one oil temperature or cylinder temperature gauge for each engine;

(d) A manifold pressure gauge for one engine;

(e) In addition to fire detecting and fire extinguishing equipment necessitated as a result of compliance with § 41.20 (f) (2) and (3), a minimum of two hand fire extinguishers of an approved type with an approved extinguishing agent, one of which installed in the crew compartment, others readily accessible to the passengers. Such additional hand fire extinguishers as the Administrator finds necessary for compliance with § 41.20 (f) (2).

(f) One landing gear position indicator or equivalent facility, if equipment includes a retractable landing gear;

(g) One or more storage batteries or other source of electrical supply sufficient to operate all radio and electrical equipment necessary for the flight;

(h) (1) Two of the following three units of radio equipment:

(i) One transmitter for two-way communication;

(ii) One receiver for two-way communication;

(iii) One receiver capable of receiving navigational signals.

(2) In addition to the instruments named in subparagraph (1) of this paragraph, one of the radio navigational systems required by § 41.21 (b), if navigational facilities on the route are required by § 41.13.

(i) All radio equipment required by these regulations (night and instrument operation);

(j) Forward position and tail lights, two landing lights, one set of instrument lights, and two landing flares each rated for at least 3-minute duration (night operation);

(k) Fuel quantity indicators indicating the amount of fuel in each tank to be used for the remainder of the flight (night and instrument operation);

(l) An electrically heated pitot tube serving each pilot's air-speed indicator (night and instrument operation);

(m) One gyro rate-of-turn indicator combined with a bank indicator, one artificial horizon indicator, and one gyro direction indicator (night and instrument operation);

(n) One outside air temperature gauge with indicating dial in the pilot compartment and one carburetor air temperature indicator or equivalent approved device (night and instrument operation);

(o) If vacuum system is used, one vacuum gauge with warning indicator on the instrument panel installed in

lines leading to the rate-of-turn and artificial horizon indicators and the gyro direction indicator (night and instrument operation).

(p) One clock with sweep second hand (night and instrument operation).

(q) Three spare fuses of each capacity, or 25 percent of the number of each capacity, whichever is the greater.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 11 F. R. 11354]

Limitations

§ 41.26 *Aircraft certification limitations.* (a) Aircraft certificated as a basic type after June 30, 1942, shall be certificated in accordance with Part 4b of this subchapter, or the transport category requirements of Part 4a of this subchapter, and shall meet the requirements of § 41.27 over each route to be flown.

(b) Aircraft certificated as a basic type prior to June 30, 1942, shall either:

(1) Retain their present airworthiness certification status and shall be operated in accordance with such operating limitations as the Administrator finds will provide a safe relation between the performance of the aircraft and the dimensions of airports and terrain; or

(2) Qualify by showing compliance with either the performance requirements contained in §§ 4a.737-T through 4a.750-T, or the requirements contained in Part 4b of this subchapter, and when so qualified shall meet the requirements of § 41.27 over each route to be flown: *Provided*, That should any type be so qualified all aircraft of any one operator of the same or related types shall be similarly qualified and operated.

(c) Aircraft used after December 31, 1953, shall comply with all of the requirements of Part 4b of this subchapter, or the transport category requirements of Part 4a of this subchapter, and shall meet the requirements of § 41.27 over each route to be flown.

[Amdt. 41-16, 13 F. R. 747, Amdt. 41-3, 14 F. R. 2196]

§ 41.27 *Operating limitations upon airplanes certificated under transport category requirements.* When operating any airplane certificated in accordance with the provisions of §§ 4b.71 to 4b.171 of this subchapter, or of §§ 4a.737-T through 4a.750-T of this subchapter, the provisions of §§ 41.28-41.35 shall apply unless deviations therefrom are specifically authorized by the Administrator when he finds that, due to a peculiarity of a specific case, such application is unnecessary for safety.

In determining compliance with these provisions the data obtained in testing the airplane for type certification may be applied, by interpolation or by computation of the effects of changes in specific variables, to conditions differing from those for which specific tests were made, where such interpolations or computations will give results substantially equalling in accuracy the results of a direct test.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-2, 11 F. R. 5996]

§ 41.28 *General limitations.* (a) Airplanes shall be operated only from airports at altitudes within the altitude range for which maximum take-off

weights have been determined and set forth in the airplane operating manual and shall be dispatched only to airports of intended destination, or to airports specified as alternates, which are at altitudes within the range for which maximum landing weights have been determined and set forth in the airplane operating manual.

(b) The weight of an airplane at take-off shall not exceed the certificated maximum take-off weight for the altitude of the airport from which the take-off is made.

(c) The weight at take-off shall be such that, allowing for the consumption of the amount of fuel and oil which would normally be consumed in flight to the intended destination, the weight on arrival at the destination will not exceed the certificated maximum landing weight for the altitude of the airport of intended destination.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-2, 11 F. R. 5997]

§ 41.29 *Take-off limitations to provide for engine failure.* Take-off shall be made only from such airports, in such directions, and under such weight limitations that the following conditions are fulfilled as shown by the performance data determined under § 4a.747-T or § 4b.91 of this chapter and set forth in the airplane operating manual:

(a) From any point on the take-off up to the time of attaining the critical-engine-failure speed set forth in the airplane operating manual it shall be possible to bring the airplane to a safe stop within the landing area, as shown by the accelerate-and-stop distance data.

(b) If the critical engine should fail at any instant after the airplane attains the critical-engine-failure speed, it shall be possible to proceed with the take-off and attain a height of 50 feet, as indicated by the take-off path data, before passing over the end of the take-off area. Thereafter it must be possible to clear all obstacles either by at least 50 feet vertically, as shown by the take-off path data, or by at least 200 feet horizontally within the airport boundaries and 300 feet horizontally after passing beyond such boundaries.

In determining the allowable deviation of the flight path in order to avoid obstacles, it is assumed that the airplane is not banked before reaching a height of 50 feet, as shown by the take-off path data, and that the maximum bank thereafter does not exceed 15°.

(c) In applying the requirements of paragraphs (a) and (b) of this section correction shall be made for any gradient of the take-off surface. Take-off data based on still air may be corrected to allow for the effect of a favorable wind which is equal to not more than 50 percent of the component along the take-off runway due to the reported wind condition.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-2, 11 F. R. 5997, Amdt. 41-9, 12 F. R. 5865]

NOTE: Special Regulation Serial No. 397, Aug. 21, 1947, effective Sept. 6, 1947, 12 F. R. 5848, and subsequently made effective Oct. 15, 1947, by Special Regulation Serial 397A, 12 F. R. 6069, provides in part as follows:

For the individual model airplanes enumerated below, the take-off weight or the minimum length of runway, or both, and the critical-engine-failure speed, V_1 , shall be further modified to include the following corrections. Correction values shall be applied by adding them algebraically, noting temperatures above the standard as positive, and noting those below the standard as negative.

Airplane	Correction to weight and/or runway length (use either column or combinations)		Correction to V_1
	Pounds/°F.	Feet/°F.	
Lockheed 649, 749.....	-90	+9	-.10
Lockheed 49-46.....	-65	+6	-.07
C-54, DC-4.....	-80	+10	0
DC-6.....	-70	+10	0
Boeing SA-307B-1.....	-50	+9	-.08
Martin 202.....			
Temp. above Std.....	-300	+12.5	0
Temp. below Std.....	-110	+15	0

§ 41.30 *En route limitations—(a) All airplanes; all engines operating.* Airplanes shall be dispatched only at such take-off weights that, in proceeding along the intended track with the weight of the airplane progressively reduced by the anticipated consumption of fuel and oil, the rate of climb with all engines operating (as set forth in the airplane operating manual), shall be, in feet per minute, $6 V_{so}$ at an altitude at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track; except that this requirement need not apply to airplanes certificated under the performance requirements of the regulations issued prior to November 9, 1945 (Part 4a of this subchapter).

(b) *All airplanes; one engine inoperative.* Airplanes shall be dispatched only at such take-off weights that in proceeding along the intended track with the weight of the airplane progressively reduced by the anticipated consumption of fuel and oil, the rate of climb with one engine inoperative (as set forth in the airplane operating manual), shall be, in feet per minute, $0.02 V_{so}^2$ for airplanes having maximum take-off weights up to 40,000 pounds, increasing linearly to $0.04 V_{so}^2$ at 60,000 pounds, and $0.04 V_{so}^2$ for maximum take-off weights above 60,000 pounds at an altitude at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track; except that for airplanes certificated under the performance requirements of the regulations issued prior to November 9, 1945 (Part 4a of this subchapter) the above rate-of-climb value may be $0.02 V_{so}^2$ irrespective of maximum take-off weight.

(c) *Airplanes with four or more engines; two engines inoperative.* If from any point along the track flown, more than 90 minutes at "all-engines-operating" cruising speed is required to reach an available landing area where the provisions of § 41.33 as modified by § 41.34 can be met at the airplane weight estimated to exist upon arrival there, an aircraft with four or more engines shall not be dispatched over such

track unless its weight is such as to permit a rate of climb with two engines inoperative (as set forth in the airplane operating manual), in feet per minute, of $0.01 V_{SO}^2$ at an altitude of at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles on either side of the intended track to the landing area, or at 5,000 feet, whichever is higher; except that this requirement need not apply to airplanes certificated under the performance requirements of the regulations issued prior to November 9, 1945 (Part 4a of this subchapter). This specified rate of climb shall correspond to the airplane's weight attained at the moment of failure of the second engine (assumed to occur 90 minutes from time of departure), or to the weight which may be attained by dumping fuel at the moment of failure of the second engine, provided that sufficient fuel is retained aboard the airplane to reach a point 1,000 feet directly above the landing area.

(d) *Special air navigation facilities.* Where special air navigation facilities provide for reliable and accurate identification of high ground or obstruction extending for less than 20 miles along the track, the lateral distance of 10 miles specified in § 41.30 (a), (b), (c) may be reduced to 5 miles.

[Amdt. 41-2, 11 F. R. 5997]

§ 41.33. *Landing distance limitations.* (a) An airplane shall be dispatched only under such conditions that it would be possible, as shown by the still-air landing data obtained in § 4b.111 of this subchapter, or § 4a.750-T of this subchapter and set forth in the airplane operating manual, at a weight corresponding to the maximum weight expected to exist at the time of arrival at the airport of intended destination, and under standard air conditions for the altitude of such airport, to bring the airplane to rest from a point 50 feet directly above the intersection of the obstruction clearance line (as defined in § 41.35) and the landing surface, within a total distance not in excess of 60 percent of the effective length of the landing area (as defined in § 41.35) most suitable for landing in still air.

(b) For every anticipated condition of wind velocity and direction and the corresponding landing direction required at the airport of intended destination by the ground handling characteristics of the airplane type involved, the ratio of landing distance to effective length of landing area shall not be greater than that as specified in paragraph (a) of this section, after allowing for the effect on the landing path and roll of not more than 50 percent of the favorable wind component due to a particular wind condition.

(c) If the requirement of paragraph (a) of this section can be met, but the requirement of paragraph (b) of this section cannot be fully met, at an airport of intended destination, a flight to such airport may be dispatched if at least one approved alternate airport is designated in the flight plan at which the require-

ments of paragraphs (a) and (b) of this section, as modified by § 41.34, are met.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-2, 11 F. R. 5997]

§ 41.34. *Landing distance at alternate fields.* The conditions of § 41.35 will apply with respect to alternate airports specified in the flight plan, except that in the case of alternate airports the landing distance as defined in that section shall not exceed 70 percent of the effective length of the landing area.

§ 41.35. *Definition of effective length of landing area.* The effective length of the landing area is the distance from the point where the obstruction clearance line, as defined below, intersects the landing surface to the far end of the landing area.

The obstruction clearance line is a line drawn tangent to or clearing all obstructions showing in a profile of the approach area as defined below. The obstruction clearance line is further limited by having a slope to the horizontal of 1:20 as it approaches the landing area.

The approach area, as used in this section, shall be an area symmetrical about a center line coinciding with and prolonging the center line of the runway, except that where there is a multiplicity of parallel runways or a large area continuously available for landing, the center line of the approach area shall coincide with the most probable landing path for instrument approaches. The approach area shall be considered as extending longitudinally from the landing area out to the most remote obstacle touched by the obstruction clearance line, assuming the center line of the approach area in plan view to be straight for at least 1,500 feet from the intersection of the obstruction clearance line with the landing surface and thereafter continuing in a path consistent with the instrument approach procedures for the runway in question, or, where such procedures are not specified, consistent with turns of at least 4,000 feet in radius; and as extending laterally to a distance of 200 feet on either side of its center line at the point of intersection of the obstruction clearance line with the landing surface, with this distance increasing uniformly to 500 feet on either side of the center line of the area at a longitudinal distance of 1,500 feet from the intersection of the obstruction clearance line with the landing surface, and maintaining a distance of 500 feet from the center line thereafter.

[Amdt. 41-0, 10 F. R. 8528, as amended by 41-2, 11 F. R. 10650]

Maintenance

§ 41.38. *Maintenance organization.* The air carrier is responsible for the continuous airworthiness of all aircraft, engines, propellers, and appliances. Unless maintenance is performed by another agency under a contract approved by the Administrator, it is responsible for maintaining adequate maintenance facilities, the adequacy and competence of maintenance personnel, and for the preparation of such maintenance reports as are required by the Administrator.

§ 41.39. *Alterations and repairs.* Aircraft, engines, propellers, and appliances must be altered or repaired only in conformity with the procedures and, insofar as they apply, the methods provided for in Part 18 of this subchapter. Reports of such alterations or repairs must be submitted promptly to the Administrator.

§ 41.40. *Inspection.* The air carrier shall maintain an inspection organization which is responsible for determining that all maintenance conforms to at least the minimum standards prescribed by the Administrator as to workmanship, methods employed, and materials used. Each inspector must hold a valid mechanic certificate and rating for the type of inspection involved.

§ 41.41. *Maintenance manual.* The air carrier shall prepare and maintain a manual for the use and guidance of maintenance personnel which contains full information pertaining to the repair and service of flight equipment and clearly outlines the responsibilities of maintenance personnel. It must be in a form approved by the Administrator and copies furnished to all persons designated by the Administrator or Board. All copies in the hands of designated company personnel must be kept up to date.

(a) *Changes.* The extension of any overhaul, check, or inspection period must have the written approval of the Administrator. Other changes in the maintenance manual may be made without the prior approval of the Administrator, if such changes are not inconsistent with any Federal regulation, the air carrier operating certificate, or safe maintenance practice.

§ 41.42. *Training program.* The air carrier must provide for the proper and periodic instruction of all maintenance personnel, particularly in connection with the introduction into service of new or unfamiliar equipment.

§ 41.43. *Records.* Current records shall be kept of the total time in service, the time since last overhaul, and the time since last inspection on all aircraft components, engines, propellers, and where practicable, on instruments, equipment, and accessories.

§ 41.44. *Cockpit check list.* (a) The air carrier shall provide for each type aircraft a cockpit check list, approved by the Administrator, adapted to each operation in which the aircraft is to be utilized. An approved check list shall be installed in a readily accessible location in the cockpit of each aircraft and shall be appropriately used by the flight crew for each flight.

(b) The cockpit check list shall include procedures prior to starting engines, prior to take-off, prior to landing, and for power-plant emergencies.

[Amdt. 41-20, 13 F. R. 2159, as amended by Amdt. 41-3, 14 F. R. 2196]

AIRMAN RULES

Pilot

§ 41.48. *Certificate.* (a) Any pilot serving as pilot in command shall hold a

valid air-line transport pilot certificate and a rating for the aircraft in which he is to serve.

(b) Any pilot serving as copilot in an aircraft requiring two pilots shall hold at least a commercial pilot certificate and instrument rating and must have demonstrated to an air carrier inspector of the Administrator, or to an authorized check pilot of the air carrier, his ability to take off and land aircraft in which he is to serve.

(c) Any pilot serving as copilot in an aircraft requiring three or more pilots shall meet the requirements of paragraph (a) of this section: *Provided*, That until June 1, 1946, any pilot may serve as copilot in an aircraft requiring three or more pilots, if he holds at least a commercial pilot certificate and instrument rating and has demonstrated to an air carrier inspector of the Administrator or to an authorized check pilot of the air carrier his ability to take off and land aircraft in which he is to serve.

(d) Any pilot serving in a pilot capacity other than as pilot in command or copilot shall meet the requirements of paragraph (b) of this section.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-2, 10 F. R. 11227, Amdt. 41-3, 11 F. R. 3158, Amdt. 41-3, 14 F. R. 2196]

§ 41.49 Number of pilots required. The number of pilots required shall be sufficient to provide adequate safety. The type of aircraft used, the type of operation involved, and the duration of flights between points where flight crews are changed shall be the basis for making this determination.

§ 41.50 Requirements for pilot route qualification. A pilot qualifying on any route must be certified by a check pilot as qualified for the route and shall have accomplished at least the applicable procedures prescribed below:

(a) A pilot who has served as pilot in command for less than 1,000 hours shall have made, within the preceding 12 calendar months, 4 one-way trips over the route as pilot without passengers or as copilot with or without passengers. One of the above trips must have been completed within the preceding 60 days, and the pilot qualifying must have been accompanied on this trip by a check pilot.

(b) A pilot in command who has served as such on any route or routes for at least 1,000 hours, in order to qualify for any other route, shall have made, within the preceding 12 calendar months, 2 one-way trips as pilot without passengers or as copilot with or without passengers. One of the above trips must have been completed within the preceding 60 days, and the pilot qualifying must have been accompanied on this trip by a check pilot.

(c) In complying with the requirements of paragraphs (a) and (b) of this section, the qualifying pilot shall have performed in flight, under actual or simulated instrument conditions, all of the approved instrument approach procedures at each regular, provisional, and refueling and holding airport approved for the route. In the case of airports used only as alternates, the pilot may

demonstrate his ability by other means approved by the Administrator.

(d) In the case of minor extensions or modifications of existing routes the provisions of paragraphs (a) and (b) of this section will not apply, unless found necessary by the Administrator in the interest of safety.

(e) In the case of new regular, provisional, or refueling and holding airports approved for a route, a pilot in command currently qualified for the route need not be required to perform the approach procedures specified in paragraph (c) of this section if the Administrator finds in each case that such procedure is unnecessary in the interest of safety.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.51 Maintenance of pilot route qualification. A pilot in command shall not serve as such over a particular route unless he has either:

(a) Made at least one one-way trip over the route as pilot in command or copilot within the preceding 12 calendar months, or

(b) After an absence from the route of more than 12 consecutive months, requalified in accordance with the appropriate provisions of § 41.50.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.52 Maintenance of pilot technique. If within any 90-day period a pilot in command or copilot has not made at least three take-offs and landings in aircraft of a particular type, such person shall not thereafter serve as a pilot in command or copilot in aircraft of that type in scheduled air transportation without having made at least three take-offs and landings in such aircraft with not less than one-half the maximum useful load. If he is to serve in air transportation at night at least one of the three take-offs and landings specified above must have been made at night.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.53 Periodic flight checks and instruction. Each air carrier must provide a sufficient number of check pilots to insure that each pilot in command employed continues to meet the minimum requirements both with regard to route competency and technique. Each of these checks must be accomplished twice each year at intervals of not less than four months. Periodic instruction must be given all pilots. In the case of pilots in command, instruction must include the obtaining of optimum performance under simulated maximum authorized weight conditions with one engine inoperative and instrument approach procedures and landings under the same conditions in the type aircraft in which such pilots serve in scheduled air transportation. In the case of all pilots other than pilots in command, instruction must include familiarization with the operations manual, with the types of equipment used, and with the duties of a copilot.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.54 Flight time limitations for aircraft having a crew of one or two pilots. (a) A pilot may be scheduled to fly 8 hours or less during any 24 consecutive hours without a rest period during such 8 hours. If a pilot is scheduled to fly in excess of 8 hours during any 24 consecutive hours, he shall be given an intervening rest period at or before the termination of 8 scheduled hours of flight duty. Such rest period must equal at least twice the number of hours flown since the last preceding rest period and in no case will such rest period be less than 8 hours. During such rest period the pilot must be relieved of all duty with the air carrier.

(b) When a pilot has flown in excess of 8 hours during any 24 consecutive hours he must receive at least 18 hours of rest before being assigned any duty with the air carrier.

(c) A pilot shall not fly in excess of 32 hours during any 7 consecutive days. Relief from all duty for not less than 24 consecutive hours must be provided for and given to a pilot at least once during any 7 consecutive days.

(d) A pilot shall not fly as a member of the crew more than 100 hours during any one month: *Provided*, That the Administrator is authorized, during the present war and until 6 months after the termination thereof, to permit the maximum of 100 hours to be exceeded to the extent necessary to complete a particular flight for military purposes.

(e) A pilot shall not fly as a member of the crew more than 1,000 hours in any 12-month period: *Provided*, That this limitation will not be effective during the present war and until 6 months after the termination thereof, and that during this period the maximum flying hours permitted in any 12-month period will be controlled by the provisions of paragraph (d) of this section.

§ 41.55 Flight time limitations for aircraft having two pilots and one additional flight crew member. (a) A pilot may not be scheduled to fly a total of more than 12 hours during any 24 consecutive hours.

(b) When a pilot has flown 20 hours or more during any 48 consecutive hours, or 24 hours or more during any 72 consecutive hours, he must receive at least 18 hours of rest before being assigned to any duty with the air carrier. In any case each pilot shall be relieved from all duty for not less than 24 consecutive hours during any 7 consecutive days.

(c) A pilot shall not fly as a member of the flight crew more than 120 hours in any 30 consecutive days or 300 hours in any 90 consecutive days: *Provided*, That the Administrator is authorized, during the present war and until 6 months after the termination thereof, to permit the above maximums of 120 or 300 hours to be exceeded to the extent necessary to complete a particular flight for military purposes.

(d) A pilot shall not fly as a member of the flight crew more than 1,000 hours in any 12-month period: *Provided*, That this limitation will not be effective during the present war and until 6 months after the termination thereof and that

during this period a maximum of 1,200 flying hours will be permitted.

NOTE: Interpretation 1, 14 F. R. 1409, provides in part as follows:

Minimum crew complement; flight radio operators. We have been asked for an interpretation of the effect of Civil Air Regulations Amendment 41-1, dated October 5, 1948, on the minimum number of flight radio operators required on a scheduled flight of over 12 hours from airport to airport, where radiotelegraphy is necessary for communication with ground stations over a route segment of the flight which is less than 12 hours in length.

Section 41.70 of the Civil Air Regulations provide that, "when one flight radio operator is required the flight-time limitations prescribed in § 41.55 apply. When two or more flight radio operators are required, the flight-time limitations of § 41.56 apply." Section 41.55 states that where a crew consists of two pilots and an additional flight crew member, a "pilot may not be scheduled to fly more than 12 hours during any 24 consecutive hours." Since aircraft with which the regulation is concerned require two pilots at the controls at practically all times, the phrase "scheduled to fly" as used in this section does not necessitate precise definition with respect to the flight time of pilots since they are on duty throughout the flight. However, the expression is ambiguous when applied to radio operators whose duty watch, from a safety standpoint, need not in all instances be continuous from airport to airport while the aircraft is in the air. As applied to such airmen the term "to fly" when used as part of the phrase "scheduled to fly," may be interpreted in two possible ways—it may mean the entire time the aircraft is in the air, or it may mean the time the radio operator is on flight duty on the aircraft.

In dealing with this problem it is necessary to bear in mind that the Board's power over maximum hours of service of airmen derives from section 601 (a) of the Civil Aeronautics Act and relates solely to promoting safety of flight in air commerce. It is evident that the Board does not consider that an airman's being in the air for more than 12 hours creates a hazardous condition in and of itself, for exactly such a situation is contemplated in § 41.56 with respect to pilots. In effect, what is required by that section is that when the flight is to be of more than 12 hours' duration, provision be made for a relief pilot to permit the captain and first officer to be relieved from time to time of the strain of a continuous flight watch. The same principle is applicable to radio operators. Where the radio operator's flight watch is scheduled for more than 12 hours in a given 24, it is apparent that a second operator must be carried to relieve the first. However, what is essential is that after 12 hours of duty the radio operator be relieved, not that he be relieved by another operator, and consequently, if such relief is afforded by reason of the fact that the radio operator's services are not required for the operation of the aircraft for more than 12 hours, the same safety standard would appear to have been met.

Prior to the adoption of Amendment 41-1 on October 5, 1948, which specifically defined what was intended by "route segment," it may not have been clear in all cases when a radio operator was required to be on flight duty under the regulation. However, since the adoption of § 41.137 (g), the Administrator is permitted to specify the exact limits of a route segment, which may be considerably more confined than the route between the airports of take-off and landing for the flight. Thus, under the regulations, the time scheduled over the route segment or segments for which the Administrator has determined radio telegraphy is necessary rep-

resents the minimum on-duty time for which a flight radio operator is required. If the air carrier desires to maintain a radio flight watch beyond the minimum time thus prescribed or to utilize the services of the airmen in some other certificated capacity on the flight, of course, the time so spent must be included as part of the airman's on-duty flight time.

Accordingly, we interpret "scheduled to fly" as used in § 41.55 and as applied to radio operators as meaning "scheduled for flight duty on the aircraft." Thus, only one flight radio operator is required on a scheduled flight over 12 hours from airport to airport where such operator is only required or assigned for duty as an airman over a route segment which is less than 12 hours in length.

§ 41.56 Flight time limitations for aircraft having three or more pilots and an additional flight crew member. (a) Flight hours shall be scheduled in such a manner as to provide for adequate rest periods on the ground while the pilot is away from his base. Adequate sleeping quarters on the aircraft must be provided in all cases where a pilot is scheduled to fly more than 12 hours during any 24 consecutive hours.

(b) A pilot, upon return to his base from any flight or series of flights, shall receive a rest period of not less than twice the total number of hours flown since the last rest period at his base and during such period will not be required to perform any duty for the company. When the required rest period exceeds 7 days, that portion of the rest period in excess of 7 days may be given at any time before the pilot is again scheduled for flight duty on any route.

(c) A pilot shall not fly as a member of the flight crew more than 350 hours in any 90 consecutive days.

(d) A pilot shall not fly as a member of the flight crew more than 1,000 hours in any 12-month period: *Provided*, that this limitation will not be effective during the present war and until 6 months after the termination thereof, and that during this period a maximum of 1,200 flying hours will be permitted.

§ 41.57 Flight time limitations for pilots not regularly assigned. A pilot not regularly assigned as a flight crew member for an entire month under the provisions of § 41.55 or § 41.56 must not fly in excess of 100 hours in any 30 consecutive days.

§ 41.58 Deadhead transportation. The time spent in deadhead transportation to or from duty assignment will not be considered a part of any rest period.

§ 41.59 Other commercial flying. A pilot shall not do other commercial flying while employed by an air carrier when such flying, in addition to that in scheduled air transportation service, will exceed any flight time limitations specified herein.

§ 41.60 Logging flight time. (a) A pilot in command may log the total flight time elapsing during his command of the aircraft.

(b) A copilot holding an air-line transport pilot certificate and rating for the aircraft flown may log the total time during which he serves as copilot.

(c) A copilot not holding an air-line transport pilot certificate and rat-

ing for the aircraft flown may log 50 percent of the total flight time.

(d) Additional pilots when required, and serving as such, may log 50 percent of the total flight time.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.61 Logging instrument flight time. Instrument flight time may be logged as such by the pilot actually manipulating the controls only when the aircraft is flown solely by reference to instruments either under actual or properly simulated flight conditions.

§ 41.62 Pilots at controls. In the case of aircraft requiring two or more pilots, two pilots shall remain at the controls at all times while the aircraft is taking off, landing, and while en route, except when the absence of one is necessary in connection with his regular duties or when he is replaced by a person authorized under the provisions of § 41.121.

§ 41.63 Pilot in command rules—(a) Pilot in command. The pilot in command is in command of the aircraft at all times during flight and is responsible for the safety of persons and goods carried and for the conduct and safety of members of the crew.

(b) *Emergency decisions.* (1) The pilot in command is authorized to follow any course of action which appears necessary in emergency situations which, in the interest of safety, require immediate decision and action. He may, in such situations, deviate from prescribed methods, procedures, or minimums to the extent required by considerations of safety. When such emergency authority is exercised the pilot shall keep the proper control station fully informed regarding the progress of the flight. He shall submit a written report of any such deviation to the Administrator of Civil Aeronautics within 7 days after the completion of the trip.

(2) In an emergency requiring either the dumping of fuel or a landing at a weight in excess of the authorized landing weight the pilot in command may elect to follow whichever procedure he considers safer.

(c) *Flight equipment.* Before any flight is started the pilot in command shall have readily available in the aircraft appropriate and current flight and navigational facility maps, including instrument procedures when instrument flight is authorized, and such other equipment as may be necessary to properly conduct the proposed flight.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.64 Compliance with foreign air traffic rules and local airport rules. Pilots flying in the airspace of any foreign country shall, at all times, comply with the air traffic rules of the foreign government and with local airport rules, except where any rule prescribed herein is more restrictive and may be followed without violating the laws or rules of such country.

§ 41.65 Composition of flight crew. (a) No air carrier shall operate an aircraft with less than the minimum flight

crew required for the type of operation and the type aircraft as determined by the Administrator in accordance with the standards prescribed in this part and specified in the air carrier operating certificate for each route or route segment.

(b) Where the provisions of this part require for a particular route, route segment, or aircraft the performance of two or more functions for which an airman certificate is necessary, such requirement shall not be satisfied by the performance of multiple functions at the same time by any airman over such route or route segment.

[Amdt. 41-1, 13 F. R. 5909, as amended by Amdt. 41-3, 14 F. R. 2196]

Flight Radio Operator

§ 41.68 *Flight radio operator; when required.* An airman holding a flight radio operator certificate shall be required for flight over any area, route, or route segment over which the Administrator has determined that radiotelegraphy is necessary for communication with ground stations during flight.

[Amdt. 41-1, 13 F. R. 5909]

§ 41.69 *Certificate.* Effective November 15, 1947, each flight radio operator shall hold a valid flight radio operator certificate issued in accordance with the provisions of Part 33 of this subchapter.

[Amdt. 41-6, 12 F. R. 3030]

§ 41.70 *Flight time limitations.* When one flight radio operator is required the flight time limitations prescribed in § 41.55 apply. When two or more flight radio operators are required the flight time limitations of § 41.56 apply.

§ 41.71 *Other flight crew members to be qualified.* In all flights requiring only one flight radio operator, one other flight crew member must be capable of operating the equipment in an emergency.

§ 41.72 *Qualification for duty.* A certificated flight radio operator shall not be assigned to nor perform duties for which he is required to be certificated unless, within the preceding 12-month period, he has had at least 4 months of satisfactory experience as a radiotelegraph operator and 25 hours of experience in the operation of aircraft radio during flight; or until the air carrier has checked the airman and has determined that he is (a) familiar with all current radio information pertaining to the routes to be flown and (b) competent with respect to the operating procedures and radio equipment to be used.

[Amdt. 41-12, 12 F. R. 6377]

Flight Engineer

§ 41.73 *Flight engineer; when required.* After December 1, 1948, an airman holding a flight engineer certificate shall be required on all four-engine aircraft certificated for more than 80,000 pounds maximum take-off weight, and on all other four-engine aircraft certificated for more than 30,000 pounds maximum take-off weight where the Administrator finds that the design of the aircraft used or the type of operation

is such as to require a flight engineer for the safe operation of the aircraft.

[Amdt. 41-1, 13 F. R. 5909]

§ 41.74 *Certificate.* Effective November 15, 1947, each flight engineer shall hold a valid flight engineer certificate issued in accordance with the provisions of Part 35 of this subchapter.

[Amdt. 41-5, 12 F. R. 1919, Amdt. 41-10, 12 F. R. 6266]

§ 41.75 *Qualification for duty.* A certificated flight engineer shall not be assigned to nor perform duties for which he is required to be certificated unless, within the preceding 12-month period, he has had at least 50 hours of experience as a flight engineer on the type aircraft on which he is to serve; or until the air carrier has checked the airman and determined that he is (a) familiar with all current information and operating procedures relating to the type aircraft to which he is to be assigned and (b) competent with respect to such aircraft.

[Amdt. 41-12, 12 F. R. 6377, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.76 *Flight time limitations.* When one flight engineer is required, the flight time limitations prescribed in § 41.55 apply. When two or more flight engineers are required, the flight time limitations prescribed in § 41.56 apply.

§ 41.77 *Other flight crew members to be qualified.* In all flights requiring the use of only one flight engineer, one other flight crew member must be capable of performing the duties of such engineer in an emergency during flight.

Flight Navigator

§ 41.80 *Flight navigator; when required.* An airman holding a flight navigator certificate shall be required for flight over any area, route, or route segment when the Administrator has determined either that celestial navigation is necessary or that other specialized means of navigation necessary for the safe conduct of flight cannot be adequately accomplished from the pilot station.

[Amdt. 41-1, 13 F. R. 5909]

§ 41.81 *Flight time limitations.* The flight time limitations prescribed in § 41.56 apply.

§ 41.82 *Qualification for duty.* A certificated flight navigator shall not be assigned to nor perform duties for which he is required to be certificated unless, within the preceding 12-month period, he has had at least 50 hours experience as a flight navigator; or until the air carrier has checked the airman and determined that he is (a) familiar with all current navigational information pertaining to the routes to be flown and (b) competent with respect to the operating procedures and navigational equipment to be used.

[Amdt. 41-12, 12 F. R. 6378]

Dispatcher

§ 41.84 *Number and location.* The air carrier shall provide an adequate number of certificated aircraft dispatch-

ers located at such points as may be necessary to insure safe operations.

§ 41.85 *Certificate.* Each dispatcher shall hold a valid aircraft dispatcher certificate issued in accordance with the provisions of Part 27 of this subchapter.

§ 41.86 *Qualification for route.* Each dispatcher within 6 months immediately preceding his qualification for a route, or part thereof, shall have made at least one trip over the route on which he is to serve prior to dispatching any aircraft. In addition he must be familiar with:

(a) The contents of the air carrier operations manual;

(b) The radio facilities in the aircraft used; and

(c) With respect to the route, the following:

(1) The prevailing weather phenomena,

(2) The sources of weather information available,

(3) All phases of the air carrier operation,

(4) The maximum authorized loads for the aircraft used,

(5) The peculiarities and limitations of each radio navigational facility and similar information with regard to such additional facilities located off the route as are approved for use in obtaining fixes by means of cross bearings, and

(6) The effect of weather conditions on the radio reception of the aircraft used.

§ 41.87 *Maintenance of qualification.* Each dispatcher shall maintain his familiarity with the route or routes on which he dispatches aircraft.

§ 41.88 *Route qualification expiration.* After 24 consecutive months of absence from dispatching duty over a route or part thereof, a dispatcher will no longer be considered qualified to dispatch aircraft over such route.

FLIGHT OPERATION RULES

Dispatching Rules

§ 41.92 *Dispatching rules—(a) Short distance operation.* Flights may be dispatched over any approved route between two terminal points.

(b) *Long distance operation.* Flights may be dispatched over any track between two terminal points within the route approved by the Administrator for the operation.

§ 41.93 *Dispatching authorization.* Flights shall be started only on the authority of an aircraft dispatcher qualified for the route. In short distance operation this authority is not required at intermediate points specified in the original clearance unless the flight is delayed more than 30 minutes at any such point. In long distance operation redispach is not required unless the flight is delayed more than 6 hours.

§ 41.94 *Dispatcher duty period.* A dispatcher may clear a flight only when he has been on duty at the station from which the clearance is effected for a period of time sufficient to become familiar with existing conditions. He must continue on duty until the aircraft has

landed in completion of a trip, or has proceeded beyond his jurisdiction, or until he has been properly relieved by another qualified dispatcher.

§ 41.95 *Use of weather reports and forecasts in dispatch.* (a) Weather reports used to control flight movements shall be prepared from observations made and released by a source acceptable to the Administrator.

(b) Weather reports used shall be the latest reports available. Weather reports, other than off-course or on-call reports made a part of the clearance form, shall not be more than one hour and 30 minutes old at the time the aircraft departs.

(c) Weather forecasts made by the United States Weather Bureau, in the case of dispatch from points within the United States, or other sources acceptable to the Administrator, in the case of dispatch from points outside of the United States, shall be taken into account.

§ 41.96 *Weather minimums—(a) Dispatch under contact flight rules, short distance operations.* Aircraft may be dispatched only if current weather reports and forecasts show a trend indicating that the ceilings and visibilities along the route to be flown are, and will remain, at or above the minimums required for flight under contact flight rules until the flight arrives at the next point of intended landing specified in the clearance.

(b) *Instrument or over-the-top dispatch, short distance operations.* Aircraft may be dispatched only if the observed weather information and current weather forecasts pertaining to the next point of intended landing specified in the clearance show a trend indicating that the ceiling and visibility will be at or above the minimums specified when the flight is scheduled to arrive; and at least one alternate airport, meeting the minimum weather requirements for the airport when used as an alternate, is designated in the clearance.

(c) *Dispatch, long distance operation.* Aircraft may be dispatched only in compliance with the following conditions:

(1) The current weather forecasts must indicate that the ceiling and visibility either at the next point of intended landing or at any required alternate therefor will be at or above the approved minimums at the time the flight is estimated to arrive.

(2) In the case of overwater flights or any other flight where the point of intended landing has no available alternate, the current weather forecasts must also indicate that the ceiling and visibility either at the point of departure or at any required alternate therefor will be above the approved minimums at the time of arrival back to such point from any point along the route closer than the point-of-no-return.

§ 41.97 *Icing conditions.* Aircraft shall not be dispatched or flown into known heavy icing conditions and may be dispatched or flown into any less serious icing condition only if the aircraft is equipped for de-icing wings, propellers,

and such other parts of the aircraft as are essential to safety.

§ 41.98 *Fuel supply—(a) Short distance contact operation.* An aircraft may be dispatched or take off only if it carries sufficient fuel, considering the wind and other weather conditions expected, to (1) fly to the next point of landing specified in the clearance and thereafter (2) for a period of at least 45 minutes at normal cruising consumption.

(b) *Short distance instrument or over-the-top operation.* An aircraft may be dispatched or take off only if it carries sufficient fuel, considering the wind and other weather conditions expected, to fly to the next point of landing specified in the clearance; and thereafter (1) to fly to and land at the most distant alternate airport designated for that point in the clearance; and thereafter (2) to fly for a period of at least 45 minutes at normal cruising consumption.

(c) *Long distance operation.* An aircraft may be dispatched or take off only if it carries sufficient fuel, considering the wind and other weather conditions expected, to fly to the next point of landing specified in the clearance; and thereafter (1) to fly to and land at the most distant alternate airport designated for that point in the clearance; and thereafter (2) to fly for a period of at least two hours at normal cruising consumption. An aircraft may be redispached to return to the point of departure or to an alternate airport for that point only when such redispach is accomplished while the aircraft has sufficient fuel to return to such point and thereafter to fly for a period of at least two hours at normal cruising consumption. In the case of a route approved without an available alternate for a particular stop, an aircraft dispatched to that point must carry sufficient fuel, considering wind and other weather conditions expected, to fly to that point and thereafter for at least 3 hours at normal cruising consumption. The Administrator may require fuel in excess of any of the minimums specified in this paragraph when he finds that additional fuel is necessary on a particular route in the interest of safety and, in the case of an overland operation where adequate intermediate airports and navigational facilities are available, may permit the operation to be conducted with the fuel reserves specified in paragraph (b) of this section.

§ 41.99 *Maintenance release, clearance, and load manifest forms.* All maintenance release, clearance, and load manifest forms used shall be approved by the Administrator. The original copies of such forms shall be given to the pilot in command and duplicate copies kept in the station file for at least 90 days.

[Amdt. 41-14, 12 F. R. 7994, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.100 *Preparation of maintenance release form.* A maintenance release form shall be prepared for each aircraft delivered by the maintenance department to the operations department. This form must be signed by personnel of the air carrier charged with the duty of supervising the maintenance of the aircraft.

[Amdt. 41-14, 12 F. R. 7994]

§ 41.101 *Preparation of clearance form.* A clearance form shall be prepared for each flight between specified clearance points. The information for such clearance shall be prepared by the authorized aircraft dispatcher of the air carrier operating the aircraft. This form shall be signed by the pilot in command and by the authorized aircraft dispatcher only when both believe the flight may be made with safety. The authority to sign such clearance may be delegated for a particular flight by the authorized aircraft dispatcher, but the authority to dispatch cannot be delegated, and such dispatcher remains responsible for the dispatch and continued supervision of the flight.

[Amdt. 41-14, 12 F. R. 7995, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.102 *Preparation of load manifest form.* A load manifest form showing the loading of the aircraft shall be prepared and signed for each flight by qualified personnel of the air carrier charged with the duty of supervising the loading of the aircraft and the preparation of the load manifest forms, or by qualified persons authorized by the air carrier. The aircraft when loaded shall not exceed the center of gravity limits or maximum allowable weight limits set forth in the aircraft certificate for the particular aircraft.

[Amdt. 41-14, 12 F. R. 7995]

§ 41.103 *Traffic conditions.* Immediately prior to departure it is the responsibility of the dispatcher, dispatching an instrument flight outside of an airway traffic control area, to ascertain from the best available information what other flights affecting the proposed flight are in progress over the route and to report this information to the pilot in command.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.104 *Dispatcher emergency procedure.* In the event of inability to maintain two-way communication with the aircraft while it is in flight the dispatcher is responsible for notifying all other known traffic in the area of such failure, giving the last approved flight plan and the expected time of arrival at the destination.

§ 41.105 *Redispach from alternate airports.* Aircraft may be redispached from any alternate airport. In the case of an off-route alternate, the return to the authorized route must be made in accordance with conditions specified by the Administrator.

Flight Preparation and Take-Off Rules

§ 41.108 *Tests and checks.* Before departure the pilot in command is responsible for the testing or checking of each item in the check list approved by the Administrator, at the time and to the extent specified.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.109 *View of traffic.* The pilot shall maneuver the aircraft to a position from which incoming and outgoing aircraft can be observed until immediately prior to take-off.

Flight Course and En Route Rules

§ 41.110 *Continuance of flight, short distance operation.* No flight shall be continued toward any point to which it is cleared unless the weather conditions at alternate airports specified in the clearance remain at or above the minimums specified for each such airport when used as an alternate.

§ 41.111 *Change in clearance en route.* The clearance may be amended en route by the substitution of another alternate airport within the fuel range of the aircraft, as outlined in § 41.98 (b), where weather conditions are at or above the minimums for such airport when used as an alternate. If a change in clearance is made while an aircraft is in flight, the two-way conversation shall be entered in the ground station radio log. After clearance for contact flight no aircraft shall be recleared en route for instrument flight, unless all instruments and items of equipment required by § 41.25 for the type of operation are in serviceable condition.

§ 41.112 *Deviation from route.* No aircraft may deviate from the route over which it is dispatched except when circumstances render such deviation necessary as a safety measure. Any deviation from the route must be explained by the pilot in a written report dispatched to the Administrator within 7 days after return to his base.

§ 41.113 *Reporting unusual conditions.* When an icing or other unusual meteorological condition is encountered in flight the pilot shall notify his company radio ground station as soon as practicable and such information shall be relayed to all flights which may be affected.

§ 41.114 *Flight altitude rules—(a) Day contact operation.* Except during take-offs and landings no aircraft shall be flown at an altitude less than 500 feet above the ground or water, or within 500 feet of any mountain, hill, or other obstruction to flight, except in such cases as may be specifically approved.

(b) *Night and instrument operation.* Except during take-offs and landings or when operating in accordance with specific procedures for definite localities approved by the Administrator, no aircraft shall be flown at an altitude of less than 1,000 feet above the highest obstacle located within a horizontal distance of 5 miles from the center of the course intended to be flown.

§ 41.115 *Communication failure.* In the event of inability to maintain two-way radio communication, the pilot in command shall observe one of the following procedures in the order listed:

(a) Proceed according to current flight plan, maintaining the minimum instrument altitude or the last acknowledged assigned altitude, whichever is higher, to the airport of intended landing and commence descent at approach time last authorized or, if not received and acknowledged, at the estimated time of arrival specified in the flight plan; or

(b) If weather conditions permit, proceed in accordance with contact flight rules; or

(c) Land as soon as practicable.

Instrument Approach and Landing Rules

§ 41.117 *Altitude on initial approach.* When making an initial approach to a radio station on instruments or on top of overcast, an aircraft shall not be operated below the initial approach altitude specified for such station until arrival over the station has been definitely established, except where a marker facility is available and a procedure for a straight-in approach is authorized.

§ 41.118 *Letting-down-through procedure.* When instrument operation is authorized the standard instrument approach procedure, or the one authorized by the control tower if more than one procedure is specified for the airport, must be used for letting-down-through. The procedures and minimum altitudes of flight specified shall be strictly observed.

§ 41.119 *Approach and landing limitations.* No instrument approach procedure shall be executed or landing made at an airport when the latest U. S. Weather Bureau weather report for that airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport.

[Amdt. 41-4, 12 F. R. 1479]

MISCELLANEOUS OPERATIONS RULES

§ 41.120 *Operations manual.* (a) The air carrier shall prepare and maintain a manual for the use and guidance of operations personnel which contains full information necessary to guide flight and ground personnel in the conduct of flight operations and to inform such personnel regarding their duties and responsibilities. It must be in a form approved by the Administrator and furnished to all persons designated by the Administrator or Board. All copies in the hands of company personnel must be kept up to date.

(b) Any changes issued by the Administrator shall be promptly incorporated in the manual. Other changes not inconsistent with any Federal regulation, the air carrier operating certificate, or safe operating practice may be made without the prior approval of the Administrator.

§ 41.120-1 *Copies of operations manual (CAA rules which apply to § 41.120).* A copy of the operations manual shall be delivered to the Director, Flight Operations Service, *A-280, Civil Aeronautics Administration, Department of Commerce, Washington 25, D. C., and to the Chief, Scheduled Air Carrier Division, of the region in which headquarters of the air carrier is located. The latter person will inform air carriers of the need for any additional copies and to whom they shall be directed.

[13 F. R. 4251. Correction noted at 14 F. R. 37]

§ 41.121 *Admission to pilot compartment.* (a) No person except a member of the operating crew or an air carrier inspector of the Administrator may be admitted to the pilot compartment during flight unless his admission is ap-

proved by the pilot in command after he has identified himself as one of the following:

(1) An employee of the Federal Government, of an air carrier, or other aeronautical enterprise whose duties are such that his presence in the compartment is necessary or advantageous to the conduct of safe air carrier operations or the improvement of the safety of such operations;

NOTE: Federal employees who deal responsibly with matters relating to air carrier safety and such air carrier employees as pilots, dispatchers, meteorologists, communication operators, and mechanics whose efficiency would be increased by familiarity with flight conditions in the pilot compartment may be considered eligible for admission to the pilot compartment under this requirement. Employees of traffic, sales, and other air carrier departments not directly related to flight operations cannot be considered eligible unless authorized under § 41.121 (a) (2).

(2) A person whose presence in such compartment has been specifically authorized by the management of the air carrier operating the aircraft and by the Administrator.

(b) No person may occupy a seat in the pilot compartment or the companionway thereto unless such seat is securely attached to the structure of the aircraft and is provided with a safety belt which shall be kept fastened by the occupant throughout his occupancy of such seat.

(c) Unless a seat is also available for his use in the passenger compartment, no person may be admitted to the pilot compartment during flight except:

(1) Air carrier inspectors engaged in checking flight operations; and

(2) Certificated airmen of the air carrier and certificated airmen of another air carrier who have been authorized by the air carrier concerned and the Administrator to make specific trips over the route.

(d) An air carrier inspector of the Administrator must be admitted to the pilot compartment of an air carrier aircraft at any time while performing his official duty.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.122 *Manipulation of controls.* No person other than a qualified pilot of the air carrier may manipulate the flight controls of an air carrier aircraft while in scheduled flight, except that at the discretion of the pilot in command such restriction will not apply to other pilots as follows:

(a) Authorized air carrier inspectors of the Administrator, or

(b) Properly qualified pilot personnel of another air carrier, if the pilot in command is at one set of controls.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.123 *Smoking rules.* No smoking will be permitted in an aircraft:

(a) While on the ground or water,
(b) During take-offs and landings,
(c) In the berths of sleeper planes, or
(d) Elsewhere, unless suitable ash containers are provided.

§ 41.124 *Passenger information signs.* Aircraft shall be equipped with the following signs so located as to be plainly visible to passengers:

(a) "No smoking" signs located in the cabin and in individual berths,

(b) "Fasten seat belt" signs located in cabin,

(c) "Use oxygen equipment" signs located in the cabin of aircraft not having pressurized cabins when operated at altitudes in excess of 12,000 feet above sea level for any period of time, unless a competent cabin attendant is provided to care for passengers.

§ 41.125 *Marking door handles.* The latched and unlatched positions of door handles shall be plainly marked.

§ 41.126 *Marking emergency exits.* Emergency exits shall be clearly marked as such with luminous paint in letters not less than three-fourths of an inch high, such markings to be located either on or immediately adjacent to the pertinent exits and readily visible to passengers. The location and method of operation of the handles shall be marked with luminous paint.

§ 41.127 *Use of emergency equipment.* The emergency equipment required by § 41.23 must be periodically inspected and tested in accordance with specifications issued by the Administrator. The crew of aircraft used in overwater flights shall be drilled periodically in "abandon ship" procedures. Passengers shall be acquainted with the location of emergency exits, with emergency equipment provided for individual use, and with the procedure to be followed in the case of an emergency landing on the water.

§ 41.128 *Route operation proving flights.* Before passengers are carried on any new route or any extension of over 100 miles of a route previously authorized, the air carrier shall demonstrate ability to conduct a safe operation by making such flights over the route as the Administrator may require in the interest of safety.

§ 41.128-1 *Route proving flights (CAA rules which apply to § 41.128).* See § 40.102-1 of this subchapter. In paragraph (c), entitled "Application," sentence 1, substitute "30" for "15."

[13 F. R. 3460. Correction noted at 14 F. R. 87]

§ 41.129 *Aircraft proving tests.* (a) A new type of air carrier aircraft shall have at least 100 hours of proving tests under the supervision of an authorized representative of the Administrator before authority for carrying passengers is issued. At least 50 hours of such tests shall be flown over authorized routes and shall include at least 10 hours of night operation.

(b) In a case of major changes on aircraft previously proved, or the use of the same aircraft on a substantially different operation, 50 hours of tests similar to those outlined in the preceding paragraph shall be required, of which at least 25 hours shall be flown over authorized routes.

(c) During the tests specified in paragraphs (a) and (b) of this section no

person shall be carried other than those essential to the tests. Mail, express, and cargo may be carried at the discretion of the Administrator.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-3, 14 F. R. 2196]

§ 41.129-1 *Aircraft proving tests (CAA rules which apply to § 41.129).* See § 61.322-1 of this subchapter. In paragraph (b), entitled "Application," sentence 1, substitute "30" for "15".

[13 F. R. 3460. Correction noted at 14 F. R. 37]

§ 41.130 *Reports.* Each air carrier shall furnish the Administrator the following reports:

(a) A monthly operations report shall be submitted on and in accordance with the form supplied or approved by the Administrator for the purpose not later than the 20th day of the next succeeding month.

(b) A mechanical interruption report shall be submitted on the form supplied for the purpose not later than 10 days after the return of the aircraft to its operating base. Any partial or complete instrument or equipment mechanical failure which occurs during flight shall be reported. The records of such mechanical failure must be made available to any authorized representative of the Administrator or Board on request.

§ 41.130-1 *Mechanical hazard and difficulty reports (CAA rules which apply to § 41.130).* See § 61.341-1 of this subchapter.

[13 F. R. 5808, 5858. Correction noted at 14 F. R. 37]

§ 41.131 *Irregularity report.* All airmen, including flight and ground personnel, shall immediately report to the operations manager any irregularity or hazard which in their opinion makes for unsafe operation. If such report is found to be justified, notice of the irregularity or hazard must be submitted to the Administrator at once.

§ 41.131-1 *Mechanical hazard and difficulty reports (CAA rules which apply to § 41.131).* See § 61.341-1 of this subchapter.

[13 F. R. 5808, 5858. Correction noted at 14 F. R. 37]

§ 41.132 *Communication priority.* Where a communications channel serves point-to-point contacts in addition to ground-to-plane, priority shall be given to plane-to-ground and ground-to-plane communications.

§ 41.133 *Flight records.* The air carrier shall maintain and make available to any authorized representative of the Administrator or Board, for not less than 1 year from the date of flight, the records pertaining to any flight which was interrupted because of weather conditions and failed to land at the point to which it was originally cleared. Such records shall include the flight plan, flight log, clearance, and any other data necessary to complete the record of the operation.

DEFINITIONS

§ 41.137 *Definitions—(a) Route.* A route is a path through the navigable air-

space identified by an area on the surface of the earth, the boundaries of which are designated or approved by the Administrator.

(b) *Short distance operation.* A short distance operation is one which involves intermediate stops of sufficient frequency to permit the dispatch from each such stop to be based on spot weather reports or a combination of spot weather reports and forecasts.

(c) *Long distance operation.* A long distance operation is one in which the time interval between stops is of sufficient duration to require that the dispatch be based entirely on forecasts of weather expected at the intended destination and alternates.

(d) *Regular airport.* A regular airport is an airport used as a regular stop on a route.

(e) *Provisional airport.* A provisional airport is an airport approved for the purpose of providing adequate service to a community when the regular airport serving that community is not available.

(f) *Alternate airport.* An alternate airport is one listed in the clearance as a point to which a flight may be directed if, subsequent to departure, a landing at the point to which the flight is cleared becomes undesirable.

(g) *Refueling and holding airport.* A refueling and holding airport is an airport approved as a point to which flights may be cleared for refueling.

(h) *Check pilot.* A check pilot is a pilot authorized by the Administrator to check pilots of the air carrier for familiarity with route procedures and for pilot-technique.

(i) *Flight crew member.* Flight crew member means a pilot, flight radio operator, flight engineer, or flight navigator assigned to duty on the aircraft during flight time.

(j) *Crew member.* Crew member means any individual assigned by an air carrier for the performance of duty on the aircraft other than as flight crew member during flight time.

(k) *Contact operation.* A contact operation is an operation conducted under contact flight rules as prescribed in Part 60 of this subchapter.

(l) *Instrument operation.* An instrument operation is an operation conducted under instrument flight rules as prescribed in Part 60 of this subchapter.

(m) *Point-of-no-return.* The term "point-of-no-return" means that point at which the aircraft no longer has sufficient fuel, under existing conditions, to return to the point of departure or any alternate for that point.

(n) *Pilot compartment.* The term "pilot compartment" means that part of the aircraft designed for the use of the flight crew.

(o) *Ceiling.* The term "ceiling", as used in this part, means the height of the base of the lowest cloud layer reported as "broken clouds" or "overcast."

(p) *Broken clouds.* The term "broken clouds" means a condition where more than 50 but less than 90 percent of the sky is covered by clouds.

(q) *Route segment.* A route segment is a portion of a route, the boundaries of which are identified by:

(1) A continental or insular geographic location;

(2) A point at which some specialized aid to air navigation is located; or

(3) A point at which a definite radio fix is located.

(r) *Category*. Category shall indicate a classification of aircraft such as airplane, helicopter, glider, etc.

(s) *Class*. Class shall indicate a difference in basic design of aircraft within a category, such as single-engine land, multiengine sea, etc.

(t) *Copilot*. Copilot shall mean a pilot serving in any piloting capacity other than as pilot in command on aircraft requiring two pilots for normal operations, but excluding a pilot who is on board the aircraft for the sole purpose of receiving dual instruction.

(u) *Flight time*. Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight (block to block).

(v) *Pilot in command*. Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

(w) *Type*. Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

[Amdt. 41-0, 10 F. R. 8528, as amended by Amdt. 41-1, 13 F. R. 5909, and Amdt. 41-3, 14 F. R. 2196]

PART 42—IRREGULAR AIR CARRIER AND OFF-ROUTE RULES

Sec.	
42.0	Applicability of this part.
42.1	Definitions.

CERTIFICATE RULES

42.5	Certificate issuance.
42.6	Duration.
42.7	Display.
42.8	Inspection.
42.9	Operations base, maintenance base, and/or office.

AIRCRAFT REQUIREMENTS

42.11	Aircraft required.
42.12	Fire prevention requirements.
42.13	Engine rotation.
42.14	Minimum performance requirements for all aircraft.
42.15	Minimum performance requirements for large airplanes used in passenger operations.
42.16	Aircraft limitations for IFR and land aircraft overwater operations.

AIRCRAFT EQUIPMENT

42.21	Basic required instruments and equipment for aircraft.
42.22	Additional required instruments and equipment for large aircraft.
42.23	Radio communications system and navigational equipment for large aircraft.
42.24	First-aid and emergency equipment.
42.25	Cockpit check list.
42.26	Oxygen.

MAINTENANCE REQUIREMENTS

42.30	General.
42.31	Inspections and maintenance.
42.32	Additional maintenance requirements for large aircraft.

FLIGHT CREW REQUIREMENTS

Sec.	
42.40	Airman requirements.
42.41	Composition of flight crew.
42.42	Pilot qualification for small aircraft.
42.43	Pilot qualifications for large aircraft.
42.44	Recent flight experience requirements for flight crew members.
42.45	Proficiency of crew members serving on large aircraft.
42.46	Logging flight time.
42.47	Grace period for airman periodic checks.
42.48	Flight time limitations for pilots on large aircraft.

FLIGHT OPERATION RULES

42.51	Pilot responsibilities.
42.52	Fuel supply.
42.53	Minimum flight altitude rules.
42.54	Flight into known icing conditions.
42.55	Weather minimums.
42.56	Instrument approach.
42.57	Airport lighting for night operations.
42.58	Navigational aids for IFR flight.
42.59	Passenger use of emergency equipment.
42.60	Operations manual for large aircraft.
42.61	Flight plan for large aircraft.
42.62	Flight manifest for large aircraft and passenger-carrying aircraft operating under IFR conditions.

OPERATING LIMITATIONS FOR LARGE PASSENGER-CARRYING AIRPLANES

42.70	Operating limitations for transport category airplanes.
42.71	Weight limitations.
42.72	Take-off limitations to provide for engine failure.
42.73	En route limitations; all engines operating.
42.74	En route limitations; one engine inoperative.
42.75	En route limitations; two engines inoperative.
42.76	En route limitations; where special air navigational facilities exist.
42.77	Landing distance limitations; airport of destination.
42.78	Landing distance limitations; alternate airports.
42.80	Operating limitations for aircraft not certificated in the transport category.
42.81	Take-off limitations.
42.82	En route limitations; one engine inoperative.
42.83	Landing distance limitations; airport of destination.

REQUIRED RECORDS AND REPORTS

42.91	Maintenance records.
42.92	Airman records.
42.93	Emergency flight reports.
42.94	Pilot's emergency deviation report.
42.95	Flight manifest record.
42.96	Reporting of malfunctioning and defects.

AUTHORITY: §§ 42.0 to 42.96 Issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 604, 52 Stat. 1007, 1010; 49 U. S. C. 551, 554; Pub. Law 872, 80th Cong.

NOTE: Special Regulation Serial No. SR-325, effective August 27, 1948, 13 F. R. 5147, provides as follows:

Any air carrier authorized by the Board, pursuant to Title IV of the Civil Aeronautics Act of 1938, as amended, to engage in scheduled air transportation of cargo may conduct such transportation under the air carrier certification and operation rules prescribed in Part 42 of this subchapter.

This regulation shall supersede Special Civil Air Regulations Serial Nos. SR-317 and SR-317-A and shall terminate August 1, 1949, unless sooner terminated or rescinded by the Board.

SOURCE: §§ 42.0 to 42.96 appear at 14 F. R. 1427.

§ 42.0 *Applicability of this part*. (a) The provisions of this part shall apply to irregular air carriers operating in interstate, overseas, or foreign air transportation, to Alaskan air carriers when authorized by the Administrator under the provisions of § 41.1 (a) of this chapter, and to air carriers holding scheduled air carrier operating certificates when making charter trips or when performing other special services.

(b) An air carrier holding a scheduled air carrier operating certificate may elect to conduct charter flights or other special services between points which it is authorized to serve under the terms of such certificate, under the provisions of Part 41, or 40 and 61, of this chapter, as the case may be, and the scheduled air carrier operating certificate: *Provided*, That the certificate is amended to authorize such operation: *And provided further*, That charter or special services to other points shall be conducted under the provisions of this part, except that it shall not be necessary for the carrier to obtain an irregular air carrier operating certificate if its scheduled air carrier operating certificate is appropriately amended.

§ 42.1 *Definitions*. (a) As used in this part the words listed below shall be defined as follows:

(1) *Accelerate-stop distance*. Accelerate-stop distance is the distance required to reach the critical point of take-off and, assuming failure of the critical engine at that point, to bring the airplane to a stop using approved braking means. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such distance is determined.)

(2) *Air carrier*. Air carrier means any citizen of the United States who undertakes directly the carriage by aircraft of persons or property as a common carrier for compensation or hire, whether such carriage is wholly by aircraft or partly by aircraft and partly by other forms of transportation between any of the following places: A place in any State of the United States, or the District of Columbia, and a place in any other State of the United States, or the District of Columbia; places in the same State of the United States through the airspace over any place outside thereof; places in the same Territory or possession of the United States, or the District of Columbia; a place in any State of the United States, or the District of Columbia, and any place in a Territory or possession of the United States, and a place in any other Territory or possession of the United States; a place in the United States and any place outside thereof; or the carriage of mail by aircraft.

(3) *Alaskan air carrier*. Alaskan air carrier includes any air carrier subject to the provisions of Part 292¹ of this chapter as heretofore or hereafter amended.

¹ Part 292 currently provides that Alaskan air carriers shall include certificated and noncertificated air carriers engaging solely in air transportation within the Territory of Alaska.

(4) *Alternate airport.* An alternate airport is one listed in the flight plan as a point to which a flight may be directed if, subsequent to departure, a landing at the point of intended destination becomes inadvisable.

(5) *Approach or take-off area.* The approach or take-off area shall be an area symmetrical about a line coinciding with and prolonging the center line of the runway, or the most probable landing or take-off path for instrument approaches where there is a multiplicity of parallel runways or a large hard-surfaced area continuously available for landing or take-off. This area shall be assumed to extend longitudinally in a straight line from the intersection of the obstruction clearance line with the runway to the most remote obstacle touched by the obstruction clearance line and in no case less than 1,500 feet. Thence, it shall be assumed to continue in a path consistent with the instrument approach or take-off procedures for the runway in question or, where such procedures are not specified, consistent with turns of at least 4,000 feet in radius. It shall be further assumed to extend laterally at the point of intersection of the obstruction clearance line with the runway 200 feet on each side of such center line. This distance shall increase uniformly to 500 feet on each side of such center line at a longitudinal distance of 1,500 feet from such point of intersection. Thereafter, this distance shall be assumed to be 500 feet on each side of such center line.

(6) *Approved.* Approved, when used either alone or as modifying other words such as "means," "method," "action," etc., shall mean approved by the Administrator.

(7) *Check pilot.* Check pilot is a pilot authorized by the Administrator to check pilots of the air carrier for such items as familiarity with en route procedures and piloting technique.

(8) *Crew member.* Crew member means any individual assigned for the performance of duty on the aircraft other than as a flight crew member.

(9) *Critical engine.* The critical engine is the engine the failure of which gives the most adverse effect on the performance characteristics of the aircraft. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such engine is determined.)

(10) *Critical-engine-failure speed.* The critical-engine-failure speed is a true indicated air speed, selected by the aircraft manufacturer, at which the take-off may be safely continued even though the critical engine becomes suddenly inoperative. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such speed is determined.)

(11) *Critical point of take-off.* The critical point of take-off is that point beyond which the aircraft cannot be brought to a safe stop in the event of failure of the critical engine. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such point is determined.)

(12) *Effective length of runway.* The effective length of runway is the distance

from the point where the obstruction clearance line intersects the runway to the far end thereof.

(13) *Flight crew member.* Flight crew member means a pilot, flight radio operator, flight engineer, or flight navigator assigned to flight duty on the aircraft.

(14) *Flight time.* Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight.

(15) *IFR.* The symbol used to designate instrument flight rules.

(16) *Irregular air carrier.* Irregular air carrier includes any air carrier subject to the provisions of Part 291² of this chapter as heretofore or hereafter amended.

(17) *Large aircraft.* Aircraft of 12,500 pounds or more maximum certificated take-off weight shall be considered large aircraft.

(18) *Maximum certificated take-off weight.* Maximum certificated take-off weight shall mean the maximum take-off weight authorized by the terms of the aircraft airworthiness certificate.³

(19) *Minimum control speed.* The minimum control speed is the minimum speed at which the airplane can be maintained in straight flight after an engine suddenly becomes inoperative. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such speed is determined.)

(20) *Night.* Night is the time between the ending of evening twilight and the beginning of morning twilight as published in the Nautical Almanac converted to local time for the locality concerned.⁴

(21) *Obstruction clearance line.* The obstruction clearance line is a line drawn tangent to or clearing all obstructions

showing in a profile of the approach or take-off area which has a slope to the horizontal of 1/20.

(22) *Passenger-carrying aircraft.* An aircraft carrying any individual other than a flight crew or crew member, company employee, or an authorized Government representative shall be considered a passenger-carrying aircraft.

(23) *Pilot compartment.* Pilot compartment means that part of the aircraft designed for the use of the flight crew.

(24) *Pilot in command.* Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

(25) *Point-of-no-return.* Point-of-no-return means the point beyond which the aircraft no longer has sufficient fuel, under existing conditions, to return to the point of departure or any alternate for that point.

(26) *Power-off stall speed.* The power-off stall speed is the minimum steady flight speed at which the airplane with engines idling is controllable in the landing configuration. (See the airworthiness requirements under which the airplane was type certificated for the manner in which such speed is determined.)

(27) *Rating.* Rating is an authorization issued with a certificate, and forming a part thereof, stating special conditions, privileges, or limitations pertaining to such certificate.

(28) *Runway.* A runway is a hard-surfaced area normally used for the landing or take-off of airplanes. An unpaved area at the end of a paved area may be considered as part of a runway if it is smooth and firm enough to permit an airplane to traverse it safely.

(29) *Second pilot.* Second pilot shall include any pilot other than the pilot in command assigned as a member of the flight crew.

(30) *Small aircraft.* Aircraft of less than 12,500 pounds maximum certificated take-off weight shall be considered small aircraft.

(31) *Transport category aircraft.* Transport category aircraft are aircraft which have been certificated in accordance with the requirements of Part 4b of this chapter, or under the transport category performance requirements of Part 4a of this chapter.

(32) *Type.* Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

(33) *VFR.* The symbol used to designate visual flight rules.

(34) V_{SO} , V_{S0} means the power-off, true-indicated stalling speed of an aircraft. (See the airworthiness requirements under which the airplane was type certificated for the manner in which V_{SO} is determined.)

CERTIFICATE RULES

§ 42.5 *Certificate issuance.* An air carrier operating certificate describing the operations authorized and prescribing such operating specifications and limitations as may be reasonably required in the interest of safety shall be issued

² Part 291 currently provides that the term "irregular air carrier" means any air carrier which (1) directly engages in air transportation, (2) does not hold a certificate of public convenience and necessity under section 401 of the Civil Aeronautics Act of 1938, as amended, and (3) does not operate or hold out to the public, expressly or by course of conduct, that it operates one or more aircraft between designated points, or within a designated point, regularly or with a reasonable degree of regularity, upon which aircraft it accepts for transportation, for compensation or hire, such members of the public as apply therefor or such property as the public offers. No air carrier shall be deemed to be an irregular air carrier unless the air transportation services offered and performed by it are of such infrequency as to preclude an implication of a uniform pattern or normal consistency of operation between, or within, such designated points.

³ Note that the aircraft airworthiness certificate incorporates as a part thereof an airplane operating record or an airplane flight manual which contains the pertinent limitation.

⁴ The Nautical Almanac containing the ending of evening twilight and the beginning of morning twilight tables may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. Information is also available concerning such tables in the offices of the Civil Aeronautics Administration or the United States Weather Bureau.

by the Administrator to a properly qualified citizen of the United States who is capable of conducting the proposed operations in accordance with the applicable requirements hereinafter specified. Application for a certificate, or application for amendment thereof, shall be made in a manner and contain information prescribed by the Administrator. No person subject to the provisions of this part shall operate in air transportation without, or in violation of the terms of, an air carrier operating certificate.

(a) *Exceptions.* Whenever upon investigation the Administrator finds that the general standards of safety required for air carrier operations require or permit a deviation from any specific requirement of this part, he may issue an air carrier operating certificate or amendment providing for such deviation. The Administrator shall promptly notify the Board of any deviation included in the air carrier operating certificate and the reasons therefor.

§ 42.6 *Duration.* An air carrier operating certificate shall continue in effect unless it is surrendered, suspended, or revoked, or a termination date is set by the Board, after which it shall be returned to the Administrator.

§ 42.7 *Display.* The air carrier operating certificate shall be kept available at the carrier's principal operations office for inspection by any authorized representative of the Administrator or Board.

§ 42.8 *Inspection.* Any authorized representative of the Administrator or the Board shall be permitted at any time and place to make inspections or examinations to determine the air carrier's compliance with the Civil Air Regulations.

§ 42.9 *Operations base, maintenance base, and/or office.* On or before July 1, 1949, each irregular air carrier shall give written notice to the Administrator of his principal business office, his principal operations base, and principal maintenance base. Thereafter, prior to any change in any such office or base, he shall give written notice to the Administrator.

AIRCRAFT REQUIREMENTS

§ 42.11 *Aircraft required.* An air carrier shall own or have the exclusive use of at least one aircraft. All aircraft used in the carriage of persons or property for compensation or hire shall be certificated in accordance with the standard airworthiness requirements. No air carrier shall operate a large aircraft for the carriage of goods or persons for compensation or hire unless the Administrator has found such aircraft safe for the service to be offered and has listed it in the air carrier operating certificate.

§ 42.12 *Fire prevention requirements.* Aircraft powered by an engine or engines rated at more than 600 h. p. each for maximum continuous operation shall, when used in passenger service, comply with the applicable fire prevention requirements of Part 4b of this chapter: *Provided,* That in those instances where the Administrator, prior to the effective date of this part, has authorized an air

carrier to operate aircraft without full compliance with such requirements, such aircraft may be operated in accordance with such authorization. For particular types of aircraft, where the Administrator finds that literal compliance with specific items of this requirement would not contribute materially to the objective sought, he may accept such measures of compliance as he finds will so contribute.

§ 42.13 *Engine rotation.* Multiengine aircraft having any engine rated at more than 480 h. p. for maximum continuous operation shall be so equipped that the crankshaft rotation of each such engine can be stopped promptly in flight.

§ 42.14 *Minimum performance requirements for all aircraft.* Except as otherwise provided in this part, no air carrier shall use any aircraft unless it meets such operating limitations as the Administrator determines will provide a safe relation between the performance of the aircraft and the airports to be used and the areas to be traversed.

§ 42.15 *Minimum performance requirements for large airplanes used in passenger operations.* No air carrier shall use large airplanes in passenger operations except as provided below:

(a) Transport category airplanes shall meet the operating limitations of §§ 42.70 through 42.78.

(b) Nontransport category airplanes shall either:

(1) Retain their present airworthiness certificate status and shall meet the operating limitations of §§ 42.80 through 42.83, or

(2) Qualify by showing compliance with either the performance requirements of §§ 4a.737-T through 4a.750-T of this chapter or the requirements contained in Part 4b of this chapter, and when so qualified shall meet the operating limitations of §§ 42.70 through 42.78 over the area to be traversed.

(c) Airplanes used after December 31, 1953, shall comply with all of the requirements of Part 4b of this chapter or the transport category requirements of Part 4a of this chapter and shall meet the requirements of §§ 42.70 through 42.78 over each route to be flown.

§ 42.16 *Aircraft limitations for IFR and land aircraft overwater operations.* When passengers are carried, no air carrier shall use any aircraft under IFR weather conditions or any land aircraft in overwater operations except as follows:

(a) *IFR operations.* Aircraft shall be multiengine and shall meet the appropriate en route operating limitations of § 42.74 or § 42.82.

(b) *Overwater operations.* Land aircraft shall be multiengine and shall meet the appropriate en route operating requirements of § 42.74 or § 42.82, unless the overwater operation consists only of take-offs and landings or the aircraft is flown at such an altitude that it can reach land in the event of power failure.

AIRCRAFT EQUIPMENT

§ 42.21 *Basic required instruments and equipment for aircraft.* The following instruments and equipment acceptable to the Administrator for the type of

operations specified shall be installed and in serviceable condition in all aircraft:

(a) *VFR (day).* For day VFR flight the following is required:

- (1) Air-speed indicator,
- (2) Altimeter,
- (3) Magnetic direction indicator,
- (4) Tachometer for each engine,
- (5) Oil pressure gauge for each engine using pressure system,
- (6) Coolant temperature gauge for each liquid-cooled engine,
- (7) Oil temperature gauge for each air-cooled engine,
- (8) Manifold pressure gauge or equivalent when required for the proper operation of the engine,
- (9) Fuel gauge indicating the quantity of fuel in each tank,
- (10) Position indicator, if aircraft has retractable landing gear or flaps,
- (11) Approved seats and safety belts adequate for all persons on board the aircraft,

(12) In passenger service, a minimum of two approved hand-type fire extinguishers, one of which is installed in the pilot compartment, the other accessible to the passengers and ground personnel, unless the aircraft is so designed that the fire extinguisher in the pilot compartment is directly available to passengers and ground personnel, in which case only one fire extinguisher is required; in cargo service, fire extinguisher or extinguishers adequate for the aircraft,

(13) Source of electrical energy sufficient to operate all radio and electrical equipment installed,

(14) One spare set of fuses or 3 spare fuses of each magnitude.

(b) *VFR (night).* For night VFR flight the following is required:

- (1) Instruments and equipment specified in § 42.21 (a),
- (2) Carburetor temperature gauge,
- (3) Carburetor heating or de-icing equipment for each engine,
- (4) Set of approved forward and rear position lights,
- (5) At least one landing light,
- (6) Approved landing flares as follows, if the aircraft is operated beyond a 3-mile radius from the center of the airport of take-off:

Maximum certificated take-off weight of aircraft:	Flares
Less than 3,500 lbs....	5 class-3 or 3 class-2.
3,500 lbs. to 5,000 lbs....	4 class-2.
More than 5,000 lbs....	2 class-1 or 3 class-2, and 1 class-1.

If desired, flare equipment specified for heavier aircraft may be used.

(7) Two-way radio communications system and navigational equipment appropriate to the ground facilities to be used,

(8) Generator of adequate capacity,

(9) One set of instrument lights.

(c) *IFR (day).* For day IFR flight the following is required:

- (1) Instruments and equipment specified in § 42.21 (a),
- (2) Two-way radio communications system and navigational equipment appropriate to the ground facilities to be used,

- (3) Gyroscopic rate-of-turn indicator,
- (4) Bank indicator,
- (5) Rate-of-climb indicator,
- (6) Artificial horizon indicator,
- (7) Sensitive altimeter adjustable for changes in barometric pressure, in lieu of § 42.21 (a) (2),

- (8) Clock with a sweep-second hand,
- (9) One gyro direction indicator,
- (10) Generator of adequate capacity,
- (11) One outside air temperature gauge easily readable from the pilot's position,

- (12) One carburetor temperature gauge or equivalent approved device,

- (13) Power failure warning means or vacuum gauge on instrument panel connecting to lines leading to gyroscopic instruments,

- (14) Carburetor heating or de-icing equipment for each engine,

- (15) Heated pitot tube for each air-speed indicator.

- (d) *IFR (night)*. For night IFR flight the following is required:

- (1) Instruments and equipment specified in paragraphs (a), (b), and (c) of this section: *Provided*, That when any requirements under paragraphs (a), (b), or (c) of this section are identical, such requirements need not be duplicated.

§ 42.22 Additional required instruments and equipment for large aircraft.

In addition to the basic instruments required by § 42.21, the following instruments and equipment for the type of operations specified shall be installed and in serviceable condition in large aircraft:

- (a) *Day (VFR and IFR)*. For flight during the day the following is required:

- (1) Additional air-speed indicator,
- (2) Additional sensitive altimeter.

- (3) Alternate source of energy to supply gyroscopic instruments which shall be capable of carrying the required load. Engine-driven pumps, when used, shall be on separate engines and, in lieu of one such source of energy, an auxiliary power unit may be used. The installation shall be such that the failure of one source of energy will not interfere with the proper functioning of the instrument by means of the other source.

- (4) In passenger service, in addition to fire-detecting and fire-extinguishing equipment necessitated as a result of compliance with § 42.12, such additional hand-type fire extinguishers as the Administrator finds necessary for compliance with § 42.21 (a) (12).

- (b) *Night (VFR and IFR)*. For flight during the night the following is required:

- (1) Instruments and equipment specified in paragraph (a) of this section, and one additional landing light.

§ 42.23 Radio communications system and navigational equipment for large aircraft.

In lieu of the radio communications system and navigational equipment specified in § 42.21 (b) (7) and (c) (2), the following shall be required in large aircraft for the type of operations specified:

- (a) For day VFR operations over routes on which navigation can be accomplished by visual reference to landmarks, each aircraft shall be equipped with such radio equipment as is necessary to accomplish the following:

- (1) Transmit to at least one appropriate ground station from any point on the route and transmit to airport traffic control towers, from a distance of not less than 25 miles,

- (2) Receive communications at any point on the route,

- (3) By either of two independent means, receive meteorological information at any point on the route and receive instructions from airport traffic control towers.

- (b) For day VFR operations over routes on which navigation cannot be accomplished by visual reference to landmarks, for night VFR, or for IFR operations, each aircraft shall be equipped as specified in paragraphs (a) (1), (2), and (3) of this section, and in addition shall be equipped with at least one marker beacon receiver and with such radio equipment as is necessary to receive satisfactorily, by either of two independent means, radio navigational signals from any other radio aid to navigation intended to be used. For operations outside the United States each aircraft operated for long distances over water or uninhabited terrain shall be equipped with two independent means of transmitting to at least one appropriate ground station from any point on the route.

- (c) If appropriate, one of the means provided for compliance with paragraph (a) (3) of this section may be employed for compliance with paragraphs (a) (2) of this section, and the means provided for compliance with the requirements of paragraph (b) of this section may be employed for compliance with paragraphs (a) (1) and (3) of this section.

§ 42.24 First-aid and emergency equipment.

- (a) Each aircraft shall be equipped with readily available first-aid and emergency evacuation equipment adequate for the type of operation and number of persons carried.

- (b) Each aircraft operated over uninhabited terrain shall carry such emergency equipment as the Administrator finds necessary for the preservation of life for the particular operation.

- (c) Except for take-offs, landings, or flights for short distances over water for which the Administrator finds that any of the equipment in subparagraphs (1), (2), or (3) of this paragraph is unnecessary, each aircraft operated over water shall be equipped with:

- (1) Individual life preservers or flotation devices readily available for each person aboard the aircraft,

- (2) Life rafts of sufficient capacity to contain all persons aboard the aircraft,

- (3) A Very pistol or equivalent signal equipment,

- (4) Portable emergency radio signaling device which is not dependent upon the aircraft power supply,

- (5) Such additional emergency equipment as the Administrator finds necessary for the preservation of life for the particular operation involved.

- § 42.25 *Cockpit check list*. The air carrier shall provide for each type of aircraft a cockpit check list adapted to each operation in which the aircraft is to be utilized. The check list shall be installed in a readily accessible location

in the cockpit of each aircraft and shall be used by the flight crew.

§ 42.26 *Oxygen*. Aircraft operated at an altitude exceeding 10,000 feet above sea level continuously for more than 30 minutes, or at an altitude exceeding 12,000 feet above sea level for any length of time, shall be equipped with effective oxygen apparatus and an adequate supply of oxygen available for the use of the operating crew. Such aircraft shall also be equipped with an adequate separate supply of oxygen available for the use of passengers when operated at an altitude exceeding 12,000 feet above sea level.

MAINTENANCE REQUIREMENTS

§ 42.30 *General*. No person shall operate an aircraft which is not in an airworthy condition. All inspections, repairs, alterations, and maintenance shall be performed in accordance with Part 18 of this chapter, and with the maintenance manual when required by § 42.32 (d).

§ 42.31 Inspections and maintenance.

- (a) Aircraft shall be given a preflight check to determine compliance with § 42.51 (e) and, in addition, shall meet the following requirements:

- (1) Large aircraft shall be maintained and inspected in accordance with a continuous maintenance and inspection system as provided for in the maintenance manual.

- (2) Small aircraft shall either be maintained and inspected in accordance with subparagraph (1) of this paragraph or be given a periodic inspection at least every 100 hours of flight time and an annual inspection at least every 12 months. The annual inspection may be accepted as a periodic inspection.

- (b) A record shall be carried in the aircraft at all times showing that the latest inspections required by paragraphs (a) (1) or (2) have been accomplished, except such record may be kept at the principal operations base when the aircraft is maintained and inspected as provided in paragraph (a) (1) of this section.

§ 42.32 Additional maintenance requirements for large aircraft.

The following requirements are applicable to operations conducted in large aircraft:

- (a) *Facilities*. Facilities for the proper inspection, maintenance, overhaul, and repair of the types of aircraft used shall be maintained by the air carrier, unless arrangements acceptable to the Administrator are made with other persons possessing such facilities.

- (b) *Maintenance personnel*. A staff of qualified mechanics, inspectors, and appropriate supervisory personnel shall be employed by the air carrier and kept available for performing the functions specified in § 42.30, except where the air carrier has obtained the approval of the Administrator for the performance of such functions by some other person. The air carrier shall permit maintenance to be performed only by an individual competent therefor.

- (c) *Reporting of mechanical irregularities occurring in operation*. Each air carrier shall prescribe in its operations manual a procedure for the submission of written reports by the members of the

flight crew for all mechanical irregularities occurring during the operation of the aircraft. The members of the flight crew designated by the air carrier shall submit a written report in accordance with such system to the person responsible for the maintenance of the aircraft. This report shall be submitted at the end of each through flight or sooner if the seriousness of the irregularity so warrants. Such report or copy thereof indicating the action taken shall be retained in the aircraft for the information of the next flight crew.*

(d) *Maintenance manual.* (1) The air carrier shall prepare and maintain for the use and guidance of maintenance personnel a maintenance manual which contains full information pertaining to the maintenance, repair, and inspection of aircraft and equipment and clearly outlines the duties and the responsibilities of maintenance personnel. The form and content shall be acceptable to the Administrator. It shall contain a copy of the approved time limitations for inspection and overhauling of aircraft, aircraft engines, propellers, and appliances. Copies and revisions shall be furnished to all persons designated by the Administrator. All copies in the hands of company personnel shall be kept up to date.

(2) A copy of those portions pertaining to the aircraft shall be carried therein.

(3) Any changes prescribed by the Administrator in the interest of safety shall be promptly incorporated in the manual. Other changes not inconsistent with any Federal regulation, the air carrier operating certificate, or safe operating practices may be made without prior approval of the Administrator.

(4) No maintenance, repair, or inspection of aircraft or equipment shall be made by the air carrier contrary to the provisions of the maintenance manual.

FLIGHT CREW REQUIREMENTS

§ 42.40 *Airman requirements.* No air carrier shall utilize an individual as an airman unless he has met the appropriate requirements of this subchapter.

§ 42.41 *Composition of flight crew.* (a) No air carrier shall operate an aircraft with less than the minimum flight crew required for the particular operation and the type of aircraft, as determined by the Administrator in accordance with the standards hereinafter prescribed, and specified in the air carrier operations manual for the area in which operations are authorized.

(b) Where the provisions of this part require the performance of two or more functions for which an airman certificate is necessary, such requirement shall not be satisfied by the performance of multiple functions at the same time by any airman.

(c) *Second pilot.* A second pilot shall be required on large aircraft, or on other aircraft when passengers are carried on operations under IFR, or when the Administrator finds that a second pilot is otherwise required in the interest of safety.

* See § 42.96 for the requirements for reporting aircraft or component malfunctioning and defects.

(d) *Flight radio operator.* An airman holding a flight radio operator certificate shall be required for flight over any area over which the Administrator has determined that radiotelegraphy is necessary for communication with ground stations during flight.

(e) *Flight engineer.* An airman holding a flight engineer certificate shall be required on all aircraft of more than 80,000 lbs. maximum certificated take-off weight, and on all other aircraft certificated for more than 30,000 lbs. maximum certificated take-off weight where the Administrator finds that the design of the aircraft used or the type of operation is such as to require a flight engineer for the safe operation of the aircraft, or on other aircraft where required by the aircraft airworthiness certificate.

(f) *Flight navigator.* An airman holding a flight navigator certificate shall be required for flight over any area where the Administrator has determined that celestial navigation is necessary.

§ 42.42 *Pilot qualification for small aircraft—(a) Pilot in command.* Any pilot serving as pilot in command on small aircraft shall hold a valid commercial pilot certificate with an appropriate rating for the aircraft on which he is to serve, and for:

(1) *Day flight VFR.* He shall have had at least 50 hours of cross-country flight time as a pilot;

(2) *Night flight VFR.* He shall have had a total of at least 500 hours of flight time as a pilot, including 100 hours of cross-country flight time of which 25 hours shall have been at night;

(3) *IFR flight.* He must possess a currently effective instrument rating and have had a total of at least 500 hours of flight time as a pilot including 100 hours of cross-country flight.

(b) *Second pilot.* Any pilot serving as second pilot on small aircraft shall hold for:

(1) *VFR flight.* A valid commercial pilot certificate with the appropriate ratings;

(2) *IFR flights.* A currently effective instrument rating.

§ 42.43 *Pilot qualification for large aircraft—(a) Pilot in command.* Any pilot serving as pilot in command on large aircraft shall meet the following requirements:

(1) After December 31, 1949, he shall possess a valid airline transport pilot rating with an appropriate rating for the aircraft on which he is to serve;

(2) Prior to and including December 31, 1949, he shall either meet the above or:

(i) Possess a valid commercial pilot certificate with an appropriate rating for the aircraft on which he is to serve;

(ii) Possess a currently effective instrument rating;

(iii) Have logged at least 1,200 hours of flight time of which 500 hours shall have been cross-country;

(iv) Have logged at least 100 hours of night flight of which 50 hours shall have been cross-country.

(b) *Second pilot.* Any pilot serving as second pilot in large aircraft shall:

(1) Possess a valid commercial pilot certificate with an appropriate rating for the aircraft on which he is to serve;

(2) Possess a currently effective instrument rating.

(c) *Three-pilot crew.* In a crew of three or more pilots at least two pilots shall meet the requirements of paragraph (a) of this section.

§ 42.44 *Recent flight experience requirements for flight crew members.* No air carrier shall utilize an airman, nor shall any individual serve as an airman, unless he meets the appropriate experience requirements specified below:

(a) *Pilots.* (1) Within the preceding 90 days a pilot shall have made at least 3 take-offs and landings in an aircraft of the same type on which he is to serve. For night flight one of the take-offs and landings required above shall have been made at night.

(2) Within the preceding 6 months a pilot in large aircraft shall have successfully accomplished an equipment check on aircraft of the type on which he is to serve. Such equipment check shall be given by an authorized representative of the Administrator or a check pilot designated by the Administrator.

(3) Within the preceding 6 months the pilot in command on any large aircraft, or on any aircraft under IFR conditions, shall have successfully accomplished an instrument check demonstrating his ability to pilot and navigate by instruments, to accomplish a standard instrument approach using radio range facilities, and to accomplish an instrument approach in accordance with ILS, GCA, or D/F procedures when such facilities are to be used. This instrument check shall have been given by an authorized representative of the Administrator or a check pilot designated by the Administrator on an aircraft which the air carrier is authorized to use.

(b) *Flight radio operator.* No individual shall be assigned to nor perform duties as a flight radio operator unless within the preceding 12 months he has had at least four months of satisfactory experience as a radiotelegraph operator and at least 25 hours of experience in the operation of aircraft radio during flight, or until a person designated by the Administrator has checked the airman and has determined that he is (1) familiar with all radio information pertinent to the operations of the air carrier and (2) competent with respect to the operating procedures and radio equipment to be used.

(c) *Flight engineer.* No individual shall be assigned to nor perform the duties as a flight engineer unless within the preceding 12 months he has had at least 50 hours of experience as a flight engineer on the type of aircraft on which he is to serve, or until a person designated by the Administrator has checked the airman and determined that he is (1) familiar with all current information and operating procedures relating to the type of aircraft on which he is to serve and (2) competent with respect to the flight engineer's duties on such aircraft.

(d) *Flight navigator.* No individual shall be assigned to nor perform duties as a flight navigator unless within the preceding 12 months he has had at least

50 hours of experience as a flight navigator, or until a person designated by the Administrator has checked the airman and determined that he is (1) familiar with all current navigational information pertaining to the operations of the air carrier and (2) competent with respect to the operating procedures and navigational equipment to be used.

§ 42.45 *Proficiency of crew members serving on large aircraft.* The air carrier shall by means of a training program or otherwise insure that crew members are proficient in their duties and are kept currently informed of all techniques and new developments pertinent thereto. The program shall include instruction in emergency procedures and in crew coordination.

§ 42.46 *Logging flight time.* (a) A pilot in command may log his total flight time.

(b) A second pilot holding an airline transport pilot certificate and rating for the aircraft flown may log the total time during which he is on duty on the flight deck.

(c) A second pilot not holding an airline transport pilot certificate and rating for the aircraft flown may log 50% of the total flight time during which he is on duty on the flight deck.

(d) A pilot may log as instrument flight time only such time as he is actually manipulating the controls when the aircraft is being flown solely by reference to instruments.

§ 42.47 *Grace period for airman periodic checks.* Whenever this part requires an airman check at stated intervals, a grace period of 30 days shall be allowed: *Provided*, That the effective date of the check, if met within the grace period, shall be the same as if met on the day immediately preceding such grace period.

§ 42.48 *Flight time limitations for pilots on large aircraft.* The following limitations shall be applicable to pilots serving on large aircraft.

(a) *Individual pilot limitations.* (1) A pilot may be scheduled to fly 8 hours or less during any 24 consecutive hours without a rest period during such 8 hours.

(2) A pilot shall receive 24 hours of rest before being assigned further duty when he has flown in excess of 8 hours during any 24 consecutive hours. Time spent in deadhead transportation to or from duty assignment shall not be considered part of such rest period.

(3) A pilot shall be relieved from all duty for not less than 24 consecutive hours at least once during any 7 consecutive days.

(4) A pilot shall not fly as a crew member in air carrier service more than 100 hours during any 30 consecutive days.

(5) A pilot shall not fly as a crew member in air carrier service more than 1,000 hours in any one calendar year.

(6) A pilot shall not do other commercial flying if his total flying time for any specified period will exceed the limits of that period.

(b) *Aircraft having a crew of two pilots.* (1) A pilot shall not be scheduled

to fly in excess of 8 hours during any 24-hour period unless he is given an intervening rest period at or before the termination of 8 scheduled hours of flight duty. Such rest period shall equal at least twice the number of hours flown since the last preceding rest period, and in no case shall such rest period be less than 8 hours. During such rest period the pilot shall be relieved of all duty with the air carrier.

(2) A pilot shall not be on duty for more than 16 hours during any 24 consecutive hours.

(c) *Aircraft having a crew of three pilots.* (1) A pilot shall not be scheduled for duty on the flight deck in excess of 8 hours in any 24-hour period.

(2) A pilot shall not be scheduled to be aloft for more than 12 hours in any 24-hour period.

(3) A pilot shall not be on duty for more than 18 hours in any 24-hour period.

(d) *Aircraft having a crew of four pilots.* (1) A pilot shall not be scheduled for duty on the flight deck in excess of 8 hours during any 24-hour period.

(2) A pilot shall not be scheduled to be aloft for more than 16 hours in any 24-hour period.

(3) A pilot shall not be on duty for more than 20 hours during any 24-hour period.

FLIGHT OPERATION RULES

§ 42.51 *Pilot responsibilities—(a) Pilot in command.* The pilot in command of the aircraft shall be designated by the air carrier.

(b) *Preflight action.* Prior to commencing a flight the pilot in command shall familiarize himself with the latest weather reports pertinent to the flight issued by the United States Weather Bureau or if unavailable, by the most reliable source, and with the information necessary for the safe operation of the aircraft en route and on the airports or other landing areas to be used, and determine that the flight can be completed with safety.

(c) *Charts and flight equipment.* The pilot in command shall have in his possession in the cockpit proper flight and navigational facility charts, including instrument approach procedures when instrument flight is authorized, and such other flight equipment as may be necessary to properly conduct the particular flight proposed.

(d) *Emergency decisions.* (1) When required in the interest of safety, a pilot may make any immediate decision and follow any course of action which in his judgment appears necessary, regardless of prescribed methods or requirements. He shall, where practicable, keep the proper control station fully informed regarding the progress of the flight.

(2) In an emergency requiring either the dumping of fuel or a landing at a weight in excess of the authorized landing weight, a pilot may elect to follow whichever procedure he considers safer.

* See § 42.94 for the report to be filed by the pilot where the authority granted by this section is exercised.

(e) *Serviceability of equipment.* Prior to starting any flight, the pilot shall determine that the aircraft, all engines and propellers, appliances and required equipment, including all instruments, are in proper operating condition. If during the flight any such engine, propeller, appliance, or equipment malfunctions or becomes inoperative, the pilot in command shall determine whether the flight can be continued with safety. Unless he believes that flight can be continued safely, he shall hold or cancel it until satisfactory repairs or replacements are made.

(f) *Pilots at controls.* In the case of aircraft requiring two or more pilots, two pilots shall remain at the controls at all times while taking off, landing, and while the aircraft is en route except when the absence of one is necessary in connection with his regular duties or when he is replaced by a person authorized under the provisions of paragraph (g) of this section.

(g) *Admission to pilot compartment.* In aircraft having a separate pilot compartment, no person other than a crew member, a check pilot, an authorized representative of the Administrator or the Board in pursuance of official duty, or a person whose admission is approved by the pilot in command may be admitted to the pilot compartment. In the latter case, the pilot in command shall remain at the controls.

§ 42.52 *Fuel supply.* The following minimum fuel requirements shall be applicable as specified:

(a) *United States.* Within the continental limits of the United States the following requirements shall be met unless the Administrator finds, after considering the character of the terrain being traversed, the available airports, and the category of aircraft being operated, that the safe conduct of the flight normally requires a greater quantity of fuel.

(1) No flight in small aircraft under VFR shall be started unless the aircraft carries sufficient fuel and oil, considering the wind and other weather conditions forecast, to fly to the point of intended landing, and thereafter for a period of at least 30 minutes at normal cruising consumption.

(2) No flight in large aircraft under VFR shall be started unless, considering the factors enumerated in subparagraph (1) of this paragraph, the aircraft carries sufficient fuel and oil to fly to the point of intended landing, and thereafter for a period of at least 45 minutes at normal cruising consumption.

(3) No flight in large or small aircraft under IFR shall be started unless, considering the factors set forth in subparagraph (1) of this paragraph, sufficient fuel and oil are carried aboard the aircraft (i) to reach the point of intended landing, (ii) thereafter to fly to the alternate airport, and (iii) thereafter to fly for a period of 45 minutes at normal cruising consumption.

(b) *Outside the United States.* Outside the continental limits of the United States, the following requirements shall be met unless the Administrator finds, after considering the character of the terrain being traversed, the available air-

ports, and the category and type of aircraft being operated, that the flight may be safely conducted with a lesser quantity of fuel.

(1) No flight shall be started unless, considering the wind and other weather conditions expected, the aircraft carries sufficient fuel and oil (i) to fly to the next point of landing specified in the flight plan, (ii) thereafter to fly to and land at the most distant alternate airport designated in the flight plan, and (iii) thereafter to fly for a period of at least 2 hours at normal cruising consumption.

(2) No flight shall be returned to the point of departure or to an alternate airport for that point unless the aircraft has sufficient fuel to return to such point and thereafter to fly for a period of at least 2 hours at normal cruising consumption.

(3) No flight shall be started to a destination for which there is no available alternate unless the aircraft carries sufficient fuel, considering wind and other weather conditions expected, to fly to that point and thereafter to fly for at least 3 hours at normal cruising consumption.

§ 42.53 *Minimum flight altitude rules.* Except during take-off and landing, the flight altitude rules prescribed in paragraphs (a) and (b) of this paragraph, in addition to the applicable provisions of § 60.17 of this chapter, shall govern air carrier operations: *Provided*, That other altitudes may be established by the Administrator for any area where he finds, after considering the character of the terrain being traversed, the quality and quantity of meteorological service, the navigational facilities available, and other flight conditions, that the safe conduct of flight permits or requires such other altitudes.

(a) *Day VFR operations.* No aircraft shall be flown at an altitude less than 500 feet above the surface or less than 1,000 feet from any mountain, hill, or other obstruction to flight.

(b) *Night VFR or IFR operations.* No aircraft shall be flown at an altitude less than 1,000 feet above the highest obstacle located within a horizontal distance of 5 miles from the center of the course intended to be flown or, in mountainous terrain designated by the Administrator, 2,000 feet above the highest obstacle located within a horizontal distance of 5 miles from the center of the course intended to be flown: *Provided*, That in VFR operations at night in such mountainous terrain aircraft may be flown over a lighted civil airway at a minimum altitude of 1,000 feet above such obstacle.

§ 42.54 *Flight into known icing conditions.* No aircraft shall be flown into known or probable heavy icing conditions. Aircraft may be flown into light or moderate icing conditions only if the aircraft is equipped with an approved means for de-icing the wings, propellers, and such other parts of the aircraft as are essential to safety.

§ 42.55 *Weather minimums.* No flight shall be started unless the take-off, en route operation, and landing at destination can be conducted in accordance with the weather requirements of Part 60 of

this chapter,¹ but in no case less than the minimums specified below:

(a) For VFR take-off, en route operation, or landing, the weather minimums shall be a ceiling of 1,000 feet and visibility of 1 mile for day and 2 miles for night, unless otherwise authorized by an air traffic clearance obtained from air traffic control, and

(b) For IFR operations the weather minimums, including alternate airport requirements, shall be not less than those specified in the CAA Flight Information Manual, or as otherwise specified or authorized by the Administrator.

§ 42.56 *Instrument approach.* No instrument approach procedure shall be executed or landing made at an airport when the latest United States Weather Bureau report for that airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport.

§ 42.57 *Airport lighting for night operations.* No air carrier shall use an airport for the take-off or landing of an aircraft at night unless such airport is adequately lighted.

§ 42.58 *Navigational aids for IFR flight.* IFR operations shall be conducted only over civil airways and at airports equipped with radio ranges or equivalent facilities, unless the Administrator has found that instrument navigation can be conducted by the use of radio direction finding equipment installed in the aircraft or by other specialized means and has approved or otherwise authorized such operation in the air carrier operating certificate.

§ 42.59 *Passenger use of emergency equipment.* The air carrier shall establish procedures for familiarizing passengers with the location and use of emergency equipment.

§ 42.60 *Operations manual for large aircraft.* (a) When operations are conducted in large aircraft the air carrier shall prepare and maintain for the use and guidance of operations personnel an operations manual which contains full information necessary to guide flight and ground personnel in the conduct of safe flight operations and to inform such personnel regarding their duties and responsibilities. The manual shall also contain a copy of the air carrier operating certificate. The form and content shall be acceptable to the Administrator. Copies and revisions shall be furnished to all persons designated by the Administrator. All copies in the hands of company personnel shall be kept up to date.

(b) A copy of the operations manual shall be kept at the principal operations base. Those portions of the manual pertinent to safe operation of the aircraft, including the copy of the air carrier operating certificate, shall be carried therein.

(c) Any changes prescribed by the Administrator in the interest of safety shall be promptly incorporated in the manual. Other changes not inconsistent with any

¹ See the Flight Information Manual for specific en route, take-off, and landing minimums for particular routes and airports.

Federal regulation, the air carrier operating certificate, or a safe operating practice may be made without the prior approval of the Administrator.

(d) No operation shall be conducted by the air carrier contrary to the safety provisions of the operations manual.

§ 42.61 *Flight plan for large aircraft.* No large aircraft shall be taken off unless a VFR or IFR flight plan containing the appropriate information required by Part 60 of this chapter is filed by the air carrier with the nearest CAA communications station or, when outside the United States, with the appropriate authority. In the event communications facilities are not readily available, such flight plan shall be filed as soon as practicable after becoming air-borne.

§ 42.62 *Flight manifest for large aircraft and passenger-carrying aircraft operating under IFR conditions.* For all large aircraft, or any aircraft carrying passengers under IFR conditions, a flight manifest form shall be prepared and signed for each flight by qualified personnel of the air carrier charged with the duty of supervising the loading of the aircraft and the preparation of the flight manifest form. The form and contents of this manifest shall be in accordance with the instructions contained in the air carrier's operations manual and shall include the names and addresses of the passengers carried, points of departure and destination, the weight of the cargo and passengers, and the distribution of such weight in the aircraft in accordance with the weight control system prescribed in the operations manual. The weight of the passengers may be determined in accordance with a weight control system prescribed by the Administrator. In the event passengers are picked up at points other than the principal operations base or discharged at points other than as shown on the latest manifest, the pilot shall, before starting the flight, cause a duplicate copy of the revised manifest to be mailed to such base, unless other requirements are set forth in the carrier's operations manual.²

OPERATING LIMITATIONS FOR LARGE PASSENGER-CARRYING AIRPLANES

§ 42.70 *Operating limitations for transport category airplanes.* (a) In operating any passenger-carrying transport category airplane the provisions of §§ 42.71 through 42.78 shall be complied with unless deviations therefrom are specifically authorized by the Administrator on the ground that the special circumstances of a particular case make a literal observance of the requirements unnecessary for safety.

(b) For transport category aircraft the data contained in the Airplane Flight Manual shall be applied in determining compliance with these provisions. Where conditions differ from those for which specific tests were made, compliance shall be determined by interpolation or by computation of the effects of changes in the specific variables where such interpolations or computations will give re-

² See § 42.95 for record-keeping requirements for the flight manifest.

sults substantially equalling in accuracy the results of a direct test.

§ 42.71 *Weight limitations.* (a) No airplane shall be taken off from any airport located at an elevation outside of the altitude range for which maximum take-off weights have been determined, and no airplane shall depart for an airport of intended designation, or have any airport specified as an alternate, which is located at an elevation outside of the altitude range for which maximum landing weights have been determined.

(b) The weight of the airplane at take-off shall not exceed the authorized maximum take-off weight for the elevation of the airport from which the take-off is to be made.

(c) The weight at take-off shall be such that, allowing for normal consumption of fuel and oil in flight to the airport of intended destination, the weight on arrival will not exceed the authorized maximum landing weight for the elevation of such airport.

§ 42.72 *Take-off limitations to provide for engine failure.* No take-off shall be made except under conditions which will permit compliance with the following requirements.

(a) It shall be possible, from any point on the take-off up to the time of attaining the critical-engine-failure speed, to bring the airplane to a safe stop on the runway, as shown by the accelerate-stop distance data.

(b) It shall be possible, if the critical engine should fail at any instant after the airplane attains the critical-engine-failure speed, to proceed with the take-off and attain a height of 50 feet, as indicated by the take-off path data, before passing over the end of the take-off area. Thereafter, it shall be possible to clear all obstacles, either by at least 50 feet vertically, as shown by the take-off path data, or by at least 200 feet horizontally within the airport boundaries and by at least 300 feet horizontally after passing beyond such boundaries.

(1) In determining the allowable deviation of the flight path in order to avoid obstacles by at least the distances above set forth, it shall be assumed that the airplane is not banked before reaching a height of 50 feet, as shown by the take-off path data, and that a maximum bank thereafter does not exceed 15°.

(c) In applying conditions in paragraphs (a) and (b) of this section, correction shall be made for any gradient of the take-off surface. Take-off data based on still air may be corrected to allow for the effect of a favorable wind according to reported wind conditions: *Provided*, That not more than 50% of the wind component along the direction of take-off may be used.⁹

§ 42.73 *En route limitations; all engines operating.* No airplane shall be taken off at a weight in excess of that which would permit a rate of climb (expressed in feet per minute), with all

engines operating, of at least $6 V_{SO}$ (when V_{SO} is expressed in miles per hour) at an altitude of at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track. Transport category airplanes certificated under Part 4a of this chapter are not required to comply with this section. For the purpose of this section it shall be assumed that the weight of the airplane as it proceeds along its intended track is progressively reduced by the anticipated consumption of fuel and oil.

§ 42.74 *En route limitations; one engine inoperative.* No airplane of a maximum certificated weight of less than 40,000 lbs. shall be taken off at a weight in excess of that which would permit a rate of climb (expressed in feet per minute), with one engine inoperative, of at least $0.02 V_{SO}^2$ (when V_{SO} is expressed in miles per hour) at an altitude of at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles either side of the intended track; for airplanes of a maximum certificated weight of 40,000 to 60,000 lbs., inclusive, the rate of climb shall increase linearly in relation to weight to $0.04 V_{SO}^2$; for airplanes of a maximum certificated weight of over 60,000 lbs. the rate of climb shall be $0.04 V_{SO}$; for transport category airplanes certificated under Part 4a of this chapter the rate of climb shall be $0.02 V_{SO}^2$ for all maximum certificated weights. For the purpose of this section it shall be assumed that the weight of the airplane as it proceeds along its intended track is progressively reduced by the anticipated consumption of fuel and oil.

§ 42.75 *En route limitations; two engines inoperative.* No airplane having four or more engines shall be flown along an intended track except under the following conditions: *Provided*, That this section shall not apply to transport category airplanes certificated under Part 4a of this chapter:

(a) No place along the intended track shall be more than 90 minutes away from an available landing area at which a landing may be made in accordance with the requirements of § 42.78, assuming all engines are operating at cruising speed; or

(b) The take-off weight is such that the airplane with two engines inoperative shall have a rate of climb (expressed in feet per minute) of at least $0.01 V_{SO}^2$ (when V_{SO} is expressed in miles per hour) either at an altitude of 1,000 feet above the elevation of the highest ground or obstruction within 10 miles on either side of the intended track or at an altitude of 5,000 feet, whichever is higher.

(1) The rate of climb referred to in this paragraph shall be determined by assuming the airplane's weight to be either that attained at the moment of failure of the second engine, assuming that failure to occur 90 minutes after departure, or that which may be attained by dropping fuel at the moment of failure of the second engine, assuming that sufficient fuel is retained to arrive at an altitude of at least 1,000 feet directly over the landing area.

§ 42.76 *En route limitations; where special air navigational facilities exist.* The 10-mile lateral distance specified in §§ 42.73 through 42.76 may, for a distance of no more than 20 miles, be reduced to 5 miles: *Provided*, That special air navigational facilities provide a reliable and accurate identification of any high ground or obstruction located outside of such 5-mile lateral distance but within the 10-mile distance.

§ 42.77 *Landing distance limitations; airport of destination.* No airplane shall be taken off at a weight in excess of that which, under the conditions stated hereinafter in paragraphs (a) and (b) of this section, would permit the airplane to be brought to rest at the field of intended destination within 60% of the effective length of the runway from a point 50 feet directly above the intersection of the obstruction clearance line and the runway. For the purpose of this section it shall be assumed that the take-off weight of the airplane is reduced by the weight of the fuel and oil expected to be consumed in flight to the field of intended destination.

(a) It shall be assumed that the aircraft is landed on the most favorable runway and direction without regard to wind.

(b) It shall be assumed, considering every probable wind velocity and direction, that the aircraft is landed on the most suitable runway, taking due account of the ground handling characteristics of the airplane and allowing for the effect on the landing path and roll of not more than 50% of the favorable wind component.

(c) If the airport of intended destination will not permit full compliance with paragraph (b) of this section, the aircraft may be taken off if an alternate airport is designated which permits compliance with § 42.78.

§ 42.78 *Landing distance limitations; alternate airports.* No airport shall be designated as an alternate airport in a flight plan unless the aircraft at the weight at take-off can comply with the requirements of paragraphs (a) and (b) of § 42.77 at such airport: *Provided*, That the aircraft can be brought to rest within 70% of the effective length of the runway.

§ 42.80 *Operating limitations for aircraft not certificated in the transport category.* In operating any passenger-carrying, large, nontransport category airplanes after January 1, 1950, the provisions of §§ 42.81 through 42.83 shall be complied with. Prior to that date, such aircraft shall be operated in accordance with such operating limitations as the Administrator determines will provide a safe relation between the performance of the aircraft and the airports to be used and the areas to be traversed. Performance data published by the Administrator for each such nontransport category type aircraft shall be used in determining compliance with these provisions.

§ 42.81 *Take-off limitations.* No take-off shall be made except under conditions which will permit the airplane to be brought to a safe stop within the effective length of the runway from any

⁹It will be noted that Special Civil Air Regulation Serial Number 397 requires the pilot to take account of temperature variations as well as his wind component in take-off.

point on take-off up to the time of attaining, with all engines operating at normal take-off power, 105% of the minimum control speed or 115% of the power-off stall speed in the take-off configuration, whichever is greater, as shown by the accelerate-stop distance data.

(a) In applying this requirement take-off data shall be based upon still-air conditions, and no correction shall be made for any uphill gradient of 1% or less when such percentage is measured as the difference between elevation at the end points of the runway divided by the total length. For all uphill gradients greater than 1%, the effective take-off length of the runway shall be reduced 20% for each 1% grade.

§ 42.82 *En route limitations; one engine inoperative.* No airplane shall be taken off at a weight in excess of that which, with the critical engine inoperative, would permit a rate of climb of at least 50 feet per minute at an altitude of at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track or at an altitude of 5,000 feet, whichever is higher. For the purpose of this section it shall be assumed that the weight of the airplane as it proceeds along its intended track is progressively reduced by the anticipated consumption of fuel and oil; that the propeller of the inoperative engine is in the minimum drag position; that the wing flaps and landing gear are in the most favorable positions; and that the remaining engine or engines are operating at the maximum continuous power available. The 10-mile lateral distance specified herein may, for a distance of no more than 20 miles, be reduced to 5 miles provided that special air navigational facilities provide a reliable and accurate identification of any high ground or obstruction located outside of such 5-mile lateral distance but within the 10-mile distance.

§ 42.83 *Landing distance limitations; airport of destination.* No airplane shall be taken off at a weight in excess of that which, under the conditions hereinafter stated in paragraphs (a) and (b) of this section, would permit the airplane to be brought to rest at the field of intended destination within 70% of the effective length of the runway from a point 50 feet directly above the intersection of the obstruction clearance line and the runway. For the purpose of this section it shall be assumed that the take-off weight of the airplane is reduced by the weight of the fuel and oil expected to be consumed in flight to the field of intended destination.

(a) It shall be assumed that the aircraft is landed on the most favorable runway and direction without regard to wind.

(b) It shall be assumed, considering every possible wind velocity and direction, that the aircraft is landed on the most suitable runway, taking due account of the ground handling characteristics of the airplane and allowing for the effect on the landing path and roll of not more than 50% of the favorable wind component.

(c) If the airport of intended destination will not permit full compliance with paragraph (b) of this section, the aircraft may be taken off if an alternate airport is designated which permits compliance with paragraphs (a) and (b) of this section.

REQUIRED RECORDS AND REPORTS

§ 42.91 *Maintenance records.* Each air carrier shall keep at its principal operations base the following current records with respect to all aircraft, aircraft engines, propellers, and, where practicable, appliances used in air transportation:

- (a) Total time and service,
- (b) Time since last overhaul,
- (c) Time since last inspection, and
- (d) Mechanical failures.

§ 42.92 *Airman records.* An air carrier shall maintain at its principal operations base current records of every airman utilized as a member of a flight crew. These records shall contain such information concerning the qualifications of each airman as is necessary to show compliance with the appropriate requirements prescribed by the Civil Air Regulations. No air carrier shall utilize any airman as a flight crew member unless records are maintained for such airman as required herein.

§ 42.93 *Emergency flight reports.* In the case of emergencies necessitating the transportation of persons or medical supplies for the protection of life or property, the rules contained herein regarding type of aircraft, equipment, and weather minimums to be observed will not be applicable: *Provided*, That within 48 hours after any such flight returns to its base the air carrier shall file a report with the Administrator setting forth the conditions under which the flight was made, the necessity therefor, and giving the names and addresses of the crew and passengers.

§ 42.94 *Pilot's emergency deviation report.* Where pursuant to authority granted in § 42.51 (d) a pilot has deviated from established methods or requirements, he shall, within 7 days after completion of the trip, file with the Administrator a report thereof giving a brief statement concerning the circumstances of the emergency and the nature of the deviation.

§ 42.95 *Flight manifest record.* A signed copy and any revision of the flight manifest required by § 42.62 shall be retained in the personal possession of the pilot for the duration of the flight, and a duplicate copy thereof shall be retained by the air carrier at its principal operations base for at least one year after completion of the flight.

§ 42.96 *Reporting of malfunctioning and defects.* An air carrier shall report in a manner prescribed by the Administrator all malfunctioning and defects occurring during operation or discovered during inspection which cause or may be reasonably expected by the air carrier to cause an unsafe condition in any aircraft, engine, propeller, or appliance. The corrective action taken by the air

carrier to prevent recurrence of the malfunctioning or defect shall be indicated.

PART 43—GENERAL OPERATION RULES

GENERAL

Sec.

43.1 Scope.

AIRCRAFT CERTIFICATION AND IDENTIFICATION

43.10 Certificates and identification marks.

43.10-1 Identification marks and airworthiness classification marks (CAA rules which apply to § 43.10 (c)).

MAINTENANCE

43.20 General.

43.21 Flight tests.

43.22 Inspections.

43.22-1 Annual inspection routine (CAA rules which apply to § 43.22).

43.23 Aircraft and engine records.

43.24 Rebuilt engine logs.

AIRCRAFT INSTRUMENTS AND EQUIPMENT

43.30 Instruments and equipment for NC powered aircraft or powered aircraft with standard airworthiness certificates.

PILOTING RULES (GENERAL)

43.40 Pilot certificates.

43.41 Medical certificate and renewal.

43.42 Operation during physical deficiency.

43.43 Pilot logbooks.

43.44 Logging of flight time.

43.45 Use of liquor, narcotics, and drugs.

43.46 Towing by aircraft.

43.47 Dropping objects.

43.48 Aerobatic flight.

43.49 Parachutes.

43.50 Transportation of explosives and other dangerous articles.

43.51 Fuel supply.

STUDENT PILOT LIMITATIONS

43.52 General limitations.

43.53 Requirements for first solo.

43.54 Flight area limitations.

43.55 Aircraft limitations.

43.56 Recent experience.

PRIVATE AND COMMERCIAL PILOT PRIVILEGES AND LIMITATIONS

43.60 Private pilot.

43.61 Commercial pilot.

43.62 Air-line transport pilot.

43.63 Rating requirements.

43.64 Flight instruction limitations.

43.65 Instrument flight limitations.

43.66 Instrument flight instruction.

43.67 Simulated instrument flight.

43.68 Recent flight experience.

DEFINITIONS

43.70 Definitions.

AUTHORITY: §§ 43.1 to 43.70 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply sec. 601, 52 Stat. 1007; 49 U. S. C. 551.

SOURCE: §§ 43.1 to 43.70 contained in Amendment 43-0, Civil Air Regulations, 10 F. R. 5062, 5393, except as noted following sections affected.

GENERAL

§ 43.1 *Scope.* This part governs the operation of civil aircraft in the United States.

AIRCRAFT CERTIFICATION AND IDENTIFICATION

§ 43.10 *Certificates and identification marks.* Aircraft, except foreign aircraft authorized by the Administrator to be flown in the United States, shall not be operated unless the following requirements are met:

(a) *Registration certificate.* A registration certificate issued to the owner of the aircraft shall be carried in the aircraft at all times.

NOTE: The owner of an aircraft is required to give immediate notice to the Administrator of any change of address. For other rules governing the registration and recordation of aircraft ownership see Parts 501 and 503 of this title.

(b) *Airworthiness certificate.* An airworthiness certificate or special authorization issued by the Administrator approving its operation shall be carried in the aircraft at all times during flight.

NOTE: Usually the manufacturer obtains the airworthiness certificate which thereafter remains with the aircraft. If no airworthiness certificate has been issued for the aircraft, or if it has expired, the owner shall obtain this certificate.

(1) *Aircraft operating limitations.* An aircraft for which an airworthiness certificate is currently in effect shall not be operated unless there are available in the aircraft appropriate aircraft operating limitations set forth in a form and manner prescribed by the Administrator, or a current airplane flight manual approved by the Administrator; nor shall such aircraft be operated otherwise than within its prescribed operating limitations.

NOTE: Special Regulation Serial No. SR-330, effective February 28, 1949, 14 F. R. 1004, provides in part as follows:

Notwithstanding the provisions of § 43.10 (b) (1) of this chapter, military personnel of a foreign government being trained in a CAA certificated school may receive special training in maneuvers not within the approved airplane operating limitations: *Provided*, That;

(1) An official request for such special training has been made to the Administrator by an accredited representative of the foreign government concerned; and

(2) The Administrator finds that such training can be done with a standard of safety equivalent to that maintained by the United States Air Force and Navy. There shall be no violation of the United States Air Force or Navy Technical Orders pertinent to the phase of the training for which approval is being given.

(3) Such aircraft shall not be used to demonstrate compliance with any acrobatic maneuver required in a flight test for the issuance of an airman certificate or rating, against which it has been placarded.

(2) *Duration.* An airworthiness certificate shall remain in effect until a termination date is fixed by the Board, unless it is suspended or revoked.

(3) *Transferability.* The airworthiness certificate and the attached currently effective aircraft operation record, upon transfer of ownership, shall remain with the aircraft for which they were issued.

(4) *Surrender.* Upon the cancellation, suspension, or revocation of an airworthiness certificate the owner of the aircraft must, upon request, surrender such certificate to an authorized representative of the Administrator.

(c) *Identification marks.* Aircraft identification marks shall be displayed on aircraft in the manner prescribed by the Administrator. Aircraft identification marks are as follows:

(1) *NC.* Roman capital letters NC followed by the registration symbols shall be displayed on aircraft which fully comply with the minimum airworthiness requirements specified in this subchapter.

(2) *NR.* Roman capital letters NR followed by the registration symbols shall be displayed on aircraft which fully comply with the airworthiness requirements of this subchapter, except those rendered inapplicable by the nature of a special purpose for which the aircraft is to be used, and the airworthiness requirements not met are compensated by suitable operating restrictions imposed by the Administrator after making a finding that the aircraft, when operated for the special purpose in accordance with the restrictions placed thereon, provides a level of safety equivalent to that of an aircraft which fully meets the provisions of the airworthiness requirements of this subchapter. NR aircraft may carry passengers and cargo but no charge shall be made for such transportation. For the purpose of this section, the materials transported for crop dusting, seeding, and other specialized operations shall not be considered pay cargo.

(3) *NX.* Roman capital letters NX followed by the registration symbols shall be displayed on aircraft which have not fully complied with the airworthiness requirements specified in the regulations in this subchapter and are to be operated only for experimental purposes when, in the opinion of the Administrator, such aircraft can be operated with appropriate restrictions without endangering public safety. In addition, the word "experimental" shall be prominently displayed near the entrance to the cabin or cockpit of any aircraft holding an experimental certificate.

(4) *Other marks or symbols.* (i) No design, mark, or symbol which modifies the identification marks shall be placed on aircraft, except with the approval of the Administrator.

(ii) No design, mark, or symbol which confuses the identification mark shall be placed on the aircraft.

(5) *NL.* Roman capital letters NL followed by the registration symbols shall be displayed on aircraft which have complied with the airworthiness requirements specified in Part 9 of this subchapter. Such aircraft shall not carry passengers or cargo for compensation or hire. A placard shall be prominently displayed in the passenger compartment of the aircraft bearing the words, "This is a military category aircraft and under the Civil Air Regulations shall not be used for the carriage of passengers or cargo for compensation or hire." The Administrator shall prescribe the dimensions of the placard and the lettering and the location of the placard.

(6) *Alternate identification marks.* After December 31, 1948, aircraft registered for the first time and, after December 31, 1950, all aircraft shall display identification marks consisting of the Roman capital letter "N" denoting U. S. registration followed by the registration number. However, this identification mark may be displayed prior to these dates at the option of the owner of the aircraft.

When this identification mark is utilized, those aircraft having other than a standard airworthiness certificate shall display the appropriate airworthiness classification as prescribed in Parts 3, 4a, 4b, 6, and 9 of this subchapter on the aircraft in a manner and form prescribed by the Administrator. Those aircraft having a standard airworthiness certificate need not display the airworthiness classification designation.

(d) *Export aircraft.* An aircraft manufactured in the United States for delivery outside the United States or its possessions shall display such identification marks or insignia as are approved by the Administrator. Such aircraft shall be operated only for the purpose of test and demonstration flights for a limited period of time or while in necessary transit to the purchaser.

[Amdt. 43-0, 10 F. R. 5062, 5393 as amended by Amdt. 43-4, 11 F. R. 1883, Amdt. 43-6; 11 F. R. 14099, Amdt. 43-1, 13 F. R. 474, Amdt. 43-3, 13 F. R. 2966, and Amdt. 43-5, 14 F. R. 2197]

§ 43.10-1 *Identification marks and airworthiness classification marks (CAA rules which apply to § 43.10 (c))*—(a) *Identification marks*—(1) *Composition.* On each aircraft, identification marks shall be displayed. They shall consist of the roman capital letter "N" denoting United States registry, followed by Arabic registration numbers, followed in some instances by an additional roman capital letter.

(2) *Location.* (i) On each fixed-wing aircraft, identification marks shall be displayed on the right half of the upper surface and the left half of the lower surface of the wing structure. So far as possible, the marks shall be located an equal distance from the leading and trailing edges of the wing. The top of the marks shall be toward the leading edge of the wing.

On each fixed-wing aircraft, identification marks shall be displayed on the upper half of the vertical tail surface. They shall be displayed on both sides of a single-tail surface, and on the outer sides of a multitail surface. They may be placed either horizontally or vertically.

On each fixed-wing aircraft, identification marks shall be displayed on the fuselage when the aircraft, as a result of design, does not have a vertical tail surface. The marks shall be located on each side of the top half of the fuselage, just forward of the leading edge of the horizontal tail surface. They may be placed either horizontally or vertically.

(ii) On each rotorcraft, identification marks shall be displayed on the bottom surface of the fuselage or cabin. The top of the marks shall be toward the left side of the fuselage.

On each rotorcraft, identification marks shall be displayed below the window lines and as near the cockpit as possible.

(iii) On each airship, identification marks shall be displayed on the upper surface of the right horizontal stabilizer and on the under surface of the left horizontal stabilizer. The top of the marks shall be toward the leading edge of the stabilizer. The marks shall be placed horizontally.

On each airship, identification marks shall be displayed on each side of the bottom half of the vertical stabilizer. The marks shall be placed horizontally.

(iv) On each spherical balloon, identification marks shall be displayed on two places diametrically opposite, and shall be located near the maximum horizontal circumference of the balloon.

(v) On each nonspherical balloon, identification marks shall be displayed on each side. They shall be located near the maximum cross section of the balloon, immediately above either the rigging band, or the points of attachment of the basket or cabin suspension cables.

(3) *Height.* (i) On each fixed-wing aircraft, wing identification marks shall be at least 20 inches high.

On each fixed-wing aircraft, vertical tail surface or fuselage identification marks shall be at least 2 inches high, but need not be more than 6 inches high.

(ii) On each rotorcraft, fuselage bottom surface or cabin bottom surface identification marks shall be at least $\frac{1}{2}$ as high as the fuselage is wide, but need not be more than 20 inches high.

On each rotorcraft, fuselage side identification marks shall be not less than 2 inches high, but need not be more than 6 inches high.

(iii) On each airship, spherical balloon, or nonspherical balloon, identification marks shall be at least 20 inches high.

(4) *Width.* On each aircraft, identification marks, with the following exception, shall be at least $\frac{2}{3}$ as wide as they are high. Number "1" shall be $\frac{1}{2}$ as wide as it is high.

On each aircraft, lines forming the identification marks shall be $\frac{1}{4}$ as wide as they are high.

(5) *Spacing.* On each aircraft, the space between identification marks shall be not less than $\frac{1}{2}$ as wide as the marks are high.

(6) *Color.* On each aircraft, identification marks shall contrast in color with the background.

(7) *Affixation.* On each aircraft, identification marks shall be painted or shall be affixed by any other means insuring a similar degree of permanence.

(8) *Formation.* On each aircraft, identification marks shall be formed by solid lines.

(9) *Design.* On each aircraft, identification marks shall have no ornamentation.

(10) *Maintenance.* On each aircraft, identification marks shall be kept clean and legible at all times.

(b) *Airworthiness classification marks.*—(1) *Composition.* (i) On each aircraft for which a limited certificate of airworthiness has been issued, the mark "Limited" shall be displayed.

(ii) On each aircraft for which a restricted airworthiness certificate has been issued, the mark "Restricted" shall be displayed.

(iii) On each aircraft for which an experimental airworthiness certificate has been issued, the mark "Experimental" shall be displayed.

On each aircraft for which a standard certificate of airworthiness has been issued, and which has been altered by the installation of components for temporary

experimental purposes so as not to adversely affect the aircraft design or flight characteristics, the mark "Experimental" shall be displayed.

(2) *Location.* On each aircraft, required airworthiness classification marks shall be placed on the fuselage at each cabin entrance and cockpit entrance so as to be readily visible to passengers and crew entering the aircraft. In cases where only one entrance for passengers and crew is used, and persons may enter the aircraft from either side of the fuselage, such as an aircraft with a sliding canopy, the marks shall be displayed on both sides of the fuselage.

(3) *Height.* On each aircraft, required airworthiness classification marks shall be at least 2 inches high, but need not be more than 6 inches high.

(4) *Width.* On each aircraft, required airworthiness classification marks shall be $\frac{2}{3}$ as wide as they are high.

On each aircraft, lines forming required airworthiness classification marks shall be $\frac{1}{4}$ as wide as they are high.

(5) *Spacing.* On each aircraft, the space between required airworthiness classification marks shall be not less than $\frac{1}{2}$ as wide as the marks are high.

(6) *Color.* On each aircraft, required airworthiness classification marks shall contrast in color with the background.

(7) *Affixation.* On each aircraft, required airworthiness classification marks shall be painted or shall be affixed by any other means insuring a similar degree of permanence.

On each aircraft for which a standard airworthiness certificate has been issued, and for which an experimental certificate of airworthiness has been subsequently issued to permit temporary experiments, the "Experimental" marks may be applied free-hand with water paint or masking tape, or by any other method which will allow the marks to be removed easily at the termination of the experiments.

(8) *Formation.* On each aircraft, required airworthiness classification marks shall be formed by solid lines.

(9) *Design.* On each aircraft, required airworthiness classification marks shall have no ornamentation.

(10) *Maintenance.* On each aircraft, required airworthiness classification marks shall be kept clean and legible.

[13 F. R. 7659]

MAINTENANCE

§ 43.20 *General.* An aircraft shall not be flown unless it is in airworthy condition. Mechanical work other than routine maintenance must be performed in accordance with § 18.10 of this subchapter.

§ 43.21 *Flight tests.* When an aircraft has undergone any repair or alteration which may have appreciably changed its flight characteristics or substantially affected its operation in flight, such aircraft, prior to carrying passengers, shall be test flown by at least a private pilot appropriately rated for the aircraft, and a notation to that effect shall be entered by such pilot in the aircraft log.

§ 43.22 *Inspections.*—(a) *Annual inspection.* An aircraft shall not be flown,

except for airworthiness flight tests, unless within the preceding 12 calendar months it has been given an annual inspection as prescribed by the Administrator and has been found to be airworthy by a person designated by the Administrator.

(b) *Periodic inspection.* An aircraft shall not be flown for hire, unless within the preceding 100 hours of flight time it has been given a periodic inspection by an appropriately rated mechanic in accordance with the periodic inspection report form prescribed by the Administrator, has been found to be airworthy, and a notation to that effect has been entered by such mechanic in the aircraft log. The annual inspection required by paragraph (a) of this section will be accepted as one such periodic inspection.

(c) *Air carrier exemption.* Air carrier aircraft are exempted from paragraphs (a) and (b) of this section when such aircraft are maintained and inspected in accordance with a continuous maintenance and inspection system as provided for by Part 41, 42, or 61 of this subchapter.

[Amdt. 43-10, 12 F. R. 6378]

§ 43.22-1 *Annual inspection routine (CAA rules which apply to § 43.22).* (a) The following procedure is prescribed for annual inspections of aircraft, other than air carrier aircraft coming within the provision of § 43.22 (c):

(1) The aircraft shall be given an inspection by an appropriately certificated mechanic and certified as airworthy on an inspection form prescribed by the Administrator.

(2) A representative of the Administrator must then determine if the aircraft complies with all current airworthiness requirements. Such representative may be either an agent employed by the Civil Aeronautics Administration or a designated aircraft maintenance inspector.

(b) A designated aircraft maintenance inspector may conduct the required periodic inspection and at the same time complete the necessary inspection forms for annual inspection.

(c) The certificate of airworthiness furnished by the Administrator setting forth the date of the annual inspection shall be prominently displayed in and affixed to the aircraft by the representative, preferably in a rear window facing the outside of the aircraft and so located as not to unduly limit the pilot's visibility.

[12 F. R. 8757. Corrections noted at 14 F. R. 38]

§ 43.23 *Aircraft and engine records.* The registered owner of a certificated aircraft shall be responsible for maintaining and keeping available for inspection by an authorized representative of the Administrator or the Board and for transfer with the aircraft or engine the following records:

(a) Aircraft and engine records which shall contain a current, accurate, and permanent record including the flight time of the aircraft and each engine, reports of inspections, minor repairs, and minor alterations of the aircraft structure, engines, and propellers. A mechan-

ical device which records the total time of operation or the total number of engine revolutions may be used in lieu of individual flight entries: *Provided*, That the totals of flight time are recorded in the aircraft and engine records at periodic intervals to enable compliance with the required inspections and maintenance procedures.

(b) A record of major repairs and alterations shall be maintained as required by Part 18 of this subchapter. A reference to such major repairs and alterations shall be entered in the appropriate place in the aircraft records.

[Amdt. 43-2, 13 F. R. 474]

§ 43.24 *Rebuilt engine logs.* A new record without previous operating history may be used for an aircraft engine rebuilt by the manufacturer or any agency approved by the manufacturer for such work, provided such new record contains a signed statement by such manufacturer or agency giving the date the engine was rebuilt and such other information as the Administrator may require.

AIRCRAFT INSTRUMENTS AND EQUIPMENT

§ 43.30 *Instruments and equipment for NC powered aircraft or powered aircraft with standard airworthiness certificates.* The following instruments and equipment, or instruments and equipment which the Administrator has found to be the equivalent, are required for the particular category of operation specified:

- (a) *Contact flight rules (day).* (1) Air-speed indicator.
- (2) Altimeter.
- (3) Magnetic direction indicator.
- (4) Tachometer for each engine.
- (5) Oil pressure gauge for each engine using pressure system.
- (6) Temperature gauge for each liquid-cooled engine.
- (7) Oil temperature gauge for each air-cooled engine.
- (8) Manifold pressure gauge, or equivalent, for each altitude engine.
- (9) Fuel gauge indicating the quantity of fuel in each tank.
- (10) Position indicator, if aircraft has retractable landing gear.
- (11) Approved flotation gear readily available for each occupant and a V or pistol or equivalent signal device, if the aircraft is operated for hire over water beyond gliding distance from shore without the aid of power.
- (12) Certificated safety belts for all passengers and members of the crew.

(b) *Contact flight rules (night).* (1) Equipment specified in paragraph (a) of this section.

(2) Set of certificated forward and rear position lights.

(3) One electric landing light, if the aircraft is operated for hire.

(4) Certificated landing flares as follows, if the aircraft is operated for hire beyond a 3-mile radius from the center of the airport of take-off:

Maximum authorized weight of aircraft:

3,500 pounds or less: five class 3 or three class 2 flares.

3,500 pounds to 5,000 pounds: four class 2 flares.

Above 5,000 pounds: two class 1 or three class 2 and one class 1 flares.

If desired, flare equipment specified for heavier aircraft may be used.

(5) An adequate source of electrical energy for such electrical and radio equipment as is installed.

(6) One spare set of fuses or 3 spare fuses of each magnitude.

(c) *Instrument flight rules.* (1) Equipment specified for contact flight rules in paragraph (a) of this section and, for night flight, equipment specified in paragraph (b) of this section.

(2) Two-way radio communications system and navigational equipment appropriate to the ground facilities to be used.

(3) Gyroscopic rate-of-turn indicator.

(4) Bank indicator.

(5) Sensitive altimeter adjustable for change in barometric pressure.

(6) Clock with a sweep second hand.

(7) Generator of adequate capacity.

[Amdt. 43-0, 10 F. R. 5062 as amended by

Amdt. 43-3, 13 F. R. 2966, and Amdt. 43-5, 14

F. R. 2197]

§ 43.40 *Pilot certificate.* No person shall pilot a civil aircraft within the United States unless he has in his personal possession at all times while piloting aircraft a valid pilot certificate with appropriate ratings issued by the Administrator, or an appropriate and valid foreign pilot certificate and ratings. Such certificate shall be presented for examination to any inspector of the Administration or State or local law enforcement officer upon the request of such inspector or enforcement officer.

[Amdt. 43-5, 14 F. R. 2197]

§ 43.41 *Medical certificate and renewal.* No person shall pilot an aircraft under authority of a pilot certificate issued by the Administrator, unless he has in his personal possession at all times while piloting aircraft a medical certificate or other evidence satisfactory to the Administrator showing that he has met the physical requirements appropriate to his rating within the following time limits:

(a) *Student or private pilot.* 24 calendar months.

(b) *Commercial pilot.* 12 calendar months, or 24 calendar months for operations requiring only a private pilot rating.

(c) *Air-line transport pilot.* Six calendar months, or 12 calendar months for operations requiring only a commercial pilot rating, or 24 calendar months for operations requiring only a private pilot rating.

[Amdt. 43-9, 12 F. R. 3170]

§ 43.42 *Operation during physical deficiency.* A person shall not pilot any aircraft during a period of any known physical deficiency or increase in physical deficiency which would render him unable to meet the physical requirements prescribed for the issuance of his currently effective medical certificate.

§ 43.43 *Pilot logbooks.* A record of the flight time used to substantiate recent experience or qualification for certificates or ratings shall be kept in a bound logbook. The logging of other flight time is not required. Such record shall show:

(a) Date of flight, duration of flight, and the points between which such flight was made.

(b) Category and type of the aircraft flown, the airplane class and engine horsepower.

(c) Aircraft identification mark.

(d) Dual instruction endorsed by a rated instructor, solo, pilot in command, instrument, and night flying time.

[Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2197]

§ 43.44 *Logging of flight time—(a) Student.* A student pilot may log as solo only that time during which he is the sole occupant of the aircraft in flight.

(b) *Private and commercial—(1) Pilot in command.* A private or commercial pilot may log flight time as pilot in command that flight time during which he is the sole manipulator of the controls of an aircraft for which he is rated or that flight time during which he is the sole occupant of the aircraft. A flight instructor may log flight time as pilot in command that flight time during which he is serving as a flight instructor. All flight time so logged may be credited toward the total flight time required for a higher pilot rating.

(2) *Copilot.* A private or commercial pilot may log as copilot time that flight time during which he is performing the duties of a copilot. Such pilot shall be entitled to credit not more than 50% of such flight time toward the total flight time required for a higher grade of pilot rating, but in no event shall a private pilot be entitled to credit more than 50 hours of such flight time.

(c) *Instrument time.* Instrument flight time may be logged as such by the pilot actually manipulating the controls only when the aircraft is flown solely by reference to instruments either under actual or simulated instrument flight conditions.

[Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2197]

§ 43.45 *Use of liquor, narcotics, and drugs.* No person shall pilot an aircraft or serve as a member of the crew while under the influence of intoxicating liquor or use any drug which affects his faculties in any manner contrary to safety. A pilot shall not permit any person to be carried in the aircraft who is obviously under the influence of intoxicating liquor or drugs, except a medical patient under proper care or in case of emergency.

§ 43.46 *Towing by aircraft.* No pilot shall tow anything by aircraft unless authority for such operation has been issued by the Administrator.

§ 43.47 *Dropping objects.* No person piloting an aircraft shall permit anything to be dropped from an aircraft in flight which might create any hazard to persons or property.

§ 43.48 *Aerobatic flight.* No pilot shall intentionally fly an aircraft in aerobatic flight carrying passengers unless all occupants are equipped with approved parachutes.

§ 43.49 *Parachutes.* No pilot shall carry on an aircraft a parachute which is available for emergency use unless:

(a) It is an approved chair-type (canopy in back) parachute which has been packed by a qualified parachute rigger within the preceding 120 days; or

(b) It is an approved-type, other than a chair-type (canopy in back) parachute which has been packed by a qualified parachute rigger within the preceding 60 days.

[Amdt. 43-7, effective July 21, 1949, 14 F. R. 3373]

§ 43.50 Transportation of explosives and other dangerous articles. No person piloting an aircraft shall permit explosives or other dangerous articles such as inflammable liquids or solids, oxidizing material, corrosive liquid, inflammable or noninflammable compressed gas, poison gas or liquid, poisonous liquid or solid, or tear gas to be carried in aircraft, except as provided for in Part 49 of this subchapter. Small arms ammunition for personal use, necessary aircraft signaling devices, and equipment necessary to safe operation of the aircraft are permitted.

§ 43.51 Fuel supply. Aircraft operated under IFR conditions shall carry sufficient fuel, considering weather reports and forecasts of wind and other weather conditions, to complete the flight to the point of first intended landing, to fly from there to the alternate airport, and to fly thereafter for 45 minutes at normal cruising speed. [Amdt. 43-4, 13 F. R. 3781]

STUDENT PILOT LIMITATIONS

§ 43.52 General limitations. No student pilot shall pilot an aircraft carrying a passenger, or on an international flight, or for compensation or hire, or in furtherance of a business.

[Amdt. 43-5, 14 F. R. 2197]

§ 43.53 Requirements for first solo. A student pilot shall not operate an aircraft in solo flight until:

(a) He has passed a written examination on pertinent provisions of this part and those of Part 60 of this subchapter dealing with contact flight rules,

(b) He has been found competent by a flight instructor to make such flight and authority therefor has been endorsed by such instructor on the student pilot certificate, and

(c) He has been given instruction in the prevention of and recovery from power-on and power-off stalls entered from all normally anticipated flight attitudes.

[Amdt. 43-8, 12 F. R. 1417, as amended by Amdt. 43-8, 14 F. R. 3352]

NOTE: § 43.53 (c) was amended, effective Aug. 15, 1949, by Amdt. 43-8.

§ 43.54 Flight area limitations. A student shall not pilot an aircraft outside a local flying area designated by his flight instructor until:

(a) He has had at least 10 solo flight hours, or if enrolled in and receiving flying instruction from an approved air agency, he is deemed competent by such agency, and

(b) His student pilot certificate has been appropriately endorsed by a flight instructor.

[Amdt. 43-11, 12 F. R. 7067]

§ 43.55 Aircraft limitations. A student shall not pilot an aircraft other than that of the category, class, and type which has been endorsed on his student pilot certificate by a flight instructor.

[Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2197]

§ 43.56 Recent experience. A student who has not piloted a powered aircraft within 90 days shall not pilot such aircraft in solo flight until he has passed a flight check given by a flight instructor and that fact has been endorsed by such instructor in the student pilot logbook.

PRIVATE AND COMMERCIAL PILOT PRIVILEGES AND LIMITATIONS

§ 43.60 Private pilot. A private pilot shall not pilot aircraft for hire.

NOTE: This section permits sharing the expenses of a flight or piloting aircraft in furtherance of a business when the flight is made solely for the personal transportation of the pilot.

§ 43.61 Commercial pilot. A commercial pilot may pilot aircraft for hire.

§ 43.62 Air-line transport pilot. An air-line transport pilot may exercise the privileges of a commercial pilot with an instrument rating.

§ 43.63 Rating requirements. A private or commercial pilot shall not pilot an aircraft carrying passengers other than an aircraft of the category, class, and type for which he is rated: *Provided*, That a holder of a pilot certificate with appropriate category and class ratings issued by the Administrator prior to May 1, 1949, shall not, until May 1, 1953, be required to have a type rating to pilot aircraft of over 12,500 lbs. maximum certificated take-off weight for which he has appropriate category and class ratings.¹ Such pilot may pilot other aircraft without passengers unless limitations placed on his certificate prohibit him from doing so.²

[Amdt. 43-5, 14 F. R. 2198]

§ 43.64 Flight instruction limitations. This section governs flight instructions:

(a) *Aircraft.* Aircraft shall be equipped with fully functioning dual controls.

(b) *Flight time.* A flight instructor shall not give more than 8 hours of dual flight instruction in any one day and not more than 36 hours of dual flight instruction in any 7-day period.

(c) *Endorsement of student pilot certificates.* A flight instructor shall

¹ Annex 1 to the Convention on International Civil Aviation (Personnel Licensing Standards) requires a pilot to have a type rating for all aircraft of a maximum certificated take-off weight of over 12,500 lbs. However, by the terms of the Convention, a holder of a pilot certificate issued prior to May 1, 1949, may, until May 1, 1953, exercise all of the privileges of such certificate both in the United States and internationally without compliance with the international standards.

² Annex 1 in defining the privileges of a commercial pilot restricts such pilot to the piloting in international air transportation of aircraft of 12,500 lbs. or less maximum certificated take-off weight. However, by the terms of the Convention, this restriction is not applicable until May 1, 1953, to certificates issued prior to May 1, 1949.

endorse the certificate of any student pilot for solo flight or flight in different categories, classes, and types of aircraft only if he has determined that the student is competent to exercise such privileges with safety, and for cross-country flight only if he has additionally determined that the student has an elementary knowledge of aeronautical charts, meteorological data, and the use of a magnetic compass.

[Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2197]

§ 43.65 Instrument flight limitations. A pilot shall not pilot aircraft under instrument flight rules, unless he holds a valid instrument rating issued by the Administrator.

§ 43.66 Instrument flight instruction. Instrument flight instruction may be given only by a person holding an effective instrument rating. A flight instructor rating is not required.

§ 43.67 Simulated instrument flight. Aircraft shall not be flown under simulated instrument flight conditions unless:

(a) Fully functioning dual controls are installed in the aircraft,

(b) An appropriately rated pilot occupies the other control seat as safety pilot, and

(c) Such safety pilot at all times has adequate vision forward and to either side of the aircraft, or a competent observer occupies a position in the aircraft so that his field of vision adequately supplements that of the safety pilot.

§ 43.68 Recent flight experience. This section governs recent flight experience:

(a) *General.* No person shall pilot an aircraft carrying passengers unless within the preceding 90 days he has made at least 5 take-offs and landings to a full stop in aircraft of the same category, class, and type of aircraft to be flown.

(b) *Night flight.* No person shall pilot an aircraft carrying passengers during the period from one hour after sunset to one hour before sunrise, unless he has made at least 5 take-offs and landings to a full stop during such period within the preceding 90 days.

(c) *Instruction flight.* A flight instructor shall not exercise the privileges of the instructor rating unless within the preceding 12 calendar months he has either:

(1) Given at least 10 hours of flight instruction while appropriately rated, or

(2) Demonstrated his continued proficiency to the Administrator.

(d) *Instrument flight.* A pilot shall not pilot an aircraft under instrument flight rules unless he has had at least 6 hours of instrument flight under actual or simulated flight conditions during the preceding six calendar months or until he has had 6 hours of such flight time under:

(1) Actual instrument conditions, accompanied by a pilot of at least private rating holding an appropriate aircraft and instrument rating, or

(2) Simulated instrument conditions in an aircraft accompanied by a pilot of at least private rating holding an appropriate aircraft rating, or

(3) Simulated instrument conditions in equipment approved by the Adminis-

trator, except that at least 3 hours must have been had in accordance with subparagraphs (1) or (2) of this paragraph. [Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2198]

DEFINITIONS

§ 43.70 *Definitions.* (a) "Pilot" is a person holding a valid pilot certificate issued by the Administrator.

(b) "To pilot" means to be in command of the aircraft during take-off, in flight, or landing.

(c) "Passenger" is an occupant of the aircraft in flight other than a crew member.

(d) "Flight instructor" means a private or commercial pilot who possesses a valid flight instructor rating.

(e) "Routine maintenance" is defined as simple or minor preservation operations, including but not limited to the adjustment of rigging and clearances, and the replacement of small standard parts not involving complex assembly operations.

(f) *Category.* Category shall indicate a classification of aircraft such as airplane, helicopter, glider, etc.

(g) *Class.* Class shall indicate a difference in basic design of aircraft within a category, such as single-engine land, multiengine sea, etc.

(h) *Copilot.* Copilot shall mean a pilot serving in any piloting capacity other than as pilot in command on aircraft requiring two pilots for normal operations, but excluding a pilot who is on board the aircraft for the sole purpose of receiving dual instruction.

(i) *Dual instruction time.* Dual instruction time shall mean that portion of the flight time during which a person is receiving flight instruction from a rated flight instructor on board the aircraft.

(j) *Flight instructor.* Flight instructor means a pilot who is qualified to instruct other pilots and who has received a flight instructor rating.

(k) *Flight time.* Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight.^{*}

(l) *Pilot in command.* Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

(m) *Solo flight time.* Solo flight time shall mean the flight time during which a pilot is the sole occupant of an aircraft.

(n) *Type.* Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

[Amdt. 43-0, 10 F. R. 5062, 5063, as amended by Amdt. 43-5, 14 F. R. 2198]

^{*} For example, a pilot taxis to the warm-up apron and holds there for several minutes before taking off to permit the engine to warm up. Such taxi and warm-up time is not considered flight time. Flight time begins when the aircraft leaves the warm-up apron and ends when the pilot returns to parking apron and turns the switches off.

PART 44—FOREIGN AIR CARRIER REGULATIONS

- Sec. 44.0 General.
- 44.1 Definition.
- 44.2 Operations specifications.
- 44.3 Aircraft airworthiness.
- 44.4 Radio equipment.
- 44.5 Flight crew certificates.
- 44.6 Air traffic rules and procedures.
- 44.7 Control of traffic.

AUTHORITY: §§ 44.0 to 44.7 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 610, 52 Stat. 1007, 1016; 49 U. S. C. 551, 560]

SOURCE: §§ 44.0 to 44.7 contained in Amendment 44-0, 10 F. R. 6366, except as noted following section affected.

§ 44.0 *General.* The regulations in this part shall apply to scheduled operations within the United States by aircraft of a foreign air carrier holding a permit issued by the Board pursuant to the provisions of section 402 of the Civil Aeronautics Act of 1938.

§ 44.1 *Definitions.* (a) As used in this part the words listed below shall be defined as follows:

(1) *Category.* Category shall indicate a classification of aircraft such as airplane, helicopter, glider, etc.

(2) *Type.* Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

(3) *United States.* United States shall mean the continental United States and any outlying Territories under its jurisdiction (including the Canal Zone).

[Amdt. 44-1, 14 F. R. 2198]

§ 44.2 *Operations specifications.* All operations within the United States shall be conducted in accordance with operations specifications issued by the Administrator of Civil Aeronautics which shall include the airports to be used, the routes or airways to be flown, and such operating rules and practices pertaining thereto as are necessary in the interest of avoiding collision between foreign aircraft and other aircraft.

§ 44.3 *Aircraft airworthiness.* Each air carrier aircraft shall be possessed of a currently effective certificate of airworthiness issued by the country whose nationality it possesses. The air carrier shall not operate any airplane within the United States at weights in excess of the maximum weights authorized by the country of origin of the airplane type involved.

[Amdt. 44-1, 12 F. R. 950, as amended by Amdt. 44-1, 14 F. R. 2198]

§ 44.4 *Radio equipment.* The air carrier shall, subject to compliance with the applicable laws and regulations governing the ownership and operation of radio equipment, provide each aircraft with such radio equipment as is necessary to make proper use of the air navigation facilities along or adjacent to the route to be flown within the United States and to maintain communication with ground stations along and adjacent to such routes.

§ 44.5 *Flight crew certificates.* Each member of the flight crew shall be pos-

sessed of a currently effective certificate or license issued by the country whose nationality the aircraft possesses, evidencing competency to perform his duties in connection with the operation of such aircraft.

§ 44.6 *Air traffic rules and procedures.* All operations within the United States shall be conducted in accordance with the air traffic rules prescribed in Part 60 of this subchapter and with such local rules as are established at the airports to be used. Each pilot assigned to serve in such operations shall be familiar with the pertinent rules, with the navigational and communication facilities to be used, and with the air traffic controls and other procedures employed in the areas to be traversed. Each air carrier shall establish procedures to insure the possession of such knowledge by its pilots and shall check the ability of each pilot to operate safely in accordance with the applicable rules and procedures. Each foreign air carrier shall conform to the same practices, procedures, and other requirements for the use of the areas to be traversed as are prescribed by the Administrator of Civil Aeronautics for domestic air carriers using such areas.

§ 44.7 *Control of traffic.* The air carrier shall, subject to compliance with immigration laws and regulations, furnish the ground personnel necessary to provide for two-way voice communication between the aircraft and ground stations at such places as the Administrator of Civil Aeronautics finds voice communication necessary, if communication cannot be maintained in a language with which ground station operators are familiar. Such personnel shall be able to speak both the English language and the language necessary to maintain communication with the aircraft and shall assist ground personnel of the United States in directing traffic. These requirements shall not be applicable in cases where the Administrator of Civil Aeronautics finds that such traffic can be adequately controlled by the use of radiotelegraphy or other means.

PART 45—COMMERCIAL OPERATOR CERTIFICATION AND OPERATION RULES

- Sec. 45.1 Applicability of part.
- 45.2 Certificate required.
- 45.3 Certification requirements.
- 45.4 Operating rules.
- 45.5 Certificate rules.

AUTHORITY: §§ 45.1 to 45.5 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 607, 52 Stat. 1007, 1011; 49 U. S. C. 551, 557.

SOURCE: §§ 45.1 to 45.5 appear at 14 F. R. 1437.

§ 45.1 *Applicability of part.* The provisions of this part shall be applicable to citizens of the United States engaging in the carriage in air commerce of goods or passengers for compensation or hire, unless such carriage is conducted under the provisions of an air carrier operating certificate issued by the Administrator. For the purpose of this part, student instruction, banner towing, crop dusting, seeding, and similar operations shall not

be considered as the carriage of goods or persons for compensation or hire.¹

§ 45.2 Certificate required. No person subject to the provisions of this part shall engage in air commerce using aircraft of 12,500 lbs. or more certificated maximum take-off weight until he has obtained from the Administrator a commercial operator certificate: *Provided*, That any such person may engage in operations subject to the provisions of this part without a commercial operator certificate until such time as the Administrator shall pass on his application for such certificate, but in no case later than January 1, 1950, if he (a) is engaged in such operations on the date of adoption of this part and (b) has filed with the Administrator an application for such certificate not later than June 1, 1949.

§ 45.3 Certification requirements. A commercial operator certificate shall be issued to an applicant who is capable of conducting his operations in accordance with the requirements of Part 42 of this chapter as heretofore or hereafter amended, or at an equivalent level of safety.

§ 45.4 Operating rules. All persons subject to the provisions of this part shall comply with the operating requirements of Part 42 of this chapter, as heretofore or hereafter amended, except that no person shall be required to comply with the provisions of § 42.12, fire prevention requirements, until January 1, 1950. Operating requirements shall be deemed to include requirements relating to aircraft and equipment, maintenance, flight crew, flight time limitations, flight operation, aircraft operating limitations, and related record-keeping and reporting requirements.

§ 45.5 Certificate rules. The certificate rules prescribed in §§ 42.5 through 42.9 of this chapter shall be applicable to commercial operator certificates.

PART 48—OPERATION OF MOORED BALLOONS

- Sec.
48.1 Scope.
48.2 General.
48.3 Operation requiring permit.
48.4 Operation requiring notice.
48.5 Rapid deflation device.

AUTHORITY: §§ 48.1 to 48.5 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply sec. 601, 52 Stat. 1007; 49 U. S. C. 551.

SOURCE: §§ 48.1 to 48.5 contained in Amendment 48-0, Civil Air Regulations, 12 F. R. 5910.

§ 48.1 Scope. The following regulations in this part shall apply to moored balloons having a diameter of more than 6 feet or a gas capacity of more than 115 cubic feet when operated anywhere in the United States, including the several States, the District of Columbia, and the several Territories and possessions of the United States, including the territorial waters and the overlying airspace thereof.

¹ Under circumstances where it is doubtful whether the operations are for "compensation or hire," the test to be applied is whether the air carriage is merely incidental to the operator's other business or is, in and of itself, a major enterprise for profit.

§ 48.2 General. Moored balloons having a diameter of more than 6 feet or a gas capacity of more than 115 cubic feet may be operated without permit from or notice to the Administrator when operated less than 150 feet above the surface at a location more than 5 miles from the boundary of an airport. Balloons of smaller size than specified in this section are exempt from compliance with the regulations in this subchapter.

§ 48.3 Operation requiring permit. Unless operated under the conditions specified in § 48.2 moored balloons subject to the regulations in this part shall be operated under the authority of and in compliance with the terms and conditions of a permit issued by the Administrator when such moored balloons are operated:

- (a) Closer than 500 feet to the base of any cloud, or
- (b) During the hours of darkness, or
- (c) When ground visibility is less than 3 miles, or
- (d) At altitudes more than 500 feet above the surface, or
- (e) Within 5 miles of the boundary of an airport.

§ 48.4 Operation requiring notice. Unless operated under the conditions specified in §§ 48.2 or 48.3, written notice must be submitted to the nearest office of the Civil Aeronautics Administration at least 30 days prior to the date of operation when moored balloons subject to the regulations in this part are operated between 150 and 500 feet above the surface. Such notice shall contain the name and address of the owner and person operating the balloon, the date or dates of the proposed operation, and the location and altitude at which the proposed operation will be conducted.

§ 48.5 Rapid deflation device. No moored balloon having a diameter of more than 6 feet or a gas capacity of more than 115 cubic feet shall be operated unless it is equipped with a device or means of automatic and rapid deflation in the event of an escape from its moorings.

PART 49—TRANSPORTATION OF EXPLOSIVES AND OTHER DANGEROUS ARTICLES

Appendix A. Items prohibited from transportation by air.

Appendix B. Items prohibited from transportation by air on passenger-carrying aircraft.

AUTHORITY: §§ 49.0 to 49.81 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply sec. 601, 52 Stat. 1007; 49 U. S. C. 551.

SOURCE: §§ 49.0 to 49.81, effective July 20, 1949, appear at 14 F. R. 2787.

§ 49.0 Applicability of part. Explosives or other dangerous articles, including flammable liquids, flammable solids, oxidizing materials, corrosive liquids, compressed gases, and poisonous substances, shall not be loaded in or transported by civil aircraft in the United States, or transported anywhere in air commerce in civil aircraft of United States registry except as hereinafter provided.

§ 49.1 Definitions. (a) As used in this part the words listed below shall be defined as follows:

(1) **Explosives.** Those liquids, gases, or solids specified as "Forbidden Explosives," Class A, Class B, or Class C explosives by the ICC Regulations.

(2) **Flammable liquid.** A flammable liquid is any liquid which gives off flammable vapors (as determined by flash point from Tagliabue's open-cup tester, as used for test of burning oils) at or below a temperature of 80° F.

(3) **Flammable solid.** A flammable solid is a solid substance, other than one classified as an explosive, which is likely under conditions incident to transportation, to cause fires through friction, through absorption of moisture, through spontaneous chemical changes, or as a result of retained heat from the manufacturing or processing.

(4) **Oxidizing material.** An oxidizing material is a substance such as a chlorate, permanganate, peroxide, or a nitrate, that yields oxygen readily to stimulate the combustion of organic matter.

(5) **Corrosive liquids.** Corrosive liquids are those acids, alkaline caustic liquids, and other corrosive liquids which, when in contact with living tissue, will cause severe damage to such tissue by chemical action, or which, in case of leakage, will materially damage the air-

¹ Chapter 39, "Explosives and Combustibles," of Title 18 of the U. S. Code, Public Law 772, 80th Congress, 2d Sess.; 18 U. S. C. 831 et seq., enacted June 25, 1948, which supersedes the Transportation of Explosives Act of March 4, 1921, adopts the term "flammable" in place of the currently-used term "inflammable." As used in this part "flammable" has the same meaning as "inflammable" and "nonflammable" the same meaning as "noninflammable" as used by current ICC Regulations.

craft structure or cargo; or which are likely to cause fire when in contact with organic matter or with certain chemicals.

(6) *Compressed gas.* A compressed gas for the purposes of these regulations is defined as any material or mixture having in the container either an absolute pressure exceeding 40 pounds per square inch at 70° F., or an absolute pressure exceeding 104 pounds per square inch at 130° F., or both; or any liquid flammable material having a Reid² vapor pressure exceeding 40 pounds per square inch absolute at 100° F. (See § 49.1 (a) (7) (i) for gases defined and classified as poisonous.)

(i) *Compressed gas, as defined above, shall be classified as a flammable compressed gas if either (a) a mixture of 13 percent or less (by volume) with air forms a flammable mixture or (b) the flammability range with air is greater than 12 percent regardless of the lower limit.*

(7) *Poisonous articles.* Poisonous articles for the purpose of these regulations are divided into four classes defined as follows:

(i) *Extremely dangerous poisons; Class A.* Poisonous gases or liquids of such nature that a very small amount of gas, or vapor of the liquid, mixed with air is dangerous to life. This class includes: chlorpicrin, cyanogen, diphosgene, ethyldichlorarsine, hydrocyanic acid, lewisite, methylchlorarsine, mustard gas, nitrogen peroxide (tetroxide), phenylcarbylamine chloride, phosgene (diphosgene). (Dilute solutions of hydrocyanic acid of not exceeding 5 percent strength are classed as poisonous articles, Class B.)

(ii) *Less dangerous poisons; Class B.* Poisonous liquids and solids, including pastes and semisols, are substances of such nature that they are chiefly dangerous by external contact with the body or by their being taken internally as in contaminated food or feeds.

(iii) *Tear gas or irritating substances; Class C.* Tear gases are liquid or solid substances which upon contact with fire or when exposed to air give off dangerous or intensely irritating fumes, such as brombenzylcyanide, chloracetophenone, diphenylaminechlorarsine, and diphenylchlorarsine, but not including any poisonous article, Class A.

(iv) *Radioactive materials; Class D.* A radioactive material is any material or combination of materials with spontaneously emits ionizing radiation. For the purpose of these rules, radioactive materials are divided into three groups, according to the type of radiation emitted at any time during transportation, as follows:

(a) *Group I radioactive materials.* Group I radioactive materials are those materials which emit any gamma radiation, either alone or with electrically charged particles or corpuscles.

(b) *Group II radioactive materials.* Group II radioactive materials are those

materials which emit neutrons and either or both of the types of radiation characteristic of Group I radioactive materials.

(c) *Group III radioactive materials.* Group III radioactive materials are those materials which emit only electrically charged particles or corpuscles (i. e., alpha and/or beta radiation).

(8) *"Unit" of gamma radiation.* "Unit" of gamma radiation is one milliroentgen per hour at a meter for "hard gamma" radiation, i. e., that amount of gamma radiation which will have the same effect on sensitive photographic film as one milliroentgen per hour at a meter of "hard gamma" radiation of radium filtered through ½ inch of lead.

(9) *Passenger-carrying aircraft.* A passenger-carrying aircraft is an aircraft carrying any individual other than a flight crew or crew member, company employee, or an authorized government representative.

(10) *Cargo aircraft.* A cargo aircraft is an aircraft other than a passenger-carrying aircraft which is carrying goods or property.

(11) *Marking.* Marking is the display on the container of the name of the articles inside, as listed in the commodity list of the ICC Regulations.

(12) *Labeling.* Labeling is the display on the container of an appropriate label as specified for a particular class of articles by the ICC Regulations.

(13) *ICC Regulations.* ICC Regulations shall mean the "Interstate Commerce Commission's Regulations for Transportation of Explosives and Other Dangerous Articles," effective January 7, 1941, as amended or revised from time to time³ (49 CFR, Parts 71-77).

(14) *Aircraft operator.* An operator of aircraft shall include the owner, lessee, or any other person who causes or authorizes the operation of the aircraft.

§ 49.3 *Packing, marking, and labeling requirements.* (a) Unless otherwise specifically provided in this part, explosives or other dangerous articles shipped by air shall be packed, marked, and labeled in accordance with the specifications established in Part 72⁴ of the ICC Regulations for transportation by rail express: *Provided*, That liquids shall be packed only in containers which are securely closed, sufficient in strength to prevent any leakage or distortion of the containers caused by change in temperature or altitude during transit, and so filled as to provide adequate outgassing. All explosives or other dangerous articles shipped by air shall show the proper shipping name as shown in the commodity list of Part 72 of the ICC Regulations and any instructions that are necessary for safe handling.

³The regulations referred to may be obtained from the Government Printing Office, Washington 25, D. C., or from the Bureau of Explosives, 30 Vesey Street, New York 7, N. Y.

⁴Part 72 of the ICC Regulations incorporates the packaging specifications of Part 73 thereof. It will be noted that items exempted from the packaging, labeling, or marking provisions of Part 73 of the ICC Regulations are not exempted from such requirements for shipment by air unless it is expressly so provided in this part.

(b) No shipper shall offer and no air carrier or other operator of aircraft shall knowingly accept explosives or dangerous articles for carriage by air unless the shipper or his authorized agent has certified that the shipment complies with the requirements of this part. No shipment shall be accepted for transportation by passenger-carrying aircraft unless the package shows a clear and plainly visible statement that it is within the limitations prescribed for passenger operations. Any operator of aircraft may rely on such a certificate as prima facie evidence that the shipment so certified complies with the requirements of this part.⁵

PASSENGER-CARRYING AIRCRAFT

§ 49.10 *Acceptable explosives and other dangerous articles on aircraft carrying passengers.* No article listed in Appendices A or B of this part shall be carried on passenger-carrying aircraft, and no other explosive or dangerous article shall be carried in passenger-carrying aircraft except as provided in §§ 49.11 through 49.18.

§ 49.11 *Explosives.* Class C explosives may be carried. Class C explosives shall be packed, marked, and labeled as required by Part 72 of the ICC Regulations. The maximum quantity that may be packed in one outside container is 50 pounds.

§ 49.12 *Flammable liquids.* Flammable liquids may be carried when packed in quantities of not more than one quart in inside metal containers or in quantities of not more than one pint in inside glass or earthenware containers. Each inside container shall be packed in a strong outside container with cushioning and absorbent material where necessary to prevent breakage and leakage: *Provided*, That viscous flammable liquids, such as cement mastics and sealers, may also be carried in quantities of not more than 8 fluid ounces in collapsible tubes which are packed in quantities of not more than 16 fluid ounces in any one strong outside container.

§ 49.13 *Flammable solids and oxidizing materials.* (a) Except for the items listed in subparagraphs (1) through (6) of this paragraph which shall be specially handled as provided therein, flammable solids and oxidizing materials may be carried in quantities of not more than 16 ounces net weight in inside metal or glass containers, suitably cushioned with nonflammable material where necessary to prevent breakage or leakage and

⁵The following statement on a shipping label signed by a responsible agent of the shipper will be accepted as meeting this requirement: "This is to certify that the contents of this package are properly described by name and are packed and marked and are in proper condition for transportation according to the regulations prescribed by the Interstate Commerce Commission and the Civil Aeronautics Board."

For shipment on passenger-carrying aircraft add the following: "This shipment is within the limitations prescribed for passenger-carrying aircraft."

²American Society for Testing Materials Method of Test for Vapor Pressure of Petroleum Products (D-323).

packed in strong outside containers. The maximum quantity that may be packed in any outside container is 25 pounds.

(1) *Liquid or solid organic peroxides.* Liquid or solid organic peroxides shall be packed in inside containers of not over one pound or one pint capacity. Not more than one such inside container suitably cushioned with nonflammable material shall be packed in a strong outside container. (See corrosive liquids for hydrogen peroxide.)

(2) *Calcium hypochlorite, dry.* Calcium hypochlorite, dry, containing more than 8.80% available oxygen (39% available chlorine) shall be packed in inside glass or metal containers of not over 5-pound capacity. Each container shall be packed in strong outside containers.

(3) *Matches.* Strike-on-box, book, or card-type matches shall be packed in tightly closed metal inside containers. The maximum quantity of matches that may be packed in any outside container is 25 pounds.

(4) *Picrate of ammonia, picric acid, urea nitrate, trinitrobenzene, and trinitrotoluene.* Picrate of ammonia, picric acid, urea nitrate, trinitrobenzene, or trinitrotoluene, wet with not less than 10% water, may be carried only when shipped as a drug, medicine, or chemical, and shall be packed in a glass container enclosed in a strong fiber carton properly cushioned with nonflammable material in an outside shipping case provided that not more than 16 ounces net content shall be packed in any one outside container.

(5) *Pyroxylin plastics.* Pyroxylin (nitrocellulose) plastics shall be securely enclosed in tight inside metal containers packed in quantities of not more than 25 pounds in strong outside containers.

(6) *Motion picture film.* Motion picture film (nitrocellulose base) shall be packed, marked, and labeled in accordance with the requirements of Part 72 of the ICC Regulations.

§ 49.14 *Acids and other corrosive liquids.* (a) Acids and other corrosive liquids may be carried when packed in bottles of not more than one pint capacity, suitably cushioned with nonflammable material to prevent breakage or leakage, and packed in a metal can. Each can shall be packed in a strong outside container.

(b) Electric storage batteries containing electrolyte or corrosive battery fluid, of the nonspillable type, protected against short circuits, and completely and securely boxed, may be carried.

§ 49.15 *Nonflammable compressed gases.* Nonflammable compressed gases may be carried. Shipment shall be made in ICC approved cylinders, and pressures shall not exceed those permitted by the ICC.

§ 49.16 *Poisonous liquids.* Class B poisonous liquids may be carried in quantities of not more than one pint in glass containers, suitably cushioned to prevent breakage or leakage, or not more than one quart in inside metal containers. Each inside container shall be packed

in a strong outside wooden or fiberboard box.

§ 49.17 *Poisonous solids.* Class B poisonous solids may be carried:

(a) Except for cyanides which shall be packed as set forth below, Class B poisonous solids shall be packed in tightly closed inside containers of glass, earthenware, or metal, or in lock-corner sliding-lid wooden boxes lined to prevent sifting, of not more than 5 pounds capacity each. Inside containers shall be securely packed in outside fiberboard or wooden containers. Not more than 25 pounds of any such article shall be packed in any one outside container.

(b) Cyanides and cyanide mixtures shall be packed in a tightly closed glass, earthenware, or metal inside container, of not over one pound capacity, securely cushioned and packed in quantities of not more than 5 pounds in outside wooden or fiberboard boxes or in wooden barrels.

§ 49.18 *Radioactive materials.* Radioactive materials—Class D, Groups I, II, and III (liquid, solid, or gaseous) may be carried when packed, marked, and labeled in accordance with the provisions of §§ 73.368 through 73.369 of the ICC Regulations. (See § 49.55 for handling of radioactive materials in aircraft. See also § 49.62 where certain other types of radioactive materials are exempted from certain of the requirements of this part.)

CARGO AIRCRAFT

§ 49.41 *Articles which may be carried in cargo aircraft.* In addition to the articles acceptable for transportation on aircraft carrying passengers, any article acceptable for and packed, marked, and labeled in accordance with the ICC Regulations for transportation by rail express may be carried in cargo aircraft: *Provided*, That no article listed in Appendix A of this part shall be carried except under the provisions of § 49.71. The maximum quantity in any one outside package or container shall not exceed that prescribed in the commodity list of Part 72 of the ICC Regulations.

LOADING AND HANDLING REQUIREMENTS

§ 49.51 *Cargo location.* (a) Articles subject to the requirements of this part shall not be carried in the cabins of passenger-carrying aircraft.

(b) Any article acceptable only for cargo aircraft shall be carried in accessible cargo pits or bins or in the cabin.

(c) Articles shall not be placed in the same cargo pit or bin nor placed side by side in cabins so that:

(1) Yellow label material is mixed with either white label or with red label material, or

(2) White label material is mixed with poison label material (red printing on white background).

§ 49.52 *Pilot notification.* When articles subject to the packing, marking, and labeling requirements of this part are carried on aircraft, the operator shall be responsible for notifying the pilot of the proper shipping name of the article as shown in the commodity list of Part

72 of the ICC Regulations, the type of label, quantity, and the location thereof. The pilot notification requirement may be met by entering the required information on the airplane load manifest.

§ 49.53 *Damaged or improperly marked articles.* If any package coming under the provisions of this part appears to be damaged, leaking, or improperly marked and labeled, it shall be removed from the aircraft and shall not be returned to transportation by air until it has been determined that the package and its contents comply with the requirements of this part.

(a) In any instance where it is indicated that the requirements of this part have been violated, a report shall immediately be made to the nearest representative of the Administrator or Board.

§ 49.54 *Quantity limitations.* Except as provided below not more than 50 pounds net weight of any article subject to the packing and labeling provisions of this part may be carried in any one cargo pit or bin on passenger-carrying aircraft, or in any inaccessible cargo pit or bin on any aircraft:

(a) Not more than 150 pounds net weight of compressed nonflammable gas may be carried in any single cargo pit or bin on passenger-carrying aircraft or in any inaccessible cargo pit or bin in any aircraft.

(b) No quantity limit is prescribed for calcium hypochlorite, pyroxylin plastics, motion picture film, or radioactive material Group III.

(c) Not more than 40 units of radioactive material Groups I or II shall be carried on any aircraft.

(d) Except as provided above for inaccessible cargo pits or bins, no quantity limitations apply to the carriage of explosives or other dangerous articles under the provisions of this part in cargo aircraft.

§ 49.55 *Special requirements for radioactive materials.* (a) Whenever any shipment of radioactive materials is damaged or appears to be damaged, it shall be removed from transportation and segregated as far as possible from human contact. The shipper shall immediately be contacted for disposal instructions, and the Administrator or the Board shall also be notified.

(b) Whenever there is any actual spillage of radioactive materials of such nature that the materials are no longer contained within their inner containers, no attempt shall be made to remove or clean up the materials until instructions are received from the shipper or other qualified persons, and then only when necessary protective measures have been taken, and qualified persons are present to supervise the handling.

(c) A container or group of containers of radioactive materials shall not be placed closer than the distance specified in the distance table to any area that may be continuously occupied by crew members or passengers. If more than one such container is present the distance shall be computed from the table below by adding together the number of units shown on the label of each package.

TABLE FOR PERSONNEL SEPARATION¹

Total number of units: ²	Minimum distance to crew members and passengers (feet) ³
0-2	1
3-5	2
6-10	3
11-20	4
21-30	5
31-40	6

¹ This table is designed to afford maximum protection to human beings from the effects of radiation and will not protect X-ray film from such effects under all conditions of exposure. Distance separation required by this table for Groups I and II (red label) radioactive materials is not required for Group III (blue label) radioactive materials.

² Total number of units refers to the number found on the red label of a single package entered on the line reading, "Radiation Units from Package: No. . . . For two or more packages stored together, the total of the numbers of all such packages is meant.

³ Distance means the number of feet from the nearest edge of the nearest radioactive container.

(d) If any aircraft is engaged principally or entirely in the transportation of radioactive materials, it shall be the responsibility jointly of the shipper and the carrier to monitor all personnel involved so that the accepted limits of personnel radiation exposure are not exceeded.

EXEMPTED ARTICLES

§ 49.61 *Aircraft equipment.* Signalling devices, aviation fuel and oil carried in tanks complying with fuel and oil tank installation provisions of this subchapter, and other equipment and materials necessary for the safe operation of the aircraft on which they are carried shall be exempt from the provisions of this part.

§ 49.62 *Radioactive materials.* (a) Radioactive materials which meet all of the following conditions are exempt from packing, marking, and labeling requirements required by this part:

(1) The package shall be such that there can be no leakage of radioactive material under conditions normally incident to transportation.

(2) The package shall contain not more than 0.1 millicuries of radium, or polonium, or that amount of strontium 89, strontium 90, or barium 140 which disintegrates at a rate of more than 5 million atoms per second; or not more than that amount of any other radioactive substance which disintegrates at a rate of more than 50 million atoms per second.

(3) The package shall be such that no significant alpha, beta, or neutron radiation is emitted from the exterior of the package, and the gamma radiation at any surface of the package shall be less than 10 milliroentgens in 24 hours.

(b) Manufactured articles other than liquids, such as instrument or clock dials of which radioactive materials are a component part, and luminous compounds, when securely packed in strong outside containers are exempt from packing, marking, and labeling requirements, provided the gamma radiation at any surface of the package is less than 10 milliroentgens in 24 hours.

(c) (1) Radioactive materials such as ores, residues, etc., packed in strong, tight containers are exempt from packing and labeling requirements for shipment in placeload lots, provided the per placeload radiation intensity at one meter from any outside surface of the load (as loaded in place in the airplane) does not exceed 10 milliroentgens per hour of gamma radiation or equivalent. There shall be no loose radioactive material in the airplane, and the shipment must be braced and lashed so as to prevent leakage or shift of lading under normal conditions of flight.

(2) It is the responsibility of the consignor and/or consignee to supervise, respectively, all loading and unloading operations and to monitor all personnel involved so that the accepted limits of personnel radiation exposure are not exceeded.

(d) Shipments of radioactive materials made by the Atomic Energy Commission or under its direction or supervision, which are escorted by personnel who are specially designated by the Atomic Energy Commission, are exempted from the provisions of these regulations where special arrangements are made with and approval by the Administrator.

§ 49.63 *Additional exempted articles.* The following articles are exempted from the provisions of this part.

(a) *Small arms ammunition.* Small arms ammunition in small quantities for personal use.

(b) *Matches.* Small quantities of matches, of the strike-on-box, book, or card type, carried on the person.

(c) *Pyroxylin plastics.* Articles manufactured from a pyroxylin plastic base such as hairbrushes, combs, and toothbrushes which are exempted from the requirements of the ICC Regulations.

(d) *Safety film.* Film having an acetate base.

§ 49.71 *Special authority.* In emergency situations or where other forms of transportation are impracticable, deviations from any of the provisions of this part for a particular flight may be authorized by the Administrator where he finds that the conditions under which the articles are to be carried are such as to permit the safe carriage of persons and cargo.

§ 49.81 *Prohibited articles.* No explosive or dangerous article listed in Part 72 of the ICC Regulations as an Explosive A, a Poison A, a forbidden article, or as an article not acceptable for rail express (see § 49.62 for authorization of the carriage of certain radioactive materials), nor any article listed in Appendix A shall be carried on aircraft subject to the provisions of this part.

APPENDIX A—ITEMS PROHIBITED FROM TRANSPORTATION BY AIR

EXPLOSIVES

Ammunition for cannon.
Blasting caps, including electric blasting caps.
Blasting caps with safety fuse.
Jet thrust units.
Rocket ammunition.

FLAMMABLE LIQUIDS

Acrolein.
Carbon bisulfide (disulfide).

Nickel carbonyl.
Zinc ethyl.

FLAMMABLE SOLIDS AND OXIDIZING MATERIALS

Acetyl benzoyl peroxide, solid.
Acetyl peroxide, solid.
Burnt cotton (not replicated).
Burnt fiber.
Carbopropoxide stabilized or unstabilized.
Charcoal, wood, screenings, other than "pinon" wood screenings.
Cotton waste, oily, with more than 5% animal or vegetable oil.
Fish scrap or fish meal containing less than 6% or more than 12% moisture.
Garbage tankage containing less than 8% moisture.
Hair, wet.
Iron mass, spent.
Iron sponge not properly oxidized.
Iron sponge, spent.
Matches, strike-anywhere.
Motion picture film scrap (nitrocellulose).
Paper stock, wet.
Rags, oily.
Rags, wet.
Spent oxide.
Tankage, fertilizers.
Tankages, rough ammoniate.
Textile waste, wet.
Waste paper, wet.
X-ray film scrap (nitrocellulose base).

COMPRESSED FLAMMABLE GAS

Fluorine.

APPENDIX B—ITEMS PROHIBITED FROM TRANSPORTATION BY AIR ON PASSENGER-CARRYING AIRCRAFT

EXPLOSIVES

Explosives Class B, all.
Chemical Ammunition containing Class B or Class C poisons.

FLAMMABLE LIQUIDS

Ethyl chloride.
Ethyl trichlorosilane.
Ethylene oxide.
Lithium aluminum hydride etheral.
Spirits of nitroglycerin in excess of one (1) percent by weight.
Trichlorosilane.

FLAMMABLE SOLIDS AND OXIDIZING MATERIALS

Acetyl benzoyl peroxide solution.
Bags, nitrate of soda, empty and unwashed.
Benzoyl peroxide.
Calcium chlorite.
Calcium phosphide.
Calcium resinate.
Calcium resinate, fused.
Chlorobenzoyl peroxide (para).
Cobalt resinate, precipitated.
Lithium hydride.
Lithium metal (unless exempt from ICC Regulations).
Lithium silicon.
Peracetic acid.
Phosphoric anhydride.
Phosphorous, amorphous, red.
Phosphorous pentachloride.
Phosphorous, white or yellow.
Phosphorous sesquisulfide.
Photographic film scrap (processed, positive or, negative nitrocellulose).
Picric acid, wet, exceeding 16 ounces by weight.
Potassium, metallic and potassium metallic liquid alloy.
Potassium peroxide.
Pyroxylin plastic scrap.
Sodium chlorite.
Sodium metallic and sodium metallic liquid alloy.
Sodium peroxide.
Sodium picramate.
Thorium metal, powdered.
Titanium metal, powdered.
Zirconium, metallic, dry, wet or sludge.

ACIDS AND OTHER CORROSIVE LIQUIDS

Acid sludge.
 Allyl chloroformate.
 Amil trichlorosilane.
 Antimony pentafluoride.
 Benzoyl bromide.
 Benzoyl chloroformate.
 Bromine.
 Bromine trifluoride.
 Bromo toluene.
 Chloroacetyl chloride.
 Chlorine trifluoride.
 Diethyl dichlorosilane.
 Dimethyl sulphate.
 Diphenyl dichlorosilane.
 Difluorophosphoric acid, anhydrous.
 Electrolyte or alkaline battery fluid packed with storage batteries, battery chargers, or radio current supply devices.
 Ethylphenyl dichlorosilane.
 Ethyl chloroformate.
 Ethyl formate.
 Fluosulfonic acid.
 Hexafluorophosphoric acid.
 Hexyl trichlorosilane.
 Hydrazine, anhydrous.
 Hydrazine solution containing 50% or less of water.
 Hydrofluoric acid, anhydrous.
 Hypochlorite solution more than 7% chlorine by weight.
 Methyl chloroformate.
 Mixtures of hydrofluoric and sulphuric acids.
 Monofluorophosphoric acid, anhydrous.
 Nitrating (mixed) acid.
 Nitric acid.
 Nitrohydrochloric acid.
 Nitrohydrochloric acid, and dilute.
 Octyl trichlorosilane.
 Phenylphosphorous oxychloride.
 Phosphorous tribromide.
 Phosphorous trichloride.
 Propyl trichlorosilane.
 Spent acid, sulfuric or mixed.
 Sulfur chloride.
 Thionyl chloride.
 Thiophosphoryl chloride.

COMPRESSED GASES

All flammable gases.
 Nonflammable gases as follows:
 Anhydrous ammonia.
 Boron trifluoride.
 Chlorine.
 Hydrogen bromide.
 Hydrogen chloride.
 Nitrosyl chloride.
 Sulfur dioxide.

POISONOUS ARTICLES

Aniline oil.
 Chemical ammunition.
 Hydrocyanic acid solutions.
 Methyl bromide.
 Motor fuel antiknock compound.
 Phenylchlorarsine.
 Tetraethyl lead.

SOURCE: §§ 50.1 to 50.33 contained in Civil Air Regulations, Amendment 50-0, 11 F. R. 4912.

CERTIFICATE

§ 50.1 *Issuance.* An airman agency certificate will be issued to an applicant who complies with the minimum requirements for one or more school ratings.

§ 50.2 *School ratings.* (a) Basic ground school.

- (b) Advanced ground school.
- (c) Primary flying school.
- (d) Commercial flying school.
- (e) Instrument flying school.
- (f) Flight instructor school.

REQUIREMENTS

§ 50.10 *Ground school requirements.* (a) Classrooms adequately heated and lighted, of sufficient size to accommodate the greatest number of students scheduled for attendance at any one time.

(b) Sufficient classroom equipment to insure adequate instruction in all required subjects.

(c) At least one regularly available principal instructor possessed of a ground instructor certificate with ratings for each of the required subjects of the curriculum.

§ 50.11 *Ground school curriculum.* A ground school curriculum approved by the Administrator for at least one of the following:

(a) *Basic ground school.* 50 hours of classroom instruction in the subjects of Civil Air Regulations (the regulations in this subchapter), including air traffic control practices and procedures, navigation, meteorology, and general servicing of aircraft.

(b) *Advanced ground school.* 100 hours of instruction in the subjects of Civil Air Regulations, including air traffic control practices and procedures, navigation, meteorology, aircraft and engines, including the general servicing and maintenance of aircraft and engines.

§ 50.12 *Flying school requirements.* (a) An airport adequate for the aircraft to be used and safe for the flight instruction to be given.

(b) Adequate hangar facilities housing all aircraft used for flight instruction.

(c) Adequate office, rest room, and ready room facilities.

(d) A sufficient number of certificated aircraft appropriate for the flight instruction to be given.

(e) Adequate shop, or readily available facilities suitable to insure proper maintenance of the aircraft to be used.

(f) A sufficient number of certificated mechanics readily available to provide for the inspection, maintenance, and repair of all aircraft used for flight instruction, unless other arrangements are approved by the Administrator.

(g) A sufficient number of regularly available and appropriately rated flight instructors.

§ 50.13 *Flying school curriculum.* A curriculum approved by the Administrator for at least one of the following:

(a) *Primary flying school.* 35 hours flying, or, if nonspinnable aircraft are used, not less than 25 hours flying.

(b) *Commercial flying school.* 160 hours of flying.

(c) *Instrument flying school.* 30 hours of instrument flying instruction of which at least 20 hours shall be in actual flight; and 30 hours of ground instruction in the subjects of Civil Air Regulations (the regulations in this subchapter), navigation, meteorology, and radio orientation and procedure, as applied to instrument flying.

(d) *Flight instructor school.* 25 hours of flying devoted exclusively to the science of flight instruction, and 40 hours of theoretical instruction in subjects covering the fundamentals of giving flight instruction and the analysis and performance of flight technique.

GENERAL

§ 50.20 *Application.* Application for an airman agency certificate and rating shall be made upon the form prescribed and furnished by the Administrator, and shall be accompanied by two copies of any proposed curriculum.

§ 50.21 *Display.* Display of an airman agency certificate shall be made upon the reasonable request of any person.

§ 50.22 *Duration.* An airman agency certificate shall expire 24 calendar months after the month of issuance.

§ 50.23 *Renewal.* Application for renewal of an airman agency certificate shall be made on a form furnished by the Administrator and may be mailed or presented to any inspector within 60 days prior to the month of expiration.

§ 50.24 *Transfer.* An airman agency certificate is not transferable.

§ 50.25 *Surrender.* Upon the suspension, revocation, termination, or cancellation of an airman agency certificate the holder thereof shall surrender such certificate to an authorized representative of the Administrator.

§ 50.26 *Quality of instruction.* The quality of instruction shall be such that at least 80 percent of the students who apply within 60 days after graduation will be able to qualify for pilot ratings appropriate to the curriculum from which they were graduated.

§ 50.27 *Student examinations.* Upon the completion of each subject included in an approved curriculum, each student taking the subject shall be given an appropriate examination. The student's written examination, or, in the case of a practical examination, a report thereof, shall be kept by the school for not less than 1 year from the date of the termination of the student's enrollment.

§ 50.28 *Records.* The school shall keep an accurate individual record of

each student, which shall include a chronological log of all instruction, attendance, subjects covered, examinations, and examination grades. The entire record shall be certified by an authorized official of the school.

§ 50.29 *Graduation certificates.* A graduation certificate on the form prescribed by the Administrator shall be given each student graduated from a certificated airman agency school.

§ 50.30 *Inspection.* Upon reasonable request, an applicant for an airman agency certificate, or the holder of such a certificate, shall permit any authorized representative of the Administrator or the Board to inspect its personnel, facilities, equipment, and records.

§ 50.31 *Curriculum changes.* Changes in an approved curriculum shall not be made without filing immediate notification of such changes with the Administrator. Unless the school is notified to the contrary within 45 days after filing the proposed changes with the Administrator, they will be considered approved.

§ 50.32 *Maintenance of facilities, equipment, and material.* A certificated airman agency shall maintain personnel, facilities, and equipment at least equal in quality and quantity to those required for the issuance of such a certificate.

§ 50.33 *Advertising.* No certificated airman agency shall make any statement pertaining to the school which is false, or which is designed to mislead any person contemplating enrollment in the school. Any advertising which indicates that the school is approved by the Administrator shall clearly differentiate between those courses which have been approved by the Administrator and those which have not.

EXAMINATIONS AND TESTS

51.14 General.
51.15 Time and place.
51.16 Inspection.
51.17 Standard of performance.

AUTHORITY: §§ 51.1 to 51.17 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 607, 52 Stat. 1007, 1011; 49 U. S. C. 551, 557.

SOURCE: §§ 51.1 to 51.17 contained in Amendment 35, Civil Air Regulations, 5 F. R. 675, except as noted following sections affected.

§ 51.1 *Ground instructor rating and certificate requirements.* A ground in-

structor rating and certificate with respect to any ground school subject in which a certificated flying school is required to provide instruction will be issued to an applicant who complies with the following requirements:

(a) *Age.* Applicant shall be at least 18 years of age.

(b) *Character.* Applicant shall be of good moral character.

(c) *Citizenship.* Applicant shall be a citizen of the United States or of a foreign government which grants or has undertaken to grant reciprocal ground instructor privileges to citizens of the United States on equal terms and conditions with citizens of such foreign government.

(d) *Aeronautical knowledge.* Applicant shall have practical and theoretical knowledge of each ground school subject with respect to which he seeks a rating. Such knowledge shall be sufficient to accomplish satisfactorily a written examination thereon.

[Amdt. 35, 5 F. R. 675, as amended by Amdt. 51-4, 7 F. R. 989 and Amdt. 51-3, 13 F. R. 4315]

GROUND INSTRUCTOR CERTIFICATE

§ 51.2 *Application.* Application for a ground instructor certificate shall be made upon the applicable form prescribed and furnished by the Administrator.

§ 51.3 *Display.* A ground instructor certificate shall be kept readily available to the instructor at all times when he is engaged in giving instruction in any ground school subject with respect to which he is rated, and shall be presented upon the request of any student receiving such instruction, school officer, or authorized representative of the Administrator.

§ 51.4 *Duration.* A ground instructor certificate shall be of 60 days' duration, and unless the holder is otherwise notified by the Administrator within such period, it shall continue in effect thereafter until otherwise specified by the Board, unless suspended or revoked.

(a) *Temporary certificates.* The Administrator or his authorized representative may issue a temporary ground instructor certificate for a period of not to exceed 90 days, subject to the terms and conditions specified therein by the Administrator.

[Amdt. 35, 5 F. R. 675 as amended by Amdt. 51-2, 12 F. R. 4433]

§ 51.5 *Recent experience requirements.* The holder of a ground instructor certificate shall not exercise the privileges thereunder unless during the preceding twelve calendar months he has:

(1) Served for at least three months as a ground school instructor, or
(2) Demonstrated to the satisfaction of the Administrator that he is able to meet the standards currently prescribed by the regulations of this subchapter for the issuance of the certificate and rating.

§ 51.6 *Reports.* The holder of a ground instructor certificate shall transmit to the Administrator, annually, during the month of January, a report for the preceding twelve-month period, set-

ting forth the amount and type of his aeronautical experience and such other pertinent data as the Administrator may require.

§ 51.7 *Expired certificates; special issuance.* The holder of a ground instructor certificate which has expired within the preceding twelve months may obtain a new certificate and the same rating theretofore held immediately prior to its expiration, upon application, by demonstrating to the satisfaction of the Administrator that he is able to meet the standards currently prescribed by the regulations of this subchapter for the issuance of the certificate and rating.

§ 51.8 *Nontransferability.* A ground instructor certificate is not transferable.

§ 51.9 *Surrender.* Upon the suspension, revocation, or expiration of a ground instructor certificate, the holder thereof shall, upon request, surrender such certificate to any officer or employee of the Administrator.

§ 51.10 *Reexamination.* An applicant for a ground instructor rating who has failed to pass any prescribed examination or test therefor shall not apply for reexamination for the same rating until the expiration of 30 days from the date of such failure or after he has received not less than 5 hours' instruction on each subject of the examination failed from a certificated ground instructor rated for such subject and presents a statement from such instructor showing the amount of instruction given and stating that he deems the applicant qualified to pass the required examination in such subject.

§ 51.11 *Revocation.* No person whose ground instructor certificate has been revoked shall apply for or be issued a ground instructor certificate of any rating for a period of 1 year after the revocation, except as the order of revocation may otherwise provide.

GROUND INSTRUCTOR RATING RECORD

§ 51.12 *Ground instructor rating record.* An appropriate Ground Instructor Rating Record, prescribed and issued by the Administrator, shall be attached to each ground instructor certificate issued after May 1, 1940. The ground school subject or subjects for which the holder of such certificate is rated shall be entered on such record.

§ 51.13 *Application to amend.* When any change is desired in a Ground Instructor Rating Record referred to in § 51.12, the applicant shall file a written request therefor upon the applicable form prescribed and furnished by the Administrator.

EXAMINATIONS AND TESTS

§ 51.14 *General.* The examinations and tests prescribed in this part will be conducted by an authorized representative for the Administrator.

§ 51.15 *Time and place.* All examinations and tests will be held at such times and places as the Administrator may designate.

§ 51.16 *Inspection.* An applicant for a ground instructor rating shall offer full cooperation with respect to any inspection.

tion and examination which may be made of such applicant upon proper request by any authorized representative of the Administrator prior or subsequent to the issuance of a ground instructor certificate.

§ 51.17 *Standard of performance.* All practical and theoretical examinations and tests shall be accomplished to the satisfaction of the Administrator and the passing grade in each subject shall be 70 percent.

PART 52—REPAIR STATION RATING

- Sec.
52.1 Repair station ratings.
52.2 Repair station certificate requirements.

REPAIR STATION CERTIFICATE

- 52.10 Application.
52.11 Application to amend.
52.12 Display.
52.13 Duration.
52.14 Nontransferability.
52.15 Surrender.
52.16 Inspection.
52.17 Revocation.
52.18 Foreign repair station certificate and ratings.

GENERAL RULES

- 52.20 Repair Station Rating Record.
52.21 Maintenance of personnel, facilities, equipment, and material.
52.22 Records.
52.23 Reporting defects or unairworthy conditions.

AUTHORITY: §§ 52.1 to 52.23 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 601, 607, 52 Stat. 1007, 1011; 49 U. S. C. 551, 557.

SOURCE: §§ 52.1 to 52.23 contained in Amendment 36, Civil Air Regulations, 5 F. R. 676, except as noted following sections affected.

§ 52.1 *Repair station ratings.* Repair station ratings are as follows:

- (a) Aircraft of composite construction;
- (b) Aircraft of all metal construction;
- (c) Aircraft engines;
- (d) Aircraft metal propellers and metal propeller hubs;
- (e) Aircraft wood propellers and their metal propeller hubs;
- (f) Aircraft instruments.

[Amdt. 84, 5 F. R. 5146]

§ 52.2 *Repair station certificate requirements.* To be eligible for a rating as a repair station and certification as such, an applicant shall comply with the following requirements:

- (a) *Personnel.* Applicant shall have adequate personnel certificated as required by this subchapter and qualified to perform or supervise the type of work involved.

¹ Manual No. 52, issued by the Administrator of Civil Aeronautics, sets forth in detail various types of work which he has interpreted as within the scope of repair stations rated according to § 52.1. It also carries lists of equipment, facilities, and material which the Administrator has approved as adequate under § 52.2 (f) for various types of rated repair stations. This manual may be secured by application to the Correspondence Section, Civil Aeronautics Administration, Washington 25, D. C.

(b) *Housing.* Applicant shall have suitable housing facilities which are adequately heated, lighted, and ventilated.

(c) *Inspection system.* Applicant shall have an adequate system of inspection.

(d) *Stock.* Applicant shall have a stockroom which provides for the proper storage and segregation of materials.

(e) *Drawings.* Applicant shall have adequate facilities and equipment for making drawings.

(f) *Other requirements.* Applicant shall have such equipment, facilities, and material as are necessary for the competent and efficient performance of the type of work for which a rating is sought.¹

[Amdt. 36, 5 F. R. 676 as amended by Amdt. 84, 5 F. R. 5146]

REPAIR STATION CERTIFICATE

§ 52.10 *Application.* Application for a repair station certificate shall be made upon the applicable form prescribed and furnished by the Administrator.

§ 52.11 *Application to amend.* When any change is desired in the Repair Station Rating Record (see § 52.20) of a certificated repair station, the applicant shall apply therefor upon the applicable form prescribed and furnished by the Administrator.

§ 52.12 *Display.* A repair station certificate shall be displayed in a prominent place in the repair station.

§ 52.13 *Duration.* A repair station certificate shall be of 60 days' duration and, unless the holder thereof is otherwise notified by the Administrator within such period, shall continue in effect indefinitely thereafter, unless suspended or revoked.

[Amdt. 36, 5 F. R. 676, as amended by Amdt. 75, 5 F. R. 3946]

§ 52.14 *Nontransferability.* A repair station certificate is not transferable.

§ 52.15 *Surrender.* Upon the suspension revocation, or expiration of a repair station certificate, the holder thereof shall, upon request, surrender such certificate to any officer or employee of the Administrator.

§ 52.16 *Inspection.* An applicant for a repair station certificate shall offer full cooperation with respect to any inspection or examination which may be made of such applicant, upon proper request by any authorized representative of the Administrator, prior or subsequent to the issuance of such certificate.

§ 52.17 *Revocation.* No person whose repair station certificate has been revoked shall apply for or be issued a repair station certificate of any rating for a period of 1 year after the revocation, except as the order of revocation may otherwise provide.

[Amdt. 87, 5 F. R. 5257]

§ 52.18 *Foreign repair station certificate and ratings.* A foreign repair station certificate with appropriate ratings may be issued to a citizen of a foreign government subject to the following requirements:

- (a) A repair station may be certificated only where it is necessary to provide for the maintenance, alteration, and repair

of United States registered aircraft outside the United States.

(b) The applicant shall meet the requirements of this part, except that in lieu of complying with §§ 52.20, 52.42, and 52.43, the applicant shall:

(1) Have adequate personnel competent to perform or supervise the work for which the repair station is rated;

(2) Be required to maintain such records and make such reports with respect to United States registered aircraft as the Administrator finds necessary for the satisfactory administration of the privileges granted by this part.

(c) The certificate shall be limited to performance of work on aircraft which are used in operations conducted in whole or in part outside the United States and contain such operating specifications and limitations as the Administrator may prescribe to insure compliance with the applicable aircraft airworthiness requirements of the Civil Air Regulations.

(d) The certificate shall be of 6-month duration, unless sooner revoked, suspended, or terminated by a general order of the Board.

[Amdt. 52-1, 14 F. R. 623]

GENERAL RULES

§ 52.20 *Repair Station Rating Record.* An appropriate Repair Station Rating Record, prescribed and issued by the Administrator, shall be attached to each repair station certificate issued after May 1, 1940. The type of repair, alteration, maintenance, and overhaul of aircraft, aircraft engines, propellers, or appliances for which the holder of such certificate is rated shall be entered upon such record.

§ 52.21 *Maintenance of personnel, facilities, equipment, and material.* The holder of a currently effective repair station certificate shall maintain personnel, facilities, equipment, and material in conformity with the standard required for the issuance of such a certificate.

§ 52.22 *Records.* A certificated repair station shall maintain adequate records of all work performed, including records which indicate the person by whom the work was done and the person by whom it was inspected.² Such records shall be kept for at least 2 years.

§ 52.23 *Reporting defects or unairworthy conditions.* A report of all recurring or serious defects, or other unairworthy conditions of parts of aircraft, aircraft engines, propellers, or appliances shall be made upon the applicable forms prescribed and furnished by the Administrator: *Provided*, That if the repair station is operated by a certificated air carrier and maintains repair base records, such records may be supplied in lieu of the reports required by this section.

[Amdt. 84, 5 F. R. 5146]

RATING CERTIFICATE REQUIREMENTS

§ 53.1 *Mechanic school rating certificate requirements.* To be eligible for a rating as a mechanic school and certification as such an applicant shall comply with the following requirements:

(a) *Curriculum.* An applicant shall have at least one of the following curricula:

(1) An aircraft curriculum which shall include instruction in the theory and practice of construction, inspection, maintenance, overhaul, and repair of aircraft and their appliances, including the applicable provisions of Parts 1-99 of this subchapter. This curriculum shall include not less than 960 hours of instruction, shall be designed to be completed in not less than 20 weeks, and shall not require attendance for more than 8 hours in any one day, or for more than 6 days in any one week.

(2) An aircraft engine curriculum which shall include instruction in the theory and practice of construction, inspection, maintenance, overhaul, and repair of aircraft power plants, propellers, and their appliances, including the applicable provisions of this subchapter. This curriculum shall include not less than 960 hours of instruction, shall be designed to be completed in not less than 20 weeks, and shall not require attendance for more than 8 hours in any one day, or for more than 6 days in any one week.

(3) A combined aircraft and engine curriculum which shall include at least 1,650 hours of instruction in the theory and practice of construction, inspection, maintenance, overhaul, and repair of aircraft, aircraft engines, propellers, and their appliances, and in the contents of the applicable regulations of this subchapter. This curriculum shall be designed to be completed in not less than 35 weeks and shall not require attendance for more than 8 hours in any one day, or for more than 6 days in any one week.

Each curriculum described in this paragraph shall provide for instruction in all the subjects necessary to qualify the student to perform the duties and functions of the position for which he may seek an airman certificate.¹

(b) *Mechanic instructors.* The applicant shall have, for all subjects included in any approved curriculum, instructors holding valid mechanic certificates and valid ground instructor certificates, with ratings for each certificate appropriate for the subject or subjects in which such persons give instruction: *Provided,* That the applicant may be deemed to have met this requirement if he shows that any such instruction being given by a person not so rated and certificated is being given under the direct supervision of a full-time instructor with the certificate and ratings required by this paragraph.

(c) *Mechanic instructors, ratio.* The applicant shall have at least one instructor giving instruction in each subject in an approved curriculum for each 25 students simultaneously receiving instruction in that subject.

(d) *Facilities, equipment, and material.*² An applicant shall have the following facilities, equipment, and material:

(1) Suitable classrooms adequate to accommodate the largest number of students scheduled for attendance at any one time. Such classrooms shall be properly heated, lighted, and ventilated.

(2) Suitable shop space adequate to accommodate the largest number of students scheduled for attendance at any one time. Such shop space shall be properly heated, lighted, and ventilated.

(3) Material and equipment of the kind and quantity necessary to give each student theoretical and practical training in the use of such material and equipment sufficient to qualify him to perform the duties and functions of the position for which he may seek an airman certificate.

[Amdt. 31, 5 F. R. 673 as amended by Amdt. 53-1, 11 F. R. 6583]

STUDENT INSTRUCTION

§ 53.10 *Student examinations.* Upon completion of each subject included in any approved curriculum, each student taking such subject shall be given an appropriate examination. The student's examination, or, in the case of a practical examination, a report thereof, shall be kept by the school as a part of its records for not less than 1 year from the date of the termination of the student's enrollment.

§ 53.11 *Records.* Certificated mechanic schools shall keep an accurate individual record of each student enrolled therein, which record shall include a chronological log of all instruction, attendance, subjects covered, examinations and examination grades. The entire record shall be certified by an

¹ The contents of the several curricula provided for are outlined in Manual 53, Mechanic School Rating.

² The equipment, facilities, and material which are necessary to comply with § 53.1 (d) are outlined in Manual 53, Mechanic School Rating.

authorized official of the school familiar with the facts contained therein.

§ 53.12 *Reports.* On the 1st day of January and July of each year and at such other times as the Administrator may require, every holder of a mechanic school certificate shall transmit to the Administrator a correct and completely executed report on the form prescribed and furnished by the Administrator. Such report shall include the following information as to students enrolled in the course or courses approved by the Administrator:

(a) The names of all students enrolled.

(b) The course or courses for which they are enrolled.

(c) The names of the students who have been graduated within the period covered by the report and the course or courses from which graduated.

(d) The names of all students dropped from enrollment within the period covered by the report and the reasons therefor.

§ 53.13 *Graduation certificate.* Each student graduating from a certificated mechanic school who has satisfactorily completed an approved curriculum shall be given a graduation certificate executed on a form prescribed and furnished by the Administrator.

§ 53.14 *Standard of instruction.* The standard of instruction in a certificated mechanic school shall be sufficiently high to insure that an average of 8 out of 10 of its graduates, who apply within 1 year after graduation, will qualify for a mechanic certificate and rating corresponding to the curriculum from which they were graduated. This average shall be computed on the basis of the number of students, graduated by the school during each 6 months' period after May 1, 1940, who apply and are examined for the mechanic certificate and rating corresponding to the curriculum from which they were graduated.

§ 53.15 *Credit for extracurricular work.* A student who is engaged in a mechanical occupation, the nature of which is comparable to some portion of the curriculum in which he is enrolled, may receive credit for a number of hours equivalent to the experience received, in lieu of such portion of the curriculum: *Provided,* That such credit shall not exceed 400 hours in the 1,650-hour curriculum, nor 200 hours in each 960-hour curriculum.

§ 53.16 *Hours of attendance.* No student shall be given a graduation certificate unless such student has been in attendance not less than 98 percent of the total hours required by the school to complete the approved curriculum for which he was enrolled.

MECHANIC SCHOOL CERTIFICATE

§ 53.20 *Application.* Application for a mechanic school certificate shall be made upon the applicable form prescribed and furnished by the Administrator, and shall be accompanied by two copies of any proposed curriculum.

§ 53.21 *Display.* A mechanic school certificate shall be presented for inspection

tion upon the reasonable request of any person.

§ 53.22 *Duration.* A mechanic school certificate shall be of 60 days' duration and, unless the holder thereof is otherwise notified by the Administrator within such period, shall continue in effect indefinitely thereafter, unless suspended or revoked.

[Amdt. 31, 5 F. R. 673 as amended by Amdt. 75, 5 F. R. 3946]

§ 53.23 *Nontransferability.* A mechanic school certificate is not transferable.

§ 53.24 *Surrender.* Upon the suspension, revocation, or expiration of a mechanic school certificate, the holder of such certificate shall, upon request, surrender such certificate to any officer or employee of the Administrator.

§ 53.25 *Inspection.* The applicant for a mechanic school certificate shall offer full cooperation with respect to any inspection or examination which may be made of said applicant, its personnel, facilities, equipment, and records, upon proper request by an authorized representative of the Administrator prior or subsequent to the issuance of a mechanic school certificate.

§ 53.26 *Revocation.* No person whose mechanic school certificate has been revoked shall apply for or be issued a mechanic school certificate for a period of 1 year after the revocation, except as the order of revocation may otherwise provide.

[Amdt. 87, 5 F. R. 5256]

GENERAL RULES

§ 53.30 *Advertising.* No certificated mechanic school shall in any manner make any statement pertaining to such school which is false or is designed to mislead any person contemplating enrollment in such school: *Provided*, That any advertising which indicates that such school is approved by the Administrator shall clearly differentiate between those subjects which have been approved by the Administrator and those which have not.

§ 53.31 *Curriculum changes.* No change shall be made in any approved curriculum prior to approval of the change by the Administrator. Unless the school is notified to the contrary within 60 days after submission of the proposed change to the Administrator, such change will be deemed to have been approved.

§ 53.32 *Maintenance of facilities, equipment, and material.* The holder of a currently effective mechanic school certificate shall maintain personnel, facilities, equipment, and material at least equal in quality and quantity to those required for the issuance of such a certificate.

SOURCE: §§ 54.1 to 54.38, contained in Amendment 54-0, Civil Air Regulations, 8 F. R. 1334.

RATINGS

§ 54.1 *Parachute loft ratings.* The following ratings may be issued prescribing the type of work the holder of a parachute loft certificate is qualified to perform:

- (a) General maintenance and minor repair;
- (b) Canopy overhaul;
- (c) Harness overhaul;
- (d) Metal parts and container overhaul;
- (e) Drop testing.

REQUIREMENTS

§ 54.2 *Certificate requirements.* To be eligible for a rating as a parachute loft and certification as such an applicant shall comply with the following requirements:

(a) *Personnel.* Applicant shall have adequate personnel certificated in accordance with the provisions of Part 25 of this subchapter and qualified to perform or supervise the type of work involved.

(b) *Facilities and equipment.* Applicant shall have such equipment, facilities, and material as are necessary for the competent and efficient performance of the type of work for which a rating is sought. Such facilities shall include suitable and adequately heated, lighted, and ventilated housing; an adequate system of inspection; adequate equipment for making drawings; and ade-

quate facilities for the segregation and storage of parts and materials.

NOTE: A manual will be issued outlining facilities, equipment, and personnel which will comply with the requirements of this section.

ISSUANCE AND DURATION

§ 54.3 *Application.* Application for a parachute loft certificate and appropriate ratings shall be made upon the applicable form prescribed and furnished by the Administrator.

§ 54.4 *Duration.* A parachute loft certificate shall remain in effect indefinitely, unless suspended or revoked: *Provided*, That such certificate may be canceled by the Administrator at any time within 60 days after issuance.

§ 54.5 *Application to amend.* Application for a change in the Parachute Loft Rating Record of a certificated parachute loft shall be made upon the applicable form prescribed and furnished by the Administrator.

REGULATIONS AND LIMITATIONS

§ 54.10 *Display.* A parachute loft certificate shall be displayed in a prominent place in the parachute loft.

§ 54.11 *Transfer.* A parachute loft certificate may not be transferred.

§ 54.12 *Surrender.* Upon the suspension, revocation, or expiration of a parachute loft certificate, the holder thereof upon request shall surrender such certificate to any officer or employee of the Administrator.

§ 54.13 *Inspection.* An applicant for a parachute loft certificate shall cooperate fully in any inspection or examination which may be made of such applicant, applicant's personnel, facilities, equipment, and records, upon proper request by an authorized representative of the Administrator, prior or subsequent to the issuance of a parachute loft certificate.

§ 54.14 *Revocation.* No person whose parachute loft certificate has been revoked shall apply for or be issued a parachute loft certificate or any rating for a period of one year after the revocation of such certificate except as the order of revocation may otherwise provide.

§ 54.15 *Records.* The holder of a parachute loft certificate shall maintain adequate records, which shall include the names of the persons who performed the work and the type of work performed. Such records shall be kept for at least two years.

§ 54.16 *Parachute Loft Rating Record.* An appropriate Parachute Loft Rating Record prescribed and issued by the Administrator shall be attached to each parachute loft certificate issued. The record shall contain the type of repair, operation, maintenance, and overhaul of parachutes for which the holder of such certificate is rated.

§ 54.17 *Recording major repair and alteration operations.* The holder of a parachute loft certificate authorized to perform major repair and alteration operations on a parachute canopy, har-

ness, container, accessory, or any combination thereof, shall execute such repair and alteration forms as may be prescribed and furnished by the Administrator and shall deliver a copy of such form to the owner of the parachute.

§ 54.18 *Maintenance, personnel, facilities, equipment, and material.* The holder of a currently effective parachute loft certificate shall maintain personnel, facilities, equipment, and material at least equal in quantity and quality to those currently required for original issuance of such a certificate and the appropriate ratings.

§ 54.19 *Quality of maintenance, repairs, and alterations.* The holder of a parachute loft certificate shall perform maintenance, repair, and alteration operations in a workmanlike manner and so as to maintain the equipment in, or restore it to an airworthy condition.

§ 54.20 *Materials.* The holder of a parachute loft certificate shall use materials in connection with maintenance, repair, and alteration operations of such quality and strength as to be suitable for the purposes used.

§ 54.21 *Reporting defects or unairworthy conditions.* The holder of a parachute loft certificate shall report upon the applicable forms prescribed and furnished by the Administrator all recurring or serious defects or other unairworthy conditions of parachutes or parts thereof.

§ 54.22 *Agencies authorized to perform maintenance, repairs, alterations, and inspections.* Maintenance, repairs, alterations, and inspections of certificated parachutes may be performed by:

(a) A certificated parachute technician of appropriate grade and ratings (see Part 25 of this subchapter for service limitations of certificated parachute technicians); or

(b) A certificated parachute loft having an appropriate rating; or

(c) The manufacturer of the parachute or part thereof; or

(d) Another parachute manufacturer deemed competent by the Administrator: *Provided*, That all maintenance, repairs, alterations, and inspections shall be performed in accordance with manuals and specifications approved by the Administrator.¹

§ 54.23 *Drop testing of parachutes.* The holder of a parachute loft certificate shall drop test any major repaired or altered parachute canopy, harness, container, accessory, or any combination thereof, when in the opinion of the inspecting certificated parachute technician such repairs or alterations may have affected its structural, functional, or other airworthiness characteristic. Drop tests shall be conducted in accordance with the following conditions:

(a) *Functional tests.* If it is necessary to determine the functional characteristics of the entire assembly, such assembly shall be drop tested with a 150-pound dummy man (not including the weight

of the parachute) at an indicated air speed of 70 miles per hour and a minimum altitude of 500 feet above the ground.

(b) *Strength tests.* If it is necessary to determine the material values in the entire assembly, such assembly shall be drop tested with a 190-pound dummy man (not including the weight of the parachute) at an indicated air speed of 120 miles per hour and a minimum altitude of 500 feet above the ground.

(c) *Airworthiness tests.* If it is necessary to determine material airworthiness of the entire assembly prior to repairs of any kind, such assembly shall be drop tested with a 190-pound dummy man (not including the weight of the parachute) at an indicated air speed of 120 miles per hour and at a minimum altitude of 500 feet above the ground.

(d) *Agencies authorized to perform drop testing operations.* Parachute drop testing operations shall be performed only by:

(1) The manufacturer of the parachute; or

(2) Another parachute manufacturer deemed competent by the Administrator; or

(3) A certificated parachute loft having an appropriate rating.

DEFINITIONS

§ 54.30 *Parachute.* A unit comprised of a canopy, harness, container, and accessories, so arranged in combination as to allow instantaneous release of a folded canopy by means of mechanical control or manually operated release device, such combination to be approved by the Administrator.

(a) *Canopy.* That part of a parachute combination which is designed to retard the descent of a falling body or object.

(b) *Harness.* That part of a parachute combination designed to enfold or carry the body or object and to serve as an attachment between the canopy and its intended cargo.

(c) *Container.* That part of a parachute combination designed to hold or contain a folded canopy.

(d) *Accessory.* That part or parts of a parachute combination necessary to complete a unit as designed by the manufacturer and approved by the Administrator.

§ 54.31 *Manufacturer.* (a) The holder of a type certificate for the manufacture of a canopy, harness, container, or accessory, or any combination thereof, or of the current rights under licensing arrangements to the benefits of such type certificate; or

(b) The maker of a part or accessory of a certificated parachute: *Provided*, That such maker shall have in his employ a properly certificated parachute technician in direct charge of maintenance, repair, or alteration operations.

§ 54.32 *Routine maintenance.* An operation limited to the packing of parachutes and the replacement of small standard parts not involving complex assembly operations.

§ 54.33 *Minor repairs.* Elementary repair operations executed in accordance with standard practices and not within the definition of major repairs.

§ 54.34 *Major repairs.* Complex repair operations of vital importance to the airworthiness of a parachute.

§ 54.35 *Alterations.* Any appreciable change in the design or an exchange of parts in a parachute canopy, harness, container, accessory, or any combination thereof.

§ 54.36 *Minor alterations.* (a) An alteration having no appreciable effect on the structural, functional, or other characteristic, affecting the airworthiness of a parachute canopy, harness, container, accessory, or combination thereof, individually or as a unit;

(b) An alteration for which specific plans and instructions have been approved by the Administrator and which can be executed by minor elementary operations.

§ 54.37 *Major alterations.* All alterations not within the definition of minor alterations.

§ 54.38 *Overhaul.* Maintenance, inspection, repairs, and alterations performed in accordance with manuals and specifications, and approved by the Administrator.

PART 60—AIR TRAFFIC RULES

GENERAL

Sec. 60.1 Scope.
60.1a Operation over the high seas.
60.2 Authority of the pilot.

GENERAL FLIGHT RULES (GFR)

60.10 Application.
60.11 Preflight action.
60.12 Careless or reckless operation.
60.13 Airspace restricted areas.
60.13-1 Danger areas (CAA rules which apply to § 60.13).
60.14 Right-of-way.
60.15 Proximity of aircraft.
60.16 Acrobatic flight.
60.17 Minimum safe altitudes.
60.17-1 Instrument flight rule altitude minimums (CAA rules which apply to § 60.17).
60.18 Operation on and in the vicinity of an airport.
60.18-1 Right-turn indicators (CAA rules which apply to § 60.18).
60.18-2 LaGuardia Airport, N. Y., traffic patterns (CAA rules which apply to § 60.18).
60.18-3 New York International (Idlewild) Airport traffic patterns (CAA rules which apply to § 60.18).
60.18-4 Newark, N. J., Airport traffic patterns (CAA rules which apply to § 60.18).
60.19 Air traffic control instructions.
60.20 Notification of arrival.
60.21 Adherence to air traffic clearances.
60.22 Water operations.
60.23 Aircraft lights.
60.23-1 Aircraft lights in Alaska (CAA rules which apply to § 60.23).

VISUAL FLIGHT RULES (VFR)

60.30 Ceiling and distance from clouds.
60.31 Visibility.
60.32 Cruising altitudes.
60.33 VFR flight plan.

INSTRUMENT FLIGHT RULES (IFR)

60.40 Application.
60.41 IFR flight plan.
60.42 Alternate airport.
60.43 Air traffic clearance.
60.44 Cruising altitudes.
60.45 Right-side traffic.

¹ Manuals and specifications may be issued by a parachute manufacturer or by the Administrator. In either case they must be approved by the Administrator.

- Sec.
60.46 Instrument approach procedure.
60.46-1 Standard instrument approach procedures (CAA rules which apply to § 60.46).
60.47 Radio communications.
60.49 Radio failure.

DEFINITIONS

- 60.60 Acrobatic flight.
60.61 Aircraft.
60.62 Airplane.
60.63 Airport.
60.64 Airship.
60.65 Airspace restricted areas.
60.66 Air traffic.
60.67 Air traffic clearance.
60.68 Air traffic control.
60.69 Alternate airport.
60.70 Approach time.
60.71 Balloon.
60.72 Ceiling.
60.73 Control area.
60.74 Control zone.
60.75 Cruising altitude.
60.76 Flight plan.
60.77 Flight visibility.
60.78 Glider.
60.79 Ground visibility.
60.80 Helicopter.
60.81 Sunset and sunrise.
60.82 IFR.
60.83 IFR conditions.
60.84 Magnetic course.
60.85 Reporting point.
60.86 Rotorcraft.
60.87 Traffic pattern.
60.88 VFR.
60.89 VFR conditions.

AUTHORITY: §§ 60.1 to 60.89 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply sec. 601, 52 Stat. 1007; 49 U. S. C. 551.

SOURCE: §§ 60.1 to 60.89 contained in Amendment 60-0, Civil Air Regulations, 12 F. R. 5547, except as noted following sections affected.

NOTE: The statements contained in the notes are intended as explanation only and shall not be construed as official interpretations of the regulations.

GENERAL

§ 60.1 *Scope.* The air traffic rules in this part shall apply to aircraft operated anywhere in the United States, including the several States, the District of Columbia, and the several Territories and possessions of the United States, including the territorial waters and the overlying airspace thereof, except:

(a) Military aircraft of the United States armed forces when appropriate military authority determines that non-compliance with this part is required and prior notice thereof is given to the Administrator, and

(b) Aircraft engaged in special flight operations, requiring deviation from this

part, which are conducted in accordance with the terms and conditions of a certificate of waiver issued by the Administrator.

NOTE: Specific operations which cannot be conducted within the provisions of the regulations in this part, such as air races, air meets, acrobatic flights, or certain pest control or seeding operations require, prior to commencement of the operation, a certificate of waiver which may be obtained from the nearest office of CAA.

§ 60.1a *Operation over the high seas.* Aircraft of United States registry operated in air commerce shall while over the high seas comply with the provisions of Annex 2 (Rules of the Air) to the Convention on International Civil Aviation.

NOTE: An airman who complies fully with Part 60 while over the high seas will also be in compliance with Annex 2. Under Article 12 of the Convention on International Civil Aviation, the member states undertake to make their regulations conform to the greatest possible extent to the ICAO Annexes. It may therefore be expected that the provisions of Annex 2 will be generally applicable to flight over the territory of member states of the International Civil Aviation Organization.

[Amdt. 60-4, 14 F. R. 1486]

§ 60.2 *Authority of the pilot.* The pilot in command of the aircraft shall be directly responsible for its operation and shall have final authority as to operation of the aircraft. In emergency situations which require immediate decision and action the pilot may deviate from the rules prescribed in this part to the extent required by consideration of safety. When such emergency authority is exercised, the pilot, upon request of the Administrator, shall file a written report of such deviation. In an emergency situation which results in no deviation from the rules prescribed in this part but which requires air traffic control to give priority to an aircraft, the pilot of such aircraft shall make a report within 48 hours of such emergency situation to the nearest regional office of the Administrator.

GENERAL FLIGHT RULES (GFR)

§ 60.10 *Application.* Aircraft shall be operated at all times in compliance with the following general flight rules and also in compliance with either the visual flight rules or the instrument flight rules, whichever are applicable.

§ 60.11 *Preflight action.* Before beginning a flight, the pilot in command of the aircraft shall familiarize himself with all available information appropriate to the intended operation. Preflight ac-

tion for flights away from the vicinity of an airport, and for all IFR flights, shall include a careful study of available current weather reports and forecasts, taking into consideration fuel requirements, an alternate course of action if the flight cannot be completed as planned, and also any known traffic delays of which he has been advised by air traffic control.

§ 60.12 *Careless or reckless operation.* No person shall operate an aircraft in a careless or reckless manner so as to endanger the life or property of others.

NOTE: Examples of aircraft operation which may endanger the lives or property of others are:

(a) Any person who "buzzes", dives on, or flies in close proximity to a farm, home, any structure, vehicle, vessel, or group of persons on the ground. In rural districts the flight of aircraft at low altitude often causes injury to livestock. A pilot who engages in careless or reckless flying and who does not own the aircraft which he is flying unduly endangers the aircraft, the property of another.

(b) The operation of aircraft at an insufficient altitude endangers persons or property on the surface or passengers within the aircraft. Such a flight may also constitute a violation of § 60.17.

(c) Lack of vigilance by the pilot to observe and avoid other air traffic. In this respect, the pilot must clear his position prior to starting any maneuver, either on the ground or in flight.

(d) Passing other aircraft too closely.

(e) An operation conducted above a cloud layer in accordance with VFR minimums which results in the pilot becoming involved in instrument flight, unless the pilot possesses a valid instrument rating, the aircraft is properly equipped for instrument flight, and all IFR requirements are observed.

§ 60.13 *Airspace restricted areas.* The Administrator may designate as a danger area an area within which he has determined that an invisible hazard to aircraft in flight exists. No person shall operate an aircraft within an airspace reservation or danger area unless permission for such operation has been issued by appropriate authority.

NOTE: Airspace restricted areas are established in order to conduct certain essential activities which might endanger air traffic passing over or near the location thereof. Airspace restricted areas are shown on aeronautical charts and in publications of aids to air navigation. Avoidance of such areas is imperative to the safety of flight unless prior permission for flight through the area has been secured from the agency having jurisdiction over the airspace reservation or danger area.

§ 60.13-1 *Danger areas (CAA rules which apply to § 60.13).* The following areas are hereby designated as danger areas:

ALABAMA

Name and location (chart)	Description by geographical coordinates	Designated altitudes	Time of designation	Using agency

Surface to 30,000 feet....	0700 to 1700 daily.....	U. S. Army, Pacific, Fort Shafter, Oahu, T. H.

[Supp. 7, 14 F. R. 1913, as amended by Amdt. 1, 14 F. R. 3181, Amdt. 2, 14 F. R. 3393]

§ 60.14 *Right-of-way.* An aircraft which is obliged by the following rules to keep out of the way of another shall avoid passing over or under the other, or crossing ahead of it, unless passing well clear;

NOTE: Right-of-way rules do not apply when, for reasons beyond the pilot's control, aircraft cannot be seen due to restrictions of visibility. The aircraft which has the right-of-way will normally maintain its course and speed, but nothing in this part relieves the pilot from the responsibility for taking such action as will best aid to avert collision.

(a) *Distress.* An aircraft in distress has the right-of-way over all other air traffic.

(b) *Converging.* Aircraft converging shall give way to other aircraft of a different category in the following order:

airplanes and rotorcraft shall give way to airships, gliders, and balloons; airships shall give way to gliders and balloons; gliders shall give way to balloons. When two or more aircraft of the same category are converging at approximately the same altitude, each aircraft shall give way to the other which is on its right. In any event, mechanically driven aircraft shall give way to aircraft which are seen to be towing other aircraft;

NOTE: In effect, an aircraft will give way to another of a different class which is less maneuverable and is unable to take as effective action to avoid collision. For this reason aircraft towing others are given the right-of-way.

(c) *Approaching head-on.* When two aircraft are approaching head-on, or ap-

proximately so, each shall alter its course to the right;

(d) *Overtaking.* An aircraft that is being overtaken has the right-of-way, and the overtaking aircraft, whether climbing, descending, or in horizontal flight, shall keep out of the way of the other aircraft by altering its course to the right, and no subsequent change in the relative positions of the two aircraft shall absolve the overtaking aircraft from this obligation until it is entirely past and clear;

NOTE: Passing an overtaken aircraft on the right is required because the pilot in side-by-side, dual-control aircraft is seated on the left and has a better view on that side. Further, in narrow traffic lanes, passing on the left of an overtaken aircraft would place the overtaking aircraft in the path of the oncoming traffic.

(e) *Landing.* Aircraft, while on final approach to land, or while landing, have the right-of-way over other aircraft in flight or operating on the surface. When two or more aircraft are approaching an airport for the purpose of landing, the aircraft at the lower altitude has the right-of-way, but it shall not take advantage of this rule to cut in front of another which is on final approach to land, or to overtake that aircraft.

NOTE: Pilots must recognize that once committed to a landing in certain aircraft the pilot has little chance to avoid other aircraft which may interfere with that landing and, therefore, careful observance of this rule is important to the safety of all concerned.

§ 60.15 *Proximity of aircraft.* No person shall operate an aircraft in such proximity to other aircraft as to create a collision hazard. No person shall operate an aircraft in formation flight when passengers are carried for hire. No aircraft shall be operated in formation flight except by prearrangement between the pilots in command of such aircraft.

§ 60.16 *Acrobatic flight.* No person shall engage in acrobatic flight:

(a) Over congested areas of cities, towns, settlements, or over an open-air assembly of persons, or

(b) Within any civil airway or control zone, or

(c) When the flight visibility is less than 3 miles, or

(d) Below an altitude of 1,500 feet above the surface.

NOTE: Acrobatic maneuvers performed over a congested area or an open assembly of persons, or in areas where considerable air traffic exists, creates an undue hazard to persons or property. Flight visibility of at least 3 miles is believed to be a prerequisite to acrobatic flight in order that the pilot, after scanning the entire vicinity, may be reasonably assured that no other aircraft is within dangerous proximity prior to performing such maneuvers.

§ 60.17 *Minimum safe altitudes.* Except when necessary for take-off or landing, no person shall operate an aircraft below the following altitudes:

(a) *Anywhere.* An altitude which will permit, in the event of the failure of a power unit, an emergency landing without undue hazard to persons or property on the surface;

(b) *Over congested areas.* Over the congested areas of cities, towns or settlements, or over an open-air assembly of persons, an altitude of 1,000 feet above the highest obstacle within a horizontal radius of 2,000 feet from the aircraft. Helicopters may be flown at less than the minimum prescribed herein if such operations are conducted without hazard to persons or property on the surface and in accordance with paragraph (a) of this section; however, the Administrator, in the interest of safety, may prescribe specific routes and altitudes for such operations, in which event helicopters shall conform thereto;

NOTE: The rule recognizes the special flight characteristics of the helicopter which can accomplish an emergency landing within a relatively small space. However, if a helicopter is flown over the congested area of a city, town or settlement, at less than 1,000 feet above the highest obstacle, the pilot is required to fly with due regard to places

in which an emergency landing can be made with safety and, further, to maintain an altitude along the flight path thus selected from which such an emergency landing can be effected at any time.

(c) *Over other than congested areas.* An altitude of 500 feet above the surface, except over open water or sparsely populated areas. In such event, the aircraft shall not be operated closer than 500 feet to any person, vessel, vehicle, or structure. Helicopters may be flown at less than the minimums prescribed herein if such operations are conducted without hazard to persons or property on the surface and in accordance with paragraph (a) of this section.

NOTE: When flight is necessary at an altitude of less than 500 feet above the surface, the pilot must avoid creating any hazard to persons or property on the surface which may result from such flight. In no event should the pilot expose his passengers to unnecessary hazard while engaging in flight at low altitude. The maneuverability of the helicopter permits safe flight below the minimums required in § 60.17, provided good judgment and caution are exercised by the pilot.

(d) *IFR operations.* The minimum IFR altitude established by the Administrator for that portion of the route over which the operation is conducted. Such altitude shall be that which the safe conduct of flight permits or requires considering the character of the terrain being traversed, the meteorological services and navigational facilities available, and other flight conditions. Where the Administrator has not established such a minimum, operations shall be conducted at not less than 1,000 feet above the highest obstacle within a horizontal distance of 5 miles from the center of the course intended to be flown.

NOTE: When minimum altitudes are established by the Administrator for particular routes, such altitudes will be published in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

[Amdt. 60-0, 12 F. R. 5547, as amended by Amdt. 60-3, 13 F. R. 1224]

§ 60.17-1 *Instrument flight rule altitude minimums (CAA rules which apply to § 60.17).* See Part 610 of this title.

[12 F. R. 7801. Correction noted at 14 F. R. 38]

§ 60.18 *Operation on and in the vicinity of an airport.* Aircraft shall be operated on and in the vicinity of an airport in accordance with the following rules:

(a) When approaching for landing, all turns shall be made to the left unless the airport displays standard visual markings approved by the Administrator and which indicate that all turns are to be made to the right, or unless otherwise authorized by air traffic control;

NOTE: Where right-hand turns and clockwise flow of traffic are desirable in the interest of safety, airport markings visible from the air will inform the transient pilot of the necessity for making turns to the right.

(b) If air traffic control is in operation at the airport, contact shall be maintained with such control, either visually or by radio, to receive any air traffic

control instructions which may be issued;

(c) Aircraft operating from an airport shall conform to the traffic patterns prescribed for that airport;

(d) The Administrator may, when necessary in the interest of safety, prescribe traffic patterns for an airport which shall supersede any other traffic patterns previously prescribed;

(e) When light signals are used for the control of air traffic, they shall be of the color and have the meaning prescribed by the Administrator.

NOTE: Light signals and their meanings are published in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

§ 60.18-1 *Right-turn indicators (CAA rules which apply to § 60.18).* The L shaped marker described hereinafter is approved as a standard visual marker which indicates that turns are to be made to the right. The marker shall be prepared in such size and color, and located in such area, that when displayed between sunrise and sunset it will be readily visible to pilots using the airport. The marker shall be placed in such a position that the short member of the L will show the direction of traffic in the air, the long member of the L will point out the landing strip to be used, and the entire L will indicate the course of the turn to be executed by pilots using the landing strip.

NOTE: The L shaped marker is applied to the Segmented Circle Airport Marker System in Technical Standard Order TSO-N5.

[13 F. R. 6079]

§ 60.18-2 *LaGuardia Airport, N. Y., traffic patterns (CAA rules which apply to § 60.18).* Aircraft taking off or landing at the LaGuardia, N. Y., Airport shall adhere to the following traffic patterns and altitudes made a part thereof, unless otherwise authorized by air traffic control.

(a) *Runway No. 13—(1) Takeoff.* Execute a climbing right turn over Yacht Basin, and proceed over Flushing Meadows to extreme south tip thereof or until reaching an altitude of at least 1200 feet before proceeding on course.

(2) *Landing.* Maintain an altitude of at least 1200 feet until over Hellgate Channel, 5 stacks or the East River and approach by descending over water insofar as practical.

(b) *Runway No. 31—(1) Takeoff.* Execute a climbing right turn to an altitude of at least 1200 feet over the East River insofar as practical before proceeding on course.

(2) *Landing.* Final approach from an altitude of at least 1200 feet over extreme southern tip of Flushing Meadow Park descending over the park and water insofar as practical.

(c) *Runway No. 9—(1) Takeoff.* Execute a climb north of Flushing Airport straight ahead to an altitude of at least 1200 feet before proceeding on course.

(2) *Landing.* Maintain an altitude of at least 1200 feet until on base leg making left turns only and approach by descending over water insofar as practical.

(d) *Runway No. 27—(1) Takeoff.* Execute a climbing right turn to an altitude

of at least 1200 feet over East River insofar as practical, before proceeding on course.

(2) *Landing.* Maintain an altitude of at least 1,000 feet to the Cloverleaf at the south end of the Whitestone Bridge and descend north of the Flushing Airport, or make final approach from an altitude of at least 1200 feet over southern tip of Flushing Meadow Park.

(e) *Runway No. 4—(1) Takeoff.* Execute a climbing right turn to an altitude of at least 1200 feet over the East River before proceeding on course.

(2) *Landing.* Northbound flights make final approach from Maspeth marker descending from an altitude of at least 1200 feet.

Flights from other directions maintain an altitude of at least 1200 feet on base leg starting descent on final approach turn.

(f) *Runway No. 22—(1) Takeoff.* Climb straight ahead to an altitude of at least 1200 feet before proceeding on course.

(2) *Landing.* Maintain an altitude of at least 1200 feet until over Whitestone Bridge and approach by descending over water insofar as practical.

NOTE: The foregoing traffic patterns for LaGuardia Airport are illustrated in the map designated Figure 1.

[Supp. 9, 14 F. R. 479]

§ 60.18-3 *New York International (Idlewild) Airport; traffic patterns (CAA rules which apply to § 60.18).* Aircraft taking off or landing at the New York International (Idlewild) Airport shall adhere to the following traffic patterns and altitudes made a part thereof, unless otherwise authorized by air traffic control.

(a) *Runway No. 1-R—(1) Takeoff.* Execute slight left turn heading toward Baisley Pond climbing to an altitude of at least 1200 feet before proceeding on course.

(2) *Landing.* Start approach from an altitude of at least 1200 feet over Jamaica Bay, descending over water making left turn into runway.

(b) *Runway No. 31-R—(1) Takeoff.* Execute a climbing left turn to an altitude of at least 1200 feet before proceeding on course.

(2) *Landing.* Start approach from old Valley Stream Airport from an altitude of at least 1200 feet descending over open area making right turn into runway, or start approach over Jamaica Bay from an altitude of at least 1200 feet descending over the water making a left turn into the runway.

(c) *Runway No. 25-L—(1) Takeoff.* Climb to an altitude of at least 1200 feet over Jamaica Bay before proceeding on course.

(2) *Landing.* Start approach from an altitude of at least 1200 feet over the south of the village of Valley Stream descending over open area to runway.

(d) *Runway No. 22-L—(1) Takeoff.* Climb to an altitude of at least 1200 feet over Jamaica Bay before proceeding on course.

(2) *Landing.* Start descent from an altitude of at least 1200 feet one mile north of Montefiore Cemetery.

(e) *Runway No. 19-L—(1) Takeoff.* Make climbing right turn to at least 1200 feet over Jamaica Bay before proceeding on course.

(2) *Landing.* Start approach from at least 1200 feet from one mile north of the north end of Baisley Pond descending along edge of airport.

(f) *Runway No. 13-L—(1) Takeoff.* Make climbing left turn over open area toward old Valley Stream Airport to at least 1200 feet before proceeding on course.

(2) *Landing.* Start approach from at least 1200 feet over Jamaica Bay descending in a right turn over water to the airport boundary.

(g) *Runway No. 7-R—(1) Takeoff.* Make slight right turn toward old Valley Stream Airport climbing to at least 1200 feet before proceeding on course.

(2) *Landing.* Descend from an altitude of at least 1200 feet over Jamaica Bay.

(h) *Runway No. 4-R—(1) Takeoff.* Climb straight ahead to at least 1200 feet before proceeding on course. This runway to be used only under conditions of extremely adverse winds.

(2) *Landing.* Descend from at least 1200 feet over Jamaica Bay.

NOTE: The foregoing traffic patterns for the New York International (Idlewild) Airport are illustrated in the map designated Figure 2.

[Supp. 9, 14 F. R. 479]

§ 60.18-4 *Newark, N. J., Airport; traffic patterns (CAA rules which apply to § 60.18).* Aircraft taking off or landing at the Newark, N. J., Airport shall adhere to the following traffic patterns and altitudes made a part thereof, unless otherwise authorized by air traffic control.

(a) *Runway No. 1—(1) Takeoff.* Execute a climbing right turn to an altitude of at least 1200 feet over the Kearney Meadows before proceeding on course.

ecute a climbing left turn of 90 degrees before reaching the range station, then climb to an altitude of at least 1200 feet over Newark Bay or the Arthur Kill River before proceeding on course.
(2) *Landing.* Maintain an altitude of at least 1200 feet until over the River before proceeding on course.

at least 1200 feet before proceeding on course.
(2) *Landing.* Maintain an altitude of at least 1200 feet on the base leg over Newark Bay until starting descent on the final approach turn.
(c) *Runway No. 24—(1) Takeoff.* Ex-

ecute a climbing left turn of 45 degrees before reaching Lake Wequahic, then climb straight ahead to an altitude of

(2) *Landing.* Start descent to the runway from an altitude of at least 1200 feet over the south end of Newark Bay.
(b) *Runway No. 28—(1) Takeoff.* Ex-

FIG. 3
NEWARK TRAFFIC PATTERN

FIG. 2
NEW YORK INTERNATIONAL AIRPORT

(2) *Landing.* Maintain an altitude of at least 1200 feet until over the Pulaski Skyway at the Passaic River Crossing before starting descent to the runway.

(e) *Runway No. 10—(1) Takeoff.* Climb to an altitude of at least 1200 feet over Newark Bay or the Hackensack River before proceeding on course.

(2) *Landing.* Maintain an altitude of at least 1200 feet until within 3 miles of the airport before starting descent on final approach. Do not make left turn into runway.

(f) *Runway No. 6—(1) Takeoff.* Climb to an altitude of at least 1200 feet over Kearney Meadows or Newark Bay before proceeding on course.

(2) *Landing.* Start descent to runway from at least 1200 feet at south end of Newark Bay.

NOTE: The foregoing traffic patterns for the Newark Airport are illustrated in the map designated Figure 3.

[Supp. 9, 14 F. R. 479]

§ 60.19 *Air traffic control instructions.* No person shall operate an aircraft contrary to air traffic control instructions in areas where air traffic control is exercised.

§ 60.20 *Notification of arrival.* If a flight plan has been filed, the pilot in command of the aircraft, upon landing or completion of the flight, shall file an arrival or completion notice with the nearest Civil Aeronautics Administration communications station or control tower.

§ 60.21 *Adherence to air traffic clearances.* When an air traffic clearance has been obtained under either the VFR or IFR rules, the pilot in command of the aircraft shall not deviate from the provisions thereof unless an amended clearance is obtained. In case emergency authority is used to deviate from the provision of an air traffic clearance, the pilot in command shall notify air traffic control as soon as possible and, if necessary, obtain an amended clearance. However, nothing in this section shall prevent a pilot, operating on an IFR traffic clearance, from notifying air traffic control that he is canceling his IFR flight plan and proceeding under VFR: *Provided*, That he is operating in VFR weather conditions when he takes such action.

CROSS REFERENCE: For Special Civil Air Regulations—SR-331 with respect to § 60.21, see note to Part 40 of this subchapter.

§ 60.22 *Water operations.* An aircraft operated on the water shall, insofar as possible, keep clear of all vessels and avoid impeding their navigation. The following rules shall be observed with respect to other aircraft or vessels operated on the water:

(a) *Crossing.* The aircraft or vessel which has the other on its right shall give way so as to keep well clear;

(b) *Approaching head-on.* When aircraft, or an aircraft and vessel, approach head-on, or approximately so, each shall alter its course to the right to keep well clear;

(c) *Overtaking.* The aircraft or vessel which is being overtaken has the right-of-way, and the one overtaking shall alter its course to keep well clear;

(d) *Special circumstances.* When two aircraft, or an aircraft and vessel, approach so as to involve risk of collision, each shall proceed with careful regard to existing circumstances and conditions including the limitations of the respective craft.

NOTE: The rules for operating aircraft on the surface of the water conform to marine rules for the operation of vessels. The "Special circumstances" rule is provided for situations wherein it may be impracticable or hazardous for a vessel or another aircraft to bear to the right because of depth of a waterway, wind conditions, or other circumstances.

§ 60.23 *Aircraft lights.* Between sunset and sunrise:

(a) All aircraft in flight or operated on the ground or under way on the water shall display position lights.

(b) All aircraft parked or moved within or in dangerous proximity to that portion of any airport used for, or available to, night flight operations shall be clearly illuminated or lighted, unless the aircraft are parked or moved in an area marked with obstruction lights.

(c) All aircraft at anchor shall display anchor lights, unless in an area within which lights are not required for vessels at anchor, and

(d) Within the Territory of Alaska the lights required in paragraphs (a), (b), and (c) of this section shall be displayed during those hours specified and published by the Administrator.

[Amdt. 60-2, 13 F. R. 475]

NOTE: International visual distress and urgency signals are contained in the CAA Flight Information Manual for sale by the Superintendent of Documents, United States Government Printing Office, Washington 25, D. C.

§ 60.23-1 *Aircraft lights in Alaska (CAA rules which apply to § 60.23).* In Alaska the lights required by this section shall be displayed when any unlighted aircraft or other unlighted prominent objects cannot readily be seen beyond a distance of three miles, or when the sun is more than six degrees below the horizon.¹

[13 F. R. 3227. Correction noted at 14 F. R. 38]

VISUAL FLIGHT RULES (VFR)

§ 60.30 *Ceiling and distance from clouds.* Aircraft shall comply with the following requirements as to ceiling and distance from clouds:

(a) *Within control zones.* Unless authorized by air traffic control, aircraft shall not be flown when the ceiling is less than 1,000 feet, or less than 500 feet vertically and 2,000 feet horizontally from any cloud formation.

(b) *Elsewhere.* When at an altitude of more than 700 feet above the surface aircraft shall not be flown less than 500 feet vertically and 2,000 feet horizontally

¹ "The duration of civil twilight is the interval in the evening from sunset until the time when the center of the sun is 6° below the horizon; or the corresponding interval in the morning between sunrise and the time at which the sun was still 6° below the horizon." "Tables of Sunrise, Sunset, and Twilight," United States Naval Observatory, 1946, p. 9.

from any cloud formation; when at an altitude of 700 feet or less aircraft shall not be flown unless clear of clouds.

[Amdt. 60-1, 13 F. R. 475]

§ 60.31 *Visibility—(a) Ground visibility within control zones.* When the ground visibility is less than 3 miles, no person shall take off or land an aircraft at an airport within a control zone, or enter the traffic pattern of such an airport, unless an air traffic clearance is obtained from air traffic control;

(b) *Flight visibility within control zones.* When the flight visibility is less than 3 miles, no person shall operate an aircraft in flight within a control zone, unless an air traffic clearance is obtained from air traffic control;

(c) *Flight visibility within control areas.* When the flight visibility is less than 3 miles, no person shall operate an aircraft within a control area;

NOTE: When the flight visibility is less than 3 miles, operations within control areas are to be conducted in accordance with instrument flight rules. Flight below 700 feet above the surface is not within a control area. See definition of control area, § 60.73.

(d) *Flight visibility elsewhere.* When outside of control zones and control areas, no person shall operate an aircraft in flight when the flight visibility is less than one mile. However, helicopters may be flown at or below 700 feet above the surface when the flight visibility is less than one mile if operated at a reduced speed which will give the pilot of such helicopter adequate opportunity to see other air traffic or any obstruction in time to avoid hazard of collision.

NOTE: When traffic conditions permit, air traffic control will issue an air traffic clearance for flights within, entering, or departing control zones when ground visibility or the flight visibility is less than 3 miles. The operator of any airport within a control zone, other than the airport upon which the control zone is centered, may secure continuing permission from air traffic control to conduct operations when the visibility is less than 3 miles: *Provided*, That such operations, at all times, remain 2,000 feet horizontally and 500 feet vertically from clouds, and traffic patterns are established and observed which avoid conflict with other operations. When outside of control zones and at an altitude of less than 700 feet above the surface, helicopters are permitted to fly when the flight visibility is less than one mile because of their special flight characteristics which allow them to proceed at low speed with safety.

§ 60.32 *Cruising altitudes.* When an aircraft is operated in level cruising flight at 3,000 feet or more above the surface, the following cruising altitudes shall be observed:

(a) *Within control zones and control areas.* At an odd or even thousand-foot altitude appropriate to the direction of flight as specified by the Administrator;

(b) *Elsewhere.* When the flight visibility is less than 3 miles, at an altitude appropriate to the magnetic course being flown as follows:

(1) 0° to 89° inclusive, at odd thousands (3,000; 5,000; etc.)

(2) 90° to 179° inclusive, at odd thousands plus 500 (3,500; 5,500; etc.)

(3) 180° to 269° inclusive, at even thousands (4,000; 6,000; etc.)

(4) 270° to 359° inclusive, at even thousands plus 500 (4,500; 6,500; etc.).

NOTE: "Odd and even" thousand-foot altitudes specified by the Administrator for civil airways will be published in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. In view of increasing air traffic and the broad range of speed of aircraft, safety requires observance of the above cruising altitudes.

§ 60.33 *VFR flight plan.* If a VFR flight plan is filed, it shall contain such of the information listed in § 60.41 as air traffic control may require.

NOTE: Although flight plans are not required for VFR flight, air traffic control will accept such flight plans when desired by the pilot. Flights proceeding over sparsely populated areas or mountainous terrain may thus take advantage of any search and rescue facilities which may be available in emergencies. The information contained in such a flight plan is of importance to search and rescue operations.

INSTRUMENT FLIGHT RULES (IFR)

§ 60.40 *Application.* When aircraft are not flown in accordance with the distance-from-cloud and visibility rules prescribed in the visual flight rules, §§ 60.30-60.33, aircraft shall be flown in accordance with the rules prescribed in §§ 60.41-60.49.

§ 60.41 *IFR flight plan.* Prior to take-off from a point within a control zone or prior to entering a control area or control zone, a flight plan shall be filed with air traffic control. Such flight plan shall contain the following information unless otherwise authorized by air traffic control:

- (a) Aircraft identification, and if necessary, radio call sign;
- (b) Type of aircraft; or, in the case of a formation flight, the types and number of aircraft involved;
- (c) Full name, address, and number of pilot certificate of pilot in command of the aircraft, or of the flight commander if a formation flight is involved;
- (d) Point of departure;
- (e) Cruising altitude, or altitudes, and the route to be followed;
- (f) Point of first intended landing;
- (g) Proposed true air speed at cruising altitude in miles per hour;
- (h) Radio transmitting and receiving frequencies to be used;
- (i) Proposed time of departure;
- (j) Estimated elapsed time until arrival over the point of first intended landing;
- (k) Alternate airport or airports, in accordance with the requirements of § 60.42;
- (l) Amount of fuel on board expressed in hours;
- (m) Any other information which the pilot in command of the aircraft, or air traffic control, deems necessary for air traffic control purposes.
- (n) For international flights: The number of persons on board.

[Amdt. 60-0, 12 F. R. 5547, as amended by Amdt. 60-4, 14 F. R. 1486]

§ 60.42 *Alternate airport.* An airport shall not be listed in the flight plan as an alternate airport unless current

weather reports and forecasts show a trend indicating that the ceiling and visibility at such airport will be at or above the following minimums at the time of arrival:

(a) *Airport served by radio directional facility.* Ceiling 1,000 feet, visibility one mile; or, ceiling 900 feet, visibility 1½ miles; or, ceiling 800 feet, visibility 2 miles;

(b) *Airport not served by radio directional facility.* Ceiling 1,000 feet with broken clouds or better, visibility 2 miles;

(c) *Minimums at individual airports.* The Administrator may, in the interest of safety, prescribe higher ceiling and visibility minimums at individual airports than required by paragraph (a) or (b) of this section; and for individual operations at particular airports, may specify lower minimums if he shall find that such reduced minimums will not decrease safety.

NOTE: The minimums set forth in § 60.42 are required for clearance prior to take-off and are not intended to limit use of any alternate airport if weather conditions change while en route, in which event the landing minimums published in the CAA Flight Information Manual shall apply. Minimums for particular airports which may be prescribed by the Administrator will be published in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

§ 60.43 *Air traffic clearance.* Prior to take-off from a point within a control zone, or prior to entering a control area or control zone, an air traffic clearance shall be obtained from air traffic control.

CROSS REFERENCE: For Special Civil Air Regulations SR-331 with respect to § 60.43, see note to Part 40 of this subchapter.

§ 60.44 *Cruising altitudes.* Aircraft shall be flown at the following cruising altitudes:

(a) *Within control areas and control zones.* At altitudes authorized by air traffic control;

(b) *Elsewhere.* At an altitude appropriate to the magnetic course being flown as follows:

- (1) 0° to 89° inclusive, at odd thousands (1,000; 3,000; etc.).
- (2) 90° to 179° inclusive, at odd thousands plus 500 (1,500; 3,500; etc.).
- (3) 180° to 269° inclusive, at even thousands (2,000; 4,000; etc.).
- (4) 270° to 359° inclusive, at even thousands plus 500 (2,500; 4,500; etc.).

NOTE: The above cruising altitudes are not in conflict with those required for flight under VFR rules.

§ 60.45 *Right-side traffic.* Aircraft operating along a civil airway shall be flown to the right of the center line of such airway, unless otherwise authorized by air traffic control.

CROSS REFERENCE: For Special Civil Air Regulations SR-331 with respect to § 60.45, see note to Part 40, of this subchapter.

§ 60.46 *Instrument approach procedure.* When instrument let-down to an airport is necessary, a standard instrument approach procedure prescribed for that airport by the Administrator shall be used, unless:

(a) A different instrument approach procedure specifically authorized by the Administrator is used, or

(b) A different instrument approach procedure is authorized by air traffic control for the particular approach, provided such authorization is issued in accordance with procedures approved by the Administrator.

NOTE: Standard instrument approach procedures prescribed by the Administrator are published in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. Such procedures have been carefully investigated with respect to pattern and terrain clearance. Safety would not permit several aircraft to make simultaneous use of more than one instrument approach procedure unless such operations were controlled.

§ 60.46-1 *Standard instrument approach procedures (CAA rules which apply to § 60.46).* See Part 609 of this title.

[12 F. R. 8111. Correction noted at 14 F. R. 38]

§ 60.47 *Radio communications.* Within control zones and control areas the pilot in command of the aircraft shall ensure that a continuous watch is maintained on the appropriate radio frequencies and shall report by radio as soon as possible the time and altitude of passing each designated reporting point, or the reporting points specified by air traffic control, together with weather conditions which have not been forecast, and other information pertinent to the safety of flight.

NOTE: Designated reporting points are noted in publications of aids to air navigation. Control of air traffic is predicated on knowledge of the position of aircraft in flight. The reporting of unanticipated weather encountered en route such as icing or extreme turbulence may be of importance to the safety of other aircraft anticipating flight within the area.

CROSS REFERENCE: For Special Civil Air Regulations SR-331 with respect to § 60.47, see note to Part 40, of this subchapter.

§ 60.49 *Radio failure.* If unable to maintain two-way radio communications, the pilot in command of the aircraft shall:

(a) If operating under VFR conditions, proceed under VFR and land as soon as practicable, or

(b) Proceed according to the latest air traffic clearance to the radio facility serving the airport of intended landing, maintaining the minimum safe altitude or the last acknowledged assigned altitude whichever is higher. Descent shall start at the expected approach time last authorized or, if not received and acknowledged, at the estimated time of arrival indicated by the elapsed time specified in the flight plan.

NOTE: Detailed procedures to be followed by the pilot are contained in the CAA Flight Information Manual, for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

[Amdt. 60-0, 12 F. R. 5547, as amended by Amdt. 60-4, 14 F. R. 1487]

DEFINITIONS

§ 60.60 *Acrobatic flight.* Maneuvers intentionally performed by an aircraft

involving an abrupt change in its attitude, an abnormal attitude, or an abnormal acceleration.

NOTE: The term "acrobatic flight" is not intended to include turns or maneuvers necessary to normal flight.

§ 60.61 *Aircraft.* Any contrivance used or designed for navigation of or flight in the air, except a parachute or other contrivance designed for such navigation but used primarily as safety equipment.

§ 60.62 *Airplane.* A mechanically propelled aircraft the support of which in flight is derived dynamically from the reaction on surfaces in a fixed position relative to the aircraft but in motion relative to the air.

§ 60.63 *Airport.* A defined area on land or water, including any buildings and installations, normally used for the take-off and landing of aircraft.

§ 60.64 *Airship.* A mechanically propelled aircraft whose support is derived from lighter-than-air gas.

§ 60.65 *Airspace restricted areas.* Designated areas in which flight is restricted, which are established by appropriate authority, and are shown on aeronautical charts and published in notices to airmen and aids to air navigation.

(a) *Airspace reservation.* An area established by Executive order of the President of the United States or by any State of the United States.

(b) *Danger area.* An area designated by the Administrator within which an invisible hazard to aircraft in flight exists.

§ 60.66 *Air traffic.* Aircraft in operation anywhere in the airspace and on that area of an airport normally used for the movement of aircraft.

§ 60.67 *Air traffic clearance.* Authorization by air traffic control, for the purpose of preventing collision between known aircraft, for an aircraft to proceed under specified traffic conditions within a control zone or control area.

§ 60.68 *Air traffic control.* A service operated by appropriate authority to promote the safe, orderly, and expeditious flow of air traffic.

§ 60.69 *Alternate airport.* An airport specified in the flight plan to which a flight may proceed when a landing at the point of first intended landing becomes inadvisable.

§ 60.70 *Expected approach time.* The time at which it is expected that an arriving aircraft will be cleared to commence approach for a landing.

[Amdt. 60-4, 14 F. R. 1487]

§ 60.71 *Balloon.* An aircraft, excluding moored balloons, without mechanical means of propulsion, the support of which is derived from lighter-than-air gas.

§ 60.72 *Ceiling.* The distance from the surface of the ground or water to the lowest cloud layer reported as "broken clouds" or "overcast".

§ 60.73 *Control area.* An airspace of defined dimensions, designated by the

Administrator, extending upwards from an altitude of 700 feet above the surface, within which air traffic control is exercised.

§ 60.74 *Control zone.* An airspace of defined dimensions, designated by the Administrator, extending upwards from the surface, to include one or more airports, and within which rules additional to those governing flight in control areas apply for the protection of air traffic.

§ 60.75 *Cruising altitude.* A constant altimeter indication, in relation to sea level, maintained during a flight or portion thereof.

§ 60.76 *Flight plan.* Specified information filed either verbally or in writing with air traffic control relative to the intended flight of an aircraft.

§ 60.77 *Flight visibility.* The average horizontal distance that prominent objects may be seen from the cockpit.

§ 60.78 *Glider.* An aircraft without mechanical means of propulsion, the support of which in flight is derived dynamically from the reaction on surfaces in motion relative to the air.

§ 60.79 *Ground visibility.* The average range of vision in the vicinity of an airport as reported by the U. S. Weather Bureau or, if unavailable, by an accredited observer.

§ 60.80 *Helicopter.* A type of rotorcraft the support of which in the air is normally derived from airfoils mechanically rotated about an approximately vertical axis.

§ 60.81 *Sunset and sunrise.* Sunset and sunrise are the mean solar times of sunset and sunrise as published in the Nautical Almanac converted to local standard time for the locality concerned, except within the Territory of Alaska.

NOTE: The Nautical Almanac containing sunshine tables may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. Information is also available from the sunshine tables in the offices of the Civil Aeronautics Administration or the United States Weather Bureau.

[Amdt. 60-2, 13 F. R. 475]

§ 60.82 *IFR.* The symbol used to designate instrument flight rules.

§ 60.83 *IFR conditions.* Weather conditions below the minimum prescribed for flights under VFR.

§ 60.84 *Magnetic course.* The true course or track, corrected for magnetic variation, between two points on the surface of the earth.

§ 60.85 *Reporting point.* A geographical location in relation to which the position of an aircraft is reported.

§ 60.86 *Rotorcraft.* An aircraft whose support in the air is chiefly derived from the vertical component of the force produced by rotating airfoils.

§ 60.87 *Traffic pattern.* The flow of aircraft operating on and in the vicinity of an airport during specified wind conditions as established by appropriate authority.

§ 60.88 *VFR.* The symbol used to designate visual flight rules.

§ 60.89 *VFR conditions.* Weather conditions equal to or above the minimum prescribed for flights under VFR.

PART 61—SCHEDULED AIR CARRIER RULES

GENERAL

Sec.	
61.1	Provision for issuance.
61.2	Certificate required.
61.3	Definitions.

SERVICE

61.11	Service performed.
61.12	Operations schedules.

ROUTE

61.21	Route operation.
61.22	Off-route operation.
61.23	Regular route.
61.24	Regular stops.
61.25	Alternate airports.

AIRCRAFT

61.31	Aircraft operation.
61.32	Multiengine fuel system arrangement.

SINGLE-ENGINE AIRCRAFT

61.41	Day operation over land.
61.42	Night operation over land.
61.43	Day operation over water.
61.44	Night operation over water.

MULTIENGINE AIRCRAFT

61.51	Day operation over land.
61.52	Night operation over land.
61.53	Day and night operation over water.

EQUIPMENT

61.61	First aid equipment.
61.62	Seat belt sign.
61.63	Cockpit check list.

MAINTENANCE

61.71	General.
61.72	Organization.
61.73	Supervision.
61.74	Inspection.
61.75	Workmanship.
61.76	Methods.
61.77	Materials.
61.78	Mechanics.
61.79	Training program.
61.80	Distribution of personnel.
61.81	Shops and facilities.
61.82	Stock.
61.83	Adequate facilities.
61.84	Inflammable material.
61.85	Refueling requirements.
61.86	Alteration and repairs.
61.87	Records.

MAINTENANCE MANUAL

61.91	Necessity.
61.92	Contents.
61.93	Form.
61.94	Delivery of copies.
61.95	Record of copies.
61.96	Changes.
61.97	Retirement of parts program.

AIRMEN

61.101	Airmen utilization.
61.101-1	"Flight crew member" (CAA interpretations which apply to § 61.101).
61.102	Airmen records.
61.102-1	Content of airmen records (CAA rules which apply to § 61.102).

PILOT IN COMMAND

61.110	Aircraft commander.
61.111	Aircraft competency.
61.112	Instrument competency.
61.113	Route competency.
61.114	Maintenance of pilot route qualification.

Sec.	
61.115	Logging flight time.
61.116	Logging instrument flight time.
61.117	Flight time limitations.
COPILOT	
61.121	When required.
61.122	Aircraft competency.
61.123	Instrument competency.
61.124	Logging flight time.
PILOT TECHNIQUE MAINTENANCE	
61.131	Responsibility of operator.
61.132	Continuance of pilot competency.
61.133	Pilot certification for equipment.
61.134	Check pilots.
61.135	Training program.
61.135-1	Pilot training and instruction program (CAA rules which apply to § 61.135).
RADIO OPERATOR	
61.141	Certificate.
DISPATCHERS	
61.151	Number required.
61.152	Location.
61.153	Dispatcher competency.
61.154	Qualification for route.
61.155	Maintenance of qualifications.
61.156	Minimum specifications.
61.157	Dispatcher route qualification expiration.
61.158	Dispatcher time limitations.
FLIGHT ENGINEER	
61.161	Flight engineer; when required.
61.162	Certificate.
61.163	Qualification for duty.
WEATHER	
61.171	Reports.
FLIGHT OPERATIONS	
PRIOR TO CLEARANCE	
61.181	Aircraft to be airworthy.
61.182	Adequately serviced.
61.183	Adequate fuel supply.
61.184	Radio ground check.
61.185	Passengers aboard during refueling.
61.186	Notice of other aircraft in flight on route (outside of airway traffic control area).
DISPATCHING RULES (FOR CLEARANCE)	
61.191	Necessity for dispatching authorization.
61.192	Dispatcher reporting for duty.
61.193	Clearance and load manifest forms.
61.194	Preparation of clearance form.
61.195	Preparation of load manifest form.
61.196	Clearance and load manifest contents.
61.197	Clearance request repetition.
61.198	Change in clearance by radio.
61.199	Weather minimums; general.
61.200	Weather minimums; visual-contact clearance.
61.201	Instrument or over-the-top clearance.
61.202	Weather conditions at terminal or intermediate airports.
61.203	Alternate airport requirement.
61.204	Types of alternate airports.
61.205	Clearance of flights from alternate airports.
61.206	Late or off-schedule flights.
61.207	Flight hazards.
61.208	Flight equipment.
61.209	Visual-contact day operation.
61.210	Visual-contact night operation.
61.211	Instrument or over-the-top day operation.
61.212	Instrument or over-the-top night operation.
61.213	Operating limitations upon airplanes certificated under transport category requirements.
61.214	General limitations.
61.215	Take-off limitations to provide for engine failure.

Sec.	
61.216	Landing distance limitations.
61.217	Landing distance at alternate fields.
61.218	Definition of effective length of landing area.
EN ROUTE LIMITATIONS	
61.219	All airplanes; all engines operating.
61.220	All airplanes; one engine inoperative.
61.221	Airplanes with four or more engines; two engines inoperative.
61.222	Special air navigation facilities.
FLIGHT PREPARATION AND TAKE-OFF RULES	
61.231	Radio ground check.
61.232	Radio check after take-off.
61.233	Control tests.
61.234	View of traffic.
61.235	Engine tests.
61.236	Instrument tests.
61.237	Take-off restrictions.
61.238	Runway utilization.
61.239	Restricted-vision take-offs.
61.240	Pilots at controls.
61.241	Ice and snow.
FLIGHT COURSE AND EN ROUTE RULES	
61.251	Weather minimums.
61.252	Deviation from route.
61.253	Dispatcher emergency decisions.
61.254	Reporting icing conditions.
FLIGHT ALTITUDE RULES	
61.261	Flight altitude rules.
61.262	Maximum altitude of flight operations.
61.263	Oxygen apparatus and its use.
INSTRUMENT APPROACH RULES	
61.271	Altitude maintenance on initial approach.
61.272	Letting-down-through procedure.
61.273	Approach and landing limitations.
61.273-1	Standard instrument approach procedures (CAA rules which apply to § 61.273).
LANDING RULES	
61.281	Pilots at controls.
61.282	Restricted-vision landing.
61.283	Provisional weight.
61.284	Fuel dumping.
FLIGHT INTERRUPTION RULES	
61.291	Weather interruption.
61.292	Icing conditions.
61.294	Mechanical interruptions.
61.295	Communications failure.
GENERAL PILOT RULES	
61.301	Command of flight.
61.302	Remaining at controls.
61.303	Manipulation of controls.
61.304	Pilot compartment.
61.305	Time of reporting for duty.
61.306	Local airport rules and interline agreements.
61.307	Maneuvers.
61.308	Maps and flight equipment.
61.309	Flashlights.
61.310	Emergency decisions.
MISCELLANEOUS RULES	
61.321	Distribution of notices.
61.322	Air carrier aircraft proving period.
61.322-1	Aircraft proving tests (CAA rules which apply to § 61.322).
61.323	Smoking rules.
61.324	No smoking signs.
61.325	Smoking in pilot compartment.
61.326	Radio rules.
61.327	Fuel dumping.
61.328	Marking emergency exits.
OPERATIONS MANUAL	
61.331	Necessity.
61.332	Contents.
61.333	Form.
61.334	Delivery of copies.
61.334-1	Copies of operations manual (CAA rules which apply to § 61.334).

Sec.	
61.335	Record of copies.
61.336	Changes.
REPORTS	
61.341	General.
61.341-1	Mechanical hazard and difficulty reports (CAA rules which apply to § 61.341).
61.342	Monthly report.
61.343	Mechanical interruption.
61.344	Weather interruption.
61.345	Mechanical record.
61.346	Irregularity report.

AUTHORITY: §§ 61.1 to 61.346 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 245 (a). Interpret or apply secs. 601, 604, 605, 52 Stat. 1007, 1010; 49 U. S. C. 551, 554, 555.

SOURCE: §§ 61.1 to 61.346 contained in Civil Air Regulations, May 31, 1938, as amended by Reg. 601-A-1, 3 F. R. 2052, and Amendment 75, 5 F. R. 3946. Exceptions are noted following sections affected.

CROSS REFERENCES: For special regulation permitting flights of scheduled air carriers at certain altitudes to be conducted without compliance with certain sections of this part, see Note 1 preceding the text of Part 40. For special regulation authorizing the issuance of air carrier operating certificates permitting operations which do not fully meet the certification and operation requirements of this part, see Note 2 to Part 40.

GENERAL

§ 61.1 *Provision for issuance.* Pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended, empowering the Administrator of Civil Aeronautics to issue air carrier operating certificates and the Board to establish minimum safety standards for the operation of air carriers to whom such certificates are issued, and for prohibiting the operation or navigation of aircraft of such air carriers in violation thereof, the following rules and regulations for the operation of scheduled air carriers engaged in interstate air transportation within the continental limits of the United States, in addition to those prescribed elsewhere in this subchapter, are hereby prescribed.

[CAR May 31, 1938, as amended by Amdt. 134, 6 F. R. 5039]

§ 61.2 *Certificate required.* No air carrier shall operate aircraft in scheduled interstate air transportation within the continental limits of the United States carrying mail, goods or persons, or any combination thereof unless such air carrier is possessed of a valid air carrier operating certificate issued by the Administrator of Civil Aeronautics.

[Amdts. 61-21 through 61-31, 7 F. R. 1414]

§ 61.3 *Definitions.* (a) As used in this part the words listed below shall be defined as follows:

(1) *Category.* Category shall indicate a classification of aircraft such as airplane, helicopter, glider, etc.

(2) *Check pilot.* Check pilot is a pilot authorized by the Administrator to examine pilots of an air carrier to determine the pilot's proficiency with regard to procedure and piloting technique, route and equipment competency, and ability to pilot and navigate by instruments.

(3) *Class.* Class shall indicate a difference in basic design of aircraft within

a category, such as single-engine land, multi-engine sea, etc.

(4) *Copilot.* Copilot shall mean a pilot serving in any piloting capacity other than as pilot in command on aircraft requiring two pilots for normal operations, but excluding a pilot who is on board the aircraft for the sole purpose of receiving dual instruction.

(5) *Crew member.* Crew member means any individual assigned by an air carrier for the performance of duty on the aircraft other than as flight crew member during flight time.

(6) *Flight crew member.* Flight crew member means a pilot, flight radio operator, flight engineer, or flight navigator assigned to duty on the aircraft during flight time.

(7) *Flight time.* Flight time shall mean the total time from the moment the aircraft first moves under its own power for the purpose of flight until the moment it comes to rest at the end of the flight (block to block).

(8) *Instrument flight time.* Instrument flight time means that flight time during which a pilot is piloting an aircraft solely by reference to instruments and without external reference points, whether under actual or simulated instrument flight conditions.

(9) *Pilot.* A pilot is an individual who manipulates the controls of an aircraft during the time defined as flight time.

(10) *Pilot in command.* Pilot in command shall mean the pilot responsible for the operation and safety of the aircraft during the time defined as flight time.

(11) *Type.* Type shall mean all aircraft of the same basic design including all modifications thereto except those modifications which result in a change in handling or flight characteristics.

[Amdt. 61-4, 14 F. R. 2199]

SERVICE

§ 61.11 *Service performed.* No scheduled air carrier shall perform or render any service, as related to the carriage of mail, goods, or persons, or to day or night operation, until rated competent to render such service in the air carrier operating certificate issued by the Administrator.

[Amdts. 61-21 through 61-31, 7 F. R. 1414]

§ 61.12 *Operations schedules.* Operations schedules shall be set up with due regard to sufficient time for the adequate servicing with fuel and oil at intermediate stops and to prevailing winds, and on the basis of a cruising speed of the aircraft at not to exceed the specified cruising power output of the engines as operated in the aircraft. All air carrier aircraft when being tested for ratings will be checked to determine cruising speeds that are to be approved. Block-to-block time shall be used in establishing time from stop to stop.

ROUTE

§ 61.21 *Route operation.* No air carrier shall operate aircraft in scheduled air transportation over any route or part thereof until rated competent to operate thereover in its air carrier operating certificate except as provided by § 61.22.

[Amdt. 61-8, 8 F. R. 6809]

§ 61.22 *Off-route operation.* An air carrier may operate aircraft in scheduled air transportation from any alternate airport where such procedure is not specifically forbidden by the Administrator via a route not included in its air carrier operating certificate to a scheduled stop on its regular route, and in making such flight need not comply with those requirements of this subchapter pertaining to (1) pilot route competency, (2) adherence to lighted airways, and (3) the provisions relating to radio range courses if the flight can be conducted under contact flight rules. No such flight shall be made, except along a civil airway, unless the aircraft is equipped with a fully functioning automatic radio direction finder. When a flight is made over an unauthorized route the air carrier shall make a written report to the Administrator within seven days after the completion of such flight setting forth full details with respect to such flight.

[Amdt. 61-8, 8 F. R. 6809]

§ 61.23 *Regular route.* The conduct of operations by a scheduled air carrier shall at all times be in strict accordance with the terms of its air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.24 *Regular stops.* Regular terminals and intermediate stops shall be used only as specified in the air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.25 *Alternate airports.* Regular terminals, intermediate stops, or other adequate airports, may be used as alternates when used for the purpose of complying with clearance requirements: *Provided,* Such alternates are listed as such in the air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

AIRCRAFT

§ 61.31 *Aircraft operation.* (a) No scheduled air carrier shall operate any aircraft until rated competent with respect thereto in the air carrier operating certificate issued by the Administrator.

[Amdt. 61-21 through 61-31, 7 F. R. 1415]

(b) Irrespective of the basis for certification, all aircraft in passenger service possessing engine(s) rated at more than 600 h. p. (each) for maximum continuous operation shall comply with the following, except that, if the Administrator finds that in particular models of existing aircraft literal compliance with specific items of these requirements might be extremely difficult of accomplishment and that such compliance would not contribute materially to the objective sought, he may accept such measures of compliance as he finds will effectively accomplish the basic objectives of this part:

(1) Sections 4b.58 and 4b.447 (a) of this chapter.

(2) At the first major fuselage overhaul subsequent to May 1, 1947, but in

any case not later than November 1, 1948, §§ 4b.442, 4b.445, 4b.447, (b), (c) and (d), 4b.448 (b) and 4b.448 (c) of this subchapter.

(3) At the first major wing center-section overhaul subsequent to May 1, 1947, but in any case not later than November 1, 1948, §§ 4b.478, 4b.484, 4b.503, (c), 4b.516-4b.518, 4b.556, 4b.557, 4b.560, 4b.561, 4b.586 and 4b. 621-4b.624, 4b.651-4b.655, 4b.661 (a) and (c), and 4b.662-4b.676 of this chapter.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415, Amdt. 61-2, 11 F. R. 11355, Amdt. 61-16, 13 F. R. 1899]

CROSS REFERENCE: For Special Civil Air Regulation SR-329, with respect to extension of date for compliance with fire prevention requirements, see note following § 41.20 of this subchapter.

§ 61.32 *Multiengine fuel system arrangement.* On and after October 31, 1946, the fuel systems of scheduled air carrier multiengine aircraft shall be arranged to permit operation in such manner that the failure of any one component will not result in the irrecoverable loss of power of more than one engine. A separate fuel tank need not be provided if the Administrator finds that the fuel system incorporates features which provide equivalent safety.

[Amdt. 61-6, 11 F. R. 3244]

SINGLE-ENGINE AIRCRAFT

§ 61.41 *Day operation over land.* No single-engine seaplane shall be operated over land with passengers unless such aircraft can, at all times, reach open water suitable for a landing in the event of complete power failure.

§ 61.42 *Night operation over land.* No single-engine aircraft shall be operated at night with passengers.

§ 61.43 *Day operation over water.* The following rules shall govern the operation of single-engine aircraft in day operation over water:

(a) No single-engine land aircraft shall be operated over water unless such aircraft can at all times reach land suitable for a landing in the event of a complete power failure.

(b) No single-engine water aircraft may be operated over water unless a landing may be effected at all times within a distance of 8 miles from shore, in the event of a complete power failure.

(c) No single-engine water aircraft shall be operated over water, except during such time and seasons as permit the use of such water for landing without any hazard from floating ice or freezing water spray.

§ 61.44 *Night operation over water.* No single-engine aircraft shall be operated at night with passengers.

§ 61.51 *Day operation over land.* No multiengine seaplane shall be operated over land more than 50 miles from open water suitable for a landing.

§ 61.52 *Night operation over land.* No multiengine seaplane shall be operated at night over land with passengers, nor shall any such seaplane be operated at night over land with goods more than 50

miles from open water suitable for a landing.

§ 61.53 *Day and night operation over water.* The following rules will govern the operation of multiengine aircraft in day or night operation over water:

(a) Multiengine land aircraft operated over water, beyond gliding distance from shore without the aid of power, shall be completely equipped for overwater flying as specified in § 40.59 (a), unless the overwater operations are so limited in duration or otherwise that the Administrator finds such equipment unnecessary.

(b) No multiengine aircraft shall be operated over water unless such aircraft can, at all times, maintain an altitude of at least 1,000 feet above the water, with any one engine inoperative and with the authorized load for the route or part thereof.

(c) No multiengine seaplane shall be operated over water except during such time and seasons as permit take-off and landing without any hazard from floating ice or freezing water spray, at terminals and intermediate stops.

(d) When one engine fails in a twin-engine land aircraft operating over water, the aircraft shall be headed toward, and thereafter continuously flown toward, a point on the nearest shore in terms of time where a safe landing may be made.

[CAR, May 31, 1938, as amended by Amdt. 129, 6 F. R. 4691, Amdt. 61-3, 10 F. R. 4288]

EQUIPMENT

§ 61.61 *First-aid equipment.* No aircraft shall be operated in scheduled air transportation unless equipped with a conveniently accessible first-aid kit adequate for proper first-aid treatment of passengers and crew which shall contain medical equipment and supplies approved by the Administrator as suitable and sufficient for the category of operation involved.

[Amdt. 122, 6 F. R. 3826, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.62 *Seat belt sign.* An aircraft shall not be operated in scheduled air transportation unless a suitable means for warning passengers to fasten seat belts is provided.

[Amdt. 129, 6 F. R. 4691, as amended by Amdt. 130, 6 F. R. 4753]

§ 61.63 *Cockpit check list.* (a) The air carrier shall provide for each make and model aircraft a cockpit check list, approved by the Administrator, adapted to each operation in which the aircraft is to be utilized. An approved check list shall be installed in a readily accessible location in the cockpit of each aircraft and shall be appropriately used by the flight crew for each flight.

(b) The cockpit check list shall include procedures prior to starting engines, prior to take-off, prior to landing, and for power-plant emergencies.

[Amdt. 61-18, 13 F. R. 2160]

MAINTENANCE

§ 61.71 *General.* Each aircraft operated by a scheduled air carrier shall be

maintained in a continuous condition of airworthiness, in accordance with accepted standards and practices, and the terms of the air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1414]

§ 61.72 *Organization.* A maintenance organization shall be set up by the air carrier and it shall be responsible for the continuous airworthiness of all aircraft, engines, propellers, accessories, and instruments, for the proper maintenance of adequate facilities, for the adequacy and competence of maintenance personnel, and for the preparation and dissemination of such maintenance reports as are required by the Administrator.

§ 61.73 *Supervision.* All phases of maintenance duties shall be adequately supervised by qualified mechanics, mechanics in charge, crew chiefs, or foremen.

§ 61.74 *Inspection.* An adequate inspection organization shall be set up by the air carrier and it shall be responsible for determining that all maintenance work conforms to minimum standards prescribed by the Civil Aeronautics Board as to workmanship, methods employed, and materials used, as provided in §§ 61.71-61.87. Each inspector shall hold a valid mechanic certificate for the category of inspection involved.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.75 *Workmanship.* Workmanship shall be at least equivalent to that generally accepted as conforming to good practice as related to the airworthiness of the aircraft or auxiliary equipment.

§ 61.76 *Methods.* Methods employed shall conform to those generally accepted as good practice. Insofar as they apply, the methods provided for in Part 18 of this subchapter shall be utilized.

§ 61.77 *Materials.* Materials used shall conform, when possible, to Army, Navy, or Part 18 of this subchapter specifications. In no case shall materials be used of physical properties less than those of the material used by the manufacturer of the equipment or component in question insofar as the airworthiness of such equipment or component is affected.

§ 61.78 *Mechanics.* An adequate staff of qualified mechanics and experienced artisans shall be employed by the air carrier and kept available for the performance of functions of maintenance and other duties which are reasonable and necessary to the safe and orderly operation involved. Each such mechanic and artisan shall be relieved of all air carrier duties for a period of at least 24 consecutive hours during each week of duty or equivalent thereof.

§ 61.79 *Training program.* A training program shall be maintained so that maintenance personnel may at all times be familiar with the duties required, with

particular reference to the introduction into air transportation service of a new or unfamiliar equipment.

§ 61.80 *Distribution of personnel.* Sufficient maintenance personnel shall be stationed or provided for along the air carrier route and at such scheduled stops as may be deemed necessary by the Administrator to provide proper service to flight equipment and auxiliaries thereto.

§ 61.81 *Shops and facilities.* At least one general overhaul and maintenance shop containing adequate working space and facilities shall be provided for by the operator. Such shop shall be properly lighted, ventilated, and heated.

§ 61.82 *Stock.* An adequate quantity of spare parts and supplies shall be kept on hand or readily available at all times.

§ 61.83 *Adequate facilities.* Adequate facilities for the proper servicing, maintenance and repair of air carrier aircraft and auxiliary equipment shall be available at all points along the air carrier's route deemed necessary or advisable by the Administrator.

§ 61.84 *Inflammable material.* Including dope, gasoline, etc., shall be kept remote from that portion of shops where sparks or open flames present fire hazards, by their proximity.

§ 61.85 *Refueling requirements.* The following rules will govern the operations incident to the refueling of air carrier aircraft:

(a) Water elimination facilities shall be provided at all refueling points.

(b) A daily check for the presence of water in fuel and storage and dispensing tanks shall be made and a record of such water checks shall be kept, unless such tanks are equipped with an automatic water eliminator deemed satisfactory by the Administrator.

(c) Where refueling is accomplished during conditions of rain or snow, precautions shall be taken to prevent the entrance of moisture into the fuel tanks of the aircraft.

(d) During refueling the aircraft and the fuel dispensing apparatus shall both be grounded to a point or to points of zero electrical potential.

(e) When refueling is accomplished at night, adequate lights shall be provided to insure proper servicing.

(f) No smoking and no fires or flames shall be permitted in the immediate vicinity of an aircraft while refueling is being accomplished.

(g) When practicable, the aircraft electrical switches shall not be switched on or switched off while refueling is being accomplished.

(h) When passengers are permitted to remain in the cabin while refueling is being accomplished, a responsible cabin attendant shall remain in the cabin at or near the cabin door.

§ 61.86 *Alteration and repairs.* Air carrier aircraft, including training aircraft, aircraft engines, propellers, and approved components thereof, shall be altered or repaired only in conformity to

the procedures provided in Part 18 of this subchapter. Reports of such alterations or repairs shall be submitted promptly to the Administrator through the air carrier maintenance inspector having supervision of the operation involved.

§ 61.87 Records. Current records shall be kept of the total time of service, the time since last overhaul, and time since last inspection, on all aircraft, engines, propellers, and where practicable on instruments, equipment, and accessories. Current records shall be kept of all instrument and equipment failures, including partial ones, which occur to the aircraft after it has departed from the block until it has reached the next block.

A new record may be used in the case of propellers for which there is no previous operating history, if the propeller hub is rebuilt by a certificated repair station having the proper rating or by the manufacturer, and new propeller blades or propeller blades with complete operating history are installed therein. The new record must be signed by the manufacturer or by the repair agency, giving the date the propeller was rebuilt and such other information as the Administrator may require.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 10 F. R. 9771]

MAINTENANCE MANUAL

§ 61.91 Necessity. In order properly to maintain flight equipment, each operator of a scheduled air carrier shall prepare and maintain a maintenance manual for the use and guidance of the maintenance personnel.

§ 61.92 Contents. Each maintenance manual shall outline instructions for operations covering the overhaul, check, inspection, and servicing of flight equipment and other equipment auxiliary thereto, and shall also contain a copy of that portion of the air carrier operating certificate pertaining to maintenance. The responsibilities of each mechanic in charge, crew chief, foreman, and inspector shall be clearly outlined.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.93 Form. The maintenance manual shall be loose-leaf in form and each page therein shall be numbered and dated to show the currency of all material contained therein. All copies of such manual shall at all times be kept up to date.

§ 61.94 Delivery of copies. A copy of the maintenance manual shall be furnished to at least the following persons:

- The Administrator of Civil Aeronautics.
- The Chief, Air Carrier Service, Civil Aeronautics Administration.
- Each air carrier maintenance inspector of the Administrator in charge of inspection of any part of the air carrier.
- Each chief of maintenance of the air carrier.
- Each chief inspector of the air carrier, and
- Each mechanic of the air carrier in charge at each station where servicing, inspection, checks, or overhauls is or are done.

§ 61.95 Record of copies. Each air carrier shall keep a complete record of all persons to whom copies of its maintenance manual have been supplied.

§ 61.96 Changes. The following rules will govern changes made in the maintenance manual:

(a) Any change issuing from the Administrator pertaining to the maintenance manual shall be promptly incorporated in the maintenance manual and a copy thereof sent, in the form of a new page of such manual, to each person required to hold a copy of the manual. Each amended page of the manual shall be properly dated.

(b) Upon receipt of such amended page or pages the recipient shall insert the current information in the manual.

(c) No change shall be made in any overhaul, check, or inspection periods without the approval in writing of the Administrator. Pages of the manual shall be changed accordingly. Notice of such changes shall be promptly given in accordance with paragraph (a) of this section.

(d) Any data not issuing from the Administrator may be changed by the operator without the approval of the Administrator, provided such change is not inconsistent with any Federal regulation, the air carrier operating certificate, or safe maintenance practice. Notice of such change shall be promptly given in accordance with § 61.96 (a).

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.97 Retirement of parts program. A retirement of parts program shall be set up by the operator based upon the experience of the operator and the best information available including recommendations from the original manufacturer of the equipment.

AIRMEN

§ 61.101 Airmen utilization. No scheduled air carrier shall utilize any dispatcher or flight crew member in scheduled air transportation until such airman has met the appropriate qualifications and requirements prescribed by the regulations of this subchapter.

[Amdt. 61-6, 12 F. R. 3171]

§ 61.101-1 "Flight crew member" (CAA interpretations which apply to § 61.101). A "flight crew member" is defined as "a pilot, flight radio operator, flight engineer, or flight navigator assigned to duty on the aircraft" (§ 41.137 (i)).

[12 F. R. 5609]

§ 61.102 Airmen records. Each scheduled air carrier shall maintain such current records of dispatchers and flight crew members utilized by the air carrier in scheduled air transportation at such points on its routes as the Administrator may designate. These records shall contain such information concerning the qualifications of each airman as is necessary to show compliance with the appropriate qualifications and requirements prescribed by the regulations of this subchapter. No scheduled air carrier shall utilize in scheduled air transportation any dispatcher or flight

crew member unless records are maintained for such airman as required herein.

[Amdt. 61-6, 12 F. R. 3171]

§ 61.102-1 Content of airmen records

(CAA rules which apply to § 61.102). (a) The following information must be maintained accurately and currently in the airmen records: (1) Name (full); (2) current duties and date of assignment (Pilot in Command, Flight Engineer, etc.); (3) Airman Certificates (category, certificate number and ratings); (4) date, result, and class of last physical examination of all flight crew members; (5) date and result of last six months' instrument competency flight check for pilots in command; (6) routes over which dispatchers and applicable flight crew members are currently qualified, together with qualification records, grades, and dates; (7) record of pilot in command's flight time, including instrument flight time and flight time in the type of aircraft on which he is currently qualified; (8) record of company training for all pilots, including actual flight, synthetic flight, and maintenance of proficiency training; (9) any check pilot authorization (§ 61.134), and (10) any information on the individual considered desirable in these records by the air carrier as to special qualifications, duty assignment, etc.

(b) These records must (1) be available at any time for reference and inspection by authorized representatives of the Administrator of Civil Aeronautics, for the determination of compliance with appropriate qualifications and requirements prescribed in this subchapter, (2) indicate the disposition of any dispatcher or flight crew member who is released from the employ of the air carrier, or who becomes physically or professionally disqualified, and (3) be retained by the company for at least six months.

[CAA Rules, 12 F. R. 5609, as amended by Amdt. 61-4, 14 F. R. 2199. Corrections noted at 14 F. R. 38]

PILOT IN COMMAND

§ 61.110 Aircraft commander. The pilot in command shall be in command of the aircraft at all times during flight, and shall be responsible for the safety of persons and goods carried, and for the conduct and safety of the members of the crew.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.111 Aircraft competency. The pilot in command shall meet the requirements of Parts 40 and 61 of this subchapter with respect to the aircraft to be operated in scheduled air transportation.

[Amdt. 61-6, 12 F. R. 3171, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.112 Instrument competency. The pilot in command, in addition to meeting the minimum requirements for an instrument rating provided for in § 20.42 of this subchapter, and appropriate provisions of Part 21 of this subchapter, as the case may be, must prove satisfactorily to the operator's check pilot, with-

in forty-five days prior to the end of every six-month period after entry into the service in accordance with the training program required by §§ 61.131 to 61.135, his ability to pilot and navigate by instruments an aircraft of a type to be flown by him in the air carrier service. Additional checks may be required by the Administrator at his discretion.

[Amdt. 61-35, 7 F. R. 3357, as amended by Amdt. 61-37, 7 F. R. 6632, Amdt. 61-5, 10 F. R. 10165, Amdt. 61-4, 14 F. R. 2199]

§ 61.113 *Route competency.* No pilot in command shall be deemed competent over any route or part thereof unless he has met the appropriate minimum requirements of Part 40 of this subchapter and has maintained his route competency as provided in this part.

[Amdt. 61-6, 12 F. R. 3171, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.114 *Maintenance of pilot route qualification.* After 12 consecutive months' absence from flight duty over a route or part thereof a pilot in command will no longer be deemed competent for the carriage of persons in air transportation service over such routes or part thereof unless he has requalified in accordance with the provisions of § 40.87 (b) of this subchapter.

[Amdt. 61-8, 11 F. R. 5646, 5779, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.115 *Logging flight time.* A pilot in command shall log the total actual flight time elapsing during his command of the aircraft.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.116 *Logging instrument flight time.* Instrument flight time may be logged as such only when the aircraft is flown solely by reference to instruments either under actual or properly simulated flight conditions. (Over-the-top flying shall not be logged as instrument flight time.)

§ 61.117 *Flight time limitations.* The following rules prescribe the flight time limitations for all pilots in scheduled air transportation:

(a) A pilot may be scheduled to fly 8 hours or less during any 24 consecutive hours, without a rest period during such 8 hours. If such pilot be scheduled to fly in excess of 8 hours during any 24 consecutive hours, he shall be given an intervening rest period at or before the termination of 8 scheduled hours of flight duty. Such rest period shall equal at least twice the number of hours flown since the last preceding rest period and in no case shall such rest period be less than 8 hours. During such rest period, the pilot shall be relieved of all duty with the air carrier.

(b) When a pilot has flown in scheduled air transportation service in excess of 8 hours during any 24 consecutive hours, he shall receive 24 hours of rest before being assigned any duty with the air carrier. Time spent in deadhead transportation to duty assignment shall not be considered part of such rest period.

(c) A pilot shall not fly in excess of 30 hours during any 7 consecutive days. Relief from all duty for not less than 24

consecutive hours shall be provided for and given to such pilot at least once during any 7 consecutive days.

(d) A pilot shall not fly in scheduled air transportation service as a member of the crew more than 100 hours in any one month: *Provided*, That the Administrator is authorized, during the present war and until 6 months after the termination thereof, to permit the maximum of 100 hours to be exceeded to the extent necessary to complete a particular flight for military purposes.

(e) A pilot shall not fly in scheduled air transportation service as a member of the crew more than 1,000 hours in any one calendar year: *Provided*, That this limitation shall not be effective during the present war and until 6 months after the termination thereof, and that during this period the maximum flying hours permitted in any one calendar year shall be controlled by the provisions of paragraph (d) of this section.

(f) The foregoing flight time limitations shall not be applicable when a pilot is qualifying on a regular route, or alternate route, over which such pilot is not qualified.

(g) A pilot shall not do other commercial flying while employed by an air carrier when such flying, in addition to that in scheduled air transportation service, will exceed any flight time limitations specified in this section.

[Amdt. 61-39, 7 F. R. 7478]

COPILOT

§ 61.121 *When required.* A copilot will be required in the following cases when passengers are carried:

(a) When the aircraft used is of a design incorporating multiengine features, combined with retractable landing gear or wing flaps or of a single-engine design incorporating both retractable landing gear and wing flaps, or

(b) When the pilot in command is required to fly 5 or more hours during any 24 consecutive hours without an intervening rest period equal to at least 2 hours for each hour flown since the last preceding rest period. Such rest period when required shall not be less than 8 hours, or

(c) When the operation authorized permits instrument flying, or

(d) When, in the opinion of the Administrator, the usual and customary duties of a pilot in command in the navigation and conduct of a flight would be unduly interfered with through the necessity of performing other duties usually performed by a copilot.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.122 *Aircraft competency.* A copilot shall meet the minimum requirements prescribed in § 40.88 of this subchapter.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.123 *Instrument competency.* At least once each 6 months after entry into service as a copilot, each copilot shall have his logbook certified to the effect that he is capable of flying by instruments and has demonstrated such fact to a pilot in command, check pilot, or to

the chief pilot of the air carrier, which person shall so certify.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.124 *Logging flight time.* (a) A copilot possessed of an airline transport pilot certificate and an appropriate rating for the aircraft flown, may log the total flight time during which he is on duty as copilot.

(b) A copilot not possessed of an airline transport pilot certificate and an appropriate rating for the aircraft flown may log 50 percent of the total flight time.

[Amdt. 61-4, 14 F. R. 2199]

PILOT TECHNIQUE MAINTENANCE

§ 61.131 *Responsibility of operator.* In order to maintain a high standard of pilot technique, the air carrier shall be responsible for proper and periodic instruction, in their respective duties, of all pilots in command and copilots employed by such operator. The instruction so given to pilots in command shall at least include operation and approach for landing with one engine fully throttled with maximum load authorized for the route or portion thereof, in each category of aircraft to be used by the pilot in scheduled air transportation service, and instrument approach procedures.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.132 *Continuance of pilot competency.* If, within any 90-day period, a pilot in command or copilot has not made at least two take-offs and landings in scheduled air transportation in aircraft of a particular type, such person shall not thereafter serve or be employed to serve as a pilot in command or copilot in aircraft of that type in such transportation without having made at least three take-offs and landings in such aircraft with one-half to three-fourths useful load, and, if he is to serve in such transportation at night, without having made at least one of the three take-offs and landings at night. No person shall be carried during such three take-offs and landings other than personnel of the air carrier or other air carriers and inspectors of the Administrator.

[Amdt. 129, 6 F. R. 4691, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.133 *Pilot certification for equipment.* When such tests are not conducted by the Administrator of Civil Aeronautics air carrier inspector, an authorized check pilot shall certify to the pilot's capabilities on the equipment involved.

§ 61.134 *Check pilots.* Each air carrier shall provide a sufficient number of check pilots to insure that each pilot constantly meets and complies with the minimum pilot requirements pertaining to scheduled air transportation service. No check pilot so provided by the operator shall check any pilots in command for the air carrier until such check pilot has been approved therefor by the Administrator. No check of pilot capabilities made in behalf of the air carrier abrogates the authority of the Admin-

istrator to make whatever pilot checks are deemed by him to be necessary in the interests of safe air carrier operation.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.135 *Training program.* A pilot training and instruction program satisfactory to the Administrator shall be maintained by the air carrier. The operator shall submit it to the Administrator within 60 days after certification of the air carrier.

§ 61.135-1 *Pilot training and instruction program (CAA rules which apply to § 61.135)—(a) Ground training.* The ground phase of the air carrier's pilot training and instruction program must include (1) a study of the regulations in this subchapter applicable to scheduled air carrier (domestic) operations, and of the provisions of the air carrier's operating certificate, placing emphasis on knowledge of those sections of Part 61 pertaining to the operation of transport category aircraft, and on the methods and principles of determining weight limitations for landings and take-offs; (2) a study of the company's operations manual and dispatch procedures; (3) training in the duties and responsibilities of flight crew members; (4) thorough familiarization with the aircraft to be flown, including a thorough study of the aircraft, engines, all major component systems, operation of cabin pressurization and oxygen systems, and standard operating procedures; a study of Civil Aeronautics Administration approved Airplane Flight Manual and familiarity with its contents; (5) the study of navigation; use of radio aids to navigation and such refresher courses necessary to keep pilots current in the application of any new developments; (6) a study of meteorology sufficient to maintain a practical knowledge of the principles of icing, fog, thunderstorms, frontal systems, etc., and the best methods of operating under these various conditions.

(b) *Flight training.* The flight phase of the training program shall be so planned as to insure adequate initial qualification of the pilot on the type aircraft he is to fly on scheduled operations. It shall also provide for continued maintenance of a high standard of pilot proficiency. This training must include (1) take-offs and landings under varying conditions of load, wind, etc.; (2) flight with one or more engines inoperative, including flight with any one engine fully throttled and at maximum authorized load either at the one-engine-inoperative service ceiling or at an altitude equivalent to 1,000 feet above the highest part of the terrain on the proposed instrument course or route to be flown by the pilot in scheduled operation; (3) operating under normal and maximum limits of power, speed, etc.; (4) conduct of instrument flight under simulated condition, including navigation by low frequency radio range, very high frequency visual-aural range, omni-directional range, automatic direction finder, etc., letting-down-through procedures utilizing radio range, ADF, ILS, GCA, etc., whichever of the navigation and letting-down-through procedures are used

by the air carrier in the course of its normal operation.

(c) *Emergency procedures.* A satisfactory pilot training program shall place special emphasis on instruction in emergency procedures. This shall include the procedures to be followed in the event of engine failure, fire in the air or on the ground, evacuation of passengers, location and operation of all emergency equipment, power settings for maximum endurance and maximum range, etc.

(d) *General.* The purpose of a pilot training program is to assure that the pilots are thoroughly trained and proficient in the aircraft, equipment, techniques and procedures to be used by them in scheduled air transportation. The effectiveness of pilot training programs will be evaluated by the Civil Aeronautics Administration on the basis of pilot proficiency.

[Supp. 5, 13 F. R. 2849, as amended by Amdt. 61-4, 14 F. R. 2199. Correction noted at 14 F. R. 38]

RADIO OPERATOR

§ 61.141 *Certificate.* Effective November 15, 1947, each flight radio operator shall hold a valid flight radio operator certificate issued in accordance with the provisions of Part 33 of this subchapter: *Provided,* That a pilot in command or copilot, holding an appropriate Federal Communications license, may serve in the capacity of a radio operator where a certificated flight radio operator is not specifically required.

[Amdt. 61-5, 12 F. R. 3030, as amended by Amdt. 61-4, 14 F. R. 2199]

DISPATCHERS

§ 61.151 *Number required.* The air carrier shall provide an adequate number of certificated aircraft dispatchers, necessary for the type of operation involved, for the purpose of dispatching air carrier aircraft.

[CAR, May 31, 1938]

§ 61.152 *Location.* One or more aircraft dispatchers shall be located at such points as may be deemed necessary by the Administrator to insure the safe operation of the air carrier.

[Amdt. 51, 5 F. R. 1839]

§ 61.153 *Dispatcher competency.* Each dispatcher used by a scheduled air carrier to dispatch aircraft in scheduled air transportation shall be possessed of a currently effective dispatcher certificate and shall be qualified over the route or routes over which he dispatches aircraft as provided in this part.

[Amdt. 61-6, 12 F. R. 3171]

§ 61.154 *Qualification for route.* The following rules shall govern the qualification of a dispatcher for a particular route:

(a) He shall have made at least one round trip over the route, or part thereof, on which he is to serve during the previous 90 days prior to dispatching any airplane over such route or part thereof.

(b) He shall observe and be familiar with the prevailing weather phenomena peculiar to the route, or part thereof, for which qualification is sought.

(c) He shall be familiar with the air carrier operation over the route, or part thereof, for which qualification is sought.

(d) He shall be familiar with the contents of the air carrier operations manual.

(e) He shall be familiar with all portions of the air carrier operating certificate pertaining to en route operations and airport specifications for the route or part thereof for which qualification is sought.

(f) He shall be familiar with the general and special rules of the air carrier concerning dispatch of aircraft in scheduled operations.

(g) He shall be familiar with the aircraft used by the air carrier.

(h) He shall be familiar with the provisions of the aircraft certificates and with the loading charts for the equipment used.

(i) He shall be familiar with the maximum authorized loads, with respect to the route or part thereof, for the aircraft to be used.

(j) He shall be familiar with the fuel and oil consumption of the aircraft, with respect to the air carrier operating conditions.

(k) He shall be familiar with the available charts used to compute the air speed of the aircraft and the fuel consumption, at various altitudes and power outputs of the aircraft engines.

(l) He shall be familiar with the local United States Weather Bureau and Civil Aeronautics Authority personnel.

(m) He shall be familiar with the radio facilities in the aircraft used.

(n) He shall be familiar with the peculiarities and limitations of each radio range and radio marker station over the route, or part thereof, for which route competency is sought.

(o) He shall be familiar with the effect of weather conditions upon the radio reception by the aircraft to be used.

(p) He shall be familiar with the time-tables which ordinarily apply to the air carrier operation.

(q) He shall be familiar with any airway facility, additional to those mentioned in paragraph (n) of this section en route, to, or located at, alternate airports approved as such, for the route or part thereof, in the air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.155 *Maintenance of qualifications.* Each dispatcher used by a scheduled air carrier to dispatch aircraft in scheduled air transportation shall maintain his familiarity with the route or routes over which he dispatches aircraft in scheduled air transportation and with the items set forth in § 61.154 (b) through (q).

[Amdt. 61-6, 12 F. R. 3171]

§ 61.156 *Minimum specifications.* A dispatcher shall not dispatch visual-contact, instrument, or over-the-top flights, either day or night, below the respective minimum specified for such flights in the air carrier operating certificate, except as provided in § 61.203 (b).

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415, Amdt. 61-19, 6 F. R. 6315]

§ 61.157 *Dispatcher route qualification expiration.* After 24 consecutive months' absence from dispatching duty over a route or part thereof, a dispatcher will no longer be deemed qualified to dispatch aircraft in scheduled operations over such route or part thereof.

§ 61.158 *Dispatcher time limitations.* The following rules will govern the hours of duty for authorized dispatchers:

(a) *Maximum consecutive hours of duty.* No dispatcher shall be on duty as such for a period of more than 10 consecutive hours.

(b) *Maximum hours of duty in 24 consecutive hours.* If a dispatcher is scheduled to be on duty as such for more than 10 hours in a period of 24 consecutive hours, he shall be given a rest period of not less than 8 hours, at or before the termination of 10 hours of dispatcher duty except in emergencies due to illness or unavoidable absence of a dispatcher due to weather during a qualification trip or other circumstances beyond the control of the operator.

(c) *Dispatcher's time off.* Relief from all duty with the air carrier for not less than 24 hours shall be provided for and given each dispatcher at least once during any consecutive 7 days, or equivalent thereto within 1 calendar month.

FLIGHT ENGINEER

§ 61.161 *Flight engineer; when required.* (a) After December 1, 1948, an airman holding a flight engineer certificate shall be required on all four-engine aircraft certificated for more than 80,000 pounds maximum take-off weight, and on all other four-engine aircraft certificated for more than 30,000 pounds maximum take-off weight where the Administrator finds that the design of the aircraft used or the type of operation is such as to require a flight engineer for the safe operation of the aircraft.

(b) The requirement of paragraph (a) of this section shall not be satisfied by the performance of multiple functions at the same time by any airman.

[Amdt. 61-3, 13 F. R. 5910]

§ 61.162 *Certificate.* Effective November 15, 1947, each flight engineer shall hold a valid flight engineer certificate issued in accordance with the provisions of Part 35 of this subchapter.

[Amdt. 61-4, 12 F. R. 1920 as amended by Amdt. 61-9, 12 F. R. 6286]

§ 61.163 *Qualification for duty.* A certificated flight engineer shall not be assigned to nor perform duties for which he is required to be certificated unless, within the preceding 12-month period, he has had at least 50 hours of experience as a flight engineer on the type aircraft on which he is to serve; or until the air carrier has checked the airman and determined that he is (a) familiar with all current information and operating procedures relating to the type aircraft to which he is to be assigned and (b) competent with respect to such aircraft.

[Amdt. 61-10, 12 F. R. 6378, as amended by Amdt. 61-4, 14 F. R. 2199]

WEATHER

§ 61.171 *Reports.* The following rules shall govern the use of weather reports by scheduled air carriers:

(a) No weather report shall be used to control flight movements unless prepared from observations made and released by the United States Weather Bureau, or by a source approved by such Bureau including pilots' flight observation reports.

(b) The weather reports used shall be the latest reports available.

(c) The last airway weather report entered upon the clearance form or attached thereto shall be not more than 1 hour and 30 minutes old at the time the aircraft departs on a scheduled flight, except that off-course weather reports or on-call weather reports may be entered thereupon or attached thereto if the last such report is not more than 2 hours old.

CROSS REFERENCE: For special regulation permitting noncompliance with the paragraph in the case of flights of scheduled air carriers at certain altitudes, see Regulations, Serial No. SR-331, appearing as a note preceding the text of Part 40.

(d) Barometric pressures, corrected to sea level readings, shall be utilized exclusively.

(e) All ceiling heights, reported by pilots in flight either by radio or by entry on forms, shall be with reference to altitude above sea level.

(f) Forecasts made by Weather Bureau or company meteorologists, or both, may be used.

[CAR, May 31, 1938, as amended by Amdt. 61-41, 7 F. R. 8414]

FLIGHT OPERATIONS

PRIOR TO CLEARANCE

§ 61.181 *Aircraft to be airworthy.* No scheduled air carrier shall operate any aircraft unless, at the time of use, the aircraft is in an airworthy condition, conforms with the terms of its current aircraft certificate, and is loaded in conformity with the current loading schedule which is a part of such certificate.

§ 61.182 *Adequately serviced.* Before departure on any flight, the air carrier aircraft shall be adequately serviced. The pilot in command shall be responsible for the proper servicing of the aircraft, although he may delegate supervision of the actual work to a copilot or other certificated airman.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.183 *Adequate fuel supply.* The following rules shall govern the minimum fuel supply to be carried by all air carrier aircraft:

(a) *Visual-contact operation (day or night).* No air carrier aircraft shall be dispatched or shall take off without fuel and oil sufficient, considering the wind and other weather conditions to be encountered during the course of the flight, to complete flight to the first point of landing specified in the clearance, and thereafter to fly for a period of at least 45 minutes at normal cruising consumption for the flight.

(b) *Instrument or over-the-top operation (day or night).* No air carrier aircraft shall be dispatched or shall take off without fuel and oil sufficient, considering the wind and other weather conditions to be encountered during the course of the flight, to complete such flight to the next point of landing specified in the clearance; and thereafter:

(1) To fly to and land at the alternate airport for such point designated in the clearance which is most distant from such point, and thereafter

(2) To fly for a period of at least 45 minutes at normal cruising consumption for the flight.

[CAR, May 31, 1938, as amended by Amdt. 129, 6 F. R. 4692]

§ 61.184 *Radio ground check.* Immediately preceding departure from originating station it shall be determined that both day and night frequencies of the two-way radio, as well as all additional frequencies whose use are contemplated during the flight, are working satisfactorily. The method of determining this shall be by radio contact on each frequency with at least one ground station.

§ 61.185 *Passengers aboard during refueling.* Passengers may be permitted to remain in the cabin during refueling: *Provided, That*

(a) There is no smoking in the aircraft, and

(b) There is no smoking on the ground in the vicinity of the aircraft, and

(c) An employee of the operator is stationed in the entrance to the passenger cabin and remains there alert for any emergency until refueling is completed.

§ 61.186 *Notice of other aircraft in flight on route (outside of airway traffic control area).* Immediately prior to departure it shall be the responsibility of the dispatcher dispatching an instrument flight outside of an airway traffic control area to ascertain from the best information available what other aircraft flights affecting the flight are in progress over the route between clearance points, the results of which shall be made known to the pilot. After departure of the scheduled flight the dispatcher will continue to advise his flight or flights the progress of all other known aircraft in flight on the course, crossing courses, converging courses, etc., affecting the flight.

DISPATCHING RULES (FOR CLEARANCE)

§ 61.191 *Necessity for dispatching authorization.* No scheduled air carrier flight shall be started except on the authority of an aircraft dispatcher qualified for the route, or part thereof, on which the flight takes off. No such authority is required for take-offs from an intermediate stop between points specified in the original clearance unless the flight has been delayed for any reason more than 30 minutes.

[Amdt. 129, 6 F. R. 4692, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415 and Amdt. 61-6, 12 F. R. 3171]

§ 61.192 *Dispatcher reporting for duty.* No dispatcher shall clear a flight of air carrier aircraft unless he has been on duty, at the station from which such clearance is effected, for a period sufficient to become familiar with existing

conditions. He shall continue on duty until the aircraft has landed in completion of a trip, or until the dispatching supervision has been taken over by an adjacent air carrier dispatcher or by another dispatcher who has relieved him after such relief dispatcher has been on duty for a period sufficient to become familiar with existing conditions.

§ 61.193 *Clearance and load manifest forms.* The clearance and load manifest forms used shall be approved by the Administrator. The original copies of such forms shall be given to the pilot in command and duplicate copies kept in the station file for at least 30 days.

[Amdt. 61-7, 12 F. R. 4667, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.194 *Preparation of clearance form.* A clearance form shall be prepared for each flight between specified clearance points. The information for such clearance shall be prepared by the authorized aircraft dispatcher of the air carrier operating the aircraft. This form shall be signed by the pilot in command and by the authorized aircraft dispatcher only when both believe the flight may be made with safety. The authority to sign such clearance may be delegated for a particular flight by the authorized aircraft dispatcher, but the authority to dispatch cannot be delegated and such dispatcher remains responsible for the dispatch and continued supervision of the flight.

[Amdt. 61-7, 12 F. R. 4667, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.195 *Preparation of load manifest form.* A manifest form showing the loading of the aircraft shall be prepared and signed for each flight by qualified personnel of the air carrier charged with the duty of supervising the loading of the aircraft and the preparation of the load manifest forms, or by qualified persons authorized by the air carrier. The aircraft when loaded shall not exceed the center of gravity limits or maximum allowable weight limits set forth in the aircraft certificate for the particular aircraft.

[Amdt. 61-7, 12 F. R. 4667]

§ 61.196 *Clearance and load manifest contents.* The following rules will govern the clearance and load manifest contents:

(a) The clearance shall contain or have attached thereto all current weather reports as outlined in § 61.171 over the airway or part thereof and, when available, any off-airway or on-call weather reports considered necessary or desirable by the pilot or dispatcher to insure the safety of the flight.

(b) When available, the latest terminal and airway forecasts shall be included in or attached to the clearance and shall be considered by the dispatcher responsible and pilot in command before clearance.

(c) The dispatcher or duly authorized station personnel shall attach or enter all current reports or information pertaining to weather and irregularities of navigational aids and facilities and aircraft instruments and equipment affect-

ing the flight. He shall also inform the pilot, during flight, of any additional or different irregularities, and the flight shall be controlled accordingly.

(d) The load manifest shall be completed or kept current at each intermediate stop.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.197 *Clearance request repetition.* When a pilot requests clearance from a dispatcher authorized to clear the proposed flight and is refused such clearance, he shall not make a similar request from another dispatcher.

§ 61.198 *Change in clearance by radio.* If a change in clearance is desirable while the aircraft is in flight, the pilot may be given a change in clearance by radio by an authorized dispatcher: *Provided*, The two-way conversation appears in the radio log. If the pilot is refused such change by one dispatcher, he shall not make a similar request of another dispatcher. No aircraft shall be recleared en route for instrument flight after clearance for contact flight with any one instrument or unit of equipment not in serviceable condition as provided for in § 61.208.

§ 61.199 *Weather minimums; general.* The following rules relating to weather conditions will govern the dispatching of air carrier aircraft.

(a) No scheduled air carrier aircraft shall be dispatched unless, at the time of take-off, the ceiling and visibility at the point of departure are equal to or better than those specified for departure in the air carrier operating certificate.

(b) In the event of ground fog, the dispatcher shall comply strictly with the pertinent procedures specified in the air carrier operating certificate with respect to take-offs and landings.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.200 *Weather minimums; visual-contact clearance.* The following rules relating to weather conditions will govern the dispatching of air carrier aircraft in visual-contact operation. No scheduled air carrier aircraft shall be dispatched unless:

(a) The hourly weather report sequence and current weather forecasts shall show a trend that gives sufficient indication that the ceilings and visibilities along the route to be flown are and will remain at or above the minimums specified in the air carrier operating certificate until the flight arrives at the point cleared to.

(b) During day operation minimum visibility shall be 1 mile except contact flight may be made when visibility is reduced to one-half mile by local smoke, dust, haze, blowing snow, or sand.

(c) During night operation at least one beacon on the course shall be visible from the aircraft at all times, unless otherwise specifically authorized by the Administrator.

[CAR, May 31, 1938, as amended by Amdt. 51, 5 F. R. 1839, Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.201 *Instrument or over-the-top clearance.* The rules in §§ 61.202-

61.204 with respect to weather conditions shall govern the dispatch of air carrier aircraft in air transportation for instrument or over-the-top flight.

[Amdt. 129, 6 F. R. 4692]

§ 61.202 *Weather conditions at terminal or intermediate airports.* Air carrier aircraft shall not be dispatched in air transportation unless:

(a) The observed weather information and current weather forecasts, pertaining to all landing points specified in the clearance, give sufficient indication at the time of clearance that the ceilings and visibilities are, or will be, when the flight would arrive at such point or points, at or above the minimums specified in the air carrier operating certificate for letting-down-through; and

(b) The alternate airports required by § 61.203 are specified.

[Amdt. 129, 6 F. R. 4692, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.203 *Alternate airport requirement.* (a) When the observed weather information and current weather forecasts pertaining to a landing point specified in the clearance indicate, at the time of clearance, that the ceiling and visibility are, and will remain until the flight would arrive at such point, at or above the minimums specified in the air carrier operating certificate for letting-down-through, there shall be at least one alternate airport specified on the appropriate flight clearance for such point.

(b) When, at the time of clearance, the ceiling or visibility at a landing point specified in the clearance is below the minimums specified in the air carrier operating certificate for letting-down-through, but the weather reports pertaining to such point at the time of clearance show a trend, by the hourly sequence and current forecasts, that indicates that the weather conditions will improve to or above such minimums upon arrival of the flight at such point, two alternate airports shall be specified in the appropriate flight clearance for such point.

[Amdt. 129, 6 F. R. 4692, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.204 *Types of alternate airports.*

(a) If an alternate referred to in § 61.203 is equipped with a radio range, the weather conditions existing thereat at the time of clearance must be equal to, or above, the ceilings and visibilities specified in the air carrier operating certificate for letting-down-through at such airport when using it as an alternate airport, and the hourly weather report sequence and current forecasts shall show a trend that indicates that such weather conditions will continue or improve at such alternate airport until the flight shall arrive thereat. The weather minimums at such alternate airport shall in no case be less than one of the following:

(1) A ceiling of 1,000 feet and visibility of 1 mile;

(2) A ceiling of 900 feet with a visibility of 1½ miles; or

(3) A ceiling of 800 feet with a visibility of 2 miles.

(b) If an alternate referred to in § 61.203 is not equipped with a radio range, the weather conditions existing thereat, at the time of clearance, must

be equal to, or better than, broken clouds and a ceiling of 1,000 feet and a visibility of 2 miles, and the hourly weather report sequence and forecasts shall show a trend that gives sufficient indication of weather conditions continuing or improving until the flight shall arrive thereat: *Provided*, That the Administrator may, in the interest of safety, prescribe higher minimums at individual airports.

[Amdt. 129, 6 F. R. 4692, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.205 *Clearance of flights from alternate airports.* Clearance of flights from an alternate airport over an unauthorized route to an airport on an authorized route shall not be permitted unless the flights can be made in accordance with the provisions of § 61.22.

[Amdt. 61-10, 11 F. R. 5646]

§ 61.206 *Late or off-schedule flights.* When variations from the regular schedules occur, the dispatcher shall take such action or issue such special orders as may be necessary and proper.

§ 61.207 *Flight hazards.* No scheduled air carrier flight shall be dispatched when, in the opinion of either the pilot in command or the dispatcher, such flight cannot be completed with safety. No scheduled air carrier flight shall be continued toward any point cleared to when, in the opinion of either the pilot in command or the dispatcher, such continuation cannot be completed with safety unless, in the opinion of either, there is no safer method of procedure. In the latter event continuation shall constitute an emergency situation (see §§ 61.253, 61.310).

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.208 *Flight equipment.* An air carrier shall not dispatch an aircraft in air transportation unless the equipment required by this chapter for the particular type of operation involved, is installed in such aircraft and in serviceable condition and, if any part of such equipment becomes unserviceable in flight, a landing shall be made either at the nearest suitable landing area where a safe landing may be made or, at the next point of intended landing, whichever in the opinion of the pilot and dispatcher is the safest procedure: *Provided*, That the aircraft dispatcher in control of the flight may dispatch or authorize the operation of such aircraft in air transportation to the nearest point where repair or replacement of such equipment can be made if the equipment specified in §§ 61.209-61.212 for the particular category of operation involved is installed in such aircraft and in serviceable condition.

[Amdt. 51, 5 F. R. 1839, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.209 *Visual-contact day operation.*

- (a) One air-speed indicator.
- (b) One altimeter.
- (c) One tachometer for each engine.
- (d) One oil pressure gauge for each engine.
- (e) One oil temperature gauge for each engine.

(f) One manifold pressure gauge for each engine.

(g) One safety belt for each person aboard.

(h) (1) In passenger service, a minimum of two hand fire extinguishers of an approved type with an approved extinguishing agent, one of which is installed in the crew compartment, others readily accessible to the passengers. Such additional hand fire extinguishers as the Administrator finds necessary for compliance with § 61.31 (b) (2).

(2) In cargo service, two approved type portable fire extinguishers.

(i) One landing gear position indicator or equivalent facility.

(j) One first-aid kit.

(k) One magnetic compass.

(l) (1) In passenger service, such fire or smoke detecting and fire extinguishing equipment as is necessary for compliance with § 61.31 (b) and (c).

(2) In cargo service, one fixed fire extinguisher in each engine compartment.

(m) One or more storage batteries of sufficient capacity to operate all radio and electrical equipment.

(n) Two of the following units of radio equipment:

(1) One transmitter for two-way communication;

(2) One receiver for two-way communication;

(3) One radio range receiver.

(o) If such aircraft is a multiengine aircraft it may be operated with any one of the units of equipment in items (c), (e), or (f) above inoperative: *Provided*, That in the case of item (e) a cylinder temperature gauge in serviceable condition is installed on the same engine on which the inoperative oil temperature gauge is installed.

[Amdt. 51, 5 F. R. 1839, as amended by Amdt. 61-2, 11 F. R. 11355, Amdt. 61-4, 14 F. R. 2199]

§ 61.210 *Visual-contact night operation.*

(a) All equipment required for visual-contact day operation.

(b) Forward position lights and continuous white tail light.

(c) Two landing lights.

(d) Two 3-minute landing flares.

(e) One set of instrument lights.

(f) One electrical generator sufficient to operate all electrical and radio equipment.

[Amdt. 51, 5 F. R. 1839 as amended by Amdt. 61-5, 8 F. R. 3282]

§ 61.211 *Instrument or over-the-top day operation.* (a) All equipment required for visual-contact day operation.

(b) A fuel quantity indicator to show the amount of fuel in each of at least two fuel tanks.

(c) One additional air-speed indicator.

(d) An electrically heated pitot tube for each air-speed indicator.

(e) One rate of climb indicator.

(f) One gyroscopic rate-of-turn indicator combined with a bank indicator.

(g) One artificial horizon indicator.

(h) One directional gyrocompass.

(i) Two sensitive type altimeters.

(j) One outside air temperature gauge with indicating dial in cockpit.

(k) One clock with sweep second hand.

(l) One vacuum gauge installed in lines leading to the rate-of-turn and artificial horizon indicators and the directional gyrocompass.

(m) One carburetor ice indicator if the de-icing equipment requires manual manipulation.

(n) All of the radio equipment required by this chapter for instrument category of operation.

(o) One spare set of fuses.

[Amdt. 51, 5 F. R. 1839, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.212 *Instrument or over-the-top night operation.* (a) All equipment required for visual-contact night and instrument or over-the-top day operation.

[Amdt. 51, 5 F. R. 1839]

§ 61.213 *Operating limitations upon airplanes certificated under transport category requirements.* (a) When operating in scheduled passenger transportation any airplane certificated in accordance with the provisions of Part 4b, Subpart B (in the regulations issued on or after November 9, 1945), or of § 4a.737-T (in the regulations issued prior to November 9, 1945), the provisions of §§ 61.214-61.218 shall apply unless deviations therefrom are specifically authorized by the Administrator when he finds that, due to a peculiarity of a specific case, such application is unnecessary for safety.

(b) In determining compliance with these provisions, the data obtained in testing the airplane for type certification may be applied, by interpolation or by computation of the effects of changes in specific variables, to conditions differing from those for which specific tests are made, where such interpolations or computations will give results substantially equalling in accuracy the results of a direct test.

[Amdt. 61-20, 7 F. R. 989, as amended by Amdt. 61-12, 11 F. R. 5997, Amdt. 61-4, 14 F. R. 2199]

§ 61.214 *General limitations.* (a) The airplane shall not be operated from any field at an altitude outside of the altitude range for which maximum take-off weights have been determined and set forth in the airplane operating manual and shall not be dispatched to a field of intended destination, or have any field specified as an alternate, which is at an altitude outside the range for which maximum landing weights have been determined and set forth in the airplane operating manual.

(b) The weight of the airplane at take-off shall not exceed the certificated maximum take-off weight for the altitude of the field from which the take-off is to be made.

(c) The weight at take-off shall be such that, allowing for the consumption of the amount of fuel and oil which would normally be consumed in flight to the intended destination, the weight on arrival at the destination will not exceed the certificated maximum landing weight for the altitude of the field of intended destination.

[Amdt. 61-20, 7 F. R. 990, as amended by Amdt. 61-12, 11 F. R. 5997]

§ 61.215 *Take-off limitations to provide for engine failure.* Take-offs shall be made only from such fields in such directions and under such weight limitations that the following conditions are fulfilled as shown by the performance data determined under § 4b.91 or § 4a.747-T of this subchapter and set forth in the airplane operating manual.

(a) From any point on the take-off up to the time of attaining the critical-engine-failure speed set forth in the airplane operating manual, it shall be possible to bring the airplane to a safe stop within the landing area, as shown by the accelerate-and-stop distance data.

(b) If the critical engine should fail at any instant after the airplane attains the critical-engine-failure speed, it shall be possible to proceed with the take-off, and attain a height of 50 feet, as indicated by the take-off path data, before passing over the end of the take-off area. Thereafter it shall be possible to clear all obstacles either by at least 50 feet vertically, as shown by the take-off path data, or by at least 200 feet horizontally within the airport boundaries and 300 feet horizontally after passing beyond such boundaries. In determining the allowable deviation of the flight path in order to avoid obstacles, it shall be assumed that the airplane is not banked before reaching a height of 50 feet, as shown by the take-off path data, and that the maximum bank thereafter does not exceed 15°.

(c) In applying requirements (a) and (b), correction shall be made for any gradient of the take-off surface. Take-off data based on still air may be corrected to allow for the effect of a favorable wind which is equal to not more than 50 percent of the component along the take-off runway due to the reported wind condition.

[Amdt. 61-20, 7 F. R. 990 as amended by Amdt. 61-12, 11 F. R. 5997, Amdt. 61-12, 12 F. R. 6656, 6923]

§ 61.216 *Landing distance limitations.* (a) Airplanes shall be dispatched only under such conditions that it would be possible, as shown by the still air landing data, obtained in § 4b.111 of this subchapter or § 4a.750-T of this subchapter and set forth in the airplane operating manual, at a weight corresponding to the maximum weight expected to exist at the time of arrival at the field of intended destination, and under standard air conditions for the altitude of such field, to bring the airplane to rest, from a point 50 feet directly above the intersection of the obstruction clearance line (as defined in § 61.218) and the landing surface, within a total distance not in excess of 60 percent of the effective length (as defined in § 61.218) of the landing area most suitable for landing in still air.

(b) For every possible condition of wind velocity and direction and the corresponding landing direction required at the field of intended destination by the ground handling characteristics of the airplane category involved, the ratio of landing distance to effective length of landing area shall not be greater than that as specified in (a), after allowing for the effect on the landing path and roll of not more than 50 percent of the favor-

able wind component due to a particular wind condition.

(c) If requirement (a) can be met, but requirement (b) cannot be fully met, at a field of intended destination, a flight to such field may be dispatched under the following or more conservative conditions:

(1) At least one suitable alternate field shall be designated in the flight plan, at which requirements (a) and (b) of this section, as modified by § 61.217, and the requirements of §§ 61.203 and 61.204 are met.

(2) If requirement (b) cannot be met for the wind conditions existing at the time of arrival, the airplane shall proceed to the alternate.

[Amdt. 61-20, 7 F. R. 990, as amended by Amdt. 61-12, 11 F. R. 5997, Amdt. 61-4, 14 F. R. 2199]

§ 61.217 *Landing distance at alternate fields.* The conditions of § 61.216 shall apply with respect to alternate fields specified in the flight plan, except that in the case of alternate fields the landing distance as defined in that section shall not exceed 70 percent of the effective length of the landing area.

[Amdt. 61-20, 7 F. R. 990]

§ 61.218 *Definition of effective length of landing area.* The effective length of the landing area shall be the distance from the point where the obstruction clearance line, as defined below, intersects the landing surface to the far end of the landing area.

The obstruction clearance line is a line drawn tangent to or clearing all obstructions showing in a profile of the approach area, as defined below. The obstruction clearance line is further limited by having a slope to the horizontal of 1:20, as it approaches the landing area.

The approach area, as used in this section, shall be an area symmetrical about a center line coinciding with and prolonging the center line of the runway, except that where there is a multiplicity of parallel runways, or a large area continuously available for landing, the center line of the approach area shall coincide with the most probable landing path for instrument approaches. The approach area shall be considered as extending longitudinally from the landing area out to the most remote obstacle touched by the obstruction clearance line, assuming the center line of the approach area in plan view to be straight for at least 1,500 feet from the intersection of the obstruction clearance line with the landing surface, and thereafter continuing in a path consistent with the instrument approach procedures for the runway in question, or where such procedures are not specified, consistent with turns of at least 4,000 feet radius; and as extending laterally to a distance of 200 feet on either side of its center line at the point of intersection of the obstruction clearance line with the landing surface, with this distance increasing uniformly to 500 feet on either side of the center line of the area at a longitudinal distance of 1,500 feet from the intersection of the obstruction clearance line with the landing surface, and main-

taining a distance of 500 feet from the center line thereafter.

[Amdt. 61-20, 7 F. R. 990, as amended by Amdt. 61-1, 11 F. R. 10650]

EN ROUTE LIMITATIONS

§ 61.219 *All airplanes; all engines operating.* Airplanes shall be dispatched only at such take-off weights that, in proceeding along the intended track with the weight of the airplane progressively reduced by the anticipated consumption of fuel and oil, the rate of climb with all engines operating (as set forth in the airplane operating manual), shall be, in feet per minute, $6 V_{SO}$ at an altitude at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track; except that this requirement need not apply to airplanes certificated under the performance requirements of Part 4a of this subchapter.

[Amdt. 61-12, 11 F. R. 5997]

§ 61.220 *All airplanes; one engine inoperative.* Airplanes shall be dispatched only at such take-off weights that in proceeding along the intended track with the weight of the airplane progressively reduced by the anticipated consumption of fuel and oil, the rate of climb with one engine inoperative (as set forth in the airplane operating manual), shall be, in feet per minute, $0.02 V_{SO}^2$ for airplanes having maximum take-off weights up to 40,000 pounds, increasing linearly to $0.04 V_{SO}^2$ at 60,000 pounds, and $0.04 V_{SO}^2$ for maximum take-off weights above 60,000 pounds at an altitude at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles of either side of the intended track; except that for airplanes certificated under the performance requirements of Part 4a of this subchapter, the above rate-of-climb value may be $0.02 V_{SO}^2$ irrespective of maximum take-off weight.

[Amdt. 61-12, 11 F. R. 5997]

§ 61.221 *Airplanes with four or more engines; two engines inoperative.* If from any point along the track flown, more than 90 minutes at "all-engines-operating" cruising speed is required to reach an available landing area where the provisions of § 61.216 as modified by § 61.217 can be met at the airplane weight estimated to exist upon arrival there, an aircraft with four or more engines shall not be dispatched over such track unless its weight is such as to permit a rate of climb with two engines inoperative (as set forth in the airplane operating manual), in feet per minute, of $0.01 V_{SO}^2$ at an altitude of at least 1,000 feet above the elevation of the highest ground or obstruction within 10 miles on either side of the intended track to the landing area; or at 5,000 feet, whichever is higher; except that this requirement need not apply to airplanes certificated under the performance requirements of Part 4a of this subchapter. This specified rate of climb shall correspond to the airplane's weight attained at the moment of failure of the second engine (assumed to occur 90 minutes from time of departure), or to the weight which may be at-

tained by dumping fuel at the moment of failure of the second engine: *Provided*, That sufficient fuel is retained aboard the airplane to reach a point 1,000 feet directly above the landing area.

[Amdt. 61-12, 11 F. R. 5997]

§ 61.222 *Special air navigation facilities.* Where special air navigation facilities provide for reliable and accurate identification of high ground or obstruction extending for less than 20 miles along the track, the lateral distance of 10 miles specified in §§ 61.219 through 61.221 may be reduced to 5 miles.

[Amdt. 61-12, 11 F. R. 5997]

FLIGHT PREPARATION AND TAKE-OFF RULES

§ 61.231 *Radio ground check.* Before departure from the originating terminal on any scheduled air carrier operation, at least one check shall be made by the pilot of the radio system to be used in flight.

§ 61.232 *Radio check after take-off.* When a trailing antenna is used, a precautionary radio check to determine possible loss of such antenna shall be made as soon as practicable after take-off.

§ 61.233 *Control tests.* The pilot shall test the flight controls to the full limit of travel immediately prior to the take-off run.

[Amdt. 61-2, 9 F. R. 11603]

§ 61.234 *View of traffic.* Immediately prior to take-off, the pilot shall maneuver the aircraft to a position from which he can observe incoming and outgoing aircraft.

§ 61.235 *Engine tests.* Before the take-off run, the aircraft engine or engines shall be individually tested at full throttle, except that supercharged engines shall be tested at run-up r. p. m. at the manifold pressure specified by the operator for the particular conditions involved. The engine temperatures (including oil, carburetor, and head temperatures) shall be normal and each magneto shall be individually tested.

(a) No person other than a certificated airman may run-up the engine or engines of an air carrier aircraft while such engines are installed in an air carrier aircraft.

(b) Engine run-ups shall be conducted in such a manner as to minimize the possibility of loose gravel, cinders, and like material contacting the propeller blades and aircraft control, lift, and stabilizing surfaces.

§ 61.236 *Instrument tests.* Before the take-off run, as many as possible of the aircraft flight instruments, and particularly all pressure gauges and gyroscopic flight instruments, shall be tested by the pilot to determine that they are all functioning properly.

§ 61.237 *Take-off restrictions.* No pilot shall take off any air carrier aircraft if, in his opinion, the aircraft is not airworthy. No pilot shall take off any air carrier aircraft at any time when an engine is not functioning properly.

§ 61.238 *Runway utilization.* The take-off shall be started from a point which makes available the greatest

length of runway, considering the direction of the wind.

§ 61.239 *Restricted-vision take-offs.* If a method of take-off under conditions of restricted vision (including conditions of ground fog) is specified in the air carrier operating certificate it shall be strictly followed.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.240 *Pilots at controls.* Neither pilot shall leave the controls during ascent of the aircraft immediately following take-off.

§ 61.241 *Ice and snow.* No scheduled air carrier aircraft shall take off when the wings or tail surfaces of such aircraft have a coating of ice or snow.

FLIGHT COURSE AND EN ROUTE RULES

§ 61.251 *Weather minimums—(a) Point cleared to.* No scheduled air carrier aircraft dispatched in accordance with §§ 61.201-61.204 shall continue toward the point cleared to unless weather conditions at such point remain at or above the minimums specified in the air carrier operating certificate for such airport: *Provided, however,* That such aircraft may be redispached en route in accordance with § 61.203 (b) if the weather conditions at the point cleared to drop below the minimums specified in the air carrier operating certificate.

(b) *Alternate airports.* No scheduled air carrier aircraft shall continue toward the point cleared to unless the weather minimums at required alternate airports (§ 61.201) specified in the clearance remain, throughout the flight, at or above the minimums specified in the air carrier operating certificate for such airport when used as an alternate: *Provided, however,* That the clearance may be amended en route by the substitution of another alternate airport within the fuel range of the aircraft as outlined in § 61.183 (b) with weather conditions at or above the minimums specified in the air carrier operating certificate for such airport when used as an alternate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415, Amdt. 61-36, 7 F. R. 6632]

§ 61.252 *Deviation from route.* No scheduled air carrier aircraft shall deviate from its authorized route, except when operating in accordance with traffic control instructions issued by a control tower or control center or when circumstances render such deviation necessary as a safety measure. In the latter case any deviation of more than 25 miles from the authorized route shall be explained by the pilot in a written report to the Administrator of Civil Aeronautics. Such report shall be made within 7 days after the completion of the flight.

CROSS REFERENCE: For special regulation permitting noncompliance with this section in the case of flights of scheduled air carriers at certain altitudes, see Regulation, Serial No. SR-331, appearing as a note preceding the text of Part 40.

[Amdt. 61-11, 11 F. R. 5646]

§ 61.253 *Dispatcher emergency decisions.* In an emergency situation, arising during the course of the flight, which

requires immediate decision and action on the part of the dispatcher, and that is known to him, the aircraft dispatcher shall notify and advise the pilot as to such situation. Further, the dispatcher shall determine from the pilot what final decision has been made by such pilot and shall cause the same to be entered in the station radio log.

§ 61.254 *Reporting icing conditions.* When a pilot reports an icing condition in accordance with § 61.292, the pertinent information including time, altitude, location, type and extent of the icing conditions encountered shall immediately be relayed to the nearest U. S. Weather Bureau airway station and to the appropriate general supervising and forecasting district headquarters of the U. S. Weather Bureau.

FLIGHT ALTITUDE RULES

§ 61.261 *Flight altitude rules.* Except during take-off and landing, the flight altitude rules prescribed in paragraphs (a) and (b) of this section, in addition to the applicable provisions of § 60.17, shall govern air carrier operations: *Provided*, That other altitudes may be established by the Administrator for any route or portion thereof where he finds, after considering the character of the terrain being traversed, the quality and quantity of meteorological service, the navigational facilities available, and other flight conditions, that the safe conduct of flight permits or requires such other altitudes.

(a) *Day VFR passenger operations.* No aircraft engaged in passenger operations shall be flown at an altitude less than 1,000 feet above the surface or less than 1,000 feet from any mountain, hill, or other obstruction to flight.

(b) *Night VFR or IFR operations.* No aircraft shall be flown at an altitude less than 1,000 feet above the highest obstacle located within a horizontal distance of 5 miles from the center of the course intended to be flown or, in mountainous terrain designated by the Administrator, 2,000 feet above the highest obstacle located within a horizontal distance of 5 miles from the center of the course intended to be flown: *Provided*, That in VFR operations at night in such mountainous areas aircraft may be flown over a lighted civil airway at a minimum altitude of 1,000 feet above such obstacle.

[Amdt. 61-13, 13 F. R. 589]

§ 61.262 *Maximum altitude of flight operations.* No scheduled air carrier aircraft shall be operated at altitudes above 17,000 feet above sea level unless specifically permitted by the terms of the air carrier operating certificate issued to the air carrier. A competent cabin attendant to care for passengers shall be provided on all air carrier flights carrying passengers operating for any period of time above 12,000 feet above sea level.

[Amdt. 120, 6 F. R. 3099, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.263 *Oxygen apparatus and its use.* No air carrier aircraft shall be operated in scheduled air transportation at an altitude exceeding 10,000 feet above sea level continuously for more than 30

minutes, or at an altitude exceeding 12,000 feet above sea level for any length of time, unless such aircraft is equipped with an effective oxygen apparatus and an adequate supply of oxygen available for the convenient use of the operating crew, and proper use is made of such apparatus.

[Amdt. 94, 6 F. R. 784]

INSTRUMENT APPROACH RULES

§ 61.271 *Altitude maintenance on initial approach.* When making an initial approach to a radio range station, on instruments or on top of overcast or clouds, an aircraft in scheduled air carrier operation shall not descend below the pertinent minimum altitude for initial approach specified in the air carrier operating certificate for such station, until arrival over the radio range station has been definitely proved by the method outlined in the appropriate instrument approach procedures of the air carrier operating certificate.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.272 *Letting-down-through procedure.* When instrument authority is authorized standard instrument approach procedure shall be established by the operator for each radio range station used or to be used for letting-down-through, and approved by the Administrator and included in the air carrier operating certificate. The letting-down-through methods, procedures and minimums specified shall be strictly adhered to.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.273 *Approach and landing limitations.* No instrument approach procedure shall be executed or landing made at an airport when the latest U. S. Weather Bureau weather report for that airport indicates the ceiling or visibility to be less than that prescribed by the Administrator for landing at such airport.

[Amdt. 61-3, 12 F. R. 345]

§ 61.273-1 *Standard instrument approach procedures (CAA rules which apply to § 61.273).* See Part 609 of this title.

[Supp. 3, 13 F. R. 1423. Correction noted at 14 F. R. 38]

LANDING RULES

§ 61.281 *Pilots at controls.* The pilots shall remain at their controls during the final approach and landing.

§ 61.282 *Restricted-vision landing.* The method of landing under conditions of restricted vision, when authorized, will be specified in the air carrier operating certificate, and shall be strictly adhered to.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.283 *Provisional weight.* No aircraft, the specification for which lists a provisional weight, shall be landed at a weight in excess of standard, except in accordance with the provisions of § 61.310.

§ 61.284 *Fuel dumping.* No fuel shall be dumped in effecting a landing except in accordance with § 61.310, and then only if the pilot deems it safer than landing at a weight in excess of standard.

FLIGHT INTERRUPTION RULES

§ 61.291 *Weather interruption.* If any hazardous flight condition is encountered en route, the pilot shall broadcast information as to the course of action which he is taking and as to his reasons therefor.

§ 61.292 *Icing conditions.* No air carrier shall dispatch or operate aircraft in air transportation through any known or probable icing condition unless the aircraft is equipped for de-icing wings, propellers, and for such other parts of the aircraft as the Administrator may prescribe to assure safety of the flight under the particular conditions to be encountered. When an icing condition is encountered in flight the pilot shall, if possible, immediately notify his radio ground station of such fact and the company shall immediately transmit such information to the nearest office of the United States Weather Bureau in accordance with § 61.254.

[Amdt. 61-3, 8 F. R. 830]

§ 61.294 *Mechanical interruptions.* In the event of any mechanical failure or interruption (including failure of engine, flight instrument, radio, or other essential component of the aircraft) which may involve the safety of the flight, the pilot shall proceed to and land at the nearest place where a safe landing can be effected.

CROSS REFERENCE: For general pilot authorization in emergency situations, see § 61.310.

§ 61.295 *Communications failure.* In the event of inability to maintain two-way communication with the appropriate communications station or in the event that the pilot does not receive radio signals sufficient to permit him to maintain instrument flight to any point cleared to or otherwise specified in the approved flight plan, one of the following procedures shall be observed:

(a) *Contact flight.* The aircraft may proceed: *Provided*, That the flight may be made in accordance with contact flight rules as provided for in § 60.2 of this subchapter.

(b) *Landing.* Landing may be made at the nearest suitable airport at which favorable weather conditions exist.

(c) *Emergency procedure.* In the event weather conditions do not permit the procedures provided for in paragraphs (a) or (b) of this section, the pilot shall proceed according to his approved flight plan, including any amending instructions issued and acknowledged en route, with particular attention to maintaining his last acknowledged assigned altitude until the approach time last authorized for him, after which landing may be made. Normal traffic will resume as soon as the aircraft has landed or been accounted for, but, in any event, in not more than 30 minutes after the approach time last authorized for the aircraft.

[CAR May 31, 1938, as amended by Amdt. 102, 6 F. R. 1159, Amdt. 61-4, 8 F. R. 2006, and Amdt. 61-5, 10 F. R. 10165]

GENERAL PILOT RULES

§ 61.301 *Command of flight.* The pilot in command shall be in command during the flight of the aircraft.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.302 *Remaining at controls.* The pilots shall remain at their posts while the aircraft is in flight and shall not leave the pilot compartment except when it is necessary in attending to their regular duties or when replaced by a person authorized in § 61.303. When a copilot is required to attend passengers, he shall not, unless the pilot in command deems it necessary, leave the pilot compartment until the aircraft has ascended to its cruising altitude, or during the final stages of an approach for a landing.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.303 *Manipulation of controls.* No person, other than a pilot in command or copilot, shall manipulate the controls of an air carrier aircraft while in scheduled flight: *Provided*, That at the discretion of the pilot in command, such restriction shall not apply to authorized inspectors of the Administrator or to properly qualified company personnel or to properly qualified personnel of other air carriers.

[Amdt. 51, 5 F. R. 1839, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.304 *Pilot compartment.* (a) No person except a member of the operating crew, an air carrier inspector of the Administrator of Civil Aeronautics, or a duly authorized representative of the Civil Aeronautics Board shall be admitted to the pilot compartment.

(b) No person shall occupy a seat in the pilots' compartment or the companionway thereto unless such seat is securely attached to the structure of the aircraft and is provided with a safety belt which shall be kept fastened by the occupant throughout his occupancy of such seat.

(c) Unless a seat is also available for his use in the passenger compartment, no person shall be admitted to the pilot compartment during scheduled flight except:

- (1) A member of the flight crew;
- (2) A person engaged during flight in the checking of pilots' operations for the Federal Government or for the air carrier;
- (3) Flight supervisory personnel of the air carrier concerned who are certificated pilots;
- (4) Pilots in command or copilots of the air carrier concerned; or pilots in command or copilots of another scheduled air carrier who have been authorized by the air carrier concerned and the Administrator to make the trips over the route being flown for the purpose of route qualification or familiarization;
- (5) Certificated aircraft dispatchers of the air carrier concerned or certificated aircraft dispatchers of another air carrier who have been authorized by the air carrier concerned and the Adminis-

trator to make the trips over the route being flown for the purpose of establishing or maintaining dispatcher route qualification; or

(6) Certificated mechanics of the air carrier concerned, in the performance of duty;

(7) Pilot trainees in the employ of the air carrier. This provision shall terminate at the end of the war.

(d) Any air carrier inspector of the Administrator of Civil Aeronautics or a duly authorized representative of the Civil Aeronautics Board shall be admitted to the pilot compartment of an air carrier aircraft at any time while in the performance of his official duty.

[Amdt. 103, 6 F. R. 1334, as amended by Amdt. 61-32, 7 F. R. 1664, Amdt. 61-2, 8 F. R. 830, Amdt. 61-7, 11 F. R. 5595, Amdt. 61-6, 12 F. R. 3171, Amdt. 61-4, 14 F. R. 2199]

§ 61.305 *Time of reporting for duty.* The pilot in command of any scheduled flight and the copilot shall report to the operations office of the operator in sufficient time prior to the start of any scheduled flight to study and familiarize themselves with weather conditions on the route to be flown and for the plan of flight to be executed for the proposed schedule.

§ 61.306 *Local airport rules and inter-line agreements.* Pilots shall at all times comply with accepted safety agreements or practices, including current inter-airline agreements and local airport traffic rules, as approved by the Administrator.

§ 61.307 *Maneuvers.* All aircraft maneuvers not necessary to the safe and orderly progress of the flight shall be avoided.

§ 61.308 *Maps and flight equipment.* It shall be the responsibility of the pilot in command before any scheduled flight is started to have in his possession in the cockpit proper flight and navigational facility maps, including instrument approach procedures when instrument flight is authorized, and such other flight equipment as may be necessary to properly conduct the particular flight proposed.

§ 61.309 *Flashlights.* It shall be the responsibility of the pilot in command to see that two satisfactory flashlights in good working order are provided in the aircraft and accessible to both pilots.

§ 61.310 *Emergency decisions.* The pilot in command is authorized, in emergency situations which require immediate decision and action, to resolve upon a course of action which is required by the factors and information available to him. He may, in such situations, deviate from prescribed methods, procedures, or minimums to the extent required by considerations of safety. When such emergency authority is exercised, the pilot shall, to the extent possible, keep the proper control station fully informed regarding the progress of the flight. He shall submit a written report of any such deviation to his operations manager. The operations manager shall furnish a copy of such report, with his comments, promptly to the Administrator.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

MISCELLANEOUS RULES

§ 61.321 *Distribution of notices.* The operator shall set up some provisions for the prompt transmission of all information pertaining to changes and irregularities of all navigational aids and facilities over his entire system. In addition where inter-air-line agreements, airway traffic control regulations, and local airport traffic rules, etc., have been provided and adopted, on any portion of the route or routes, prompt notice and appropriate instructions shall be given to all personnel concerned.

§ 61.322 *Air carrier aircraft proving period.* (a) All air carrier aircraft of a new type shall have at least 100 hours of proving tests in the hands of an air carrier, under the supervision of an authorized representative of the Administrator, before authority for carrying passengers may be issued. At least 50 hours of such tests shall be in scheduled air carrier operation and include at least 10 hours of night operation.

(b) In the case of major changes on aircraft previously proved, or the use of the same aircraft on a different operation, 50 hours of proving tests similar to that outlined in the preceding paragraph may be required, at least 25 hours of which shall be in scheduled operation.

(c) During the tests specified in paragraphs (a) and (b) of this section, passengers other than those essential to the tests are prohibited. Mail, express, and cargo may be carried, at the discretion of the Administrator.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.322-1 *Aircraft proving tests (CAA rules which apply to § 61.322).*—(a) *Purpose.* The purpose of aircraft proving tests is to determine the air carrier's ability to conduct the proposed operation in compliance with applicable provisions of the regulations in this subchapter and in accordance with the minimum safety requirements of the Civil Aeronautics Administration.

(b) *Application.* At least 15 days prior to the scheduling of aircraft proving tests, officials of the air carrier shall submit to the Civil Aeronautics Administration office handling its operations specifications, a written request for the assignment of Civil Aeronautics Administration personnel to observe the tests. The request must be accompanied by an original application and copies of pertinent proposed amendments to the operations specifications, and must include sufficient data pertaining to the aircraft to satisfy the Administrator that the air carrier is prepared for the aircraft proving tests. This will allow sufficient time for making any necessary additions or corrections, thus preventing delays or misunderstandings.

(c) *Conduct.* After the air carrier has made all the necessary preparations to conduct the aircraft proving tests, duly designated representatives of the Civil Aeronautics Administration will be assigned to observe them. Such portions of the aircraft proving tests as may be conducted under conditions of scheduled operation, shall be undertaken exactly as the operator intends to operate in scheduled air transportation when carrying

passengers, property, or mail, or any combination thereof. Air carrier personnel assigned to conduct the aircraft proving tests shall be regular crew members who, it is anticipated, will be assigned to the aircraft.

(d) *Conclusion.* On completion of the aircraft proving tests, a reasonable period of time will be required in order that the information gained during the tests can be compiled by the field office and submitted, with recommendations regarding approval, to appropriate supervisory personnel of the Civil Aeronautics Administration.

[Supp. 2, 13 F. R. 3460. Corrections noted at 14 F. R. 38]

CROSS REFERENCE: For statements of policy by the Administrator of Civil Aeronautics regarding § 61.322. Air carrier aircraft proving period, see Part 910 of this title.

§ 61.323 *Smoking rules.* The operator may permit smoking in scheduled air carrier aircraft except in berths of sleeper planes and during refueling: *Provided,* (a) The aircraft carries a copilot or cabin attendant, who shall notify passengers when and where smoking is prohibited.

(b) Sufficient ash containers of a suitable type are provided.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.324 *No smoking signs.* A prominent "No Smoking" sign shall be displayed in berths.

§ 61.325 *Smoking in pilot compartment.* When the operator permits smoking in the pilot compartment, suitable ash containers for the members of crew shall be provided. In no event shall smoking be permitted during take-offs, landing, and refueling.

§ 61.326 *Radio rules.* The following rules will govern the use and operation of radio facilities by an air carrier.

(a) Radio facilities, exclusive of the emergency equipment in the aircraft, shall be ready for immediate use at all times when the aircraft is in flight, except as may otherwise be provided for in § 61.208.

(b) The radio communications system required by this subchapter shall at all times be operated in strict accordance with the rules and regulations provided therefor by the Federal Communications Commission.

CROSS REFERENCE: For the regulations of the Federal Communications Commission governing aviation radio services, see Telecommunication, 47 CFR Part 9.

(c) Where a communication channel serves point-to-point contacts in addition to ground to plane it is required that priority of the circuit be given to plane to ground and ground to plane communication. Where in the opinion of the Administrator the volume of point-to-point traffic is so heavy as to interfere with the primary purpose of the circuit, i. e., plane to ground and ground to plane contacts, the Administrator may require that all other traffic be removed from this circuit.

§ 61.327 *Fuel dumping.* In circumstances other than those in connection with the effecting of a landing, fuel shall not be dumped except in accordance

with § 61.310, and then only if the pilot deems it safer than any other procedure.

§ 61.328 *Marking emergency exits.* Emergency exits of aircraft carrying passengers shall be clearly marked as such in letters not less than three-fourths of an inch high with luminous paint, such markings to be located either on or immediately adjacent to the pertinent exit and readily visible to passengers. Location and method of operation of the handles shall be marked with luminous paint.

[Amdt. 61-13, 8 F. R. 14602]

OPERATIONS MANUAL

§ 61.331 *Necessity.* Each operator of a scheduled air carrier shall prepare and maintain an operations manual for the use and guidance of the air carrier flight and ground personnel. If desired by the operator, such manual may be broken down into two or more parts, on a divisional basis, but the manual for each division shall be complete as pertains to such division.

§ 61.332 *Contents.* Each operations manual, including a divisional manual, shall contain:

(a) A copy of that portion of the air carrier operating certificate pertaining to en route operations and airport specifications.

(b) A copy of all interline traffic agreements affecting the particular operation involved; and

(c) Any other data or information which the operator desires to include for the efficiency or safety of the operation.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

§ 61.333 *Form.* The operations manual shall be loose-leaf in form, and each page therein shall be numbered and dated to show the currency of all material contained therein. All copies of such manual shall at all times be kept up to date.

§ 61.334 *Delivery of copies.* A copy of the operations manual shall be furnished to at least the following persons:

(a) The Administrator of Civil Aeronautics;

(b) The Chief of the Air Carrier Service, Civil Aeronautics Administration;

(c) Each air carrier inspector of the Administrator of Civil Aeronautics in charge of inspection on any portion of the route, including any division thereof;

(d) Each air carrier pilot in command;

(e) Each air carrier copilot;

(f) Each person authorized for dispatching duty;

(g) Each air carrier aircraft radio operator; and at

(h) Each air carrier terminal and scheduled intermediate stop.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

§ 61.334-1 *Copies of operations manual (CAA rules which apply to § 61.334).* The copy of the operations manual for the Administrator of Civil Aeronautics shall be delivered to the Director, Flight Operations Service, A-280, Civil Aeronautics Administration, Department of Commerce, Washington 25, D. C., and

the copy of the operations manual for the Chief of the Air Carrier Service, Civil Aeronautics Administration, shall be delivered to the Chief, Scheduled Air Carrier Division of the region in which headquarters of the air carrier is located.

[Supp. 4, 13 F. R. 4252. Correction noted at 14 F. R. 38]

§ 61.335 *Record of copies.* Each air carrier shall keep a complete record of all persons to whom copies of its operations manual have been furnished.

§ 61.336 *Changes.* The following rules will govern changes made in the operations manual:

(a) Any change issuing from the Administrator pertaining to that portion of the air carrier operating certificate covering en route operations and airport specifications shall be promptly incorporated in the operations manual and a copy thereof sent, in the form of a new page of such manual, to each person required to hold a copy of the manual. Each amended page of the manual shall be properly dated.

(b) Upon receipt of such new page or pages, the recipient shall insert the current information in the manual.

(c) Any data not issuing from the Administrator may be changed by the operator, without approval of the Administrator, providing such change is not inconsistent with any Federal regulation or the air carrier operating certificate. Notice of any such change shall be given promptly in accordance with the provisions of paragraph (a) of this section.

[CAR, May 31, 1938, as amended by Amdts. 61-21 through 61-31, 7 F. R. 1415]

REPORTS

§ 61.341 *General.* Each scheduled domestic air carrier shall furnish the Administrator such reports as may be required by him.

§ 61.341-1 *Mechanical hazard and difficulty reports (CAA rules which apply to § 61.341)—(a) Daily report of mechanical hazards.* (1) Whenever a failure, malfunctioning, or other defect is detected in flight or on the ground in an aircraft or aircraft component which may reasonably be expected by the air carrier to cause a serious hazard in the operation of any aircraft, notice thereof shall be transmitted through the air carrier's principal maintenance base to the Civil Aeronautics Administration maintenance agent-in-charge assigned to the air carrier.

NOTE: Failures, malfunctionings, or other defects required to be reported under these rules comprise generally the following basic items:

- (1) Fire hazards.
- (2) Structural hazards.
- (3) Serious system or component malfunctioning or failure.
- (4) Unsafe procedures or conditions, and
- (5) Defects in design or quality of parts and materials found installed on aircraft or intended for such installation.

(2) Such daily reports shall be required only where mechanical hazards have been detected; shall cover the 24-hour period from midnight to midnight of each day; and shall be transmitted to

the assigned maintenance agent of the Civil Aeronautics Administration before noon of the following working day, except that reports for Fridays, Saturdays, and Sundays may be submitted not later than noon of the following Mondays.

(3) Such reports may be transmitted in a manner and on a form convenient to the air carrier's system of communications and procedures.

NOTE: Whenever practicable, the following guide for each aircraft category should be used by the air carrier in the preparation of the daily reports:

- (1) Category, NC identification of aircraft, airline and trip number.
- (2) Emergency procedure effected (unscheduled landing, dumped fuel, etc.).
- (3) Nature of condition (fire, structural failure, etc.).
- (4) Identification of part and system involved.
- (5) Apparent cause of trouble (wear, cracks, design, personnel error, etc.).
- (6) Disposition (repaired, replaced, aircraft grounded, etc.).
- (7) Brief narrative summary to supply any other pertinent data required for more complete identification, determination of seriousness, etc.

(4) The daily reports should not be withheld pending presentation of all specific details pertaining to such items of information. As soon as the additional information is obtained it may be submitted as a supplement to the report.

(5) The rules requiring daily reports of mechanical hazards will become effective upon publication in the FEDERAL REGISTER.

[CAR, May 31, 1938, as amended by Amdt. 61-4, 14 F. R. 2199]

(b) *Monthly report of mechanical difficulties.* (1) As soon as practicable after the expiration of each calendar month, each air carrier shall submit in triplicate on a form prescribed by, or other form acceptable to, the Administrator, such information with respect to the mechanical defects, malfunctionings, and failures which occurred to the aircraft and components operated by the air carrier during the preceding calendar month, as may be necessary to determine the mechanical reliability of such aircraft and components. The detailed information upon which such reports are based shall be made available for review by the assigned maintenance agent of the Civil Aeronautics Administration, or an authorized representative of the Civil Aeronautics Board.

NOTE: Sample guides for this form may be obtained from authorized representatives of the Administrator.

(2) The foregoing monthly reporting procedure shall become effective beginning with the calendar month of October 1948.

[Supp. 6, 13 F. R. 5808, 5858, 5877]

§ 61.342 *Monthly report.* A monthly operations report shall be submitted to the Administrator, on and in accordance with a form supplied for the purpose, not later than the 20th day of the next succeeding month.

§ 61.343 *Mechanical interruption.* A mechanical interruption report shall be submitted to the Administrator, on and in accordance with a form supplied for

the purpose, through the air carrier maintenance inspector of the Administrator assigned to such operation, as soon as possible but not later than 10 days after such mechanical interruption occurs. Any block-to-block instrument or equipment mechanical failure, in whole or in part, shall be reported as above.

§ 61.344 *Weather interruption.* An air carrier shall maintain and make readily available to inspectors of the Administrator or Board for not less than 1 year from the date of the flight the records pertaining to any flight of aircraft engaged in air transportation which, because of unfavorable weather conditions, was interrupted by either:

- (a) Failure to land at the point or points to which the flight was cleared;
- (b) A landing at a point other than that to which the flight was specifically cleared;
- (c) Landing at points cleared to other than in the progressive order of landing specified in the flight clearance; or
- (d) A re-clearance by radio during flight.

Such records shall include at least the flight plan, flight log, company clearance form, and weather reports upon which the clearance was based.

[Amdt. 52, 5 F. R. 1949]

§ 61.345 *Mechanical record.* The records of the air carrier covering mechanical trouble shall be made available upon request to any authorized representative of the Administrator or Board.

[Amdt. 75, 5 F. R. 3947]

§ 61.346 *Irregularity report.* All airmen, including flight and ground personnel, shall immediately report any irregularity or hazard which exists on or adjacent to any civil airway, and which in their opinion, makes for unsafe operation of aircraft in flight. Such report shall be made to the air carrier operations manager, who shall verify its accuracy to the best of his ability. If the report is justified, notice of the irregularity or hazard shall at once be given to the Administrator.

PART 62—NOTICE AND REPORTS OF AIRCRAFT ACCIDENTS AND MISSING AIRCRAFT

- Sec.
62.0 Applicability of this part.
62.1 Definitions.

SUBPART A—AIR CARRIER REQUIREMENTS

NOTICE OF ACCIDENT

- 62.5 Notice of aircraft accident and occurrences.
62.6 Responsibility for giving notice.
62.7 To whom notice is directed.
62.8 Information to be given in notice.

REPORT OF ACCIDENTS

- 62.10 Report of aircraft accidents.
62.11 Responsibility for making report.
62.12 Form of report and contents.
62.13 To whom the report is directed.

PRESERVATION OF WRECKAGE AND RECORDS

- 62.14 Preservation of aircraft wreckage and records.
62.15 Prohibition against removing or disturbing wreckage and records.
62.16 Recording of original position and condition of wreckage.
62.17 Release of wreckage.

NOTICE OF OVERDUE AIRCRAFT

62.32 Responsibility for giving notice.
62.33 To whom notice is directed.
62.34 Information to be given in notice.

REPORT OF ACCIDENT

- 62.36 Report of aircraft accident.
62.37 Responsibility for making report.
62.38 Form of report and contents.
62.39 To whom the report is directed.

PRESERVATION OF WRECKAGE AND RECORDS

- 62.41 Preservation of aircraft wreckage and records.
62.42 Prohibition against removing or disturbing wreckage and records.
62.43 Recording of original position and condition of wreckage.
62.44 Release of wreckage.

NOTICE OF MISSING AIRCRAFT

- 62.46 Notice of missing aircraft.
62.47 Contents of notice.

AUTHORITY: §§ 62.0 to 62.47 issued under secs. 205 (a), 702, 52 stat. 984, 1013; 49 U. S. C., 425 (a), 582.

SOURCE: §§ 62.0 to 62.47 appear at 14 F. R. 1516.

§ 62.0 *Applicability of this part.* The provisions of this part establish requirements for the notification and reporting of accidents involving civil aircraft in the United States, and aircraft of United States registry wherever they occur, and further establish requirements for the notification of overdue aircraft.

§ 62.1 *Definitions.* (a) As used in this part the words listed below shall be defined as follows:

(1) *Aircraft accident.* An aircraft accident is an accident which occurs during the starting or warming up of an engine or engines, or operation of an aircraft, which results in serious or fatal injury to one or more persons or in substantial damage to any aircraft. Whenever fatal or serious injury results from contact with a rotating propeller which is installed on an aircraft, it shall be considered an aircraft accident. A collision of two or more aircraft is considered one aircraft accident. Aircraft accidents are divided into two classifications: (i) Aircraft accidents incident to flight and (ii) aircraft accidents not incident to flight.

(2) *Accident incident to flight.* An aircraft accident incident to flight is an accident which occurs between the time an engine or engines are started for the purpose of commencing flight until the aircraft comes to rest with all engines stopped for complete or partial deplaning or unloading. It excludes death or injuries to persons on board which result from illness, altercations, falling, stumbling, etc., or during enplaning or deplaning and other occurrences not directly attributable to normal flight operation.

(3) *Accident not incident to flight.* An aircraft accident not incident to flight is an aircraft accident other than one defined in subparagraph (2) of this paragraph as incident to flight.

(4) *Operator.* An operator of aircraft shall include the owner, lessee, and any other person who causes or authorizes the operation of the aircraft.

(5) *Fatal injury.* Fatal injury is an injury which results in death within 30 days.

(6) *Serious injury.* Serious injury is an injury which requires hospitalization and medical treatment for a period of five or more days, or results in a fracture of any bone (except simple fractures of fingers, toes, or nose), lacerations which cause severe hemorrhages, or involve muscles, injury to any internal organ, or second or third degree burns or any burns involving more than 5% of the body surface, provided that the injury does not result in death within 30 days.

(7) *Minor injury.* Minor injury is any injury which does not result in death within 30 days and is not a serious injury.

(8) *Substantial damage.* Substantial damage is damage which necessitates major overhaul of the aircraft or the replacement of or extensive repairs to any major component or combination of components of the aircraft.

(9) *Minor damage.* Minor damage shall include damage which is easily repairable such as scraped wing tips, bent fairing or cowlings, small punctured holes in the skin or fabric, dented skin or trailing edge, or damage to tires, engine accessories, brakes, or propeller blades.

SUBPART A—AIR CARRIER REQUIREMENTS

NOTICE OF ACCIDENT

§ 62.5 *Notice of aircraft accident and occurrences.* Immediate notice shall be given of any accident involving air carrier aircraft of United States registry wherever it occurs. Immediate notice will be made of any occurrence of fire involving any of the components or systems aboard the aircraft when incident to flight, regardless of the extent of injury to occupants or damage to the aircraft.

§ 62.6 *Responsibility for giving notice.* In accidents or occurrences involving air carrier aircraft of United States registry, the operator thereof shall be responsible for giving notice as provided in § 62.5.

§ 62.7 *To whom notice is directed.* The notice shall be directed to the Civil Aeronautics Board through its nearest office or through the nearest Civil Aeronautics Administration communications station or agent who upon receipt shall transmit the information to the nearest Civil Aeronautics Board office. The notice shall be sent by the most expeditious means of communication available.

§ 62.8 *Information to be given in notice.* The notice shall include the following information concerning the accident, if available: Location, date, time of day, number of persons involved, injuries to each, aircraft identification including registration number, aircraft make and model, names of crew members, operator, and briefly the nature or circumstances surrounding the accident.

REPORT OF ACCIDENTS

§ 62.10 *Report of aircraft accidents.* A written report shall be made of every aircraft accident incident to flight involving air carrier aircraft of United

States registry wherever it may occur. A written report will not be required on any occurrence involving minor damage, or minor injury, or of any aircraft accident not incident to flight, unless the operator has been requested to make such a report by an authorized representative of the Civil Aeronautics Board or the Civil Aeronautics Administration.

§ 62.11 *Responsibility for making report.* The operator of the aircraft involved in the accident shall be responsible for making the written report required by § 62.10. The report shall be made as soon as practicable and good cause shown in writing for any delay over ten days. Each member of the crew involved in the accident, if not physically incapacitated at the time of the submission of the report, shall attach thereto a signed statement setting forth the facts, conditions, and circumstances pertinent to the accident. If incapacitated, a statement shall be submitted as soon as physically possible.

§ 62.12 *Form of report and contents.* The report shall be made in duplicate on an accident report form furnished by the Civil Aeronautics Board and shall contain all available information required therein.

§ 62.13 *To whom the report is directed.* The original and one copy of the report shall be mailed or delivered to the office or representative of the Civil Aeronautics Board nearest the headquarters of the air carrier involved, or delivered to a Civil Aeronautics Administration agent who will immediately transmit the original copy of the report with the originals of any attachments directly to the appropriate office of the Civil Aeronautics Board.

PRESERVATION OF WRECKAGE AND RECORDS

§ 62.14 *Preservation of aircraft wreckage and records.* Aircraft, parts, and records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.5 shall be preserved for the Board by the operator.¹ Wreckage of aircraft involved in accidents not requiring notification under § 62.5 need not be preserved, unless specifically ordered by an authorized representative of the Civil Aeronautics Board or of the Administrator.

§ 62.15 *Prohibition against removing or disturbing wreckage and records.* Aircraft, parts, or records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.5 shall not be disturbed or removed, unless specific permission is granted by an authorized representative of the Civil Aeronautics Board, except where necessary (a) to give assistance to persons injured or trapped therein, (b) to protect such wreckage from further serious damage, or (c) to protect the public from injury.

¹Where accidents occur outside of the United States, its territories, or possessions, the air carrier shall only be responsible for taking such measures for preserving aircraft wreckage or records as may legally be taken in the place where the accident occurs.

§ 62.16 *Recording of original position and condition of wreckage.* Whenever wreckage is removed in accordance with the provisions of § 62.15, prior to the removal, sketches or photographs shall be made of the original position and condition of the wreckage, and marks on the ground, and any pertinent data which cannot be effectively photographed shall be recorded, unless the resultant delay would endanger the lives of persons injured, or trapped, or unless the essential interests of public safety can be protected only by immediate movement. In any event, movement of the wreckage shall be so accomplished as to entail the minimum possible disturbance thereof, and it shall be preserved in accordance with the provisions of § 62.14.

§ 62.17 *Release of wreckage.* Aircraft, parts, or records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.5 shall not be released for repair, salvage, disposal, or any other purpose until permission is granted by an authorized representative of the Civil Aeronautics Board.

NOTICE OF OVERDUE AIRCRAFT

§ 62.21 *When notice is to be given.* When an aircraft is overdue and the operator is reasonably sure that it has been involved in an accident, the operator shall immediately notify the Civil Aeronautics Board in accordance with the provisions of §§ 62.6 through 62.8.

§ 62.22 *Contents of notice.* The notice shall include place, date and time of departure, destination, estimated time of arrival, aircraft identification including registration number, make and model, names of crew members and passengers, operator, and all other known pertinent information concerning the flight. In addition, it shall be the responsibility of the operator to furnish such records pertinent to the flight as may be requested by the Civil Aeronautics Board.

SUBPART B—REQUIREMENTS FOR CIVIL AIRCRAFT OTHER THAN AIR CARRIER AIRCRAFT

NOTICE OF ACCIDENT

§ 62.31 *Notice of aircraft accident and occurrences.* Immediate notice shall be given when any occurrence incident to flight, and involving civil aircraft in the United States, or within a territory or possession thereof, or civil aircraft of United States registry anywhere, (a) is known or believed to have resulted from structural failure of an aircraft, aircraft engine, or propeller, (b) involves collision of two or more aircraft in the air, (c) involves fire on board an aircraft, or (d) results in serious or fatal injury to any person.²

§ 62.32 *Responsibility for giving notice.* In all civil aircraft accidents of which immediate notice must be given, the pilot, or pilots, or, if the pilots are incapacitated, the owner or operator shall be responsible for giving such notice.

²It will be noted that notice is required even though the damage to the aircraft is only minor in nature.

§ 62.33 *To whom notice is directed.* The notice must be directed to the Civil Aeronautics Board through its nearest office or through the nearest Civil Aeronautics Administration communications station or agent who upon receipt shall transmit the information to the nearest Civil Aeronautics Board office. The notice shall be sent by the most expeditious means of communication available.

§ 62.34 *Information to be given in notice.* The notice shall include the following information concerning the accident, if available: location, date, time of day, number of persons involved, injuries to each, aircraft identification including registration number, aircraft make and model, names of crew members, operator, and briefly the nature or circumstances surrounding the accident.

REPORT OF ACCIDENT

§ 62.36 *Report of aircraft accident.* A written report shall be made of every aircraft accident involving aircraft of United States registry wherever it may occur. A written report is not required on an occurrence involving minor injury or minor damage, unless the pilot, owner or operator has been requested to make a report by an authorized representative of the Civil Aeronautics Board or the Civil Aeronautics Administration.

§ 62.37 *Responsibility for making report.* The pilot, owner, or operator of the aircraft involved in the accident shall be responsible for making the written report required by § 62.36. The report shall be made as soon as possible and good cause shown in writing for any delay over seven days. If the operator is not the pilot, then each pilot involved in the accident, if not physically incapacitated at the time of the submission of the report, shall sign the report or attach thereto a signed statement setting forth the facts, conditions, and circumstances pertinent to the accident. When incapacitated at the time of the submission of the report, the pilot shall submit such a statement as soon as he is physically able to do so.

§ 62.38 *Form of report and contents.* The report shall be made in duplicate on an accident report form furnished by the Civil Aeronautics Board and shall contain all available information required therein.

§ 62.39 *To whom the report is directed.* The original and one copy of the report shall be mailed or delivered to the nearest office of the Civil Aeronautics Board or delivered to a Civil Aeronautics Administration agent who will immediately transmit the original copy of the report with the originals of any attachments directly to the appropriate office of the Civil Aeronautics Board.

PRESERVATION OF WRECKAGE AND RECORDS

§ 62.41 *Preservation of aircraft wreckage and records.* Aircraft, parts, and records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.31 shall be preserved for the Board

by the pilot, owner, or operator.* Wreckage of aircraft involved in accidents not requiring notification under § 62.31 need not be preserved, unless specifically ordered by an authorized representative of the Civil Aeronautics Board or of the Administrator.

§ 62.42 *Prohibition against removing or disturbing wreckage and records.* Aircraft, parts, or records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.31 shall not be disturbed or removed, unless specific permission is granted by an authorized representative of the Civil Aeronautics Board, except where necessary (a) to give assistance to persons injured or trapped therein, (b) to protect such wreckage from further serious damage, or (c) to protect the public from injury.

§ 62.43 *Recording of original position and condition of wreckage.* Whenever wreckage is moved in accordance with the provisions of § 62.42, sketches or photographs of the original position and condition of the wreckage, marks on the ground, and any other pertinent data shall be made prior to the removal, unless the resultant delay would endanger the lives of persons injured, or trapped, or unless the essential interests of public safety can be protected only by immediate movement. In any event, movement of the wreckage shall be accomplished so as to entail the minimum possible disturbance thereof and shall be preserved in accordance with the provisions of § 62.41.

§ 62.44 *Release of wreckage.* Aircraft, parts, or records thereof involved in or pertaining to an accident of which notice must be given under the provisions of § 62.31 shall not be released for repair, salvage, disposal, or any other purpose until permission is granted by an authorized representative of the Civil Aeronautics Board.

NOTICE OF MISSING AIRCRAFT

§ 62.46 *Notice of missing aircraft.* When an aircraft is assumed to be missing and the operator or owner is reasonably sure that it has been involved in an accident, the operator or owner shall immediately notify the Civil Aeronautics Board in accordance with the provisions of §§ 62.32 through 62.34.

§ 62.47 *Contents of notice.* The notice shall include place, date and time of departure, destination, estimated time of arrival, aircraft identification including registration number, make and model, names of crew members and passengers, operator, owner, and all other known pertinent information concerning the flight. In addition, it shall be the responsibility of the owner or operator to furnish such records pertinent to the flight as may be requested by the Civil Aeronautics Board. If the aircraft is still missing upon the expiration of seven

days, the reporting provisions of §§ 62.36 through 62.39 shall be complied with.

PART 97—RULES OF PRACTICE GOVERNING SAFETY CASES ARISING UNDER SECTIONS 602 AND 609 OF THE CIVIL AERONAUTICS ACT OF 1938, AS AMENDED, AND PETITIONS FOR WAIVERS OF CIVIL AIR REGULATIONS

AUTHORITY: §§ 97.1 to 97.24 issued sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 1001, 1002, 52 Stat. 1017, 1018; 49 U. S. C. 641, 642.

SOURCE: §§ 97.1 to 97.24, contained in Amendment 97-0, Civil Air Regulations, 11 F. R. 14257, 12 F. R. 64, except as noted following section affected.

§ 97.1 *Initiation of proceedings.* A proceeding may be initiated by the Administrator of Civil Aeronautics as plaintiff by filing a complaint with the Board. In any case where, under the provisions of the Civil Aeronautics Act of 1938, as amended, the circumstances, in the opinion of the Board, require action and no complaint has been filed by the Administrator of Civil Aeronautics, the Board may institute proceedings on its own initiative by the issuance of an order to show cause.

§ 97.2 *Complaint; order to show cause; allegations.* The complaint or order to show cause shall contain:

- (a) A short plain statement of the grounds upon which the Board's legal authority and jurisdiction rests;
- (b) A plain statement of the facts which the Administrator or the Board proposes to establish; and
- (c) A statement of the action the Administrator requests of the Board, or which the Board proposes to take on its own initiative.

§ 97.3 *Filing of complaint or order to show cause.* An original and nine copies of the complaint or order to show cause, either in printed or typewritten

form, shall be filed with the Docket Section of the Board.

§ 97.4 *Service.* When a complaint or order to show cause is filed the Safety Legal Division shall send a copy thereof by registered mail, return receipt requested, to the defendant, together with a copy of these rules of practice and a statement concerning hearing as provided in § 97.7. The complaint or order to show cause will be deemed served upon the defendant on the date specified on the postal return receipt.

§ 97.5 *Answer.* After service upon him of the complaint or order to show cause the defendant shall have ten days within which to answer in writing the allegations set forth therein. Such answer shall be deemed filed as of the date of mailing to the Civil Aeronautics Board properly addressed and postage prepaid. Failure to answer any of the allegations within the prescribed ten-day period shall be deemed an admission of the allegations not answered. Upon good cause shown, the examiner to whom the case is assigned or the Safety Legal Division may grant additional time within which to answer.

§ 97.6 *Motions to make more definite and certain.* Defendant may file with his answer a motion that the allegations in the complaint or order to show cause be made more definite and certain. Such motion shall point out the defects complained of and the details desired.

§ 97.7 *Request for or waiver of hearing.* An appropriate form for requesting or waiving a hearing shall be mailed to defendant with a copy of the complaint or order to show cause. Defendant shall have until the time for filing of his answer to the complaint or order to show cause to request a hearing. Failure to make such request within the prescribed time shall be deemed a waiver of defendant's right to a hearing. The defendant may at any time cancel his request for a hearing.

§ 97.8 *Notice of hearing.* When a hearing has been requested, the Safety Legal Division shall give the defendant adequate notice of the date and place where such hearing will be held; the nature thereof; the legal authority and jurisdiction under which the hearing is to be held; and the matters of fact and law asserted. In fixing the times and places for hearings due regard shall be had for the convenience and necessity of the parties and their representatives.

§ 97.9 *Amendment of pleadings.* Either party to the proceedings may amend his pleadings, as a matter of course, by serving a copy of such amended pleadings on the adverse party and by filing with the Board at any time more than 15 days prior to the date of hearing three copies of the amended pleadings. After that time, or in the event a hearing has been waived, amendment shall be allowed at the discretion of the examiner assigned to the case. In case of an amendment to any pleading, the examiner shall allow the party affected thereby a reasonable opportunity to reply thereto and to request a hearing thereon.

*Where accidents occur outside of the United States, its Territories, or possessions, the operator shall only be responsible for taking such measures for preserving aircraft wreckage or records as may legally be taken in the place where the accident occurs.

§ 97.10 *Withdrawal of complaint.* A complaint may be withdrawn by the Administrator of Civil Aeronautics, as plaintiff, at any time prior to the issuance of an initial decision in the proceeding as provided for in §§ 97.14 and 97.15, by filing with the Board an original and two copies of a formal Notice of Withdrawal of Complaint stating the reasons for such action, together with a signed statement that a copy thereof has been mailed to the defendant, and the proceeding shall thereupon be deemed terminated without further action of the Board.

[Amdt. 97-1, 12 F. R. 1509]

§ 97.11 *Appearances.* Any party to a proceeding may appear and be heard in person or by attorney. No register of attorneys who may practice before the Board is maintained and no application for admission to practice is required. Any attorney practicing or desiring to practice before the Board may, upon hearing and good cause shown, be suspended or prohibited from so practicing.

§ 97.12 *Subpoenas.* Subpoenas requiring the attendance of witnesses, or the production of evidence, at a designated place of hearing, shall be issued to any party to a proceeding upon proper application to an examiner duly designated by the Board for such purpose.

Such application shall be in writing and must show the general relevance and reasonable scope of the evidence sought. An application for the subpoena for the production of evidence must describe in detail the articles or documents desired.

§ 97.13 *Depositions.* After answer is filed by defendant the testimony of any person within the United States may be taken by deposition at the instance of either party to the proceedings. Such depositions shall be taken before any person having power to administer oaths who is designated by the Safety Legal Division or the examiner to whom the case is assigned, in accordance with the provisions of section 1004 of the Civil Aeronautics Act of 1938, as amended.

§ 97.14 *Submission without hearing or appearance.* Where a hearing has been waived by the defendant, the examiner, on the basis of the pleadings and the documentary evidence submitted to the Board by the parties, shall prepare the initial decision. The examiner shall serve a copy of this initial decision upon the defendant and his counsel, if any, and upon the plaintiff, by personal service or registered mail. The parties to the proceedings shall have ten days, or such other time as the examiner may specify, after the date of service of such initial decision within which to file exceptions and appeal to the Board. The date of service shall be the date shown upon which service was actually effected except where service is made by registered mail the date of service shall be the date shown on the postal return receipt. If no appeal to the Board is filed or action by the Board to review such decision is entered within the time allowed, such decision shall without further proceed-

ings then become the decision of the Board.

§ 97.15 *Hearing cases; initial decision; exceptions; oral argument.* In any case in which a hearing has been requested, at the close of the hearing the examiner may render his initial decision orally or, if either party requests or the examiner desires the initial decision to be in writing, the examiner shall prepare and cause the same to be served upon the parties by registered mail or personal service as soon as possible. An appeal to the Board must be made in writing and shall clearly state the exceptions taken and the assignments of error upon which the appeal is predicated. A request for oral argument must also be in writing and shall clearly state any special reasons therefor. If no appeal to the Board is filed or action by the Board to review such decision is entered within the time allowed, such decision shall without further proceedings then become the decision of the Board.

§ 97.16 *Refusal of Administrator to issue airman certificates.* Any person whose application for the issuance or renewal of an airman certificate or rating has been denied may petition the Board for a review of the action of the Administrator. Upon request petitioner shall be granted a hearing which shall be conducted in accordance with the procedure set forth in § 97.15, or he may submit the matter for determination without a hearing in accordance with the procedure set forth in § 97.14.

§ 97.17 *Petition for waiver of Civil Air Regulations.* Any person adversely affected by the requirements of any regulation of this subchapter may petition the Board for a waiver of such requirements and the Board will, after a consideration of the matters presented in the petition, and as it may appear in the public interest, either grant or deny such petition in whole or in part. A public hearing will not be held on a petition for waiver of the regulations of this subchapter unless expressly so ordered by the Board.

§ 97.18 *Stay of order pending judicial review.* The filing of a petition for a judicial review of an order made under these rules as provided in section 1006 of the Civil Aeronautics Act of 1938, as amended, shall not operate to stay the effectiveness of the order unless specifically so ordered by the Board. The petitioner may request, and if good cause is shown therefor, the Board will stay the effectiveness of the order from which an appeal is being taken.

§ 97.19 *Petition for rehearing, reargument, reconsideration or modification of order.* (a) Either party to a proceeding may petition for rehearing, reargument, reconsideration or modification of any final order of the Board within fifteen days after the receipt thereof. Every such petition shall be in writing, filed with the Board and served by petitioner upon the adverse party and his attorneys of record. If the petition be to take further evidence, the nature and purpose of the new evidence to be adduced must be briefly stated and the reasons why such evidence was not presented at the

time of the prior hearing must be stated. If the petition be for reargument, reconsideration or modification of the order, the matters claimed to have been erroneously decided must be specified and the alleged errors briefly stated.

(b) Replies to petitions filed pursuant to this section shall be filed and served upon petitioner and his attorneys of record within ten days after the receipt of the petition. Upon good cause shown the Safety Legal Division may extend the time for filing such replies.

(c) The filing of a petition to rehear or reargue a proceeding or to reconsider or modify an order, shall not operate to stay the effectiveness of the order, unless otherwise ordered by the Board.

§ 97.20 *Evidence—(a) Right to full and true disclosure of the facts.* Every party shall have the right to present his case or defense by oral or documentary evidence, to submit evidence in rebuttal, and to conduct such cross-examination as may be required for a full and true disclosure of the facts.

(b) *Burden of proof.* In general the proponent of any rule or order shall have the burden of proof thereof.

(c) *Admission and exclusion of evidence.* The trial examiner shall admit relevant, material, and competent evidence, but shall exclude irrelevant, immaterial, incompetent, or unduly repetitious evidence.

(d) *Order to be based on whole record.* No order shall be issued except upon consideration of the whole record or such portions as may be cited by any party and as supported by and in accordance with reliable, probative and substantial evidence.

(e) *Objections.* Objections to the evidence before a trial examiner shall be in short form; but written argument in support of such objections, specifying the grounds thereof, may be presented at the discretion of the trial examiner. The transcript shall not include argument or debate thereon except as ordered by the trial examiner. Rulings on such objections shall be a part of the transcript. An objection not urged in an appeal from the examiner's initial decision will be deemed to have been waived.

§ 97.21 *Trial examiners' authority.* Trial examiners shall have the authority, subject to the published rules of the Board and within its powers, as follows:

(a) To give notice concerning, and hold, hearings;

(b) To administer oaths and affirmations;

(c) To examine witnesses;

(d) To take or cause depositions to be taken whenever the ends of justice would be served thereby;

(e) To rule upon offers of proof and receive competent evidence;

(f) To regulate the course of the hearing;

(g) To hold conferences, before or during the hearing, for the settlement or simplification of issues, by consent of the parties;

(h) To dispose of procedural requests or similar matters;

(i) Within his discretion, or upon the direction of the Board, to certify any

question to the Board for its consideration and disposition;

(j) To issue subpoenas as provided for in § 97.14.

(k) To make initial decisions;

(l) To take any other action authorized by these rules; and

(m) The trial examiner's authority in each case will terminate:

(1) When the time for appeal from the initial decision shall have expired.

(2) When he shall have withdrawn from the case upon considering himself disqualified, and

(3) Whenever the Board shall have determined that the trial examiner is disqualified, upon the filing in good faith of a timely and sufficient affidavit of bias or disqualification.

§ 97.22 *Submittals and decisions.* At any time during the process of hearing and appeal to the Board, the examiner shall give the parties to the proceeding adequate opportunity for the presentation of arguments in support of motions, objections, and exceptions. Prior to each initial decision, or decision upon a Board review thereof, the parties shall be afforded a reasonable opportunity to submit for consideration (a) proposed findings and conclusions, or (b) exceptions to the initial decisions of the trial examiners, and (c) supporting reasons for such exceptions or proposed findings or conclusions. The record shall show the ruling upon each such finding, conclusion, or exception presented.

§ 97.23 *Saving clause.* The repeal or amendment of any regulation of this subchapter shall not affect any pending proceeding or any proceeding thereafter commenced to alter, amend, modify, suspend, or revoke any certificate issued by the Administrator for causes arising or acts committed prior to said repeal or amendment, unless the act of repeal or amendment specifically so provides.

§ 97.24 *Applicable rules of Federal procedure.* In any situation not provided for or controlled by this part, the rules of civil procedure for the District Courts of the United States, wherever applicable, shall govern.

Subchapter B—Economic Regulations

PART 200—DEFINITIONS AND INSTRUCTIONS

Sec.

200.1 Board.

200.2 Act.

200.3 Section.

200.4 Rule, regulation, and order.

200.5 Other terms.

200.6 Terms defined by act.

200.7 Instructions.

AUTHORITY: §§ 200.1 to 200.7 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425.

SOURCE: §§ 200.1 to 200.7 appear at 14 F. R. 3524.

§ 200.1 *Board.* The term "Board" means the Civil Aeronautics Board.

§ 200.2 *Act.* The term "Act" means the Civil Aeronautics Act of 1938 as amended.

§ 200.3 *Section.* The term "section" refers to a section of the act or a section of the regulations in this chapter, as indicated by the context.

§ 200.4 *Rule, regulation, order.* The terms "rule", "regulation", and "order" refer to the rules, regulations, and orders prescribed by the Board pursuant to the act.

§ 200.5 *Other terms.* The terms "this section", "pursuant to this section", "in accordance with the provisions of this section", and words of similar import when used in this chapter refer to the section of this subchapter in which such terms appear.

§ 200.6 *Terms defined by act.* Unless otherwise specifically stated, other words and phrases have the meaning defined in the act.

§ 200.7 *Instructions.* The regulations of the Board may be cited by section numbers. For example, this regulation may be cited as § 200.7 of the "Economic Regulations." The sections contained in the Rules of Practice under title IV and sections 1002 (d) to (i) of the act, may also be cited by appropriate rule numbers. For example, section 10 may be cited as "rule 10 of the Rules of Practice." In each case in which a rule, regulation, order, or other document of the Board refers to a regulation or a rule of practice of the Board by means of the numbering system used prior to the adoption of section numbers, such reference shall be deemed to relate to the appropriate new section number of this subchapter.

Certificates of Public Convenience and Necessity

PART 201—APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

Sec.

201.1 Formal requirements.

201.2 Amendments.

201.3 Incorporation by reference.

201.4 General provisions concerning contents.

201.5 Operations other than between fixed points.

AUTHORITY: §§ 201.1 to 201.5 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 401, 52 Stat. 987, 49 U. S. C. 481.

SOURCE: §§ 201.1 to 201.5 appear at 14 F. R. 3524.

§ 201.1 *Formal requirements.* Applications for certificates of public convenience and necessity or amendments thereof, shall meet the requirements set forth in Part 302 of this chapter as to (a) execution, number of copies, and service; (b) verification; and (c) formal specifications of papers. All pages of an application shall be consecutively numbered and the application shall clearly describe and identify each exhibit by a separate number or symbol. All exhibits shall be deemed to constitute a part of the application to which they are attached.

§ 201.2 *Amendments.* If, after receipt of any application, the Board shall request the applicant to supply it with additional information, such information shall be furnished in the form of an amendment to the original application. All amendments to applications shall be consecutively numbered and shall comply with the requirements of this part as

to form, number of copies, verification, and other essential respects.

§ 201.3 *Incorporation by reference.* In general it is desirable that incorporation by reference shall be avoided. However, where two or more applications are filed by a single carrier, lengthy exhibits or other documents attached to one may be incorporated in the others by reference if that procedure will substantially reduce the cost to the applicant.

§ 201.4 *General provisions concerning contents.* (a) The statements contained in an application shall be restricted to significant and relevant facts. They shall be free from argumentation or from expressions of opinions, except such as may be required by this part.

(b) Requests for authority to engage in air transportation between points in the continental United States and requests for authority to engage in air transportation to or from any point outside the continental United States shall not be included in the same application. Similarly, requests for authority to engage in scheduled air transportation and requests for authority to engage in nonscheduled air transportation shall not be included in the same application.

(c) Each application shall give full and adequate information with respect to each of the items set forth in this paragraph. In addition, the application may contain such other information and data as the applicant shall deem necessary or appropriate in order to acquaint the Board fully with the particular circumstances of its case. Among other things, every such application shall contain the following information:

(1) The full name and address of the applicant, the nature of its organization (individual, partnership, corporation, etc.) and the name of the State under the laws of which it is organized.

(2) A statement that the applicant is a citizen of the United States as defined by section 1 (13) of the act. It is not required that the application shall contain all the evidence which the applicant is prepared to present at the hearing or otherwise in support of such statement, but the application shall at least indicate the nature and result of its investigations in that matter and the character of the evidence it will be prepared to present in support of citizenship.

(3) An adequate identification of each route for which a certificate is desired, specifying the type or types of service (mail, passengers, and property) to be rendered on each such route, and whether or not such services are to be rendered in scheduled operations. The identification of each route shall name every terminal and intermediate point to be included in the certificate for which application is made.

(4) A map (which may be attached as an exhibit) drawn approximately to scale showing all terminal and intermediate points to be served, giving the approximate mileages between all adjacent points, and the principal over-all distances.

(5) A statement as to the type of aircraft applicant proposes to use in the

new service and whether such aircraft is presently owned by the applicant.

(6) If applicant does not hold a certificate of public convenience and necessity authorizing air transportation, the name and type of business of any affiliate, subsidiary, or principal stockholder of applicant engaged in any form of transportation as a common carrier or engaged in any phase of aeronautical activity.

(7) If applicant does not hold a certificate of public convenience and necessity authorizing air transportation, a statement as to whether or not applicant is currently engaged in air transportation pursuant to the authority granted by Part 291 of this chapter.

(8) If the application shows, pursuant to subparagraph (7) of this paragraph that the applicant is currently engaged in air transportation pursuant to the authority granted by Part 291 of this chapter, a statement that all reports due under said part from the applicant have been filed with the Board and the date or dates thereof. No proceedings other than those necessary for amendment or dismissal shall be had on any application which fails to comply with this subparagraph or discloses failure by the applicant to file such a required report while default in filing such report continues.

§ 201.5 *Operations other than between fixed points.* An application for a certificate authorizing operations other than between fixed points, or not having terminal or intermediate points capable of precise description, need comply with the provisions of § 201.4 (c) (3) and (4) only to the extent that it shall clearly describe the authorization sought by the applicant.

PART 202—TERMS, CONDITIONS AND LIMITATIONS OF CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY; INTERSTATE AND OVERSEAS AIR TRANSPORTATION

Sec.

- 202.1 Applicability.
- 202.2 Nonstop authorization.
- 202.3 Airport authorization.
- 202.4 Service pattern change.
- 202.5 Filing and service of notices and applications.
- 202.6 Provisions as to scheduled stops.
- 202.7 Failure to comply.

AUTHORITY: §§ 202.1 to 202.7 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 401, 52 Stat. 987, 49 U. S. C. 481.

SOURCE: §§ 202.1 to 202.7 appear at 14 F. R. 3525.

§ 202.1 *Applicability.* Unless a certificate or the order authorizing the issuance of such certificate shall otherwise provide, there shall be attached to the exercise of the privileges granted by each certificate authorizing an air carrier to engage in interstate or overseas air transportation pursuant to section 401 of the act such terms, conditions, and limitations as are set forth in this part, and as may from time to time be prescribed by the Board.

§ 202.2 *Nonstop authorization.* Subject to the provisions of section 405 (e)

of the act, the holder of a certificate may inaugurate scheduled nonstop service between any two points not consecutively named in its certificate (if such certificate authorizes service between such points and does not prohibit nonstop service between them) upon the effective date of a schedule page, showing such nonstop service, filed with the Board in accordance with Part 231 of this chapter.

§ 202.3 *Airport authorization—(a) Airport notice.* If the holder of a certificate desires to serve regularly a point named in such certificate through the use of any airport not then regularly used by such holder, such holder shall file with the Board written notice of its intention so to do. Such notice shall be filed at least 30 days prior to inaugurating the use of such airport. Such notice shall be conspicuously entitled Airport Notice, shall clearly describe such airport and its location, and shall state the reasons the holder deems the use of such airport to be desirable. The use of such airport may be inaugurated 30 days after the filing of such notice, unless the Board notifies the holder within said 30-day period that it appears to the Board that such use may adversely affect the public interest, in which event such use shall not thereafter be inaugurated (except as may be expressly permitted by such notification) unless and until the Board finds, upon application filed by the holder, that the public interest would not be adversely affected by such use. The Board may permit the use of an airport at any time after the filing of the Airport Notice whenever the circumstances warrant such action. In no event shall the holder use the provisions of this paragraph as authority to receive passengers at one airport and discharge such passengers at any other airport serving the same point.

(b) *Service of notice.* A copy of each Airport Notice shall be served upon such persons as the Board may designate in a particular case, and shall be served upon the following persons in all cases:

(1) The Postmaster General, marked for the attention of the Second Assistant Postmaster General;

(2) Each scheduled air carrier which regularly renders service to or from the point intended to be served through the proposed airport;

(3) The chief executives of the city (or other political subdivision) and of the State, in which are located the currently used airport, the proposed airport, and the point to be served, respectively. (If there be a state commission or agency having jurisdiction of transportation by air, notice shall be served on such commission or agency rather than on the chief executive of the State.)

§ 202.4 *Service pattern change—(a) Applicability.* This section shall be applicable only to certificates which contain a condition requiring that each trip operated by the holder of the certificate between points named in the route or a segment thereof shall (subject to exceptions set forth in such certificate) serve each terminal and intermediate point.

(b) *Application for change in service pattern.* If at any time the holder of

such a certificate desires to establish a service pattern omitting one or more of the points served or required to be served pursuant to such condition of the certificate, the holder shall make written application to the Board for approval thereof. Such application shall be conspicuously entitled Application for Change in Service Pattern, and shall set forth the facts relied upon to establish that the proposed service pattern is in the public interest and consistent with the holder's performance of a local air transportation service. The Board will grant such application to such extent, for such periods of time, and subject to such conditions as the Board deems proper and adequate, if it finds that such condition would prevent a proposed service pattern which is in the public interest and consistent with the holder's performance of a local air transportation service.

(c) *Service of application.* A copy of each Application for Change in Service Pattern shall be served upon such persons as the Board may designate in a particular case, and shall be served upon the following persons in all cases:

(1) The Postmaster General, marked for the attention of the Second Assistant Postmaster General;

(2) Each scheduled air carrier which regularly renders service to or from any point named on the route segment the service pattern of which the holder proposes to change;

(3) The chief executives of each point on such route segment and of each State in which are situated the points on such route segment. (If there be a State commission or agency having jurisdiction of transportation by air, notice shall be served on such commission or agency rather than the chief executive of the State.)

§ 202.5 *Filing and service of notices and applications.* An original and nine copies of each Airport Notice or Application for Change in Service Pattern shall be filed with the Board, each setting forth the names and addresses of the persons required to be served and stating that service has previously been made on all such persons by personal service or by registered mail. In the case of registered mail, the date of mailing shall be considered the date of service. Each copy of a notice or application served pursuant to this part shall be accompanied by a letter of transmittal stating that such service is made pursuant to Part 202.

§ 202.6 *Provisions as to scheduled stops.* (a) With respect to a flight carrying any passengers in addition to the crew members, a scheduled stop at a point within the continental United States shall not be scheduled to exceed 45 minutes on any flight if the origination or termination of such flight at such point is prohibited by any restriction in the certificate.

(b) With respect to a flight carrying only property or mail in addition to the crew members, a scheduled stop at a point within the continental United States shall not be scheduled to exceed 2 hours on any flight if the origination or termination of such flight at such

point is prohibited by any restriction in the certificate.

(c) A certificate containing a condition or restriction which has the effect of permitting the origination of a flight only at a certain point or points shall not be deemed to permit an increase in passenger or property-carrying capacity (by change of gage, substitution of equipment, addition of extra sections, or otherwise) on any such flight at any point other than a point at which the origination of such flight is authorized. A certificate containing a condition or restriction which has the effect of permitting the termination of a flight only at a certain point or points shall not be deemed to permit a decrease in passenger or property-carrying capacity on any such flight at any point other than a point at which the termination of such flight is authorized. With respect to a particular flight, a point shall not be deemed to be beyond another specified point within the meaning of such condition or restriction unless the holder serves such other specified point on such flight or omits service thereto pursuant to regulation or other specific authorization (such as authority to render nonstop service, or to suspend service to such point) of the Board.

§ 202.7 *Failure to comply.* It shall be a condition upon the holding of the certificate that any intentional contravention in fact by the holder of the provisions of Title IV of the act or of the orders, rules, or regulation issued thereunder, or of the terms, conditions, and limitations attached to the exercise of the privileges granted by the certificate, even though occurring without the territorial limits of the United States shall (except to the extent that such contravention in fact shall be necessitated by an obligation, duty, or liability imposed by a foreign country) be a failure to comply with the terms, conditions, and limitations of the certificate within the meaning of section 401 (h) of the act.

PART 203—TERMS, CONDITIONS AND LIMITATIONS OF CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY; FOREIGN AIR TRANSPORTATION

Sec.

- 203.1 General.
- 203.2 Change in approved service plan.
- 203.3 Nonstop service.
- 203.4 Requirements of foreign countries.
- 203.5 Airport notices.
- 203.6 Compliance.
- 203.7 Persons upon whom notice must be served.
- 203.8 Manner of filing and serving papers.

AUTHORITY: §§ 203.1 to 203.8 issued under sec. 205 (a); 52 Stat. 934, 49 U. S. C. 425. Interpret or apply sec. 401, 52 Stat. 937, 49 U. S. C. 481.

SOURCE: §§ 203.1 to 203.8 appear at 14 F. R. 3526.

§ 203.1 *General.* Unless the order authorizing the issuance of a particular certificate shall otherwise provide, there shall be attached to the exercise of the privileges granted by each certificate of public convenience and necessity authorizing an air carrier to engage in foreign air transportation issued pursuant to section 401 of the Civil Aeronautics Act of 1938, as amended, the terms, condi-

tions, and limitations set forth in this part and such other terms, conditions, and limitations as may from time to time be prescribed by the Board and approved by the President of the United States.

§ 203.2 *Change in approved service plan.* If the holder of a certificate authorizing it to engage in foreign air transportation to a general area desires, as part of its approved service plan, to engage in foreign air transportation to a point in such area not then included in its approved service plan, or to cease to engage in foreign air transportation to a point in such area in its approved service plan, such holder shall make written application to the Board for approval thereof. Such application shall be conspicuously entitled Application for Change in Approved Service Plan—Foreign Air Transportation, shall clearly describe such point, its location, the segment of the approved service plan to which such point is to be added or from which it is to be removed, and shall set forth the facts relied upon to establish that the proposed change in the approved service plan is in the public interest. At the time such application is filed with the Board, a copy thereof shall be served by the holder upon such persons as the Board may require. After the filing of such application the holder may submit to the Board additional information in support of such application and shall file and serve copies of such additional information in the manner required in the case of such application. The Board will grant such application if it finds that such proposed change in the approved service plan is not inconsistent with the public interest.

§ 203.3 *Nonstop service.* (a) If at any time the holder of a certificate desires to render a scheduled nonstop service omitting one or more of the intermediate points served or to be served pursuant to the certificate, and if such nonstop service is not then regularly scheduled by such holder, such holder shall file with the Board written notice of its intention to inaugurate such service. Such notice shall be filed at least 20 days prior to inaugurating such service, shall be conspicuously entitled Notice of Nonstop Service in Foreign Air Transportation and shall fully describe such service. At the time such notice is filed with the Board a copy thereof shall be served by such holder upon such persons as the Board may require: *Provided*, That, subject to the provisions of section 405 (e) of the act, nonstop service may be inaugurated between any two points at any time without the filing of the notice herein prescribed, if, during the 12 months preceding such inauguration, nonstop service was regularly scheduled by such holder between such points during a period of at least 45 days.

(b) Such nonstop service may be inaugurated upon the expiration of 20 days after the filing of such notice unless:

(1) The Board notifies such holder within said 20-day period that it appears to the Board that such service may adversely affect the public interest, in which event such service shall not be inaugurated unless and until the Board finds

upon application of the holder and after notice and public hearing that the public interest would not be adversely affected by such nonstop service; or

(2) Such service involves a schedule designated for the transportation of mail and the inauguration of such service on such day would be prohibited pursuant to the provisions of section 405 (e) of the act, in which event the inauguration of such service shall be subject also to said section. The Board may, subject to the provisions of section 405 (e) of the act, permit nonstop service to be inaugurated at any time after the filing of the Notice of Nonstop Service in Foreign Air Transportation herein prescribed whenever the circumstances warrant such action. The holder of a certificate issued pursuant to section 401 (e) (1) of the act, may, subject to the provisions of section 405 (e) of the act, continue to render any nonstop service regularly scheduled on the date of issuance of such certificate, although such nonstop service was not regularly scheduled by the holder on August 22, 1938, if the holder files a Notice of Nonstop Service in Foreign Air Transportation with respect to such service with the Board within 30 days after such date of issuance: *Provided*, That, if a direct, straight-line course between the points between which such service is operated appears to involve a substantial departure from the shortest course between such points as determined by the route described in the certificate, and if the Board shall, after notice and public hearing, instituted within 90 days after such date of issuance, find that the public interest would be adversely affected by such service on account of such substantial departure, such service shall thereupon be discontinued: *Provided further*, That, subject to the provisions of section 405 (e) of the act, nonstop service may be continued between any two points without the filing of the notice herein prescribed if, during the 12 months preceding the date of issuance of the certificate, nonstop service was regularly scheduled by the holder of the certificate between such points during a period of at least 45 days.

(c) Subject to the provisions of section 405 (e) of the act, nonstop service may be inaugurated between any two points at any time without the filing of the notice herein prescribed if, during the period from June 1, 1941, to May 31, 1942, inclusive, nonstop service was regularly scheduled by such holder between such points during a period of at least 10 days. This authorization shall remain in effect during the present war and thereafter until the Board shall by order declare the authorization terminated.

§ 203.4 *Requirements of foreign countries.* If at any time the holder of a certificate is required, in order to comply with any obligation, duty, or liability imposed by any foreign country (other than any obligation, duty, or liability arising out of a contract or other agreement entered into between an air carrier or any officer, or representative thereof, and any foreign country, if such contract or agreement shall have been disapproved by the Board as being contrary to the public interest):

(a) To inaugurate scheduled nonstop service omitting one or more of the intermediate points named in the certificate or included in the approved service plan and situated in one or more foreign countries; or

(b) To add a stop at a point not named in the certificate, or not included in the approved service plan, and situated in such foreign country; or

(c) To change the terminal point in such foreign country; such holder shall file with the Board written notice of such requirement. Such notice shall be filed within 20 days after the air carrier shall have been advised of such requirement; shall be conspicuously entitled Notice of Nonstop Service Required by Foreign Country, Notice of Additional Stop Required by Foreign Country, or Notice of Terminal Change Required by Foreign Country, as the case may be, and shall fully set forth the facts and circumstances relating to such requirement. At the time such notice is filed with the Board a copy thereof shall be served by the holder upon such persons as the Board may require. Such service may be inaugurated immediately upon the filing of such notice and may be continued unless and until the Board, after notice and public hearing, shall disapprove such service as being contrary to the public interest, or unless and until the Board shall find, after investigation, that such requirement of the foreign country is not in effect.

§ 203.5 Airport notices. (a) If the holder of a certificate desires to serve regularly a point through any airport not then regularly used by such holder, such holder shall file with the Board written notice of its intention so to do. Such notice shall be filed at least 30 days prior to inaugurating the use of such airport. Such notice shall be conspicuously entitled Airport Notice—Foreign Air Transportation, shall clearly describe such airport and its location, and shall state the reasons why the holder deems the use of such airport to be desirable. At the time such notice is filed with the Board a copy thereof shall be served by the holder upon such persons as the Board may require. Subject to the provisions of section 405 (e), the use of any such airport may be inaugurated upon the expiration of 30 days after the filing of such notice, unless within said 30-day period the Board shall serve upon the holder an order directing such holder to show cause why such use should not be disapproved: *Provided*, That, subject to the provisions of section 405 (e) of the act, the Board may permit the use of any airport prior to the expiration of such 30-day period whenever the circumstances warrant such action. Upon service of such order, such use shall not thereafter be inaugurated except as may be expressly permitted by such order unless and until the Board finds, after notice and public hearing, that the public interest would not be adversely affected by such use.

(b) If at any time the holder of a certificate is required, in order to comply with any obligation, duty, or liability imposed by any foreign country (other than any obligation, duty, or liability arising out of a contract or other agreement entered into between an air car-

rier, or any officer or representative thereof, and any foreign country, if such contract or agreement shall have been disapproved by the Board as being contrary to the public interest) to serve regularly a point or points in such foreign country through any airport not then regularly used by such holder, such holder shall file with the Board written notice of such requirement. Such notice shall be filed within 20 days after the air carrier shall have been advised of such requirement; shall be conspicuously entitled Airport Notice—Foreign Air Transportation—Change Required by Foreign Country; and shall fully set forth the facts and circumstances relating to such requirement. The use of such airport may be inaugurated immediately upon the filing of such notice and may be continued unless and until the Board, after notice and public hearing, shall disapprove the use of such airport as being contrary to the public interest, or unless and until the Board shall find, after investigation, that such requirement of the foreign country is not in effect.

§ 203.6 Compliance. It shall be a condition upon the holding of a certificate that any intentional contravention in fact by the holder of the terms of Title IV of the act or of the orders, rules, or regulations issued thereunder or of the terms, conditions, and limitations attached to the exercise of the privileges granted by the certificate, even though occurring without the territorial limits of the United States, shall, except to the extent that such contravention in fact shall be necessitated by an obligation, duty, or liability imposed by a foreign country, be a failure to comply with the terms, conditions, and limitations of the certificate within the meaning of section 401 (h) of the act.

§ 203.7 Persons upon whom notice must be served. A copy of each Application for Change in Approved Service Plan—Foreign Air Transportation, Notice of Nonstop Service in Foreign Air Transportation, Airport Notice—Foreign Air Transportation, Notice of Nonstop Service Required by Foreign Country, Notice of Additional Stop Required by Foreign Country, or Notice of Terminal Change Required by Foreign Country, as the case may be, filed with the Board pursuant to this part by the holder of a certificate of public convenience and necessity, shall be served upon the following:

(a) The Postmaster General, marked for the attention of the Second Assistant Postmaster General, if the holder's certificate authorizes the transportation of mail;

(b) The Secretary of State, marked for the attention of Chief, Aviation Division;

(c) In the case of an Application for Change in Approved Service Plan—Foreign Air Transportation, each scheduled air carrier which is authorized to serve the same general area in which is situated the point to which the holder, as part of its approved service plan, desires to engage, or to cease to engage, in foreign air transportation; and also each scheduled air carrier which is authorized

to serve a general area contiguous to the general area wherein such point is situated;

(d) In the case of an Airport Notice—Foreign Air Transportation, each scheduled air carrier which regularly renders service to or from the point intended to be served through the proposed airport;

(e) In the case of a Notice of Nonstop Service in Foreign Air Transportation or Notice of Nonstop Service Required by Foreign Country, each scheduled air carrier which regularly renders service to or from any point (not located in the continental United States) named in such certificate or located in a general area the holder is authorized by such certificate to serve;

(f) In the case of a Notice of Additional Stop Required by Foreign Country or Notice of Terminal Change Required by Foreign Country, each scheduled air carrier which regularly renders service to or from such additional stop or new terminal point, as the case may be; and

(g) Such other persons as the Board may specially designate in a particular case.

§ 203.8 Manner of filing and serving papers. Service of a copy of an application or notice upon any person pursuant to this part may be made by personal service, or by registered mail addressed to such person. Whenever service is made by registered mail, the date of mailing shall be considered as the time when service is made. Each copy of a notice, served pursuant to this part shall be accompanied by a letter of transmittal stating that such service is being made pursuant to this part. An executed original and nine copies of each such notice shall be filed with the Board, and each such copy shall be accompanied by a statement to the effect that the air carrier has served a copy thereof upon each such person required to be served hereunder. Such statement shall include the names and addresses of the persons upon whom a copy of such notice was served.

PART 205—TEMPORARY SUSPENSION OF SERVICE AUTHORIZED BY CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

Sec.

- 205.1 Service of notice.
- 205.2 Contents of notice.
- 205.3 Form and contents of application.
- 205.4 Additional service of notice.
- 205.5 Disposition.
- 205.6 Authorized suspensions of service.

AUTHORITY: §§ 205.1 to 205.6 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 401, 52 Stat. 987, 49 U. S. C. 481.

SOURCE: §§ 205.1 to 205.6 appear at 14 F. R. 3527.

§ 205.1 Service of notice. Prior to or coincident with the filing of any application for temporary suspension of service to or from any point in any certificate of public convenience and necessity (hereinafter referred to as certificate) to or from any point included in an approved service plan designating points which may be served in general areas named in any certificate, the holder of such certificate, unless otherwise authorized by the Board, shall cause a notice

of such filing together with a copy of the application to be served by personal service or registered mail upon:

(a) Each scheduled air carrier which regularly renders service to the point for which temporary suspension of service is sought;

(b) The chief executive of the city, town, or other unit of local government at any such point located in the United States or any Territory or possession thereof;

(c) The Secretary of State (marked for the attention of Chief, Aviation Division) if such point is not located in the United States or any Territory or possession thereof;

(d) The Postmaster General (marked for the attention of the Second Assistant Postmaster General) if the applicant's certificate authorizes the transportation of United States mail to or from such point;

(e) The manager or other individual having direct supervision over and responsibility for the management of the airport being used to serve such point at the time the application is filed.

§ 205.2 *Contents of notice.* Such notice shall state that it is being served pursuant to this part and shall indicate the date upon which the application will be or is being filed.

§ 205.3 *Form and contents of application.* The application shall be entitled Application for Order Authorizing Temporary Suspension of Service and in addition to the specific relief requested, shall contain a list of the persons upon whom notice of the filing thereof was or is being served, and facts relied upon to establish that the temporary suspension of service for which application is made is in the public interest. An executed original and nine copies of such application with a copy of the notice attached to each shall be filed with the Board.

§ 205.4 *Additional service of notice.* Action on the application may be withheld by the Board, in its discretion, pending proof of such additional service of notice by the applicant as the Board may direct.

§ 205.5 *Disposition.* The Board will grant such application if it finds that such temporary suspension of service is in the public interest. In case a certificate of public convenience and necessity contains a condition or limitation requiring service to a point on each trip or schedule operated on a route or a route segment by the holder of such certificate, an application based upon the fact that the air-carrier operating certificate of the holder does not authorize service to such point through any airport convenient thereto, with any type of aircraft then regularly being used, or proposed to be used, by the holder, will be granted only if the Board finds that such temporary suspension of service will not substantially change the character of the service for which the certificate of public convenience and necessity was granted, and is otherwise in the public interest. An order authorizing temporary suspension of serv-

ice will be subject to revocation or amendment by the Board at any time.

§ 205.6 *Authorized suspensions of service.* (a) Unless otherwise ordered by the Board, the holder of a certificate shall not be required to file an application or obtain an order of the Board:

(1) For temporary suspension of service to a point named in such certificate, or included in the holder's approved service plan, during such time as the air carrier operating certificate of the holder does not authorize service to such point through the airport and with the type of aircraft last regularly used by the holder to serve such point;

(2) For temporary suspension of service to (i) a point named in a certificate issued pursuant to section 401 (d) or 401 (e) (2) of the act, but never regularly served by the holder after the date of issuance of the certificate, or (ii) a point included in the holder's approved service plan, but never regularly served by the holder after the date on which such point was included in such approved service plan during such time as the air carrier operating certificate of the holder does not authorize service to such point through any airport convenient thereto with any type of aircraft then regularly being used (or, if the holder is not operating, with any type of aircraft proposed to be used) by the holder for scheduled operations between other points served pursuant to such certificate: *Provided*, That the provisions of this subparagraph shall not apply to the temporary suspension of service to a point by the holder of a certificate of public convenience and necessity if such certificate contains a condition or limitation requiring service to such point on each trip or schedule operated on a route or a route segment by the holder of such certificate; or

(3) In the case of a point named in a certificate issued pursuant to section 401 (e) (1) of the act, for continued temporary suspension of service to such point if such service was suspended during the 30 days immediately preceding July 31, 1939.

(b) With respect to any such point the Board may by order at any time revoke or amend the authority conferred on the holder of a certificate by this section.

PART 206—CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY; TEMPORARY INTERRUPTION OF SERVICE OR CHANGE OF ROUTE

§ 206.1 *Temporary interruption of service.* The temporary interruption of service to or from a point named in a certificate, or included in the holder's approved service plan, caused by adverse weather conditions, or by other conditions which the holder could not reasonably have been expected to foresee or control, shall not be deemed to constitute a temporary suspension of service within the meaning of Part 205 of this chapter or of the terms, conditions, or limitations of such certificate. (Sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or applies sec. 401, 52 Stat. 987, 49 U. S. C. 481) [14 F. R. 3528]

Permits to Foreign Air Carriers

PART 211—APPLICATIONS FOR PERMITS TO FOREIGN AIR CARRIERS

Sec.	
211.1	Formal requirements.
211.2	Filing and service.
211.3	Amendments.
211.4	Incorporation by reference.
211.5	General provisions regarding contents.

AUTHORITY: §§ 211.1 to 211.5 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 402, 52 Stat. 991, 49 U. S. C. 482.

SOURCE: §§ 211.1 to 211.5 appear at 14 F. R. 3528.

§ 211.1 *Formal requirements.* Applications for permits to engage in foreign air transportation under the terms of section 402 of the act (hereinafter called foreign air carrier permits) shall meet the requirements set forth in § 302.3 of this chapter as to execution, number of copies, formal specifications of papers, and verifications. Such verifications shall be subscribed and sworn to before a notary public or other officer authorized to administer oaths in the jurisdiction in which such application is executed. Notwithstanding the laws of the country of applicant's citizenship, an application verified before a United States consular officer will be deemed to have met the requirements of this section. All pages of an application shall be consecutively numbered, and the application shall clearly describe and identify each exhibit by a separate number or symbol. All exhibits shall be deemed to constitute a part of the application to which they are attached.

§ 211.2 *Filing and service.* Applications for foreign air carrier permits shall be forwarded to the Board, through diplomatic channels, by the government of the applicant's country of citizenship, and shall be deemed to have been filed on the date such applications are actually received by the Board. Each applicant shall furnish such additional copies of its application, and shall make such service thereof upon such other persons as the Board may at any time require.

§ 211.3 *Amendments.* Any information which the Board may request of an applicant subsequent to receiving its application, or any information which the applicant deems appropriate to submit thereafter, shall be furnished in the form of an amendment to the original application. All amendments to applications shall be consecutively numbered and shall comply with the requirements of this part as to form, number of copies, verification, and in all other essential respects.

§ 211.4 *Incorporation by reference.* In general it is desirable that incorporation by reference shall be avoided. However, where two or more applications are filed by a single carrier, lengthy exhibits or other documents attached to one may be incorporated in the others by reference if that procedure will substantially reduce the cost to the applicant.

§ 211.5 *General provisions regarding contents.* The statements contained in an application shall be restricted to sig-

nificant and relevant facts. They shall be free from argumentation or from expressions of opinion, except as such may be required by this part. Each application shall give full and adequate information with respect to each of the items set forth in this section. The application may contain such other information and data as the applicant shall deem necessary or appropriate in order to acquaint the Board fully with the particular circumstances of its case. Among other things, every such application shall contain the following information:

(a) The full name and address of the applicant, the nature of its organization (individual, partnership, corporation, etc.), and, if other than an individual, the name of the country under the laws of which it is organized and the statutory citation of such laws, if any. The citizenship of the applicant should be shown, as well as the percentage of direct and indirect beneficial and non-beneficial interest in applicant held by each government and aggregate of nationals of each government, other than the government of applicant's citizenship. If the applicant is governmentally owned or controlled in whole or in part, the extent of such governmental ownership or control should be shown.

(b) The name and official address of the competent air authority of applicant's country of citizenship having regulatory jurisdiction over applicant.

(c) An identification of the route or routes to be covered by the permit for which application is made, specifying the type or types of service (mail, passenger, and property) to be rendered on each such route, and whether or not such services are to be rendered in scheduled operations. The identification of each route shall name every terminal and intermediate point to be served by applicant in connection with the service for which a permit is sought.

(d) A map (which may be attached as an exhibit) drawn approximately to scale, showing all terminal and intermediate points, both in the United States and in all foreign countries to be served by applicant in connection with the service for which the permit is sought, giving the approximate air mileages between all adjacent points, and principal over-all distances.

(e) If the application is made pursuant to section 402 (c) of the act, it shall state that a permit for the services applied for was issued by the Secretary of Commerce under section 6 of the Air Commerce Act of 1926, as amended, giving the date of such issuance, and that such permit was in effect on May 14, 1938.

Tariffs of Air Carriers

PART 221—PREPARATION OF TARIFFS OF AIR CARRIERS

Sec.	
221.1	Definitions.
221.2	Form.
221.3	Title page.
221.4	Contents.
221.5	Statement of rates.
221.6	Statement of routes.
221.7	Rules.
221.8	Amendments.
221.9	Supplements.
221.10	Revised and additional pages.

AUTHORITY: §§ 221.1 to 221.10 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply secs. 403 and 404, 52 Stat. 992, 993, 49 U. S. C. 483, 484.

SOURCE: §§ 221.1 to 221.10 appear at 14 F. R. 3529.

§ 221.1 **Definitions.** As used herein, unless the context otherwise requires:

(a) "Carrier" means any air carrier or any foreign air carrier subject to section 403 of the Civil Aeronautics Act of 1938.

(b) "Rates" includes "fares" and "charges."

(c) "Rules" includes "regulations" and "other governing provisions."

(d) "Tariff" means a publication containing rates applicable to the transportation of persons or property, and rules relating to or affecting such rates or transportation, whether such rates and rules are combined in one publication or are stated in separate publications. A "loose-leaf tariff" shall be deemed to consist of that combination of pages, whether original or revised, which is currently effective.

(e) "Local rate" means a rate that applies for service solely over the line or route of one carrier. "Local tariffs" are those which contain local rates or rules.

(f) "Joint rate" means a rate that applies for through service over the lines or routes of two or more carriers and that is made by arrangement between such carriers evidenced by concurrence or power of attorney as provided in Part 222 of this chapter. "Joint tariffs" are those which contain joint rates or rules.

(g) "Through rate" means the total rate from point of origin to destination, whether a local rate, a joint rate, or combination of separately published rates.

§ 221.2 **Form.** (a) All tariffs shall be in book, pamphlet, or loose-leaf form; supplements shall be in book or pamphlet form. The pages of a tariff or supplement shall be 8½ by 11 inches (except that tariffs naming only rates for the transportation of property may be 9½ by 11½ inches) and shall be plainly printed, planographed, stereotyped, or prepared by other similar durable process on paper of good quality.

(b) The type used shall be of size not less than 8-point bold or full-face, except as provided in § 221.3 (a) and except that 6-point bold or full-face type may be used for explanation of reference marks and for column headings.

(c) A margin of not less than 1 inch, without any printing thereon, shall be allowed at the binding edge of each tariff or supplement thereto.

(d) Each carrier shall file tariffs under consecutive C. A. B. numbers. An agent shall file tariffs under his own C. A. B. numbers. Numbers shall run consecutively beginning with the next consecutive number in the existing series, or, if no tariffs shall have been issued previously, beginning with C. A. B. No. 1. Supplements to a tariff shall be numbered as provided in § 221.9 (a). If, for any reason a tariff or supplement is not numbered consecutively with the last filed publication in the same series, such tariffs or supplement must be accompanied by a memorandum explaining

why consecutive numbers were not used. When a publication is rejected by the Board as unlawful, the number which it bears must not be again used. Such publication must not thereafter be referred to as canceled, amended, or otherwise, but a publication that is issued to take the place of such rejected publication must bear the notation, "Issued in lieu of C. A. B. No. ----, (or Supplement No. ----), (or ---- Revised page No. ----) rejected by the Board."

(e) Pages of loose-leaf tariffs must be consecutively numbered in the upper right-hand corner as "Original page 1," "Original page 2," etc. (see § 221.10 for numbering original pages issued subsequent to the filing of the original tariff); and must show at the top of the page the name of the publishing carrier or agent (see § 221.3 (a) (2)), the page number, and the C. A. B. number of the tariff, and at the bottom of the page the date of issue, the effective date, and the name, title, and business address of the issuing officer or agent. No alteration in writing or erasure shall be made on any tariff or supplement thereto.

§ 221.3 **Title page.** (a) The title page of every tariff or supplement shall consist of durable flexible paper of sufficient weight and strength to withstand hard usage and shall contain the following information in the order named:

(1) On the upper right-hand corner, the C. A. B. number in prominent bold-face type, which shall, on printed tariffs, be not less than 12 point. Immediately under this number there shall be shown the C. A. B. number or numbers of the tariff or tariffs canceled thereby.

(2) On the upper central portion the name of the issuing carrier or agent.

(b) Below the name of the carrier or agent:

(1) A statement indicating whether the tariff contains local or joint rates and rules, or a combination thereof;

(2) A brief but reasonably complete statement of the territory within which, or the points from and to, or between which, the rates or rules apply; and, where the application is indicated by states, the names of all states to or from which rates apply;

(3) The date on which the rates and rules will become effective, shown on the lower right-hand corner; and the date on which the publication is issued, on the lower left-hand corner;

(4) The name, title, and address of the person issuing the tariff, near the bottom of the title page.

(c) Every publication which contains rates or rules effective upon a date different from the general effective date of such publication shall show on its title page a notation in substantially the following form:

Effective ----- 19---- (except as otherwise provided herein) or (except as provided on page ----)

(d) On every tariff, supplement, or revised page in which all rates or rules are made effective on less than 30 days' notice under permission or order of the Civil Aeronautics Board, a notation in substantially the following form shall be shown:

Issued on ----- days' notice under (here describe and show date and number of the permission or order, etc.) issued by the Civil Aeronautics Board.

(e) A tariff containing only rates that are intended to apply for a limited period shall show on the title page an expiration date to coincide with the final date upon which such rates are applicable; when limited-period rates are published in the same tariff with permanent rates, such limited-period rates shall be properly reference-marked to indicate their expiration date.

§ 221.4 *Contents.* Tariffs shall contain in the order named:

(a) A table of contents showing the pages in the tariff where information concerning the general subjects covered by the tariff will be found, such subjects to be arranged in alphabetical order in the table, for example:

	Page
Abbreviations.....	
Application of tariff.....	
Baggage.....	
Articles not accepted.....	

If a tariff contains so small a volume of matter that its title page or its interior arrangement plainly discloses its contents, the table of contents may be omitted.

(b) The corporate names of participating carriers, alphabetically arranged, together with the number of the power of attorney or the concurrence of each under which the tariff is issued.

(c) A complete index, alphabetically arranged, of all articles upon which specific rates are named therein, making reference to each page where specific rates on each article are published. The index may also include a list of articles that will not be accepted for transportation. If all of the specific rates to each destination in a general property tariff or a combined passenger and property tariff is arranged in alphabetical order by articles, the index of articles may be omitted from that tariff.

(d) Alphabetical indexes of points of origin and destination from and to or between which rates are named in the tariff, unless such points are arranged in continuous alphabetical order in the tables naming the rates, and appropriate conspicuous notation of that fact appears on the title page of the tariff or supplement. Such indexes must show precisely and clearly (by use of point index or item or page numbers) the place or places in the tariff where the rates from or to each point may be found. Reissuance of pages containing such indexes will be required when the indexes do not permit ready and convenient location of all of the rates from or to each point. Separate indexes of points of origin and destination shall be provided, except that when all, or substantially all, of the rates named in the tariff apply in both directions between the points shown therein, the points of origin and destination may be combined in one index. The State or other governmental unit in which each point is located must be shown in each index.

(e) Explanation of reference marks, symbols, and abbreviations of technical terms used in the tariff, if not explained on the pages where such reference

marks, symbols, and abbreviations are used.

(f) Such explanatory statements as may be necessary to remove all doubt as to the proper application of the rates and rules contained in the tariff. When rates are published for account of any carrier under authority of a limited concurrence or of a limited power of attorney, there shall be included in this section of the tariff such statement as is necessary to indicate clearly and definitely the extent to which the published rates apply for account of such carrier.

(g) General rules which govern the tariff, i. e., state conditions which in any way affect the rates named in the tariff, or the service under such rates. Each rule should be given a separate number. A rule affecting a particular rate must be specifically referred to in connection with such rate, except that rules affecting a limited number of the rates contained in the tariff, or applying for the account of only certain of the carriers for whom the rates are published, may be included in the explanatory statements authorized in paragraph (f) of this section. Reference to any rule published under the immediately preceding exception must be made in such manner as to leave no doubt concerning the application of the rates. A rate tariff may not refer to another rate tariff for rules.

(h) A statement of charges for excess baggage, sleeper service, and any other like services unless such charges are included in the statement of the rules governing such services.

(i) A statement of rates applicable for transportation of persons and property between the points named in the tariff as more particularly set forth in § 221.5.

(j) A clear and explicit statement of routes over which the published rates apply prepared in accordance with the provisions of § 221.6.

§ 221.5 *Statement of rates.* (a) If the same tariff contains rates for the transportation of passengers and rates for the transportation of property (other than the property of passengers carried as baggage), such rates shall be separately stated in distinct passenger and property sections of the tariff.

(b) All rates shall be clearly and explicitly stated (cents or dollars and cents) in terms of lawful money of the United States together with the name or proper designations of the places from and to which they apply; except that rates for transportation originating outside of the United States may be stated in terms of currencies other than lawful money of the United States. Rates stated in terms of foreign currency may be set forth in a separate tariff, or if included in the same tariff, must be set forth in a separate section which shall not precede the statement of rates in terms of lawful money of the United States. A rate stated in terms of lawful money of the United States shall not also be published in terms of a foreign currency. Tariffs may contain such information as may be required under the laws of any country in or to which an air carrier or foreign air carrier is authorized to operate.

(c) Rates for transportation by aircraft must be published for application from airport to airport, and must be stated separately from any charge made by the air carrier, or any subsidiary or affiliate thereof, for ground transportation to or from airports or for pick-up-and-delivery service; however, no separation of charges is necessary when the published rates include ground transportation at no additional charge. The tariff must definitely show any separate charge that is to be made by the air carrier, or any subsidiary or affiliate thereof, for ground transportation or pick-up-and-delivery service. Charges of others for such ground transportation or pick-up-and-delivery service may be shown in the tariff without being deemed to constitute a part thereof; but if shown must be plainly referenced to show that they are published for information only and not guaranteed by the air carrier.

(d) A tariff may provide rates for side trips from or to designated points by the addition of arbitraries to rates shown therein, but provisions for the addition of arbitraries shall be shown either in connection with the base rate or in a separate section which must specifically name the base point, and clearly and definitely state the manner in which such arbitraries shall be applied.

(e) When specific rates are established, the description of the article must be specific and the rates thereon may not be applied to analogous articles.

(f) When a carrier or carriers establish a local or joint rate for application over a designated route from point of origin to destination, such rate is the applicable rate of such carrier or carriers over that route, notwithstanding that it may be higher than the combination of rates between points on that route.

§ 221.6 *Statement of routes.* All tariffs containing joint passenger rates shall specify the route or routes over which each such rate applies, stated in such a manner that such routes may be definitely ascertained. Tariffs containing local passenger rates shall specify routes in the same manner if optional routing is available. Passenger tariffs must definitely provide that rates named therein apply only over routes specifically shown therein.

§ 221.7 *Rules.* (a) Rules relating to or affecting the application of rates may be published in a tariff other than the tariff naming the rates. The pertinent requirements of §§ 222.1, 221.2, 221.3 and 221.4 must be observed in the publication of rules tariffs.

(b) A rules tariff must provide that it governs only such rate tariffs as make specific reference thereto. Tariffs naming rates subject to a rules tariff must bear the following notation on the title page (or elsewhere as may be appropriate):

Governed, except as otherwise provided herein, by rules shown in (here insert name of issuing carrier or agent) Rules Tariff C. A. B. No. — supplements thereto, and succeeding issues thereof.

§ 221.8 *Amendments.* (a) Any change in or addition to a tariff shall be known as an amendment.

(b) A tariff may be amended at any time (1) by "reissuing" the tariff; i. e., by filing, posting and publishing an entirely new tariff which contains all of the unamended data in the previous tariff as well as a complete statement of the amended data, and which bears the next C. A. B. number in the series and directs the cancellation of the previous tariff; (2) by issuing a supplement (to a book or pamphlet tariff) constructed generally in the same manner, and arranged in the same order, as is the tariff (see § 221.9); or (3) by reprints of the pages of a loose-leaf tariff. (See § 221.10.)

(c) A rate or rule sought to be amended and the amendment thereto cannot be in effect at the same time. All amendments must be effected by specifically canceling the existing rate or rule, and publishing the new rate or rule which amends the existing rate or rule. Cancellation of the existing rate or rule must be made in the publication stating the new rate or rule, except as may be otherwise arranged with the Bureau of Economic Regulation in particular instances.

(d) The nature of each amendment must be indicated by use of the following uniform symbols, which shall be shown and explained in the publication in which they are used (see § 221.4 (e)) and which shall not be used for any other purpose:

- ◊ or (R) to denote reductions
- ◇ or (A) to denote increases
- △ or (C) to denote changes in wording which result in neither increases nor reductions in charges
- or (N) to denote addition.

(e) When a tariff, supplement or revised page canceling a previous issue omits points of origin or destination, route, rates, or rules contained in the previous issue, the new tariff, supplement, or revised page shall indicate the cancellation in the manner prescribed in paragraph (c) of this section, and, if such omission effects changes in charges or services, that fact shall be indicated by the use of the uniform symbols prescribed in paragraph (d) of this section.

(f) Matter brought forward without change from a tariff or revised page which has not become effective, also all matter brought forward without change from one supplement to another, must be designated "Reissued" in distinctive type and must show the original effective date and the number of the supplement, tariff, or revised page from which it is reissued. Reference marks may be used for this purpose providing the explanations thereof are made in the tariff or supplement in which the reference marks are used. Example: "No. ---- Reissued from C. A. B. No. 1, (or Supplement No. 1) effective ----." (Here show the date upon which the item became effective in the tariff or supplement so named.)

(g) Every publication which consists partly but not wholly of matter established upon less than statutory notice shall show, in connection with each change made effective on less than statutory notice, a notation that such matter is issued on ---- day's notice under ----. (Here give specific reference to the Spe-

cial Tariff Permission, decision, order, rule, or other authority.) (See § 221.3 (c).)

(h) Amended tariff matter that has been filed with the Board in error may be canceled in full or in part, on or before the date upon which such matter is to become effective, by refiling the existing matter erroneously amended upon less than 30 days' notice without obtaining special tariff permission for short-notice publication, provided that a full explanation of the attending circumstances is given in the letter of transmittal of the refiled matter (see § 222.2 (a) of this chapter). A tariff, supplement or revised page filed under this section must bring forward unchanged the existing tariff matter, properly reference-marked with the following notation:

Cancellation of proposed tariff matter published in error; issued upon less than 30 days' notice under permission granted by § 221.8 of the Economic Regulations of the Civil Aeronautics Board.

§ 221.9 *Supplements.* (a) The first supplement to a tariff shall be identified and numbered on the upper right-hand corner of the title page as follows:

Supplement No. 1
to
C. A. B. No. -----

Subsequent supplements shall be numbered consecutively in like manner. Each supplement shall specify on its title page, immediately under the supplement number and C. A. B. number of the tariff supplemented, the publications which the supplement cancels, and shall also specify the supplements that are in effect. The statement that the supplement cancels conflicting portions of the tariff or prior supplements (without showing the numbers of the prior supplements) shall not be used; cancellations must be specific.

(b) If matter to be amended has been amended by a previous supplement, specific cancellation shall be made of the matter as contained in the previous supplement, and specific reference shall be made not only to the page number or numbers (or other identifying designations) of the previous supplement containing such matter, but to the page number or numbers (or other identifying designations) of the tariff or of the supplement in which the matter was originally established.

(c) A supplement shall contain either a list of carriers participating in the tariff, as amended or shall state that the list of participating carriers is "as shown in tariff," or "as shown in tariff and effective supplements," to which may be added "except ----." (Here show corrections in, additions to, or eliminations from the original list that are effected by the supplement.) Changes in or additions to the list of participating carriers in the tariff or previous supplements shall be listed alphabetically as provided in § 221.4 (h). When a participating carrier is eliminated by supplement, such supplement must also provide for the cancellation of all rates and routes in which the carrier concurs.

(d) The aggregate volume of supplemental matter currently in effect shall

not exceed one-third of the volume of the principal tariff. The Board may direct the reissue of any tariff at any time.

§ 221.10 *Revised and additional pages.* (a) Reprints of existing pages of a loose-leaf tariff (see § 221.8) for the purpose of amending the existing page shall be known as "revised pages." Each such page shall show the number of the revision and the number of the page, and direct the cancellation of the previous page; for example, "1st Revised Page 1 cancels original Page 1," "2d Revised Page 1 cancels 1st Revised Page 1," "3d Revised Page 1 cancels 2d Revised Page 1." The term "revised page" must not be used to designate additional pages filed for the first time. (See paragraph (c) of this section.)

(b) When a revised title page is issued, the following notation shall be shown immediately under the effective date of the revised title page:

Original tariff effective ----- (Here show effective date of the original tariff.)

(c) When it becomes necessary to publish additional pages in a loose-leaf tariff, such additional pages must be designated "Original." If they are added between pages of the tariff, they must bear the same number as the preceding page, followed by a letter suffix: thus, "Original Page 4-A," "Original Page 4-B," etc. (Revisions of such pages must bear the same number, as "1st Revised Page 4-A.") If additional pages follow the last page of the tariff, they must be given the next consecutive numbers: thus, three pages added at the end of a tariff of 150 pages should be numbered "Original Page 151," "Original Page 152," and "Original Page 153." An original page may not be added for the purpose of changing rates or rules which concurrently appear on other pages of the tariff.

(d) When a revised page is issued which omits rates or rules previously published on the page which it cancels, and such rates or rules are published on a different page, the revised page shall make specific reference to the page on which the rates or rules will be found, and the page to which reference is so made will contain the following notation in connection with such rates or rules:

For ---- (Here insert rates or rules, as the case may be) in effect prior to the effective date hereof, see page ----.

Subsequent revised pages of the same number shall omit this notation insofar as this particular matter is concerned.

(e) The following method shall be used in identifying and checking revised pages filed for the purpose of amending loose-leaf tariffs: Each time revised or additional original pages are filed, such revised and additional original pages shall show, in the lower right-hand corner, correction numbers running in consecutive order beginning with No. 1, each revised and additional original page issued and filed at the same time being given its individual consecutive correction number. A permanent check sheet, containing in numerical order a list of correction numbers beginning with No. 1 and the following provision, shall be filed with the original tariff:

Each time revised or additional original pages are received, check marks should be made on the check sheet opposite the correction numbers corresponding to those appearing in the lower right-hand corner of the revised or additional original pages. If pages are received not bearing consecutive correction numbers, the issuing officer or agent should be requested to furnish the page bearing the correction number for which a page has not been received.

(f) When protective covers for a loose-leaf tariff are used, only such information should appear thereon as will remain constant and in use during the life of the tariff.

(g) Supplements shall not be issued to loose-leaf tariffs except for the purpose of canceling the tariff, or as authorized by § 222.5 of this chapter, or as otherwise permitted by the Bureau of Economic Regulation.

PART 222—FILING AND POSTING TARIFFS OF AIR CARRIERS

- Sec.
- 222.1 Who may file.
 - 222.2 Method of filing.
 - 222.3 Application for special tariff permission.
 - 222.4 Filing of initial tariffs.
 - 222.5 Suspensions.
 - 222.6 Concurrences.
 - 222.7 Powers of attorney.
 - 222.8 Revocation of concurrence or power of attorney.
 - 222.9 Statement of filing with foreign governments.

AUTHORITY: §§ 222.1 to 222.9 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply secs. 403 and 404, 52 Stat. 992, 993; 49 U. S. C. 483, 484.

SOURCE: §§ 222.1 to 222.9 appear at 14 F. R. 3531.

§ 222.1 *Who may file.* (a) Local tariffs shall be filed by an officer or duly authorized agent of the carrier.

(b) Joint tariffs shall be filed by an officer of one of the carriers (to be known as the issuing carrier), or by the duly authorized agent of each of the carriers, parties thereto. Such filing will constitute filing for all carriers parties thereto.

(c) An agent will be deemed to be duly authorized to file a local tariff and/or a joint tariff when appropriate power of attorney has been given to him for the purpose as provided in this part.

(d) A joint tariff may be filed by an officer of the issuing carrier only when each of the other carriers parties thereto has given its concurrence as provided in this part.

(e) A carrier issuing a power of attorney to an agent, or a concurrence to another carrier, to publish and file certain rates shall not publish in its own tariffs rates which duplicate or conflict with those published by such agent or other carrier under such power of attorney or concurrence.

(f) The filing of a tariff with the Board in no way relieves an air carrier from liability for any violation of the act or of regulations issued thereunder.

§ 222.2 *Method of filing.* (a) All tariffs, supplements, and revised pages filed with the Board shall be accompanied by a letter of transmittal 8½ by 11 inches in size, in form substantially as follows:

(Name of carrier or agent in full)

(Post Office address)
-----, 19-----
Tariff Transmittal No. -----
To the CIVIL AERONAUTICS BOARD,
Tariffs Section, Washington 25, D. C.
Sent you for filing in compliance with the requirements of the Civil Aeronautics Act of 1938, is accompanying publications issued by ----- and bearing C. A. B. No. ----- (or Supp. No. ----- to C. A. B. No. -----) (or ----- revised page No. ----- to C. A. B. No. -----), effective -----, 19-----, for the purpose of (here insert a comprehensive explanation of the accompanying tariff filing). This publication is concurred in by all carriers named therein as participants under continuing concurrences or powers of attorney now on file with the Civil Aeronautics Board, except the following named carriers, whose concurrences or powers of attorney are attached hereto:

(Signature) -----
(Title) -----

(b) A letter may be accompanied by more than one publication.

(c) If receipt is desired by the filing carrier or agent, letters of transmittal must be sent in duplicate, and one copy showing the date of receipt by the Board will be returned to the sender.

(d) Three copies of each tariff, supplement, or revised page must be transmitted to the Board in one package and under one letter of transmittal. The word "tariffs" must appear on the outside of the package, which must be addressed in conformity with the letter of transmittal.

(e) No tariff, supplement, or revised page will be received by the Board unless it is delivered to it free from all charges, including claims for postage.

(f) Tariff publications will be received for filing only by delivery thereof to the Board through normal mail channels or by delivery thereof by hand directly to that office of the Board charged with responsibility for maintaining the official file of tariffs, and will be received for filing only during the established business hours of the Board. A tariff publication will be deemed filed only upon actual receipt by the Board in accordance with such requirements, and any required period of notice will commence to run only from the time of such filing. Tariff publications received by the Board but subsequently rejected for filing will not be returned.

(g) Each carrier shall post and make available for public inspection at each of its stations or offices which are in charge of a person employed exclusively by the carrier, or by it jointly with another person, and at which property is received for transportation or at which tickets for passenger transportation are sold, all of the currently effective tariffs to which it is a party and containing the rates and rules applicable to the transportation by it of the property received or the passengers to whom tickets are sold at such stations or offices. A carrier will be deemed to have complied with the requirement that it "post" tariffs, if it maintains at each such station or ticket

office a file of current tariffs in complete form.

(h) Each carrier shall maintain permanently at its principal or general office a complete file of all tariffs issued by it or by its agents, including those tariffs in which it concurs.

(i) The granting of authority to issue tariffs under powers of attorney or concurrences does not relieve the carriers conferring the authority from the necessity of complying with the Board's regulations with regard to posting tariffs. Tariffs issued under such authority must be posted as required by these regulations.

(j) Each file of tariffs shall be kept in complete and accessible form. Employees of the carrier shall be required to give any desired information contained in such tariffs, to lend assistance to seekers of information therefrom, and to afford inquirers opportunity to examine any of such tariffs without requiring the inquirer to assign any reason for such desire.

§ 222.3 *Application for special tariff permission.* (a) The Civil Aeronautics Act of 1938 authorizes the Board in its discretion and for good cause shown to permit changes in rates on less than statutory notice, and also to permit departure from the Board's regulations. The Board will exercise the power only in cases where actual emergency and real merit are shown. Desire to meet the rates of a competing carrier that has given statutory notice of change in rates will not of itself be regarded as good cause for permitting change in rates or other provisions on less than statutory notice. Clerical or typographical errors in tariffs constitute good cause for the exercise of this authority, but every application based thereon must plainly specify the error together with a full statement of the attending circumstances, and must be presented with reasonable promptness after discovery of the error.

(b) Applications for permission to make changes or additions in tariffs on less than statutory notice, or to establish rates, fares, charges, rules and regulations in an initial tariff on less than 30 days' notice, or for waiver of the provisions of this section, must be made by the carrier or agent that holds authority to file the proposed publication.

(c) If the application requests permission to make changes in joint tariffs it must be filed for and on behalf of all carriers parties to the proposed change, and must so state.

(d) Two copies of applications (including amendments thereto and exhibits made a part thereof) shall be sent to the Civil Aeronautics Board, Bureau of Economic Regulation, Tariffs and Service Division, Washington 25, D. C.

(e) Applications for permission to publish on less than statutory or 30 days' notice shall be made on paper 8½ by 11 inches, shall be in substantially the form shown herein below, and shall give all the information required by this rule, together with any other pertinent facts. They shall be numbered consecutively and must bear the signature of the carrier's agent or officer, specifying his title.

RULES AND REGULATIONS

When the application is made by an agent, appropriate change should be made in the introductory and closing paragraphs of this form.

(Address)

(Date)

To the CIVIL AERONAUTICS BOARD,
Bureau of Economic Regulation,
Tariffs and Service Division,
Washington 25, D. C.
Special Tariff Permission Application No. _____

-----, by
(Name of carrier) (Name of officer, special agent, or on behalf of all carriers flying title)

parties to its tariff C. A. B. No. _____¹ applies to the Civil Aeronautics Board for permission under Section 403 of the Civil Aeronautics Act of 1938 and the Economic Regulations adopted pursuant thereto, to put in force the following tariff provisions to become effective _____ days after the filing thereof with the Civil Aeronautics Board:

(Here show matter as directed by par. (f) (1))
Your applicant further represents that the said:

(Here state in numbered paragraphs the data required by par. (f))

By: (Name of carrier)
(Name and title)

(f) Applications for permission to publish on less than statutory or 30 days' notice shall show the following information:

(1) The proposed tariff provisions, clearly and completely. For that purpose, an accompanying exhibit may be used if properly identified and referred to in the application. If the proposed provisions consist of rates, all points of origin and destination must be shown or definitely indicated; if permission is sought to establish or change a rule, the exact wording of the proposed rule must be given.

(2) The C. A. B. numbers of the tariffs in which the proposed rates or rules will be published. If publication is to be made in supplements or revised pages, this fact shall be shown.

(3) The rates or rules which it is desired to initiate or change, and the C. A. B. numbers of the tariffs (showing supplement and loose-leaf page numbers) in which they are currently effective. Where the matter to be shown is voluminous, or for other reasons is difficult of presentation, it may be included in an accompanying exhibit properly identified and referred to in the application. The extent to which cancellations will be made must be definitely indicated.

(4) The names of all air carriers and agents advised of the proposed rates or rules and whether they have been advised that it is proposed to establish such rates or rules on less than statutory or 30 days' notice. If such carriers or agents have

expressed their views in regard to the proposed provisions, a brief statement of their views shall be given.

(5) The special circumstances or unusual conditions which are relied upon as justifying the requested permission, together with any related facts or circumstances which may aid the Board in determining whether the requested permission is justified. (See paragraph (a) of this section.)

(g) Application seeking waiver of the provisions of this tariff regulation must conform to the requirements of this paragraph insofar as appropriate, and such waiver may be permitted by the Bureau of Economic Regulation of the Board.

(h) A Special Tariff Permission must be used in its entirety and in the manner set forth therein. If it is not desired to use the permission as granted, and less or more extensive or different permission is desired, a new application complying with the provisions of § 222.3 in all respects and referring to the previous permission must be filed.

(i) Any air carrier or foreign air carrier is hereby authorized to file initial tariffs upon less than 30 days' notice or to make tariff changes upon less than statutory notice without further action by the Board upon the following conditions having been fulfilled:

(1) An application for permission to make tariff changes upon less than statutory notice or file an initial tariff upon less than 30 days' notice has been duly filed in the form, and setting forth the information, required by this section;

(2) Such application has been approved in writing by the Director of the Bureau of Economic Regulation of the Board; and

(3) The initial tariffs shall be filed, and changes in tariffs shall be made, upon such notice as is approved by the Director of the Bureau of Economic Regulation, and shall be only those specifically approved.

(j) In all other cases, initial tariffs shall be filed, and tariff changes shall be made, upon less than 30 days' notice only when and to the extent that a particular application therefor has been approved by the Board.

(k) The Director of the Bureau of Economic Regulation will approve or disapprove in writing any application which has as its only purpose the correction of mechanical, clerical or administrative errors, or any application the disposition of which does not involve new and substantial questions of policy, but in acting upon any such application the Director will be governed by and act in accordance with the provisions of this paragraph. The Director can refer any application to the Board for disposition, and will so refer any application which he is not authorized to approve or disapprove.

(l) Any application disapproved by the Director pursuant to this paragraph is thereby denied, subject to review by the Board as hereinafter provided. In the event of such disapproval, an applicant may within 5 days after it has received written notice thereof file a written request for review of the denial

resulting from such disapproval. The Board will thereupon review the matter and enter an order finally disposing of the application.

§ 222.4 *Filing of initial tariffs.* Initial tariffs shall be filed with the Board at least 30 days prior to their effective date.

§ 222.5 *Suspensions.* Whenever the operation of any provision of a tariff, supplement, or loose-leaf page is suspended by the Board, the carrier or agent whose tariff is affected by such suspension shall immediately file, post, and publish a supplement prepared in such form and manner as may be required by the Bureau of Economic Regulation. Protests against and requests for suspension of tariff amendments under section 1002 (g) of the act will not, except under unusual circumstances which must be fully explained, be considered unless they are received by the Board within 5 days after the date such tariff amendments are filed with the Board.

§ 222.6 *Concurrences.* (a) A carrier desiring to give another carrier authority to publish rates or rules in which they, or they and other carriers join, shall give to such other carrier a concurrence in the form set forth below. Concurrences shall be prepared on good paper of durable quality, 8½ by 11 inches in size. They must be prepared in triplicate. The original shall be filed with the Board, the duplicate sent to the carrier to which such authorization is directed, and the third copy retained by the issuing carrier. When more than two carriers join in the same publication each of the concurring carriers shall give its concurrence to the issuing carrier. If not restricted, such concurrence will cover any tariff, supplement, or revised pages published by the issuing carrier in which the concurring carrier is shown as participating.

(b) A carrier giving a concurrence or concurrences may not itself publish rates or rules which would duplicate or conflict with rates or rules published under such concurrence or concurrences; and must exercise care to avoid giving concurrences to two or more carriers which could result in duplication of or conflict in rates or rules to which it is a party.

(c) A concurrence may be revoked upon not less than 45 days' notice to the Board by filing with the Board and serving at the same time a copy thereof on the carrier to whom the concurrence was given a notice of revocation of concurrence prepared in a manner similar to that prescribed in § 222.7 (d) in respect to notice of revocation of power of attorney.

§ 222.7 *Powers of attorney.* (a) The following form shall be used by a carrier to give authority to an agent to publish and file tariffs, supplements and revised pages, for and on behalf of such carrier. (See § 222.1 (a), (b) and (c)). Powers of attorney shall be prepared on good paper of durable quality, 8½ by 11 inches in size. They must be prepared in triplicate. The original shall be filed with the Board, the duplicate sent to the agent designated therein, and the third copy retained by the issuing carrier.

POWER OF ATTORNEY

No. _____

Cancels No. _____

(Corporate name of carrier)

(Post-office address)

_____, 19____

Know all men by this instrument:

That, (insert correct corporate name of carrier) makes and appoints (name of principal agent) attorney and agent, (1) for it alone, and (2) for it jointly with other carriers, to publish and file for it all tariffs, supplements, and revised pages it is required to publish and file by the Civil Aeronautics Act of 1938, and the regulations of the Civil Aeronautics Board issued pursuant thereto, and ratifies and confirms all that said attorney and agent may lawfully do by virtue of the authority herein granted and assumes full responsibility for the acts and failures to act of said attorney and agent.

(If the authority is to be restricted state specifically what authority is conferred, i. e., property rates, charges, rules, regulations, and routings not including air express rates, charges, rules, regulations, or routings; passenger fares, baggage rates, rules, regulations, and routings; Universal Air Travel Plan Tariff, supplements or revised pages thereto and successive issues thereof.)

And further, that (insert correct corporate name of carrier) makes and appoints (name of alternate agent) alternate attorney and agent to do and perform the same acts and exercise the same authority granted to (name of principal agent) in the event and

only in the event of the death or disability of (name of principal agent).

[CORPORATE SEAL]

Duplicate mailed to: (Name and address of agent.)

The term "disability" as used in the power of attorney shall mean resignation, permanent transfer to other duties, or other permanent absence, of the principal agent, and not temporary absence of the principal caused by vacation, illness, or other similar reasons.

(b) Powers of attorney, if executed without modification, confer unlimited authority to publish local rates for the carrier issuing the power of attorney and to publish joint rates for such carrier and such other carriers as shall have issued the necessary authority. If it is desired to limit the authority granted to the agent, the form may be modified by adding at the end of the first paragraph the statement: "This authority is restricted to the filing of the publications (or types of publications) set forth below", or by otherwise clearly stating the extent of the authority granted. If it is desired to limit the authority granted to publication of a particular tariff or tariffs, this may be done by giving a sufficiently accurate description of the title page of each tariff to identify it, and by showing the C. A. B. number, if known. If it is intended that the authority granted shall include supplements to, or reissues of, specifically named tariffs, that fact should be made clear by adding after the designation of the tariff, "supplements thereto and successive issues thereof."

(c) Powers of attorney may not contain authority to delegate to another the power thereby conferred. In giving authority to an agent to publish and file for the carrier by which such authority is issued, care must be taken to avoid duplicating to two or more agents authority which, if used, would result in conflicting rates or other provisions.

(d) A power of attorney may be revoked upon not less than 45 days' notice to the Board by filing with the Board, and serving at the same time a copy thereof on the agent in whose favor the power of attorney was executed, a notice of revocation in the form set forth and prepared in conformity with the requirements prescribed in this paragraph in respect to powers of attorney. Such revocation may be made for the purpose of eliminating agency publication of tariffs (generally or specifically), for the purpose of changing the authority previously granted to an agent without changing the agent, or for transferring authority from one agent and alternate to another agent and alternate. If the revocation is for the purpose of changing the authority previously granted to an agent without changing the agent the revocation notice must be accompanied by the new power of attorney and the form of notice set forth below should be modified to include specific reference to the new power of attorney. When it is desired to transfer authority from one agent and alternate to another agent and alter-

nate, such transfer may be accomplished by filing a new power of attorney for the agent and alternate thereafter to serve, which shall specifically cancel the previous power of attorney. Such new powers of attorney shall bear no effective date. The originals thereof should not be sent direct to the Board but must be forwarded to the new principal agent who, after he has secured all the necessary authorities, must file the originals with the Board all at one time together with three copies of a take-over supplement for each tariff taken over. Such powers of attorney will become effective upon the date they are received by the Board. The power of attorney issued for the purpose of the transfer of agents shall not increase nor decrease the authority contained in the power of attorney being canceled.

(Address)

(Date)

(e) A new agent, or an alternate assuming the duties of his principal, shall file with the Board and post and publish a supplement to each of the effective tariffs issued by the agent superseded. The title page of such supplement shall show no effective date but shall contain a statement substantially as follows: "On and after (here show the effective date of the power of attorney of a new agent, or the date on which the principal ceased to act) this publication shall be considered as the issue of (here show name of new agent or alternate)." When issued by a new agent such supplement shall also contain a list of participating carriers together with reference to the new power of attorney issued by each such carrier. An alternate shall submit to the Board on or before the date of filing of such supplement a sworn statement setting forth the facts which justify such exercise of authority. After an alternate has once exercised the authority granted him, the principal may not thereafter act under the same power of attorney.

§ 222.8 *Revocation of concurrence or power of attorney.* When a power of attorney or concurrence is revoked, appropriate revision or cancellation of the tariff or tariffs must immediately be made effective upon statutory notice. In the event of failure to make such revision or

cancellation, the rates in such tariff or tariffs remain applicable and must be observed.

§ 222.9 Statement of filing with foreign governments. Every air-carrier tariff, supplement, or revised page containing rates or rules which by treaty, convention, or agreement entered into between any foreign country and the United States are required to be filed with that foreign country, shall include a statement substantially as follows:

The rates, fares, charges, classifications, rules, regulations, practices, and services provided herein have been filed in each country in which filing is required by treaty, convention, or agreement entered into between that country and the United States, in accordance with the provisions of the applicable treaty, convention, or agreement.

PART 223—TARIFFS OF AIR CARRIERS; FREE AND REDUCED RATE TRANSPORTATION

Sec.

- 223.1 Definitions.
- 223.2 Persons to whom free and reduced rate transportation may be furnished.
- 223.3 Passes to be issued.
- 223.4 Form of pass.
- 223.5 Carrier's records.
- 223.6 Carrier's rules.
- 223.7 Filing of lists.
- 223.8 Application for authority to carry other persons.
- 223.9 Effect on other regulations.

AUTHORITY: §§ 223.1 to 223.9 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply secs. 403 and 404, 52 Stat. 992, 993, 49 U. S. C. 483, 484.

SOURCE: §§ 223.1 to 223.9 appear at 14 F. R. 3534.

§ 223.1 Definitions. As used in this part, unless the context otherwise requires—

(a) "Carrier" means an air carrier or a foreign air carrier.

(b) An "affiliate" of a carrier means a person—

(1) Who controls such carrier, or is controlled by such carrier or by another person who controls or is controlled by such carrier, and

(2) Whose principal business in purpose or in fact is:

(i) The holding of stock in one or more carriers, or

(ii) Scheduled transportation by air or the sale of tickets therefor, or

(iii) The operation of one or more airports, one or more of which are used by such carrier or by another carrier who controls or is controlled by such carrier or who is under common control with such carrier by another person, or

(iv) Activities devoted to the scheduled transportation by air conducted by such carrier or by another carrier which controls or is controlled by such carrier or which is under common control with such carrier by another person.

(c) Within the meaning of this section, "control" means the beneficial ownership of more than 40 percent of outstanding voting capital stock unless, as to the specific case, the Board shall have determined in a proceeding pursuant to section 408 of the act that control does not exist; such control may be direct or by or through one or more in-

termediate subsidiaries likewise controlled or controlling through beneficial ownership of more than 40 percent of outstanding voting capital stock.

(d) "Pass" means a written authorization issued by a carrier for free or reduced-rate transportation of persons or property; "annual pass" means such an authorization effective over a period of a calendar year; "term pass" means such an authorization effective over a specified period of less than a year; "trip pass" means such an authorization for a single one-way trip or round trip (whether the return trip is made via the same route as the outbound trip or a different one) between designated points.

(e) "Free transportation" means the carriage by a carrier of any person or property (other than property owned by such carrier) in air transportation without compensation therefor; "reduced-rate transportation" means such carriage for a compensation less than that under the rate, fare, or charge published in the tariffs of such carrier, on file with the Board and otherwise applicable to such carriage.

§ 223.2 Persons to whom free and reduced rate transportation may be furnished. Subject to the provisions of the act and the orders, regulations (including this regulation) and rules of the Board now or hereafter in effect, any carrier may at its option provide free or reduced-rate transportation to any or all classes of persons specifically mentioned in section 403 (b) of the act; and in addition thereto, all carriers engaged in overseas or foreign air transportation may furnish free or reduced-rate transportation to:

(a) Directors, officers, and employees and members of their immediate families, of any affiliate of such carrier, the name of which affiliate currently is included in the list of affiliates filed by such carrier pursuant to § 223.7 (a) (3);

(b) Directors, officers, and employees and members of their immediate families, of any person operating as a common carrier by air, or in the carriage of mails by air, or conducting transportation by air, in a foreign country, but only over routes and in territories served in such foreign country; and

(c) Other persons to whom such carrier is required to furnish free or reduced-rate transportation by law or by a contract or agreement, now or hereafter in effect, between such carrier and the government of any country served by such carrier, but only to the extent so required and only if such contract or agreement is filed with the Board and if the provisions thereof relating to such transportation are not disapproved by the Board as being contrary to the public interest.

§ 223.3 Passes to be issued. No carrier shall furnish any free or reduced-rate transportation unless a pass therefor has been issued, except that passes need not be issued:

(a) For any transportation provided for in any tariff on file with the Board and currently effective when such transportation is furnished;

(b) For necessary travel of the carrier's own directors, officers, or employees

in the performance of their official duties;

(c) For free or reduced-rate transportation of persons injured in aircraft accidents or of physicians or nurses attending such persons, or with the object of providing relief in cases of general epidemic, pestilence, or other calamitous visitation; or

(d) For free or reduced-rate transportation authorized in any other section of this chapter or order of the Board now or hereafter in effect.

§ 223.4 Form of pass. No carrier shall issue any form of pass other than an "annual", "term", or "trip" pass. Every pass shall be issued upon the express condition that it is subject to suspension or cancellation for the abuse of the privileges accorded thereunder, and must show on its face, at least, the name of the person or persons who, or whose property, is entitled to receive free or reduced-rate transportation. Each pass must bear either the signature in ink of an official named in the list referred to in § 223.7, or the facsimile signature of such an official and the countersignature in ink of some other official or responsible subordinate who is designated by name and title on the pass, and before presented for transportation such pass must bear the signature in ink of the person to whom issued; *Provided*, That regular tickets or bills of lading, stamped with a suitable notation, may be used as trip passes, and when so used need not conform to the provisions of this section as to form.

§ 223.5 Carrier's records. Each carrier shall maintain a record of all passes issued by it, which record shall be filed in such manner as to be accessible and convenient for examination, and shall contain the following information: The type of pass; dates of issuance and expiration; number; to whom issued, including name, address, and eligibility under the act and under this part; privileges accorded thereunder; points between which transportation is authorized, or, in the case of "annual" and "term" passes, the route number or system or particular points, as may be appropriate; and the name of the official upon whose authorization the pass was issued. All correspondence or memorandums relating to free or reduced-rate transportation shall be retained and made a part of the carrier's records. In the case of reduced-rate transportation, the records shall show the amount of the charge assessed or assessable.

§ 223.6 Carrier's rules. Each carrier shall file with the Board three copies of all instructions to its employees, and of all company rules and regulations, governing its practices in connection with the issuance and interchange of passes. If no instructions, rules, or regulations are in effect, then three copies of a general statement by an appropriate official of the carrier, comprehensively describing its practices in connection with the issuance and interchange of passes must be filed. Three copies of any change in any such instructions, rules, regulations, or statement of practices must be filed

with the Board within 30 days after the effective date of such change.

§ 223.7 *Filing of lists.* (a) Before issuing any pass each carrier shall file with the Board:

(1) A list containing the name and title of each of its officials upon whose authorization passes may be issued,

(2) A list containing the name and title of each of its officials who are authorized to request passes from other carriers, and

(3) In the case of issuance of passes to directors, officers, employees, or members of their immediate families, of any affiliate of such carrier, a list containing all of such carrier's affiliates and showing the exact relationship of each such affiliate to such carrier as respects control and principal business.

(b) Any change in any of such lists must be filed with the Board within 15 days after such change is effective; *Provided*, That an affiliate not previously included in any list filed with the Board must be included in a new list prior to the issuance of any pass to any person authorized to receive such pass by reason of such affiliation.

§ 223.8 *Application for authority to carry other persons.* Any carrier desiring special authorization under section 403 (b) of the act to furnish free or reduced-rate overseas or foreign air transportation to a person or persons not described in that section nor in § 223.2 may apply to the Board, by letter or other writing, for such authorization. The application shall state the identity of the person or persons to whom, and the points between which, such transportation is to be furnished, the time or approximate time of departure, and the carrier's reasons for desiring to furnish such transportation. The application shall contain a definite statement that the carrier is willing and intends to furnish such transportation if authority to do so is granted by the Board. Such application shall be deemed to have been approved and authority for the transportation granted unless the Board shall otherwise advise the carrier within 10 days after the application is received by the Board; *Provided*, That no application filed less than 10 days before the proposed transportation is to be furnished shall be deemed approved unless notice of such approval is received by the carrier prior to the furnishing of the transportation.

§ 223.9 *Effect on other regulations.* Nothing contained herein shall be construed as repealing or amending any provision of any other section of this subchapter.

PART 224—TARIFFS OF AIR CARRIERS; FREE AND REDUCED RATE TRANSPORTATION—ACCESS TO AIRCRAFT FOR SAFETY PURPOSES

- Sec.
224.1 Safety inspectors.
224.2 Requests for access to aircraft.
224.3 Traffic control and communications personnel.

AUTHORITY: §§ 224.1 to 224.3 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425.

Interpret or apply secs. 601 to 610, 52 Stat. 1007 to 1012, 49 U. S. C. 551 to 560.

SOURCE: §§ 224.1 to 224.3 appear at 14 F. R. 3536.

§ 224.1 *Safety inspectors.* Every air carrier shall carry, without charge, on any aircraft which it operates any duly authorized official or employee of the Board or of the Administrator of Civil Aeronautics who has been assigned to the duty of inspecting during flight such aircraft, its engines, propellers, appliances, route facilities, operational procedures or airman competency.

§ 224.2 *Requests for access to aircraft.* Such carriage without charge shall be granted, (a) on presentation to the appropriate agents of the air carrier of a certificate identifying the person presenting it as being entitled to such carriage signed by the Secretary of the Civil Aeronautics Board, or by the Assistant Administrator for Aviation Safety of the Office of the Administrator of Civil Aeronautics, or by any of the regional administrators of the Civil Aeronautics Administration, and signed by the person presenting it; and (b) on delivery to the appropriate agents of the air carrier, in duplicate, of a "Request for Access to Aircraft" on a form supplied by the Board or by the Administrator stating that the signer thereof desires access to a certain aircraft of the air carrier from a named point of departure on a designated date and hour to a named destination for the purpose of performing his official duties during flight of such aircraft. The air carrier shall retain one copy of each such request. On or before the 10th day of each month, each air carrier shall forward one copy of all such requests received by it during the second preceding calendar month to the Secretary of the Civil Aeronautics Board, Washington 25, D. C.

§ 224.3 *Traffic control and communications personnel.* Any air carrier may carry without charge on any aircraft which it operates any airway traffic control manager or assistant manager or any communications supervisor or assistant communications supervisor of the Administrator of Civil Aeronautics (including supervising officers of such persons) for the purpose of more fully and adequately acquainting such persons with the problems affecting airway traffic control and communications; *Provided, however*, That no such person shall be carried without charge on a round trip by any air carrier for such purpose more often than once in each year.

Transportation of Mail

PART 231—TRANSPORTATION OF MAIL; MAIL SCHEDULES

- Sec.
231.1 Filing of general schedules.
231.2 Form of schedules.
231.3 Title page.
231.4 Schedule pages.
231.5 Additions and changes.
231.6 Number of copies.
231.7 Effect of filing.

AUTHORITY: §§ 231.1 to 231.7 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. In-

terpret or apply sec. 405 (e), 52 Stat. 994, 49 U. S. C. 485.

SOURCE: §§ 231.1 to 231.7 appear at 14 F. R. 3536.

§ 231.1 *Filing of general schedules.* Each air carrier authorized to engage in air transportation shall file with the Board a statement, to be known as a "general schedule," showing the points between which the air carrier is authorized to engage in air transportation, all schedules of aircraft which will be operated by the air carrier between such points on the date the general schedule is to become effective, the time of arrival and departure at each point, and the frequency of each schedule. Prior to the date it engages in any scheduled air transportation each such air carrier shall file a general schedule with the Board; *Provided, however*, That an air carrier authorized to engage in air transportation on October 1, 1939, may file its first general schedule hereunder at any time within 20 days thereafter.

§ 231.2 *Form of schedules.* All general schedules and amendments thereto shall be in loose-leaf form, with pages 8½ by 11 inches in size, and shall be plainly typewritten, stereotyped, or mimeographed on durable paper. Each page shall be printed on one side only, and shall have a left margin at least 1 inch wide.

§ 231.3 *Title page.* The first page of a general schedule shall be designated as a title page and include the following:

- (a) Name of carrier,
- (b) The general schedule number,
- (c) A brief description of the contents,
- (d) The date of issue,
- (e) An effective date, and
- (f) The issuing officer's name and address.

§ 231.4 *Schedule pages.* (a) All pages following the title page shall be consecutively numbered and known as schedule pages. The name of the air carrier shall appear at the top of each schedule page, the page number in the upper right-hand corner, and the general schedule number in the upper left-hand corner. At the bottom of each schedule page shall appear its date of issue and effective date.

(b) Each schedule page shall indicate the route number, if any, and the terminal and intermediate points served by the schedules appearing on the page, shall show the time of arrival and departure of each schedule at such points, and the types of equipment operated on each schedule. Each schedule shall be assigned a trip or flight number. Each schedule shall contain an explanation of all symbols used thereon.

§ 231.5 *Additions and changes.* (a) An additional schedule may be added to a general schedule either by filing a new schedule page or by revising an existing schedule page. A change in a schedule page to show the addition of a new schedule or to show a change in an existing schedule shall be effected by reproducing the entire page. Such changed schedule page shall be designated a revised page, and shall cancel the former page; for example:

1st revised page 1, cancels original page 1.

(b) Any change in an existing schedule on which mail is being transported shall be filed with the Board at least 10 days prior to the effective date of such change: *Provided, however,* That any change in schedule, or the addition of a new schedule, required by an order of the Postmaster General under section 405 (e) of the act shall be filed with the Board by the air carrier on or before the effective date of such order: *And provided further,* That if the Board postpones the effective date of any such order pursuant to section 405 (e) of the act, the air carrier shall revise its general schedule to conform to the action taken on such order by the Board and shall make such revision as promptly as possible but not more than 10 days after the effective date of such order.

(c) Any change in a nonmail schedule, or the addition of a new nonmail schedule, shall be filed with the Board on or before the effective date thereof.

§ 231.6 *Number of copies.* Each air carrier shall transmit to the Board for filing three copies of each general schedule or revised page, accompanied by letters of transmittal (in duplicate if a receipt is desired) listing the general schedule or revised pages that are transmitted for filing. The letter of transmittal and all copies of the material listed therein shall be included in one package addressed to:

Civil Aeronautics Board,
Bureau of Economic Regulation
Tariffs and Service Division,
Washington 25, D. C.

§ 231.7 *Effect of filing.* The filing of a schedule, or a new or revised schedule page, with the Civil Aeronautics Board, shall not relieve an air carrier of requirements made by any other governmental instrumentality, as to filing or reporting.

PART 232—TRANSPORTATION OF MAIL; REVIEW OF ORDERS OF POSTMASTER GENERAL

Sec.

- 232.1 Application for review.
- 232.2 Form and contents of application.
- 232.3 Serving copies of application.

AUTHORITY: §§ 232.1 to 232.3 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 405 (e), 52 Stat. 994, 49 U. S. C. 485.

SOURCE: §§ 232.1 to 232.3 appear at 14 F. R. 3537.

§ 232.1 *Application for review.* Any person who would be aggrieved by an order of the Postmaster General issued under and within the meaning of section 405 (e) of the act may, within not more than 10 days after the issuance of such order, apply to the Board for a review thereof. An application filed hereunder shall be deemed to have been filed on the date on which it is actually received by the Board at its offices in Washington, D. C.

§ 232.2 *Form and contents of application.* (a) An application filed hereunder may be made in writing or by telegram. An application in writing shall be conspicuously entitled Application for a Review of Order of the Postmaster General Issued under section 405 (e) of the Civil Aeronautics Act, shall

specify the schedule affected and identify the order complained of, and shall specify the manner in which the applicant is or would be aggrieved by the order, the relief sought, and the facts relied upon to establish that the public convenience and necessity require that such order be amended, revised, suspended, or canceled by the Board. The execution, number of copies, and verification of a written application filed hereunder, and the formal specifications of papers included in such application shall be in accordance with the requirements of the Rules of Practice relating to applications generally (see Part 302 of this chapter).

(b) If the application for a review is made by telegram, such telegram shall succinctly state the substance of the matters to be set forth in the written application, and shall be confirmed and followed by an application in writing.

§ 232.3 *Serving copies of application.* At the time a written or telegraphic application is filed hereunder a copy thereof shall be served by personal service or registered mail upon the Postmaster General and upon the air carrier operating or ordered to operate the mail schedule in question. Each copy so served shall be accompanied by a letter of transmittal stating that such service is being made pursuant to this section.

PART 233—TRANSPORTATION OF MAIL; FREE TRAVEL FOR POSTAL EMPLOYEES

Sec.

- 233.1 Postal employees to be carried free.
- 233.2 Credentials required.
- 233.3 Requests to be filed.
- 233.4 Issuance of credentials and transportation request forms by Post Office Department.

AUTHORITY: §§ 233.1 to 233.4 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 405 (m), 52 Stat. 994, 49 U. S. C. 485.

SOURCE: §§ 233.1 to 233.4 appear at 14 F. R. 3537.

§ 233.1 *Postal employees to be carried free.* Every air carrier carrying the mails shall carry, on any plane that it operates and without charge therefor, the persons in charge of the mails when on duty, and the following officers, agents, and inspectors of the Post Office Department, when such persons are traveling on official business relating to the transportation of mail by aircraft and are duly accredited as hereinafter provided:

- (a) Postmaster General.
- (b) The Executive Assistant to the Postmaster General.

(c) The First Assistant Postmaster General; the Third Assistant Postmaster General; the Fourth Assistant Postmaster General; the Second Assistant Postmaster General; his Confidential Assistant; his Under Second Assistant and his four Deputy Second Assistants; the Administrative Officer, Air Postal Transport; the Solicitor of the Post Office Department and the Associate Solicitor and any attorney in the Office of the Solicitor who at the time is assigned by the Solicitor to handle matters relating to the transportation of mail by aircraft; the

Chief Inspector and the Assistant Chief Inspector.

(d) The Director of Domestic Air Postal Transport and the Director of Foreign Air Postal Transport.

(e) The five Regional Superintendents, and the five Assistant Regional Superintendents, Air Postal Transport, located respectively at New York, N. Y., Chicago, Ill., San Francisco, Calif., Atlanta, Ga., and Fort Worth, Texas; the Regional Superintendents and Assistant Regional Superintendents at Large, Air Postal Transport.

(f) The General Superintendent, 13th Division, Railway Mail Service, located at Seattle, Wash., and the District Superintendent and Assistant District Superintendent, Railway Mail Service, located at Anchorage, Alaska, when traveling between Seattle, Wash., and Alaska or within Alaska on official business relating to the transportation of mail to, from and within Alaska.

(g) Any inspector of the Post Office Department.

(h) Any additional agent or officer of the Post Office Department designated by the Postmaster General.

§ 233.2 *Credentials required.* (a) Any person described in paragraphs (a) to (f), inclusive, of § 233.1 shall be deemed to be duly accredited upon exhibition of a certificate of the Postmaster General that the bearer is one of the persons so described and is entitled to free transportation when traveling on official business relating to the transportation of mail by aircraft, and bearing the signature of the person so described.

(b) Any person described in paragraphs (g) and (h) of § 233.1 shall be deemed to be duly accredited upon exhibition of proper credentials evidencing that he is an inspector, officer, employee, or agent of the Post Office Department, and upon presentation of a Request for Free Transportation by Air (on such form as the Post Office Department may prescribe) executed by him in triplicate and stating:

- a. The points from and to which the person is to be furnished free transportation;
- b. The tariff fare for the transportation requested, and
- c. The official position of the traveler and that such travel is on official business relating to the transportation of mail by aircraft.

§ 233.3 *Requests to be filed.* Each air carrier on or before the 20th day of each month shall forward one copy of every Request for Free Transportation by Air accepted by it during the preceding calendar month, to the Secretary, Civil Aeronautics Board, Washington 25, D. C., and one copy to the Deputy Second Assistant Postmaster General, Post Office Department, Washington, D. C.¹

§ 233.4 *Issuance of credentials and transportation request forms by Post Office Department.* With regard to free air travel by the persons described in § 233.1 the Postmaster General shall be responsible (a) for the issuance of proper credentials, (b) for prescribing proper

¹ The third copy shall be preserved by the air carrier in its records in compliance with the requirements of this subchapter. See § 249.4 item 48-B.

transportation request forms where required, and (c) for authorizing such travel, subject to such rules and regulations as he may prescribe.

PART 234—TRANSPORTATION OF MAIL; PETITIONS FOR DETERMINATION OF RATES

- Sec.
234.1 Number of copies.
234.2 Verification.
234.3 Amendments.
234.4 Formal requirements.
234.5 Time of filing.
234.6 Contents of petitions.
234.7 Service on Postmaster General.

AUTHORITY: §§ 234.1 to 234.7 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 406, 52 Stat. 998, 49 U. S. C. 486.

SOURCE: §§ 234.1 to 234.7 appear at 14 F. R. 8537.

§ 234.1 *Number of copies.* Ten copies of each petition shall be filed with the Board. Only one of such copies need be actually executed on behalf of the petitioner. The names and titles of all signing officers shall be clearly typed or printed beneath their signatures. All unexecuted copies filed with the Board shall contain typed, printed, or facsimile signatures.

§ 234.2 *Verification.* The signed copy of each petition shall be verified by the petitioner. If the petitioner is a partnership, such verification shall be made by two or more of the partners. If it is a corporation, business trust, or other similar organization, the petition shall be verified by three of its officers, who shall be, respectively, the chief executive, the chief financial, and the chief operating officer. In the event of the unavailability of any such officer, the acting officer charged with the responsibility for his duties may execute such verification in his stead. Every such verification shall set forth that the persons verifying the same have read, and are familiar with the contents of, the petition and the attached exhibits; that they intend and desire that, in granting or denying the relief applied for, the Board shall place full and complete reliance on the accuracy of each and every statement therein contained; that they are familiar with the facts therein set forth, and that, to the best of their information and belief, every statement contained in the petition is true and no such statement is misleading. Every such verification shall be subscribed and sworn to before a notary public or other officer authorized to administer oaths in the jurisdiction in which such petition is executed.

§ 234.3 *Amendments.* If, after receipt of any petition, the Board shall request the petitioner to supply it with additional information, such information, except that furnished in formal proceedings, shall be furnished in the form of an amendment to the original petition. Each amendment (including those made on the petitioner's own initiative) should be consecutively numbered, and shall comply with the requirements of this regulation as to form, number of copies, manner of execution, verification, and all other essential re-

spects. In the event that any petition shall be amended, the amendment shall contain a statement that a copy thereof has been served on the Postmaster General by sending the same to him by registered mail, postpaid, prior to the filing with the Board of such amendment.

§ 234.4 *Formal requirements.* Every petition shall be made on paper approximately 8½ by 13 inches in size except that exhibits or other documents attached thereto may be folded to those dimensions. Every petition shall be typewritten, printed, or reproduced by some other process which will produce a clear and durable result on firm, tough paper. Each copy must be clear and legible in all respects. A margin of at least 1 inch in width shall be left on the left-hand side of all pages, and all petitions must be bound on that side. All pages of a petition shall be consecutively numbered and the petition shall clearly describe and identify each exhibit by a separate number or symbol. All exhibits shall be deemed to constitute a part of the petition to which they are attached.

§ 234.5 *Time of filing.* A petition shall be deemed to have been filed only when it is actually received by the Board at its office in Washington, D. C.

§ 234.6 *Contents of petitions.* The petition should, in accordance with the provision of section 406 (c) of the act, include a statement of the rate the petitioner believes to be fair and reasonable. In this connection, the rate-making elements set forth in section 406 (b) of the act should be particularly considered by the petitioner in the preparation of the petition. Opportunity for argument will be given at the public hearing.

§ 234.7 *Service on Postmaster General.* The petition shall contain a statement that the petitioner has served a copy of the petition on the Postmaster General by sending the same to him by registered mail, postpaid, prior to the filing of the petition with the Board. The petition need not be accompanied by any further proof of service, but, upon setting any petition down for public hearing, the Board will cause notice of such hearing to be given to such interested parties as it deems appropriate in the particular case.

Accounts, Records and Reports

PART 241—FILING OF REPORTS BY CERTIFICATED AIR CARRIERS

- Sec.
241.1 Reports of financial and operating statistics.
241.2 Uniform system of accounts.

AUTHORITY: §§ 241.1 and 241.2 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 241.1 and 241.2 appear at 14 F. R. 8538.

§ 241.1 *Reports of financial and operating statistics.* Each air carrier holding a certificate of public convenience and necessity shall make periodic financial and statistical reports to the Board using the appropriate schedules of the Report of Financial and Operating Statistics for

Air Carriers, CAB Form 41; Interim Operating Statement and Selected Expenses, CAB Form 41 (a), and such amendments thereto as may hereafter be approved by the Board. Such reports shall be made in accordance with, and shall be filed with the Secretary of the Board at times specified by the reporting procedure contained in the Uniform System of Accounts for Air Carriers, effective January 1, 1947, and such amendments thereto as may hereafter be approved by the Board.

§ 241.2 *Uniform system of accounts.* Each air carrier engaged in scheduled air transportation shall keep its accounts, records, and memoranda in accordance with the Uniform System of Accounts for Air Carriers issued by the Civil Aeronautics Board, dated January 1, 1947, and such amendments thereto as may hereafter be prescribed by the Board.

PART 242—FILING OF REPORTS BY IRREGULAR AIR CARRIERS AND NONCERTIFICATED CARGO CARRIERS

- Sec.
242.1 Statistical and flight reports required.
242.2 Statistical reports by small irregular carriers.
242.3 Statistical reports by large irregular carriers and noncertificated cargo carriers.
242.4 Flight reports by large irregular carriers.
242.5 Flight reports by noncertificated cargo carriers.

AUTHORITY: §§ 242.1 to 242.5 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 242.1 to 242.5 appear at 14 F. R. 3538.

§ 242.1 *Statistical and flight reports required.* Statistical reports shall be filed with the Board by each small irregular carrier¹ in accordance with § 242.2, and by each large irregular carrier and noncertificated cargo carrier in accordance with § 242.3. Flight reports shall be filed with the Board by each large irregular carrier in accordance with sub § 242.4 and by each noncertificated cargo carrier in accordance with § 242.5. Each small irregular carrier, large irregular carrier, and noncertificated cargo carrier shall keep all accounts, records, and memorandums (including the accounts, records, and memorandums of the movement of traffic, as well as of the receipts and expenditures of money), which are needed in order to accomplish full compliance with the reporting requirements of this part. Such accounts, records, and memorandums as relate to statistical reports shall be preserved for 3 years, and such as relate to flight reports shall be preserved for 1 year. The reports to be filed by such carriers shall be pre-

¹ Section 2912 of this subchapter provides, as to the aircraft units utilized in the transportation services of an irregular air carrier; that, if "the allowable gross take-off weight exceeds 10,000 pounds for any one unit or 25,000 pounds for the total of such units (disregarding units of 6,000 pounds or less), such carrier shall be classified as a 'large irregular carrier', otherwise, such carrier shall be classified as a 'small irregular carrier'."

pared in accordance with the following provisions and shall be certified to be correct by a responsible officer of the reporting carriers.

§ 242.2 *Statistical reports by small irregular carriers.* (a) For the calendar year 1947 and thereafter for each succeeding calendar year, each small irregular carrier shall file a statistical report. Such report for the year 1947 shall be filed not later than July 15, 1948; and thereafter such report shall be filed within 45 days after termination of the reporting period.

(b) The statistical report shall contain the following data:

(1) *Balance sheet or statement of investment.* At end of reporting period.

(2) *Profit and loss statement.* Insofar as practicable, distinguish items attributable to transportation operations from items attributable to other operations; e. g., plane rentals, flying schools, airport services, etc.

(3) *Airplanes utilized.* Tabulation showing aircraft registration number, type, cost, date of acquisition, and the amount of accrued depreciation for each airplane owned as of the end of the reporting period.

(4) *Personnel.* For the payroll period ending nearest the middle of the last month of the reporting period, specify the number of personnel engaged in transportation operations, the number engaged in other operations, and the total.

(5) *Transportation of passengers or cargo.* (i) Revenue aircraft hours and miles.

(ii) Number of revenue passengers and tons of revenue cargo.

(iii) Revenue passenger-miles and revenue ton-miles of cargo.

§ 242.3 *Statistical reports by large irregular carriers and noncertificated cargo carriers.* (a) For the calendar year 1947, and thereafter for the calendar quarter ending March 31, 1948, and for each succeeding calendar quarter, each large irregular carrier and each noncertificated cargo carrier shall file a statistical report. Such reports for the year 1947 and for the first quarter of 1948 shall be filed not later than July 15, 1948, and thereafter, such report shall be filed within 45 days after termination of the reporting period.

(b) Such report shall contain the following data:

(1) *Balance sheet.* As of end of reporting period.

(2) *Profit and loss statement.* Insofar as practicable, distinguish items attributable to transportation operations from items attributable to other operations.

(3) *Airplanes utilized.* Tabulations showing type, aircraft registration number, and date acquired, for each airplane owned or rented as of the end of the reporting period, and indicating whether or not such airplane is utilized in transportation operations. For each airplane owned, such tabulation shall specify the cost thereof and the amount of accrued depreciation. For each airplane rented, such tabulation shall specify the amount of the rental. If data for a particular quarter are the same as those sub-

mitted for the previous quarter, a statement to that effect will suffice.

(4) *Personnel.* For the payroll period ending nearest the middle of the last month of the reporting period, set forth data as follows:

(i) The number of flight personnel engaged in transportation and the number of other activities, such as flight training.

(ii) The number of ground personnel engaged in transportation and the number in other activities.

(iii) The total number of personnel.

(5) *Transportation.* For the following data, distinguish between operations which were, and operations which were not, performed under letter of registration:

(i) Revenue aircraft hours and miles, and total aircraft hours and miles.

(ii) Number of revenue passengers and tons of revenue cargo.

(iii) Revenue passenger-miles and revenue ton-miles of cargo.

(6) *Station data.* Reports by noncertificated cargo carriers shall contain also the following information, covering only operations performed pursuant to letter of registration, and set forth by points so authorized to be served:

(i) The number of flights arriving at and departing from each station during the period covered.

(ii) The total tons of cargo enplaned and deplaned at each station during the period covered.

§ 242.4 *Flight reports by large irregular carriers.* (a) Commencing with a report for the second calendar quarter of 1948, the 3 months' period ending June 30, 1948, each large irregular air carrier shall file a flight report for each calendar quarter within 20 days after the termination of the reporting period. Data reported pursuant to paragraph (b) (1) and (b) (3) of this section shall be available for official use on behalf of the Civil Aeronautical Board, but shall otherwise be withheld from public disclosure except as disclosure may be necessary in carrying out responsibilities under section 412 of the act.

(b) Requirements for flight report are as follows:

(1) *Chronological tabulation.* The flight report shall contain a tabulation of all flights other than training and test flights on which no goods or passengers are carried, in chronological order, setting forth the following data for each such flight:

(i) Registration number of the aircraft.

(ii) An indication by the letters "D", "P", "C", or "PC" whether the flight was "deadhead" or carried "passengers," or "cargo," or both "passengers and cargo."

(iii) The date of departure from the point of origin and from all points at which passengers or cargo were enplaned or deplaned, and the terminal point. List such points in the order served.

(2) *Agreements and manifests.* The flight report shall include memorandums of all oral agreements, copies of all written agreements, and copies of all passenger and cargo manifests covering flights of the following categories:

(i) Each flight on which persons, either revenue or nonrevenue (other than crew required by applicable Civil Air

Regulations), were carried between a point in the United States (as defined by section 1 (32) of the Civil Aeronautics Act) and a point outside thereof.

(ii) Each flight which, in the opinion of the carrier, was not in common carriage.

(3) *Other data.* For each flight of the categories designated by subparagraph (2) of this paragraph, a tabulation of the following data shall be submitted (unless the information is available from instruments filed pursuant to said item):

(i) Name and address of the person for whom the flight was operated.

(ii) Manner in which passengers and cargo transported on such flight were obtained (solicitation, advertising, circular, etc.)

(iii) Nature, terms, and conditions of the arrangements for such flight.

(iv) Obligations and responsibilities of the parties to the arrangement in connection with the transportation.

(v) Number of persons (other than crew required by applicable Civil Air Regulations) carried on each flight of the category designated by subdivision (i) of this subparagraph.

(4) *Agreements with agencies, etc.* The flight report shall state whether or not any passengers or cargo were transported pursuant to arrangements made with any traffic generating agencies (such as ticket agents, travel agents, travel bureaus, forwarders, consolidators, etc.), and shall include memorandums of all oral agreements and copies of all written agreements covering any such arrangements. For each such arrangement, a tabulation of the following data shall be submitted (unless the information is available from the instruments filed):

(i) Name and address of the agency party to the arrangement.

(ii) Nature, terms, and conditions of the arrangement, including basis on which agency compensation is computed.

(iii) Obligations and responsibilities of the parties in connection with the transportation.

(iv) Statement as to whether or not there was any expressed or implied agreement as to number of flights to be operated or amount of space to be made available.

§ 242.5 *Flight reports by noncertificated cargo carriers.* (a) For the calendar quarter ending March 31, 1948, each noncertificated cargo carrier shall file a flight report by July 15, 1948, and for each succeeding calendar quarter shall file such report within 20 days after the termination of the respective reporting period. Data reported pursuant to this section shall be available for official use on behalf of the Civil Aeronautics Board, but shall otherwise be withheld from public disclosure unless reportable pursuant to section 412 of the act.

(b) Requirements for the flight report are as follows:

(1) *Agreements and manifests.* The flight report shall state whether or not any flights of the following categories were operated, and shall include memorandums of all oral agreements, copies of all written agreements, and copies

of all passenger and cargo manifests covering any such flights:

(i) All flights on which persons, either revenue or nonrevenue (other than crew required by applicable Civil Air Regulations) were carried.

(ii) All flights to or from any point not authorized to be served by the carrier pursuant to Part 295 of this subchapter.

(2) *Other data.* For each flight of the categories designated by subparagraph (1) of this paragraph a tabulation of the following data shall be submitted (unless the information is available from instruments filed pursuant to said subparagraph):

(i) Name and address of the person for whom the flight was operated.

(ii) Manner in which passengers and cargo transported on such flight were obtained (solicitation, advertising, circular, etc.)

(iii) Nature, terms, and conditions of the arrangements for such flight.

(iv) Obligations and responsibilities of the parties to the arrangement in connection with the transportation.

(v) Number of revenue and nonrevenue passengers and pounds of cargo transported on each flight of the category designated by subparagraph (1) (ii) of this paragraph.

PART 243—FILING OF REPORTS BY ALASKAN AIR CARRIERS

- Sec.
243.1 Statistical report required.
243.2 Place of filing.
243.3 Public disclosure withheld.

AUTHORITY: §§ 243.1 to 243.3 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 243.1 to 243.3 appear at 14 F. R. 3539.

§ 243.1 *Statistical report required.* Each Alaskan air carrier which does not hold a certificate of public convenience and necessity, each Alaskan air carrier holding a certificate of public convenience and necessity but relieved from complying with the requirements of § 241.1 of this chapter and each Alaskan pilot-owner (as defined in § 292.8 of this chapter) shall make periodic financial and operating statistical reports to the Board for all periods subsequent to June 30, 1948, using the appropriate schedules of the Report of Financial and Operating Statistics (Alaska), CAB Form 2790 and such amendments thereto as may be approved hereafter by the Board.

§ 243.2 *Place of filing.* The reports required by § 241.1 of this chapter with respect to Alaskan Air Carriers holding certificates of public convenience and necessity, and by § 243.1 shall be filed with the Director of the Alaska Office, at Anchorage, Alaska, at such times as may be specified by the Director and shall be made in accordance with the instructions of the Director relating thereto.

§ 243.3 *Public disclosure withheld.* Data reported by individual Alaskan pilot-owners pursuant to § 243.1 shall be available for official use on behalf of the Board, but shall otherwise be withheld from public disclosure except as dis-

closure may be necessary in connection with use of such data in formal proceedings of the Board.

PART 244—FILING OF REPORTS BY AIR FREIGHT FORWARDERS

- Sec.
244.1 Statistical report required.
244.2 Insurance statements.

AUTHORITY: §§ 244.1 and 244.2 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 244.1 and 244.2 appear at 14 F. R. 3540.

§ 244.1 *Statistical report required.* (a) Air freight forwarders operating during any portion of the quarter ending December 31, 1948, and subsequent to the filing of applications for letters of registration shall file a statistical report on or before January 31, 1949, in the form and manner herein prescribed. Thereafter, air freight forwarders holding letters of registration, whether or not actually engaged in air-freight-forwarder operations, shall file statistical reports for each succeeding calendar quarter. Such report shall be filed within 30 days after the termination of each calendar quarter and shall be certified to be correct by a responsible officer of the reporting air freight forwarder.

(b) Such statistical report shall contain the following data:

- (1) Balance sheet, prepared in accordance with accepted practices.
- (2) Profit and loss statement, with a separation of expense items so as to indicate payments to direct air carriers.
- (3) Statistical data:
 - (i) Number of shipments received from shippers for carriage by air.
 - (ii) Number of consignments to carriers by air.
 - (iii) Number of tons consigned for shipment by:
 - Certificated air carriers.
 - Noncertificated cargo carriers.
 - Irregular carriers.
 - Surface carriers (rail, motor other than pick-up and delivery or water).

(4) Station data (list by individual stations):

- (i) Number of personnel engaged in:
 - Selling.
 - Operating.
 - Administrative and other.
- (ii) Total number of tons received from shippers for carriage by air.

§ 244.2 *Insurance statements.* With each statistical report each air freight forwarder shall submit a statement of all outstanding cargo and public liability insurance in effect or surety bonds with regard to its operations pursuant to Part 296 of this chapter. Such statement shall identify the companies issuing the policies or bonds, the amounts thereof and a brief statement as to their coverage.

PART 245—REPORTS OF OWNERSHIP OF STOCK AND OTHER INTERESTS

- Sec.
245.1 Reports required.
245.2 Time for reporting.
245.3 Schedule of data.

AUTHORITY: §§ 245.1 to 245.3 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 245.1 to 245.3 appear at 14 F. R. 3540.

§ 245.1 *Reports required.* At the times and in the manner hereinafter provided, each officer and each director of each air carrier shall transmit to the Board a report describing the shares of stock or other interests held by him in any air carrier, any person engaged in any phase of aeronautics, or any common carrier, and in any person whose principal business, in purpose or in fact, is the holding of stock in, or control of, air carriers, other persons engaged in any phase of aeronautics, or common carriers.

§ 245.2 *Time for reporting.* Not more than 30 days after such officer or director is first elected or appointed, a report shall be filed covering the period from January 1 of the preceding year to the date of election or appointment; subsequently, a report shall be filed, on or before March 1 of each year, covering such portion of the preceding calendar year as has not been previously reported, or the full year if he so desires.

§ 245.3 *Schedule of data.* The report required in § 245.1 shall be prepared in accordance with the following schedule:

SCHEDULE

I. Data as to individual reporting. The categories for which data shall be set forth are as follows:

- (1) Name.
- (2) Address.
- (3) Principal occupation.
- (4) All air carrier positions held (indicate title of position and name of air carrier);
- (5) Positions held as officer, director, or member of:
 - (a) Common carriers (other than air);
 - (b) Enterprises engaged in any other phases of aeronautics;
 - (c) Enterprises whose principal business is that of holding securities and/or control of air carriers, common carriers, and enterprises which are engaged in any other phases of aeronautics (giving title of position and name of company or enterprise);
- (6) Append the following declaration to the report:

"I hereby declare that this report, including documents attached hereto, has been examined by me, and to the best of my knowledge and belief is a true, correct, and complete report, made in good faith, for the period stated." Execute the declaration, affixing date and signature.

II. Data as to stock or other interests. The categories for which data shall be set forth are as follows:

- (1) Interests held in air carriers;
- (2) Interests held in other common carriers;
- (3) Interests held in any enterprise engaged in any phase of aeronautics other than air carriers;
- (4) Interests held in enterprises whose principal business is that of holding securities and/or control of air carriers, other common carriers, or enterprises which are engaged in any phase of aeronautics other than air carrier. For each of the foregoing categories, the following data shall be set forth:
 - A. Name of enterprise (corporate or otherwise) in which interest is or was held at any time during the period covered by report.
 - B. Class of interest, such as common stock, preferred stock, rights, options, etc.; and description of bonds, notes, or other instruments evidencing interest or ownership.

(Give names and addresses of all persons (1) by whom any part of the foregoing items were held for reporting individual, (2) for whom any part of the foregoing items were held by reporting individual, (3) who held joint interest with reporting individual in any part of the foregoing items, and state nature of the relationship and the principal business of such persons.)

C. Number of shares or amount of each item reported under "B" held as of the last day of the period covered by report.

D. On all items reported under "C" which equal 5 percent or more of the total outstanding amount of the same class, show such percentages.

E. Indicate by "Yes" or "No," whether reporting individual controlled and/or exercised ALL voting rights of the items reported under "B." If the answer is "No," state amount of voting rights not controlled or exercised by reporting individual and give the names, addresses, and principal business of persons controlling and/or exercising such voting rights.

F. Maximum amount held during period covered by report.

G. On all items reported under "F" which equal 5 percent or more of the total outstanding total amount of the same class show such percentages.

H. Minimum amount held during period covered by report.

PART 246—REPORTS OF STOCK OWNERSHIP OF AFFILIATES OF AIR CARRIERS

Sec.

246.1 Definition.

246.2 Stock reports.

246.3 Exceptions.

AUTHORITY: §§ 246.1 to 246.3 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 246.1 to 246.3 appear at 14 F. R. 3540.

§ 246.1 *Definition.* For the purposes of this part a person shall be deemed to be an affiliate of an air carrier if it has direct or indirect control over such air carrier, or if it has the power to exercise control over such air carrier.

§ 246.2 *Stock reports.* Except as provided in § 246.3, every affiliate of an air carrier shall submit on or before January 25 of each year:

(a) A report showing, as of the preceding December 31:

(1) The names and addresses of each of its stockholders or members holding more than 5 percent of the entire capital stock or capital, as the case may be of such affiliate, together with the name and address of any person for whose account, if other than the holder, such stock is held;

(2) The number of shares, and percentage of the total shares issued, held by each such stockholder, and indicating whether such shares are voting, non-voting, common, or preferred; and

(b) A report setting forth, as of the preceding December 31, a description of the shares of stock or other interests held by the affiliate, or for its account, in any common carrier, air carrier, foreign air carrier, or any person engaged in any phase of aeronautics, and a description of the shares of stock or other interests held by the affiliate or for its account in any person whose principal business, in purpose or in fact, is the holding of stock in, or control of, common carriers, air carriers, foreign air car-

riers, or persons engaged in any phase of aeronautics, indicating:

(1) The name of the issuing company;

(2) Whether such stock or other interest is voting, nonvoting, common or preferred, convertible or nonconvertible. (If convertible an explanation of the option shall be set forth.)

(3) The par and book value of such stock or other interests held by the affiliate or for its account, and the amount pledged, unpledged, and held in fund and deposit accounts, and

(4) The total amount of stock or other interests (by class and issue) having voting or conversion rights which have been actually issued by the issuing company and are outstanding (whether or not held by the affiliate reporting hereunder). If convertible, an explanation of the option shall be set forth, and the total amount convertible shall be stated.

§ 246.3 *Exceptions.* The reports required in § 246.2 need not be filed as of December 31 of any year by any such affiliate:

(1) If such affiliate is an air carrier required to file a report as of December 31 of the same year, pursuant to section 407 (b) of the act; or

(2) If such affiliate is an individual required to file a report as an officer or director of any air carrier, on or before March 1 of the following year, pursuant to section 407 (c) of the act: *Provided, however,* That if between said December 31 and March 1 of the following year any such individual should be relieved of the requirement of filing said report as an officer or director of any air carrier, then the exception herein created shall immediately terminate as to said individual, and said individual shall file, on or before April 1, the report required in § 246.2 (b).

PART 247—DIRECT AIRPORT-TO-AIRPORT MILEAGE RECORDS

§ 247.1 *Official mileage record of the Board.* The direct airport-to-airport mileage record now maintained, and as hereafter amended or revised from time to time by the Tariffs and Service Division of the Bureau of Economic Regulation of the Civil Aeronautics Board in the regular performance of its duties, is hereby adopted as the official mileage record of the Board and the mileages set forth therein shall be used in all instances where it shall be necessary to determine direct airport-to-airport mileages pursuant to the provisions of Titles IV and X of the Civil Aeronautics Act of 1938, as amended or any rule, regulation, or order of the Board pursuant thereto. (Sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or applies sec. 407, 52 Stat. 1000, 49 U. S. C. 487) [14 F. R. 3541]

PART 248—SUBMISSION OF AUDIT REPORTS BY PUBLIC ACCOUNTANTS

Sec.

248.1 Filing of audit reports.

248.2 Withholding from public disclosure.

AUTHORITY: §§ 248.1 and 248.2 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 248.1 and 248.2 appear at 14 F. R. 3541.

§ 248.1 *Filing of audit reports.* Whenever any air carrier shall have caused an annual audit of its books, records, and accounts to be made by public accountants, such air carrier shall file with the Board a special report consisting of a true and complete copy of the audit report submitted by public accountants, including all schedules, exhibits, and certifications included in or attached to such report. Such a report shall be filed in duplicate with the Board within 15 days after the public accountants have submitted their reports to the air carriers, except that no such special report is required to be filed until 30 days after the effective date of this regulation. This section shall apply to all annual audit reports which may have been submitted to any air carrier on or after January 1, 1944.

§ 248.2 *Withholding from public disclosure.* The special report required to be filed by § 248.1 shall be withheld from public disclosure, until further order of the Board, if such treatment is requested by the air carrier at the time of filing.

PART 249—PRESERVATION OF ACCOUNTS, RECORDS AND MEMORANDA

Sec.

249.1 Definitions.

249.2 Use of certified reproductions.

249.3 Preservation of certified reproductions.

249.4 Time for preservation of records.

249.5 Air freight forwarders.

249.6 Air freight forwarders; administrative and financial records.

AUTHORITY: §§ 249.1 to 249.6 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 407, 52 Stat. 1000, 49 U. S. C. 487.

SOURCE: §§ 249.1 to 249.6 appear at 14 F. R. 3541.

§ 249.1 *Definitions.* For the purposes of this part:

(a) "Records" means air carrier records which belong to the categories set forth in § 249.4. The term "records" embraces accounts and memorandums and includes material coming into the possession of an air carrier through acquisition of, or merger with, other air carriers.

(b) "Certified description" means an instrument identifying records by date or period covered and describing them in accordance with § 249.4, which instrument has been pronounced correct in a certificate executed by a responsible officer of an air carrier.

(c) "Certified reproduction" means a photographic reproduction of records, which has been pronounced correct in a certificate executed by a responsible officer of an air carrier, after having been made pursuant to an authorization issued by the Director of the Bureau of Economic Regulation of the Board (1) by circulating, to all air carriers, a communication authorizing the substitution of a photographic reproduction for specified categories of records, or (2) by approving an "application for substitution" filed with him by an air carrier.

(d) "Application for substitution" means an application setting forth: (1)

A "certified description" of records relating to a period for which the Board has completed its audit; (2) a description of the photographic process proposed for reproducing such records; (3) a request for approval of the substitution of such reproduction for such records.

§ 249.2 *Use of certified reproductions.* An air carrier may substitute a "certified reproduction" for the records reproduced.

§ 249.3 *Preservation of certified reproductions.* All records, and all "certified reproductions" which have been substituted for records, shall be preserved by each air carrier for the respective periods prescribed in § 249.4. Upon the execution of a "certified description," records which have been replaced by a "certified reproduction" and records and "certified reproductions" which have been preserved for the prescribed period, may be destroyed, if further preservation is not necessitated by the requirements of any governmental instrumentality. If, during the prescribed period of preservation, records shall become unavailable through loss, destruction, or otherwise, the air carrier shall, without delay, submit to the Board an explanatory statement and a "certified description" of such records.

§ 249.4 *Time for preservation of records.*

PERIODS OF TIME PRESCRIBED FOR THE PRESERVATION OF RESPECTIVE CATEGORIES OF AIR CARRIER RECORDS

Item Nos.

- 1-18 Administrative and financial.
- 19 Insurance coverage and claim records.
- 20-23 Revenues.
- 24-32 Expenditures.
- 33-37 Maintenance and overhaul.
- 38-41 Transportation.
- 42-46 Passenger service and reservations.
- 47-56 Miscellaneous.

ADMINISTRATIVE AND FINANCIAL

- 1. Minute books of directors', stockholders' and other committee meetings: Permanently.
- 2. Capital stock and bond records: Permanently.
- 3. Corporate election records, including (A) Official list of voting stockholders, (B) Returned proxies: 1 year after expiration of term.
- 4. Annual and interim reports to stockholders: Permanently.
- 5. Monthly or other periodical statements and supporting work papers of general balance sheet, income and profit and loss accounts, comparative or otherwise: 5 years.
- 6. Retired securities: 3 years.
- 7. Ledgers or ledger accounts:
 - A. Permanent: (1) General: (2) Investments and Securities; (3) Property and Equipment; (4) Revenue and Expense: Permanently.
 - B. Others:
 - (1) Materials and supplies: 6 years.
 - (2) Bank balances: 3 years.
 - (3) Expense and working fund advances: 1 year.
 - (4) Accounts receivable. General: 6 years.
 - (5) Accounts payable. General: 6 years.
 - (6) Accounts receivable. Traffic: 2 years.
 - (7) Accounts payable. Traffic: 2 years.
- 8. Journals and registers supporting ledger entries: 10 years.
- A. Journals (including authorizations, work sheets, or summaries needed to explain journal entries); (1) Journal vouchers (general); (2) Cash receipts; (3) Cash disbursements.

- B. Registers: (1) Voucher, (2) Check, (3) Insurance, (4) Deferred charges, (5) Sales, (6) Payroll, (7) Tax.

- 9. Deeds and franchises: Permanently.
- 10. Title papers: Until disposition of property or equipment.
- 11. Contracts, agreements, releases:
 - A. Contracts:
 - (1) Involving an interest in realty: Permanently.
 - (2) With governmental bodies (major contracts): Permanently.
 - (3) Involving purchase or sale of equipment: 6 years.
 - (4) Leases: 6 years after termination.
 - (5) Of agency: 3 years after termination.
 - (6) Air Travel Plan (including requests for additional cards): 3 years after termination.
 - (7) Miscellaneous: Until expiration.
 - B. Releases from direct or contingent liability arising out of actions in tort: 2 years.
- 12. Tax records:
 - A. Ad Valorem (according to value):
 - (1) Real estate (Statements, receipts, and assessment appeals): 2 years after disposition of property.
 - (2) Personal property (Statements, receipts, reports, and assessment appeals): 10 years.
 - B. Privilege taxes—statements, receipts, returns or reports, supporting summaries, and assessment appeals (franchise, capital stock, licenses): Permanently.
 - C. Excise taxes on manufacture, sale or consumption (transportation, sales, gasoline and oil):
 - (1) Statements, receipts, returns or reports, report summaries and assessment appeals: 10 years.
 - (2) Details, supporting report summaries: 4 years.
- D. Social Security taxes:
 - (1) State and Federal unemployment insurance:
 - (a) Receipts; returns or reports; report summaries; assessment appeals: 10 years.
 - (b) Details supporting report summaries; removal notice forms: 3 years.
 - (2) Federal old age benefits:
 - (a) Receipts; returns or reports; report summaries; assessment appeals: Permanently.
 - (b) Details supporting report summaries: First quarterly returns each year, permanently; other quarterly returns, 10 years.

- E. Income:
 - (1) Federal, State and municipal income tax returns. Information returns, supporting papers, receipts, papers supporting refunds or legal actions relating to income taxes: Permanently.
 - (2) Detail supporting forms to Federal, State and municipal information returns: 3 years.

- 13. Fidelity bonds of employees:
 - A. Individual bonds: 3 years after termination of employment.
 - B. Blanket bonds: 3 years after expiration of bond.

- 14. Bulletins, orders, regulations, and other communications from Federal and State regulatory bodies pertaining to the air carrier: 1 year after becoming ineffective or inapplicable.

- 15. Treasurer's records:
 - A. Statements and summaries of balances on hand and with depositories or other periodical statements of working cash balances: 1 year.
 - B. Statements from depositories of funds received, disbursed, and transferred: 3 years.
 - C. Authorities for transfer of funds from one depository to another: 1 year after expiration.
 - D. Daily or other periodical statements of the receipts and disbursements of funds: 1 year.
 - E. Bank deposit books and check book stubs: 3 months after bank reconciliation.

F. Slips or statements giving the postings of miscellaneous receipts and payments of funds when the information contained thereon is shown on other records which are retained: 3 years.

G. Copies of deposit slips and advices of transfer from one depository to another: 3 months after bank reconciliation.

16. Audit reports:

A. Reports, examinations, and audits prepared and certified by independent public accounts: Permanently.

B. Reports of examinations and audits by internal auditors and others: 3 years.

17. Records pertaining to verifications of treasurers' cash or securities: 3 years.

18. Patents and copyright records:

A. Records pertaining to applications on which patents or copyrights issued: Permanently.

B. Records pertaining to applications on which patents or copyrights did not issue: 3 years after abandonment or final rejection.

INSURANCE COVERAGE AND CLAIM RECORDS

19. Insurance coverage and claim records:

A. Insurance: (1) Policies; (2) underwriters' inspection reports of condition of property: until expiration of policy.

B. Claim files including memoranda and reports in connection with loss, damage, personal injury, fire, etc., except claims for refund of transportation charges: 6 years after settlement or rejection.

C. Assignments, attachments, and garnishments involving (1) employees' salaries or (2) direct liability of carrier: 3 years.

REVENUES

20. Sales and ticket reports and other similar reports from stations, offices and agents: 4 years.

21. Tickets and ticket records:

A. Audited ticket coupons: 2 years.

B. Perpetual inventory ticket stock: 3 years.

C. Requisitions and receipts for tickets furnished agents and ticket-selling employees: 3 years.

D. Records and reports incident to ticket refund claims: 3 years.

E. Lost ticket memoranda, certification of loss and receipt for refund: 3 years.

22. Volume travel plan records:

A. Receipts for air travel cards: 1 month after expiration or return of card.

B. Receipts for one-trip travel orders: 3 months after orders are accounted for.

23. Invoices, bills, accounts receivable statements: (A) transportation receipts and one trip travel orders; (B) copies of invoices and supporting papers; (C) credit memoranda; (D) statements (except when used as ledger): 1 year after settlement.

EXPENDITURES

24. Payroll and personnel records:

A. Pay records in general: (1) Control; (2) Individual employee earnings records; (3) Canceled checks or receipts for payment; (4) Pay roll authorization removal, adjustment notices; (5) Pay roll certification; (6) Overtime certification; (7) Absent reports: 6 years.

B. Other records:

(1) Employees' payroll deduction authorization: 1 year after termination of authority.

(2) Clock cards and flight crews' time records: 3 years.

(3) Job expense distribution cards: 3 years.

(4) Records incident to issuance and control of identification badges and cards: 6 months after return of identification media.

C. Personnel records: (1) Applications, (2) contract or employment agreements, (3) bond record, (4) history: 2 years after termination of employment.

25. Vouchers:

A. File of voucher jackets or other (alphabetical, etc.) indexes to vouchers: 3 years.

B. File of voucher jackets with supporting papers attached:

(1) Vouchers involving purchase of property and/or equipment having unit values of \$100.00 or more: permanently.

(2) Vouchers involving payments of workmen's compensation insurance: 10 years.

(3) Other vouchers: 6 years.

C. Paid drafts, checks and receipts for cash paid out except as otherwise herein provided: 6 years.

26. Other equipment and property records:

A. Schedule of budget authorization for retirements: permanently.

B. Approved authorization for retirements: permanently.

C. Depreciation schedules: permanently.

27. Special authorization for expenditures:

A. Equipment and property: permanently.

B. Other: 3 years.

28. Periodical schedules or statements of material and supplies received, issued, and on hand by locations: 3 years.

29. Materials and supplies, physical inventory data:

A. Records of inventories on hand: 3 years.

B. Reconciliation of physical inventory with book balances by account classification: 3 years.

C. Detail inventory cards supporting records of inventories on hand: 1 year.

30. Stores record of materials received: 2 years.

31. Perpetual inventory records and sources of information from which journals for distribution of materials and supplies to expense are prepared:

A. Perpetual inventory cards showing receipts, issues, balances, etc.: 2 years after transfer.

B. Requisitions: 2 years.

C. Notices of stores issues and transfers: 2 years.

D. Stores bin cards: 3 months after discontinuance.

E. Notices of depleted stock: 3 months after replenishment.

F. Records and memoranda of consigned materials: 1 year after settlement.

32. Gasoline and oil: (A) requisitions (requests for issues); (B) notices of issues, transfers, etc.; (C) daily consumption records and motor readings; (D) periodical station summaries: 2 years.

MAINTENANCE AND OVERHAUL

33. Recommendations and approvals for repairs to property and equipment:

A. Log books: Until equipment is sold or 3 years after retirement.

B. Job or work orders: 2 years.

34. Records and reports concerning repairs (excluding job expense distribution detail):

A. Flight equipment:

(1) Maintenance work: (a) Line check and work-performed reports; (b) intermediate line engine check and work-performed reports: 2 years.

(2) Overhaul work: (a) Intermediate main base engine check and work-performed reports; (b) major overhaul check and work-performed reports: until equipment is sold or 3 years after retirement.

B. Ground equipment and property: 2 years.

35. Records of inspections made by public authorities:

A. Certificate of aircraft airworthiness: Until equipment is sold or 3 years after retirement.

B. Recurring inspections: 3 years after next inspection.

C. Other inspections: 3 years.

36. Flight equipment maintenance service schedule showing by type of equipment the units received, released, and on hand: 1 year.

37. Maintenance statistical data by individual units of flight equipment including: (A) accumulated flight time; (B) periodic inspections; (C) maintenance service work

performed; (D) mechanical failures, etc.: until equipment is sold or 3 years after retirement.

TRANSPORTATION

38. System report of airplane movements by trip number showing: (A) arrivals; (B) departures; (C) delays; (D) related information: 6 years.

39. Individual trip reports:

A. Operations data: (1) dispatchers clearance forms; (2) weather forecasts (terminal and intermediate); (3) flight plan; (4) radio contacts by or with pilots enroute: 3 months.

B. Other data: (1) records of crews by trip numbers; (2) passenger and cargo manifests; (3) mail manifest, report of mail pouches received and distributed; (4) records and reports of irregularities and delays in handling of passengers, mail, and other cargo: 1 year.

40. Records and reports (internal) and memoranda incident to airplane accidents:

A. Major accidents: 6 years.

B. Minor accidents: 2 years.

41. Air express (records and reports of express received and delivered; delays and irregularities, waybills and related matters): 3 years.

PASSENGER SERVICE AND RESERVATIONS

42. Records of comments and complaints from passengers and others: 1 year.

43. Records and reports of lost and found department: 1 year.

44. Reports incident to meals prepared and served (for requisitions, notices of issue and commissary inventories, see No. 31): 1 year.

45. Reservations reports and records:

A. Cards and charts constituting original source of passengers' names, telephone numbers, etc.: 3 months.

B. Telegrams and radio messages relating to the clearance of space, passenger dispatches, etc.: 3 months.

C. Records and reports relating to errors or irregularities, oversales, no-show passengers, etc.: 1 year.

D. Bulletins of instructions dealing with schedule changes, reservations, procedure sales effort, etc.: 6 months after expiration.

46. Detective and police service reports and records in connection with policing the company's property, detective service, investigations of robberies, attempts to defraud the company: 1 year.

MISCELLANEOUS

47. Purchase records:

A. Purchase orders: 3 years.

B. Requisitions for purchase orders: 1 year.

48. Tariff and other rate authorities:

A. Official tariff regulations and amendments thereto: permanently.

B. Authorizations, records, reports, and supporting papers incident to the transportation of persons at reduced rates or free: 6 years.

C. Correspondence (including bulletins and circulars) and working papers in connection with the making of rates and compilation and interpretation of tariffs: 1 year after cancellation of tariff.

49. Reports to Civil Aeronautics Board, its predecessor (the Civil Aeronautics Authority), and other regulatory bodies:

A. Periodic financial, operating, and statistical reports and supporting papers: permanently.

B. Reports of accidents involving aircraft, mechanical interruption in flight, power-plant failure, and aircraft structural failure and defects; and supporting papers therefor: 2 years after current year.

C. Records and reports of petitions and hearings: 5 years.

50. Engineering records (maps, profiles, specifications; estimates of work; records of engineering studies; records pertaining to

extensions, additions, and betterment projects):

A. Projects completed: 6 years after completion.

B. Projects abandoned: 3 years after abandonment.

51. Instructions to employees, agents and others (file copies of books and circulars of instruction on various topics): 2 years after expiration or cancellation.

52. Employees welfare records:

A. Medical:

(1) By individual employee: 2 years after termination of employment.

(2) Other: 1 year.

B. Retirement plan: 6 years after termination of employment or 3 years after notice of death of annuitant.

C. Workmen's compensation:

(1) Accident reports:

(a) Major: 10 years.

(b) Minor: 6 years.

(2) Payroll audits: 3 years.

D. Employees relief, hospital insurance, credit-union, other than records pertaining to the receipt and disbursement of funds: 1 year.

(1) Records pertaining to the receipt and disbursement of funds: same periods as provided for similar records elsewhere herein.

53. Advertising and publicity department records pertaining to displays, photographs, publicity, and advertising copy: 1 year.

54. Records and reports of damage to buildings and equipment not covered by insurance: 3 years.

55. Correspondence:

A. Correspondence (including interoffice memoranda) without which the records specified in provisions considered herein would not be complete: The period prescribed for primary records.

B. Other correspondence: 1 year.

56. Data relating to the destruction of records as provided in this section; authorizations and certificates executed in connection with the reproduction or destruction of records: Permanently.

§ 249.5 *Air freight forwarders.* All air freight forwarders as defined in § 296.1 of this chapter shall retain and preserve the following records and documents for a period of 1 year, unless otherwise ordered by the Board:

1. Shipping documents—airway bills, bills of lading, cargo manifests, receipts, exchange orders, invoices, and similar evidences of shipping transactions;

2. Information to agents and representatives—bulletins, circulars and all instructions to traffic-soliciting personnel;

3. Information to the public—press releases, paid advertisements, pamphlets, brochures, circulars, and bulletins;

4. Agreements—agreements, contracts, documents, and memorandums evidencing any arrangement with agents and representatives, with direct air carriers, with other freight forwarders, or with agents and representatives thereof;

5. Correspondence—all correspondence relating to any of the foregoing.

§ 249.6 *Air freight forwarders; administrative and financial records.* All air freight forwarders shall retain their administrative and financial records and insurance and claim records as specified and referred to in § 249.4 for the periods indicated therein.

Prohibited Interests

PART 251—PROHIBITED INTERESTS; INTERLOCKING RELATIONSHIPS

Sec.

251.1 Application for approval.

251.2 Formal requirements of applications.

Sec.	
251.3	General provisions concerning contents of applications.
251.4	Approval of system of affiliated and subsidiary companies.
251.5	Supplements to applications.
251.6	Uninterrupted tenure; no new applications required.
251.7	Notice of changes in positions.
251.8	Extent of authorization to hold position.
251.9	Revocation of authorization to hold position.
251.10	Effect of order.
251.11	Reports.
251.12	Prior applications.
251.13	Procedure governing disposition of applications.

AUTHORITY: §§ 251.1 to 251.13 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 409, 52 Stat. 1002, 49 U. S. C. 489.

SOURCE: §§ 251.1 to 251.13 appear at 14 F. R. 3543.

§ 251.1 *Application for approval.* If approval by the Board is desired of an interlocking relationship which would otherwise be prohibited by section 409 (a) of the act (hereinafter in this part referred to as an "interlocking relationship"), an application for such approval shall be filed with the Board by the individual (hereinafter in this part referred to as the "individual applicant") occupying or seeking to occupy the interlocking relationship, and by each air carrier (hereinafter in this part referred to as the "air carrier applicant") in which such individual holds or seeks to hold the position of officer or director. At their election such applicants may join in a single application. If separate applications are submitted it is desirable that all shall be filed at the same time. An application may incorporate by specific reference current information contained in another application in the same matter or in any document then on file with the Board.

§ 251.2 *Formal requirements of applications.* Applications filed pursuant to this part shall conform generally to the outline set forth in § 251.3 and to the requirements of § 302.3 of this chapter, with the additional requirement that each individual verifying the application shall include in his verification a statement that he has personally made a careful investigation of the proposed interlocking relationship and that the application includes all of the information required by this part and that it contains no misleading statement and does not omit information which would tend to show that the public interest would be adversely affected by the existence of the proposed interlocking relationship. If a joint application is filed it shall be verified by the individual applicant and by a responsible officer of each air-carrier applicant. However, any individual verifying any such joint application may disclaim responsibility for any statements therein except statements concerning matters which are peculiarly within his knowledge. In any such case, however, every allegation contained in the application shall be verified by one or more qualified individuals.

§ 251.3 *General provisions concerning contents of applications.* (a) Each ap-

plication (except one filed pursuant to § 251.4 shall, among other things, include the following information:

(1) The full name, place of residence, and citizenship of the individual applicant;

(2) The name and address of the major business or professional activity of the individual applicant;

(3) A complete description of the interlocking relationship for which approval is sought, as well as a description of any other interlocking relationship occupied by the individual applicant which has been approved by the Board. (This description shall include the date and manner of the individual applicant's election or appointment to the position or positions which he occupies or seeks to occupy, and shall state the name or names of the persons primarily responsible, directly or indirectly, for his election or appointment. It shall also include a statement of his present or contemplated duties in connection with the interlocking relationship for which approval is sought and the approximate amount of time devoted or expected to be devoted thereto);

(4) The name of the person or persons, if any, whom the individual applicant represents or will represent on the board of directors of each air carrier applicant, together with a statement as to any financial interest held by such person or persons in any air carrier, common carrier, person engaged in any phase of aeronautics otherwise than as an air carrier, or person whose principal business, in purpose or in fact, is the holding of stock in, or control of any other person engaged in any phase of aeronautics;

(5) The name and address of each business (including but not limited to corporations, partnerships, trusts, etc.) of which the individual applicant is an officer, director, partner, trustee, receiver, manager, attorney, agent, or controlling stockholder or employee, the general character of each such business and a description of the individual applicant's financial interest therein;

(6) A complete description of any benefit and of the amount of, and basis for, any money or thing of value (i) received by the individual applicant during the last year from each air carrier applicant and from any person with whom the individual applicant has or seeks to have an interlocking relationship, whether for services, reimbursement of expenses or otherwise, and (ii) which the applicant contemplates receiving from any such person during the continuance of the interlocking relationship;

(7) The names and titles of all officers and directors of each air carrier applicant, and of each person with whom the individual applicant has or seeks to have an interlocking relationship;

(8) With respect to the individual applicant, a statement that the information contained in the most recent report filed by him with the Board pursuant to Part 245 of this chapter is the same as of the date within 30 days of the filing of the application pursuant to this regulation, or, if such information has changed, a

statement setting forth the details of such changes; and with respect to each officer and director of each air carrier applicant other than the individual applicant, a statement that there is presently on file with the Board a report pursuant to Part 245 of this chapter for each such individual officer or director (If no such report is on file with reference to any such officer or director, including the individual applicant, it shall be filed concurrently with the application pursuant to this part);

(9) The names (i) of the largest stockholders, not exceeding 20, who hold 1 percent or more of the voting capital stock of any air carrier applicant and (ii) of the largest stockholders, not exceeding 20, who hold 1 percent or more of the voting capital stock of any person with whom an interlocking relationship is sought by such application to be approved; together with the number of shares of each class of stock held by each of such stockholders and the percentage which such shares bear to the total number of shares of the same class authorized and outstanding. (If all or any part of such shares are held for the account of any person other than the holder, the names of such persons shall be disclosed. If the applicant, after making all reasonable efforts, is unable to obtain disclosure of such information with respect to any of the persons classified under (ii) in the first sentence of this paragraph, the application shall state specifically the efforts made to obtain such information and the reasons why such efforts were unsuccessful);

(10) A description of the shares of stock or other interests held by each air carrier applicant or for its account in persons other than itself;

(11) A full description of any professional, financial or other business transactions or arrangements which have been entered into within 1 year prior to the date of the filing of the application by each air carrier applicant with the individual applicant and by each air carrier applicant or individual applicant with any person with whom the individual applicant has or seeks to have an interlocking relationship, together with a full statement as to any such transactions or arrangements which it is contemplated may be entered into while such interlocking relationship continues.

(b) Each application shall state fully such further facts as the applicants respectively deem desirable in order to show that the public interest will not be adversely affected by the approval by the Board of the interlocking relationship.

§ 251.4 *Approval of system of affiliated and subsidiary companies.* (a) In the event that an individual occupies or seeks to occupy an interlocking relationship falling within the purview of section 409 (a) of the act which involves only the holding by him of the position of officer or director in two or more companies within the same system of affiliated and subsidiary companies (as hereinafter defined), an application for approval of such relationships need not comply with the requirements of § 251.3 (a) (11) but shall comply with all other requirements

of that section. Such application shall also include:

(1) Such information as is necessary to disclose the fact that the companies in which the individual applicant occupies or seeks to occupy the interlocking relationships are members of the system of affiliated and subsidiary companies as defined herein, and

(2) A statement that the individual applicant does not occupy or seek to occupy any interlocking relationship falling within the purview of section 409 (a) of the act other than those within the same system of affiliated and subsidiary companies.

(b) The individual applicant may include in any application made by him pursuant to this part a request for an order authorizing him to hold generally, in addition to the positions so specifically requested, directorships or offices within the same system of affiliated and subsidiary companies, and it shall not be necessary to file a separate application with respect to each such relationship. Any applicant assuming a directorship or office pursuant to such authorization shall, not later than 15 days after assuming such directorship or office, make or cause to be made a full and complete report thereof to the Board. As used in this part, the term "system of affiliated and subsidiary companies" shall include only a specified company and those companies of which it, directly or indirectly, through one or more intermediate companies, owns 50 percent or more of the voting capital stock issued by such companies.

§ 251.5 *Supplements to applications.* Applicants under this part shall, upon requests of the Board and within such time as may be allowed, supplement any application with such information as may be required by the Board. In the event of any substantial change in the information set forth in the application prior to a decision by the Board upon such application, either by reason of the individual applicant's election or appointment to another position or positions involving an interlocking relationship or otherwise, the application shall be supplemented by such information as will fully describe such change. Such supplements shall comply with the formal requirements of § 251.2.

§ 251.6 *Uninterrupted tenure; no new applications required.* After the individual applicant has been authorized by the Board to hold a particular position, further application in connection with each successive term will not be required so long as he continues in uninterrupted tenure of such position, unless otherwise ordered by the Board.

§ 251.7 *Notice of changes in positions.* In the event of the individual applicant's resignation, withdrawal, or failure of re-election or reappointment with respect to any of the positions for which authorization has been granted by the Board, or in the event of any other material or substantial change therein, the individual and each air carrier applicant shall promptly and not more than 30 days after any such change occurs give notice thereof to the Board, setting forth fully

the details of any such change. Such notices shall comply with the formal requirements of § 251.2, except that the verification may be in simple form.

§ 251.8 *Extent of authorization to hold position.* An order by the Board authorizing an individual applicant to hold the position of director of a Company will be construed as sufficient to authorize him to serve also as chairman of the board of directors or as a member or chairman of any committee or committees of such board.

§ 251.9 *Revocation of authorization to hold position.* Any order issued by the Board pursuant to section 409 (a) of the act shall be subject to revocation in whole or in part by the Board at any time if it deems that the public interest will be adversely affected by the holding by the individual applicant of any or all of the positions authorized to be held by such order. If any individual or air carrier applicant knowingly or wilfully withholds any information called for by this part or any other information which may be material or relevant to the application, or misrepresents facts disclosed in the application, such omission or misrepresentation may be considered sufficient cause for the immediate revocation of any such order.

§ 251.10 *Effect of order.* No order of the Board entered in connection with any application filed pursuant to this part shall constitute approval by the Board of any interlocking relationship which was not fully disclosed.

§ 251.11 *Reports.* An individual occupying an interlocking relationship pursuant to authorization of the Board may be required to file such periodic or special reports as the Board may deem necessary.

§ 251.12 *Prior applications.* Any application filed prior to March 10, 1942 shall not be subject to the provisions of this part, except to the extent that the Board may, by appropriate request, in particular cases require compliance with any specific provision or provisions hereof.

§ 251.13 *Procedure governing disposition of applications.* (a) Each application will be docketed as received and applicants will be advised of the docket number assigned thereto.

(b) If the Board is convinced by the application and its consideration and investigation thereof that applicants have made a due showing that the public interest will not be adversely affected by the interlocking relationships for which approval is sought, an order of approval will be entered.

(c) If the Board is not convinced that applicants have made a due showing applicants will be advised to that effect by letter. Thereupon applicants may file with the Board a petition in the proceeding for leave to withdraw the application, may request that the application be assigned for hearing, or may submit within a reasonable time to be fixed by the Board such additional information as they believe will result in a due showing.

(d) In the event additional information is submitted, the Board reserves the

right to assign the application for hearing on its own initiative or to enter an order of approval or disapproval in accordance with its determination that a due showing has or has not been made.

(e) The Board further reserves the right to vary the procedure herein set forth insofar as necessary or desirable in disposing of any particular application.

Pooling and Other Agreements

PART 261—FILING OF AGREEMENTS

Sec.	
261.1	Who shall file.
261.2	Number of copies.
261.3	Formal requirements of documents filed.
261.4	Place and time of filing.
261.5	Certification and verification.
261.6	Modifications or cancellations.
261.7	Contracts or agreements previously filed.

AUTHORITY: §§ 261.1 to 261.7 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 412, 52 Stat. 1004, 49 U. S. C. 492.

SOURCE: §§ 261.1 to 261.7 appear at 14 F. R. 3545.

§ 261.1 *Who shall file.* (a) The filing of copies of contracts and agreements which are required to be filed under the provisions of section 412 (a) of the Civil Aeronautics Act of 1938, as amended, shall be made by every air carrier which is a party thereto. However, if the required number of copies are filed by any air carrier which is a party to such contract or agreement, any other air carrier which is a party shall be deemed to have complied with this requirement if it transmits to the Board, within the time prescribed by § 261.4, a signed statement to the effect that it concurs in such filing.

(b) The filing of copies of contracts or agreements evidenced by resolutions or other action of association of air carriers may be effected in the following manner. The Secretary or other authorized officer of the association may be designated as agent for the purpose of making such filing. Each air carrier which is a member of such association shall separately transmit to the Board a written statement, signed by such air carrier, reciting that a designated person or persons holding the office of secretary or other office of the association, or that any person or persons holding a designated office or offices of the association is constituted the attorney in fact for the filing of copies of any contracts or agreements evidenced by resolution or other action of the association to which such air carrier may become a party. Such authorizations may be revoked at any time by any air carrier by giving formal notice of revocation to the Board.

§ 261.2 *Number of copies.* (a) Unless express permission to file fewer copies is granted, there shall be filed with the Board three true and complete copies of all contracts and agreements which are required to be filed under the provisions of section 412 (a) of the Civil Aeronautics Act of 1938, as amended. Oral contracts and agreements required to be filed under the provisions of said section shall be evidenced by true and complete written memorandums and three true and complete copies of such

memorandums shall be filed with the Board. The filing of contracts or agreements evidenced by correspondence or by resolutions of associations of air carriers shall be made by filing with the Board three true and complete copies of such correspondence or resolutions, as the case may be.

(b) Additional copies of contracts or agreements shall be furnished to the Board upon request.

§ 261.3 *Formal requirements of documents filed.* All documents filed hereunder shall be on strong, durable white paper and, if possible, not larger than 8½ inches by 13 inches in size, except that tables, charts, maps, and other documents larger than that size may be folded to approximately the required measurements. The left margin should be at least 1½ inches wide and if the document is bound, it should be bound on the left side. One copy of each type-written document should be carbon-backed.

§ 261.4 *Place and time of filing.* The required number of copies of formal written contracts or agreements shall be filed at the office of the Board in Washington, D. C., addressed to the operations Division, Civil Aeronautics Board, within 15 days after the date of execution thereof. The required number of copies of memoranda of oral contracts or agreements and of correspondence or resolutions evidencing contracts or agreements shall be filed in the same manner, within 30 days after such contracts or agreements have been entered into between the parties. The time of filing prescribed herein may be extended by the Board in exceptional circumstances upon proper application therefor.

§ 261.5 *Certification and verification.* (a) One copy of each formal written contract or agreement filed shall bear the certification of the secretary or other duly authorized officer of the filing party or parties to the effect that such copy is a true and complete copy of the original written instrument executed by the parties.

(b) One copy of each memorandum of oral contracts or agreements filed shall be verified by the secretary or other duly authorized officer of the filing party or parties to such oral contract or agreement. The person or persons verifying such memorandum shall set forth that they are fully familiar with all the terms and conditions of such oral contract or agreement and that the memorandum filed is a true and complete memorandum thereof.

(c) Copies of correspondence evidencing contracts or agreements shall be accompanied by the certifications of the secretary or other duly authorized officer of the filing party or parties to the effect that such copies are true and complete copies of the originals of such correspondence.

(d) One copy of each contract or agreement evidenced by resolution or other action of associations of air carriers shall bear the certification of the secretary of the association to the effect that such copy is a true and complete copy of the resolution duly adopted by

the association on a certain date. The secretary shall also specify in such certification the name of each air carrier which concurred in such resolution or other action and the name of each air carrier member which did not so concur.

§ 261.6 *Modifications or cancellations.* This part shall be applicable to all modifications or cancellations of contracts or agreements required to be filed under the provisions of section 412 (a) of the Civil Aeronautics Act of 1938, as amended.

§ 261.7 *Contracts or agreements previously filed.* Contracts or agreements which have been filed prior to August 1, 1939, shall not be subject to the provisions of this part, except to the extent that the Board may by appropriate request in particular cases require compliance with any specific provision or provisions hereof.

PART 262—AGREEMENTS BETWEEN AIR CARRIERS AND FOREIGN COUNTRIES

- Sec.
262.1 Filing required.
262.2 Evidence of agreement.
262.3 Verification and formal specifications.
262.4 Time of filing.

AUTHORITY: §§ 262.1 to 262.4 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 1102, 52 Stat. 1026, 49 U. S. C. 672.

SOURCE: §§ 262.1 to 262.4 appear at 14 F. R. 3546.

§ 262.1 *Filing required.* Every air carrier shall file with the Board true and complete evidence, as specified in § 262.2 of each agreement in any way affecting or involving operating rights and in force on October 11, 1943 or thereafter issued or entered into as between such air carrier, or any officer or representative thereof, and any foreign country or political subdivision thereof, or any department, agency, officer or representative of such country or subdivision. For the purposes of this part, the term "agreement" means and includes any permit, concession, franchise, contract, understanding, or arrangement, and also any amendment, modification, renewal, rescission or revocation of any thereof.

§ 262.2 *Evidence of agreement.* (a) The evidence of such agreement shall be as follows:

- (1) If written in English, three copies thereof;
- (2) If written in a foreign language, three copies and three translations thereof;
- (3) If oral, three copies of a descriptive memorandum thereof; or
- (4) If evidenced by correspondence only, three copies of such correspondence and, if such correspondence, in whole or in part, is written in a foreign language, three translations of the part that is so written.

(b) In any case where translations are required, the copies to be filed shall be copies of official translations if official translations have been made.

§ 262.3 *Verification and formal specifications.* Evidence of agreements filed hereunder shall meet, insofar as possible, the requirements set forth in § 302.3 of

this chapter as to verification and formal specifications of papers.

§ 262.4 *Time of filing.* Such evidence shall be filed within 60 days after such agreement has been issued or entered into, except that agreements which have been issued or entered into prior to October 11, 1943 shall be filed within 60 days after such date.

Classification and Exemption of Carriers

PART 290—APPLICATION FOR EXEMPTIONS OF CARRIERS

- Sec.
290.1 Notice to interested parties required.
290.2 Form and contents of application.
290.3 Additional service of notice.
290.4 Emergency application.

AUTHORITY: §§ 290.1 to 290.4 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 416, 52 Stat. 1004, 49 U. S. C. 496.

SOURCE: §§ 290.1 to 290.4 appear at 14 F. R. 3546.

§ 290.1 *Notice to interested parties required.* (a) Prior to or coincident with the filing of any application for exemption from the requirements of Title IV of the Civil Aeronautics Act of 1938, as amended, or any provision thereof, or any rule, regulation, term, condition, or limitation prescribed thereunder, the applicant, unless otherwise authorized by the Board, shall cause a notice of such filing to be served by personal service or registered mail upon all persons who may have an interest in the subject matter of the application; *Provided, however,* That any large irregular carrier, as defined in Part 291 of this chapter, filing such application for exemption prior to June 20, 1949, shall not be required to cause a notice of such filing to be served upon any of the persons having an interest therein if such application requests exemption authority to engage in irregular air transportation other than between specified points. In the case of any application which proposes the furnishing or discontinuance of air transportation to or from any point, the following persons shall be presumed to have an interest in the subject matter of the application:

(1) Any scheduled air carrier which regularly renders service to any point involved in the application;

(2) Any person whose application for a certificate of public convenience and necessity authorizing regular service to or from any such point has been filed with, and has not finally been disposed of, by the Board;

(3) The chief executive of any State, Territory, or possession of the United States in which any such point is located; and

(4) The chief executive of the city, town, or other unit of local government at any such point located in the United States or any Territory or possession thereof.

(b) Such notice shall indicate the date upon which the application will be or is being filed and, unless accompanied by a copy of the application, shall contain a brief statement of the relief requested.

§ 290.2 *Form and contents of application.* The application shall be en-

titled Application for Exemption Order and in addition to the specific relief requested, shall contain a list of the persons upon whom notice of the filing thereof was or is being served, and facts relied upon to establish that the enforcement of the matter from which exemption is sought is or would be an undue burden upon the applicant by reason of the limited extent of, or unusual circumstances affecting, the operations of such applicant, and is not in the public interest. An executed original and nine copies of such application with a copy of the notice attached to each shall be filed with the Board.

§ 290.3 *Additional service of notice.* Action on the application may be withheld by the Board, in its discretion, pending proof of such additional service of notice by the applicant as the Board may direct.

§ 290.4 *Emergency application.* In the event of an emergency requiring immediate action, an application may be filed by telegraph if it substantially conforms to the requirements hereof as to contents and notice (which notice in such case may be served by telegraph) and states the reasons deemed to necessitate immediate action.

PART 291—CLASSIFICATION AND EXEMPTION OF IRREGULAR AIR CARRIERS

- Sec.
- 291.1 Definitions.
- 291.2 Classification.
- 291.3 Small irregular carriers; exemptions.
- 291.4 Small irregular carriers; duration of exemption.
- 291.5 Small irregular carriers; approval of certain interlocking relationships.
- 291.6 Small irregular carriers; effect on other statutes.
- 291.7 Small irregular carriers; conditions to exercise of temporary exemption privilege.
- 291.8 Small irregular carriers; issuance of letter of registration.
- 291.9 Small irregular carriers; restrictions on issuance of letter of registration.
- 291.10 Small irregular carriers; effective period of letter of registration.
- 291.11 Small irregular carriers; nontransferability of letter of registration.
- 291.12 Small irregular carriers; suspension of letter of registration.
- 291.13 Small irregular carriers; revocation of letter of registration.
- 291.14 Small irregular carriers; cancellation of letter of registration.
- 291.15 Large irregular carriers; exemptions.
- 291.16 Large irregular carriers; duration of exemption.
- 291.17 Large irregular carriers; condition to exercise of temporary exemption privilege.
- 291.18 Large irregular carriers; nontransferability of letter of registration.
- 291.19 Large irregular carriers; suspension of letter of registration.
- 291.20 Large irregular carriers; revocation of letter of registration.
- 291.21 Large irregular carriers; cancellation of letter of registration.
- 291.22 Large irregular carriers; interlocking relationships.
- 291.23 Large irregular carriers; operational limitations.
- 291.24 Nonapplicability.
- 291.25 Separability.
- 291.26 Past violations.

AUTHORITY: §§ 291.1 to 291.26 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. In-

terpret or apply sec. 416, 52 Stat. 1004, 49 U. S. C. 496.

SOURCE: §§ 291.1 to 291.26 appears at 14 F. R. 3546.

NOTE: The following interpretation of Part 291 was adopted by Regulation Serial No. ER-136, 13 F. R. 7769.

Examples of irregular air transportation within the meaning of Part 291. For the guidance of irregular air carriers and other interested parties the Board here sets forth a number of illustrative examples of irregular and regular service. All irregular air carriers should study these examples, for the Board expects to use them as standards to apply to the operations of such carriers.

It should be noted that all of the illustrations included here refer only to actual operations. Such operations indicate a course of conduct constituting the holding out of regular or irregular service, as the case may be. The holding out of regular service may also be brought about by means other than actual operations—for example, although its services are operated irregularly, a carrier may be holding out regular service by reason of the nature and extent of its advertising and traffic solicitation efforts. In other words, an irregular air carrier is not immune from enforcement action if its actual operations are irregular but all the circumstances surrounding its business show that the carrier is holding out regular service.

The illustrations included represent application of the principles announced in *Page Airways, Inc., Investigation*, 6 CAB 1061, *Trans-Marine Airways, Inc., Investigation of Activities*, 6 CAB 1071, and *Investigation of Nonscheduled Services*, 6 CAB 1049, and more particularly of the cease and desist order entered in the *Matter of the Noncertificated Operations of Trans Caribbean Air Cargo Lines Inc.*, Order Serial No. E-370, adopted March 14, 1947. This is emphasized because the Board is not attempting by revision of Part 291 either to enlarge or contract the scope of operations permitted by the regulation.

(1) An irregular air carrier operates between points A and B, in one direction, on the days of the month which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
[1]	2	3	4	5	6	7
[8]	9	10	11	12	13	14
[15]	16	17	18	19	20	21
[22]	23	24	25	26	27	28
[29]	30	31				

Since these flights are conducted on the same day of each week, the service is not irregular within the meaning of Part 291. Moreover, if over a period of weeks an occasional Sunday flight is omitted, or is operated on some other day of the week, such minor variations in the general pattern of regularity would not cause the service to become an irregular service.

(2) An irregular air carrier operates between points A and B, in one direction, on the days of the month which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	1	[2]	3	[4]	5	6
7	8	[9]	10	[11]	12	13
14	15	[16]	17	[18]	19	20
21	22	[23]	24	[25]	26	27
28	29	[30]				

These flights are conducted regularly, twice a week, without frequent and extended definite breaks in service and are obviously not irregular within the meaning of Part 291. Moreover, if over a period of weeks an occasional flight is omitted, or is operated on some other day of the week, such minor variations in the general pattern of regularity would not cause the service to become an irregular service.

(3) An irregular air carrier operates between points A and B, in one direction, on the days of the month which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	—	—	[1]	2	3	4
5	6	[7]	8	9	10	11
12	[13]	14	15	16	17	[18]
19	20	21	[22]	23	24	25
[26]	27	28	29	[30]		

These flights are conducted at regularly recurring periods, or substantially regular periods (every 4, 5 or 6 days), and therefore do not achieve infrequency and irregularity of service through frequent and extended definite breaks in service. Such service is not irregular within the meaning of Part 291.

(4) An irregular air carrier operates between points A and B in one direction, on the days of the two successive months which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	—	—	—	—	[1]	2
3	4	[5]	6	[7]	8	9
10	[11]	[12]	13	14	15	16
17	18	[19]	[20]	21	22	23
24	[25]	26	[27]	28	29	30
31						
—	1	[2]	3	[4]	5	6
7	8	9	[10]	11	12	[13]
14	15	16	17	18	19	20
21	[22]	23	24	[25]	26	27
[28]	29	30	[31]			

These flights are conducted twice a week in succeeding weeks without the intervention of other weeks or similar periods at irregular but frequent intervals during which no flights are operated. Such service is not irregular within the meaning of Part 291.

(5) An irregular air carrier operates between points A and B, in one direction, on the days of the two successive months which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	—	—	—	—	[1]	2
[3]	[4]	5	[6]	7	[8]	9
10	11	[12]	[13]	14	15	16
17	[18]	19	[20]	21	[22]	23
24	25	26	27	28	29	30
[31]						
—	[1]	2	[3]	4	5	[6]
7	8	[9]	[10]	11	12	13
[14]	15	[16]	17	[18]	[19]	20
21	22	23	24	25	26	27
[28]	[29]	30				

In this pattern, unlike the preceding example, two breaks of at least a week occur within a 2-month period. However, operations in the other weeks occur with such frequency that the breaks in service are not of sufficient frequency and extent to compensate for the substantial number of flights conducted with frequency over a substantial period. The flights are not irregular within the meaning of Part 291.

(6) An irregular air carrier operates between points A and B, in one direction, on the days of the two successive months which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	—	—	—	—	—	1
5	6	[7]	8	9	[10]	11
12	13	14	15	16	17	18
19	20	[21]	22	23	[24]	25
26	27	[28]	[29]	30	31	
—	—	—	—	—	—	1
2	3	[4]	5	6	[7]	8
9	10	11	12	13	14	[15]
16	17	[18]	19	20	[21]	22
23	24	[25]	26	27	[28]	29
30	31					

The flights do not exceed two per week and the 2-month period includes two definite breaks in service. However, in view of the frequent rendition of service on Tuesdays and Fridays the breaks in service and comparatively small number of flights operated are not sufficient to destroy the pattern of regularity. The service is not irregular within the meaning of Part 291.

(7) An irregular air carrier operates between points A and B, in one direction, on the days of the two successive months which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	1	[2]	3	[4]	5	[6]
7	[8]	9	[10]	11	[12]	13
14	15	16	17	18	19	[20]
21	[22]	23	[24]	25	[26]	27
[28]	29	[30]	31			

—	—	—	—	[1]	2	[3]
4	5	6	7	8	9	10
[11]	12	[13]	14	[15]	16	[17]
18	[19]	20	[21]	22	[23]	24
25	26	27	28	29	30	[31]

These flights are operated every other day except for infrequent breaks. Such service is not irregular within the meaning of Part 291.

(8) Four large irregular air carriers agree to utilize the services of a single ticket agency, XYZ Ticket Agency, Inc., with respect to service between points A and B, and to furnish to the agent the dates upon which each will operate between A and B. If the flights, considered in combination, of such carriers between A and B reveal a pattern of operations similar to those shown in examples (1) through (7) above, the combination of flights constitute regular air transportation and each such carrier is deemed to be conducting regular operations between A and B.

(9) An irregular air carrier operates between points A and B, in one direction, on the days of the month which appear in brackets on the following calendar table:

S	M	T	W	T	F	S
—	—	[1]	2	3	4	5
6	7	8	[9]	10	11	12
13	14	15	16	[17]	18	19
20	21	22	23	24	25	[26]
27	[28]	29	30	31		

These flights are conducted on a different day of each week, and are operated only after frequent and definite breaks in service. Although two flights (on the 26th and 28th) were operated within one period of less than one week, this frequency was compensated for by the breaks of at least a week between the other flights. The flights are therefore irregular within the meaning of Part 291.

(10) An irregular air carrier operates between points A and B, in one direction, on the days of the two successive months which appear in brackets on the following calendar table (numerals above and to the left of dates appearing in brackets indicate the number of flights operated on those dates):

S	M	T	W	T	F	S
—	1	2	3	4	5	6
7	8	[9]	[10]	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
[28]	29	30				
—	—	—	1	2	3	4
[5]	[6]	[7]	[8]	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	[29]	[30]	31	

These flights are conducted in such manner that frequent, extended and definite breaks in service occur at irregular intervals and therefore the service is irregular within the meaning of Part 291.

§ 291.1 *Definitions*—(a) *Irregular air carrier*. The term irregular air carrier

means any air carrier which (1) directly engages in air transportation, (2) does not hold a certificate of public convenience and necessity under section 401 of the Civil Aeronautics Act of 1938, as amended, and (3) does not operate, or hold out to the public expressly or by course of conduct that it operates, one or more aircraft between designated points, or within a designated point, regularly or with a reasonable degree of regularity, upon which aircraft it accepts for transportation, for compensation or hire, such members of the public as apply therefor or such property as the public offers. No air carrier shall be deemed to be an irregular air carrier unless the air transportation services offered and performed by it are of such infrequency as to preclude an implication of a uniform pattern or normal consistency of operation between, or within, such designated points.

(b) *Point*. The term "point" as used in this part shall mean any airport or place where aircraft may be landed or taken off, including the area within a 25-mile radius of such airport or place.

§ 291.2 *Classification*. (a) There is hereby established a classification of noncertificated air carriers to be designated as "irregular air carriers."

(b) Any irregular air carrier, as classified above, which does not use in its transportation services aircraft units having a gross take-off weight in excess of 10,000 pounds for any one unit or of 25,000 pounds for the total of such units (disregarding units of 6,000 pounds or less), shall be classified as a small irregular carrier.

(c) Any irregular air carrier other than a small irregular carrier shall be classified as a large irregular carrier: *Provided*, That no air carrier shall be so classified unless it holds a letter of registration issued to it as a large irregular carrier pursuant to application therefor filed with the Board before August 6, 1948, and not revoked or cancelled as of May 20, 1949.

§ 291.3 *Small irregular carriers; exemptions*. Except as otherwise provided in this section, each small irregular carrier, falling within the classification above, shall be temporarily exempt from the following provisions of Title IV of the Civil Aeronautics Act of 1938, as amended:

(a) Subsection 401 (a);

(b) Section 403;

(c) Subsection 404 (a); *Provided*, That small irregular carriers shall abide by those provisions of this subsection which require air carriers to provide safe service, equipment and facilities in connection with air transportation;

(d) Subsection 404 (b);

(e) Subsection 405 (e);

(f) Subsection 407 (b);

(g) Section 408;

(h) Subsection 409 (a); and

(i) Section 412.

§ 291.4 *Small irregular carriers; duration of exemption*. The temporary exemption from any provision of Title IV of the act provided by § 291.3 shall continue in effect only until such time as the Board shall find that enforcement

thereof would be in the public interest or would no longer be an undue burden on the small irregular carriers; *Provided*, That upon such a finding as to any small irregular carrier or class of small irregular carriers, such exemption shall to that extent terminate with respect to such carrier or class of carriers.

§ 291.5 *Small irregular carriers; approval of certain interlocking relationships*. To the extent that any officer or director of a small irregular carrier would, without prior approval of the Board, be in violation of any provisions of subsection 409 (a) of the Civil Aeronautics Act of 1938, as amended, by reason of any interlocking relationship directly involving such small irregular carrier, such relationship is hereby approved.

§ 291.6 *Small irregular carriers; effect on other statutes*. The temporary exemption granted in § 291.3 from sections 408, 409 (a) and 412 shall not constitute an order made under such sections, within the meaning of section 414, and shall not confer any immunity or relief from operation of the "anti-trust laws", or any other statute (except the Civil Aeronautics Act of 1938, as amended), with respect to any transaction, interlocking relationship, or agreement otherwise within the purview of such section.

§ 291.7 *Small irregular carriers; conditions to exercise of temporary exemption privilege*. (a) No person shall exercise the temporary exemption privilege conferred by § 291.3 unless there is in effect with respect to such person a letter of registration issued by the Board, acknowledging that such person has been duly registered with the Board as a small irregular carrier under the provisions of this part, as amended, relating to irregular air transportation. Any small irregular carrier which holds a letter of registration issued to it, and not revoked or canceled, prior to May 20, 1949, is not required to obtain another letter of registration.

(b) No small irregular carrier shall make or maintain any agreement or arrangement with any other air carrier or air carriers with respect to the conduct of air transportation services which, if conducted by a single carrier, would take it out of the classification of an irregular air carrier as set forth in this part.

§ 291.8 *Small irregular carriers; issuance of letter of registration*. Except as provided in § 291.9, upon the filing of proper application therefor the Board will issue to any small irregular carrier a letter of registration. Such application shall be certified as correct by a responsible official of such carrier, and shall contain the following information: (a) Date; (b) name of carrier; (c) mailing address; (d) location of principal operating base; (e) if a corporation, the place of incorporation, the name and citizenship of officers and directors and a statement that at least 75 per centum of the voting interest is owned or controlled by persons who are citizens of the United States or of one of its possessions; (f) if an individual or partnership, the name and citizenship of owners or partners;

(g) the types and numbers of each type of aircraft utilized in air transportation. Such application shall be submitted in duplicate in letter form or on CAB Form No. 2789, which is available on request for the convenience of applicants.

§ 291.9 *Small irregular carriers; restrictions on issuance of letter of registration.* An application filed pursuant to § 291.8 will be denied and no letter of registration as a small irregular carrier will be issued to an applicant which has, or proposes to have, as owner, partner, officer, director, or stockholder holding a controlling interest, any person who was or is connected in any such capacity with any irregular air carrier, noncertificated cargo carrier, or air freight forwarder, if the letter of registration or exemption privilege of such carrier or forwarder was suspended or revoked by the Board on account of acts or omissions which occurred during the time of such connection, unless it has been shown to the Board by such applicant, and the Board finds, that the public interest and applicant's intention and ability to conform to the provisions of the act and requirements thereunder will not be adversely affected by such relationship or former relationship. For the purpose of carrying out the intent of this provision, the Board may, before or after the issuance of a letter of registration, require the applicant to furnish information in addition to that required to be set forth in its application filed pursuant to § 291.8.

§ 291.10 *Small irregular carriers; effective period of letter of registration.* Each letter of registration of a small irregular carrier shall become effective only upon the date specified therein and shall continue in effect until suspended, revoked or canceled, or until the temporary exemption privilege conferred by § 291.3 shall terminate or otherwise cease to be effective with respect to such small irregular carrier, whichever occurs first.

§ 291.11 *Small irregular carriers; nontransferability of letter of registration.* A letter of registration shall be nontransferable and shall be effective only with respect to the person or persons named therein.

§ 291.12 *Small irregular carriers; suspension of letter of registration.* Letters of registration shall be subject to immediate suspension when, in the opinion of the Board, such action is required in the public interest. Letters of registration shall be further subject to suspension, without hearing or other proceedings, for continuing failure to file tariffs or reports as required by provisions of the act or any order, rule or regulation issued thereunder, after not less than 10 days' notice to the small irregular carrier within which to comply with such requirement. Such suspension shall continue until the Board finds that such suspended carrier has complied with or submitted satisfactory evidence and assurance that it will comply with the provisions of the act or such rules, regulations or orders. Failure to seek reinstatement of a letter of registration suspended pursuant to the provisions of this subparagraph within a period of 60

days after notice to the carrier of such suspension shall automatically terminate all rights under such letter of registration; *Provided*, That in the case of a letter of registration suspended prior to May 20, 1949, failure to seek reinstatement of such letter of registration, prior to July 20, 1949, shall automatically terminate all rights under such letter of registration.

§ 291.13 *Small irregular carriers; revocation of letter of registration.* Letters of registration shall be subject to revocation, after notice and hearing, for knowing and willful violation of any provisions of the act or of any order, rule, or regulation issued under any such provision or of any term, condition, or limitation of any authority issued under said act or regulations, or for any cause which, at the time of revocation, would justify the Board in refusing to issue to the holder of such letter a like letter.

§ 291.14 *Small irregular carriers; cancellation of letter of registration.* (a) The letter of registration of any small irregular carrier shall be canceled without prejudice upon the filing by such carrier of a written request for cancellation; *Provided*, That the Board may refuse to grant such request if any proceeding or action is pending in which the small irregular carrier's letter of registration may be subject to suspension or revocation.

(b) In any case in which the Board has reason to believe that a small irregular carrier has ceased to operate pursuant to the temporary exemption privilege conferred by § 291.3, the Board may, by registered letters mailed to the carrier at its last known address and to the designated agent of such carrier, if any, request such carrier to advise the Board, within 60 days after receipt thereof, whether such carrier wishes to continue such operations or to have its letter of registration canceled. Failure to reply within a period of 60 days after receipt thereof, or return of such letters unclaimed, shall automatically terminate all rights under such letter of registration.

§ 291.15 *Large irregular carriers; exemptions.* Except as otherwise provided in this part, each large irregular carrier, falling within the classification above, shall be temporarily exempt from the following provisions of Title IV of the Civil Aeronautics Act of 1938, as amended:

(a) Subsection 401 (a);

(b) Subsection 404 (a): *Provided, however*, That each such large irregular carrier shall abide by these provisions of this subsection which require air carriers to provide safe service, equipment, and facilities in connection with interstate and overseas air transportation; and to establish, observe and enforce just and reasonable individual rates, fares and charges and just and reasonable classifications, rules, regulations and practices relating to such air transportation.

(c) Subsection 405 (e).

§ 291.16 *Large irregular carriers; duration of exemption.* The temporary exemption conferred by § 291.15 shall ter-

minate and cease to be effective with respect to each large irregular carrier at 5 p. m., eastern daylight saving time, on June 20, 1949: *Provided*, That any large irregular carrier which before such time has on file with the Board pursuant to section 416 (b) of the act an application for an individual exemption from Title IV of the act extending to all or part of the air transportation which such large irregular carrier is authorized to perform as of June 19, 1949, pursuant to the temporary exemption conferred by § 291.15 may continue, except during any such time as its letter of registration may be suspended, to exercise such privilege until, but only until, the date specified in the Board's order finally disposing of its application for individual exemption, or until its letter of registration is revoked or canceled, whichever shall be earlier. Suspension of the letter of registration of a large irregular carrier shall not render such carrier ineligible to file an application for individual exemption hereunder.

§ 291.17 *Large irregular carriers; condition to exercise of temporary exemption privilege.* No person shall exercise the temporary exemption privilege conferred by § 291.15 unless there is in effect with respect to such person a letter of registration issued by the Board, acknowledging that such person has been duly registered with the Board as a large irregular carrier under the provisions of this part, as amended, relating to irregular air transportation.

§ 291.18 *Large irregular carriers; nontransferability of letter of registration.* A letter of registration of a large irregular carrier shall be nontransferable and shall be effective only with respect to the person or persons named therein.

§ 291.19 *Large irregular carriers; suspension of letter of registration.* Letters of registration of large irregular carriers shall be subject to immediate suspension when, in the opinion of the Board, such action is required in the public interest.

§ 291.20 *Large irregular carriers; revocation of letter of registration.* Letters of registration of large irregular carriers shall be subject to revocation, after notice and hearing, for knowing and willful violation of any provisions of the act or of any order, rule, or regulation issued under any such provisions or of any term, condition or limitation of any authority issued under said act or regulations.

§ 291.21 *Large irregular carriers; cancellation of letter of registration.* (a) The letter of registration of any large irregular carrier shall be cancelled without prejudice upon the filing by such carrier of a written request for cancellation: *Provided*, That the Board may refuse to grant such request if any proceeding or action is pending in which the carrier's letter may be subject to suspension or revocation.

(b) In any case in which the Board has reason to believe that a large irregular carrier has ceased to operate pursuant to the temporary exemption conferred by § 291.15, the Board may, by registered letters mailed to the carrier at its last

known address and to the designated agent of such carrier, if any, request such carrier to advise the Board, within 60 days after receipt thereof, whether such carrier wishes to continue such operations or to have its letter of registration canceled. Failure to reply within a period of 60 days after receipt thereof, or return of such letters unclaimed, shall automatically terminate all rights under such letter of registration.

§ 291.22 *Large irregular carriers; interlocking relationships.* If an application by any large irregular carrier for approval of an interlocking relationship in existence on May 20, 1949, and heretofore exempt from the provisions of section 409 (a) is filed with the Board on or before June 20, 1949, such carrier may retain the officer, director, member or stockholder involved in such relationship pending final disposition by the Board of said application, and such relationship is hereby approved pending such final disposition.

§ 291.23 *Large irregular carriers; operational limitations.* Large irregular carriers shall not engage in the foreign air transportation of persons, and are not granted any exemption by this part from the provisions of the Civil Aeronautics Act of 1938, as amended, with respect to such foreign air transportation of persons.

§ 291.24 *Nonapplicability.* This part shall not apply to any air carrier authorized by a certificate of public convenience and necessity to engage in air transportation, to Alaskan air carriers, to operations within Alaska, or to any non-certificated air carrier engaged in air transportation pursuant to special or individual exemption by the Board or pursuant to exemption created by any other part of this subchapter.

§ 291.25 *Separability.* If any provisions of this part or the application thereof to any air transportation, person, class of persons, or circumstances is held invalid, the remainder of the part and the application of such provisions to other air transportation, persons, classes of persons, or circumstance shall not be affected thereby.

§ 291.26 *Past violations.* All those provisions of this part in effect prior to the revision adopted April 13, 1949, which are included in the amendment without substantial change are hereby affirmed and continued in effect and all such provisions are intended to speak from the time of their first enactment. All references to violations of the Board's regulations include any violations at any time of the provisions of this part as then in effect, and the aforesaid revision shall in no way affect any pending enforcement proceeding or action, or any enforcement action taken subsequent of May 20, 1949, of this amendment with respect to violations which occurred prior to such date.

PART 292—CLASSIFICATION AND EXEMPTION OF ALASKAN AIR CARRIERS

- Sec.
292.1 Classification.
292.2 Temporary exemption of certificated air carriers.

- Sec.
292.3 Temporary exemption of noncertificated air carriers.
292.4 Regulation.
292.5 Procedural requirements.
292.6 Formal proceedings.
292.7 Powers of the Director in formal proceedings.
292.8 Alaskan pilot-owner; conditions and requirements.

AUTHORITY: §§ 292.1 to 292.8 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply secs. 401 and 416, 52 Stat. 987, 1004; 49 U. S. C. 481, 496.

SOURCE: §§ 292.1 to 292.8 appear at 14 F. R. 3550.

§ 292.1 *Classification.* (a) There is hereby established, within the meaning of section 416 (a) of the Civil Aeronautics Act of 1938, a classification of air carriers which, except as otherwise authorized in § 292.2 (b) and § 292.3 (a) (2), engage solely in air transportation within the Territory of Alaska, said classification to be designated as Alaskan air carriers. Such classification shall include both (1) certificated air carriers and (2) air carriers operating under the authority of § 292.3.

(b) There is hereby established a further classification of air carriers operating in Alaska to be designated Alaskan pilot-owners. As used in this section an Alaskan pilot-owner carrier shall mean a certificated pilot with a commercial or airline transport rating who:

- (1) Directly or indirectly engages as a principal in air transportation solely within the Territory of Alaska;
- (2) Utilizes in such air transportation only aircraft which have a certificated capacity of no more than four passengers, and which are beneficially owned and flown exclusively in air transportation by him alone;
- (3) Is not otherwise authorized by the Board to engage in air transportation.

§ 292.2 *Temporary exemption of certificated air carriers.* Until the Board shall adopt further rules, regulations, or orders, an Alaskan air carrier which holds a certificate of public convenience and necessity issued by the Board shall be exempt, subject to the conditions and requirements set forth in this part, from sections 401 (a) and 404 (a) of the act insofar as the enforcement of said sections would prevent any such air carrier:

(a) From providing, over a regular route designated in a certificate of public convenience and necessity, service, of the same type authorized by the certificate, to such additional points not named in the certificate as are situated within the Territory which would ordinarily be served by such route;

(b) From making charter trips and rendering other special services between points on routes which it is authorized by its certificate to serve. (Charter trips and other special services may also be rendered to or from any other point within or outside the Territory of Alaska: *Provided, however,* That such trips originate at or are destined to a point on a route, regular or irregular, the carrier is authorized by its certificate to serve: *And, provided further,* That all such trips are casual, occasional, or infrequent, and are

not made in such manner as to result in establishing a regular or scheduled service);

(c) From transporting over postal routes 78182 and 78187 (blanket authorization of the Postmaster General relating to the transportation of first-class mail) and over postal routes designated by the Postmaster General as "gratuitous" routes, such mail as may be tendered by postmasters in Alaska for transportation over such routes.

§ 292.3 *Temporary exemption of non-certificated air carriers.* (a) Until the Board shall adopt further rules, regulations, or orders, any air carrier engaging in air transportation within the Territory of Alaska which (i) does not hold a certificate of public convenience and necessity, (ii) during the 6 months ending March 31, 1945, was engaging within the Territory of Alaska in air transportation which had not been authorized by the Board, and (iii) has heretofore filed on or prior to September 15, 1945, an application for a permanent or temporary certificate of public convenience and necessity covering such services, shall be exempt, subject to the conditions and requirements hereinafter set forth, from sections 401 (a) and 404 (a) of the act insofar as the enforcement of said sections would otherwise prevent:

(1) Any such air carrier from continuing to engage in air transportation of the same nature, extent, regularity and frequency as was rendered by it within the Territory of Alaska during said period ending March 31, 1945, and for which air transportation such air carrier filed, on or prior to September 15, 1945, an application for a permanent or temporary certificate of public convenience and necessity;

(2) Any such air carrier from making charter trips and rendering other special services between points on routes over which it is authorized to serve by the terms of subparagraph (1) of this paragraph with equipment utilized thereunder. (Charter trips and other special services may also be rendered with such equipment to or from any other point, within or outside the Territory of Alaska: *Provided,* That such trips originate at or are destined to a point on a route such air carrier is authorized to serve by the terms of subparagraph (1) of this paragraph: *And provided, further,* That all such trips are casual, occasional, or infrequent, and are not made in such a manner as to result in establishing a regular or scheduled service.)

(b) The exemptions granted in paragraph (a) of this section shall be of no further force and effect as to any air carrier from and after the effective date of an order of the Board denying the aforesaid application of such carrier filed prior to September 15, 1945, or from the date of the inauguration of air transportation pursuant to an authorization of the Board granting such application in whole or in part;

(c) Until the Board shall adopt further rules, regulations, or orders, any air carrier engaging in air transportation within the Territory of Alaska pursuant to a specific exemption order adopted by the Board pursuant to section

416 (b) of the act shall be exempt, subject to the conditions and requirements hereinafter set forth, from sections 401 (a) and 404 (a) of the act insofar as the enforcement of said sections would otherwise prevent any such air carrier from continuing to engage in air transportation of the same nature, extent, regularity, and frequency as is authorized by the Board in the specific exemption order applicable to such carrier. The exemption granted in this paragraph shall remain in force and effect as to any air carrier for the term provided for in, and in accordance with the terms of, the order granting the specific exemption for such air carrier.

(d) Until September 30, 1949, or until such earlier date that the Board may make effective further rules, regulations, or orders relative hereto, any Alaskan pilot-owner carrier shall be exempt, subject to the conditions and requirements herein set forth, from sections 401 (a) and 404 (a) of the act, insofar as the enforcement thereof would prevent any such person from engaging in the air transportation of persons or property within the Territory of Alaska on a casual, occasional, or infrequent basis, and in such manner as will not result in the establishment of a regular or scheduled service.

§ 292.4 Regulation. (a) This subchapter shall not be applicable to Alaskan air carriers except to the extent provided in this section. Subject to the provisions of paragraphs (b) and (c) of this section, the following regulations are made applicable to Alaskan air carriers:

- Part 200 (Definitions and Instructions).
- Part 201 (Applications for Certificates of Public Convenience and Necessity).
- Part 205 except § 205.6 (Temporary Suspension of Service Authorized by Certificates of Public Convenience and Necessity).
- Part 206 (Certificates of Public Convenience and Necessity; Temporary Change of Route).
- Parts 221 and 222 (Preparation of Tariffs of Air Carriers and Filing and Posting of Tariffs of Air Carriers).
- Part 223 (Tariffs of Air Carriers; Free and Reduced-Rate Transportation).
- Part 224 (Tariffs of Air Carriers; Free and Reduced-Rate Transportation; Access to Aircraft for Safety Purposes).
- Part 231 (Transportation of Mail; Mail Schedules).
- Part 232 (Transportation of Mail; Review of Orders of Postmaster General).
- Part 233 (Transportation of Mail; Free Travel for Postal Employees).
- Part 234 (Transportation of Mail; Petitions for Determination of Rates).
- Part 241 (Reports by Certificated Air Carriers).
- Part 245 (Reports of Ownership of Stock and Other Interests).
- Part 246 (Reports of Stock Ownership of Affiliates of Air Carriers).
- Part 248 (Submission of Audit Reports by Public Accountants).
- Part 249 (Preservation of Accounts, Records, and Memorandums).
- Part 251 (Prohibited Interests; Interlocking Relationships).
- Part 261 (Filing of Agreements).
- Part 262 (Agreements between Air Carriers and Foreign Countries).
- Part 293 (Classification and Exemption of Carriers; Omission of Stop at Junction Point).
- Rules of Practice.

(b) The Director of the Alaska Office may take preliminary action for the Board to relieve any Alaskan air carrier or group of Alaskan air carriers from complying with a specific provision or provisions of Parts 221, 222, 231, and 241 of this chapter when the application of any provision or provisions of these parts is found by him to be an undue burden on such Alaskan air carrier or air carriers by reason of the limited extent of, or unusual circumstances affecting, the operations of such Alaskan air carrier or air carriers. Upon finding that such relief is no longer necessary, the Director of the Alaska Office may take preliminary action for the Board to cancel the relief previously granted in accordance with the provisions of this section. The action of the Director shall be subject to ratification by the Board and any person affected by his action may file exceptions thereto with the Board within 15 days after the date the Director makes his action effective. The action of the Director under this section may be taken either on written application or may be initiated by him in the first instance. Whenever reference is made in Parts 221 or 222 of this chapter to the Bureau of Economic Regulation or to the Director of the Bureau of Economic Regulation, such reference shall be deemed to mean the Director of the Alaska Office.

(c) An Alaskan air carrier which prior to December 1, 1947, has suspended service to a point on a regular route named in its certificate, and which shall file, within 45 days after December 1, 1947, an "Application for Order Authorizing Temporary Suspension of Service" pursuant to Part 206 of this chapter is authorized to continue to suspend service to that point until its application shall have been granted or denied by the Board.

§ 292.5 Procedural requirements.—(a) *Place and time of filing.* Notwithstanding the requirements of any other regulation, order, or rule of the Board, all documents authorized or required by the Civil Aeronautics Act, or any regulation, order, or rule of the Board issued thereunder, to be filed with the Board by any Alaskan air carrier or in connection with air transportation performed or sought to be performed by such air carrier shall be filed in accordance with the methods and within the time limitations provided therein with the Director of the Alaska Office of the Board; *Provided*, That applications, motions, and petitions in formal proceedings filed through counsel having addresses outside of Alaska may be filed with the Board at its office in Washington, D. C., in which event one signed copy (being one of the duplicate originals specified in paragraph (b) of this section) of each such document shall be sent by air mail to the Director of the Alaska Office in Anchorage, Alaska, by the counsel so filing.

(b) *Duplicate originals required.* In addition to the number of copies of each document required to be filed by the regulation, order, or rule under which it is filed, one additional signed copy shall be filed, and if the regulation, order, or rule under which it is filed requires verifica-

tion of documents filed thereunder, said additional signed copy shall also be verified. Two signed copies will constitute duplicate originals. In the event both copies are filed with the Director of the Alaska Office, that office shall transmit one signed copy to the office of the Board in Washington, D. C., and retain the other signed copy in the files of the Alaska Office.

(c) *Conformity to rules.* All such documents shall in all other respects conform to the requirements of the regulation, order or rule of the Board under which they are filed; *Provided*, That any such requirement may be waived or substantial compliance authorized by the Director of the Alaska Office if he finds that such requirement will constitute an undue burden on an air carrier or group of air carriers and strict compliance is unnecessary in view of the limited extent of or unusual circumstances affecting the operations of any such air carrier or group of air carriers.

(d) *Posting and preservation of documents.* The Alaska Office copy of all documents subject to this part which are required by the Act, or by the regulations, orders, or rules, of the Board, thereunder, to be posted in the Office of the Secretary of the Board shall be posted in the Office of the Director of the Alaska Office; and the Alaska Office copy of documents which are required by section 1103 of the act to be preserved as public records in the custody of the Secretary of the Board, shall be preserved as public records in the custody of the Director of the Alaska Office under such reasonable arrangements as he may make for public inspection thereof. Such posting and preservation as public records shall be in addition to that required of the Secretary of the Board.

(e) *Requests for additional information.* The Director of the Alaska Office may at any time require any person filing documents with the Alaska Office to file additional copies thereof, and to make service upon persons other than those specified in the pertinent regulation, order, or rule of the Board, if he finds such requirements necessary in the public interest or in the interest of efficiency and expedition in the work of the Board. If he is of the opinion that a formal or informal application, complaint, petition or other document does not sufficiently set forth the material required to be set forth by any applicable regulation, order or rule of the Board, or is otherwise insufficient, he may advise the party filing the same of the deficiency and require that any additional information be supplied. In case he deems an answer to formal complaints and petitions desirable, he may so notify the parties.

(f) *Extension of time.* The Director of the Alaska Office shall have authority, upon good cause shown, to extend the time for filing of any document required by this part to be filed with the Alaska Office.

(g) *Recommendations concerning regulations.* The Director of the Alaska Office may submit a draft of proposed regulations affecting air transportation within Alaska, or of amendments or

modifications of such regulations to the Alaskan air carriers for comment. Upon expiration of the date fixed for submission of comments he shall transmit any comments received, together with his recommendations, to the Board for consideration. The Board may revise any such proposed regulation, amendment, or modification, and in respect of any substantial revision, may direct the Director of the Alaska Office to submit such revision to the Alaskan air carriers for further comment.

§ 292.6 Formal proceedings—(a) Docket of Alaska Office. A complete docket of all formal proceedings by or against Alaskan air carriers, or by or against persons seeking authority to engage in air transportation solely within the Territory of Alaska, shall be maintained in the offices of the Board at Washington, D. C., and in the Board's Alaska Office.

(b) Exceptions and oral argument. Exceptions to the initial or recommended decision of the examiner in any formal proceeding and briefs in support of such exceptions, may be filed with the Board at its office in Washington, D. C. One copy of such exceptions and briefs shall be sent by air mail to the Director of the Alaska Office by the party so filing; or may be filed with the Director of the Alaska Office, in which event they will be transmitted by him to the Board's office in Washington, D. C. If any of the parties to any such proceeding so desire, the Director of the Alaska Office may on behalf of the Board hear oral argument upon exceptions to the examiner's report, and shall transmit a transcript of such oral argument to the Board. Such oral argument before the Director of the Alaska Office shall be in lieu of oral argument before the Board.

(c) Hearings and conferences. Hearings and conferences in proceedings on the Board's Alaskan docket shall be assigned, and procedural notices (other than notice of oral argument before the Board) and examiner's report will be served by the Director of the Alaska Office.

§ 292.7 Powers of the Director in formal proceedings. Subject to the modification or reversal by the Board, on his own motion or upon petition or application of any air carrier or other person affected by or having a substantial interest in his action, the Director of the Alaska Office is authorized and designated to act for the Board in the following matters:

(a) Intervention. All petitions for intervention in proceedings on the Board's Alaska docket shall be referred to the Director of the Alaska Office who shall have authority to grant or deny such intervention. Any person whose petition for intervention shall have been denied by the Director of the Alaska Office may file exceptions thereto within 15 days after such denial and the Director of the Alaska Office shall submit such petition and exceptions to the Board for review.

(b) Dismissal of applications. The Director of the Alaska Office shall have authority to order dismissal of any application made to the Board pursuant to

the Civil Aeronautics Act of 1938, as amended, and pending on the Board's Alaska Docket, when such dismissal is requested by the applicant or where the applicant has failed to prosecute such application.

(c) Consolidation of applications. The Director of the Alaska Office shall have authority to consolidate applications under Title IV of the act on the Board's Alaska Docket for hearing or issuance of initial or recommended decision by an examiner.

§ 292.8 Alaskan pilot-owner; conditions and requirements. Persons seeking to engage in air transportation as an Alaskan pilot-owner carrier shall be subject to the following conditions and requirements.

(a) Such persons shall first file with the Board a proper application for, and shall hold a currently effective letter of registration (Alaska); before undertaking to engage in such air transportation, except that any person engaged in service on May 28, 1948, and filing such application on or before such date may continue to engage in services of the nature and extent herein authorized until such letter of registration (Alaska) has been issued or he has been notified that no such letter will be issued;

(1) An application by an Alaskan pilot-owner for a letter of registration may be submitted to the Board in duplicate in letter form. Such application shall be certified to be correct by the applicant, and shall set forth the following information:

(i) Date.
(ii) Name, citizenship, address, principal operating base, airman certificate number and ratings held by applicant, and whether applicant operates as individual enterprise, partnership, or corporation.

(iii) Number of aircraft units beneficially owned by applicant and utilized by him in air transportation, registration number, make, model of each aircraft, and type of landing gear employed, and the name in which each aircraft is registered.

(iv) Types of services and area in which services will be performed, and any seasonal variations in proposed services.

(2) Letters of registration (Alaska) shall be subject to immediate suspension when, in the opinion of the Board, such action is required in the public interest.

(3) Letters of registration (Alaska) shall be subject to revocation, after notice and hearing, for knowing and willful violation of any provision of the Civil Aeronautics Act of 1938, as amended, or of any order, rule, or regulation issued under any such provision, or of any term, condition, or limitation of any authority issued under said act or regulations.

(b) An Alaskan pilot-owner shall not engage in any air transportation between points on any route on which one or more carriers holding certificates of public convenience and necessity undertake, pursuant to schedules filed with the Board under section 405 (e) of the act, to provide service on an aggregate

of three or more scheduled flights weekly;

(c) An Alaskan pilot-owner shall be subject to the provisions of §§ 292.4, 292.5, 292.6, and 292.7 in the same manner and to the same extent as an Alaskan air carrier.

PART 293—CLASSIFICATION AND EXEMPTION OF CARRIERS; OMISSION OF STOP AT ROUTE JUNCTION POINTS

§ 293.1 Omission of stop. Notwithstanding the provisions of section 401 (a) of the act, an air carrier on any flight which is regularly scheduled to be operated between points on two or more of its certificated routes, via a junction point of such routes, may omit a stop at such junction point whenever weather conditions at such junction point otherwise would require the cancellation or postponement of any portion of such flight. (Sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interprets or applies sec. 416, 52 Stat. 1004, 49 U. S. C. 496) [14 F. R. 3552]

PART 295—CLASSIFICATION AND EXEMPTION OF NONCERTIFICATED CARGO CARRIERS

AUTHORITY: §§ 295.1 to 295.12 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 416, 52 Stat. 1004, 49 U. S. C. 496.

SOURCE: §§ 295.1 to 295.12 appear at 14 F. R. 3552.

§ 295.1 Definitions. (a) A noncertificated cargo carrier shall be defined to mean any air carrier which directly engages in interstate or overseas air transportation of property only and which on May 5, 1947:

(1) Did not hold a certificate of public convenience and necessity under section 401 of the Civil Aeronautics Act of 1938, as amended;

(2) Had on file with the Board an application for a certificate of public convenience and necessity authorizing scheduled interstate or overseas air transportation of property only; and

(3) Was actively engaged in the business of carrying property by air for compensation or hire.

(b) For the purpose of this part, the term "established points" shall be defined for any given noncertificated cargo carrier to include any point to or from which such carrier has transported property by air, for compensation or hire, on other than merely a casual, occasional, or infrequent basis, at any time during the 12-month period ending May 5, 1947: *Provided, however,* That such point is a point, or is located in a region, proposed to be served in such carrier's pending application referred to in paragraph (a) (2).

§ 295.2 *Applicability.* This part shall not apply to any air carrier authorized by a certificate of public convenience and necessity to engage in air transportation, to Alaskan air carriers, to operations within Alaska, or to any noncertificated air carrier engaged in air transportation pursuant to special or individual exemption by the Board, or pursuant to exemption created by any other part of this subchapter.

§ 295.3 *Classification.* There is hereby established a classification of noncertificated air carriers to be designated as noncertificated cargo carriers.

§ 295.4 *Scope of operations affected.* (a) Except as otherwise provided in this part, each noncertificated cargo carrier shall be entitled to the exemptions created by this part only with respect to transportation between such carrier's "established points."

(b) Upon filing written notice with the Board of intention to serve any other point located within the area immediately adjacent to any established point, such carrier also shall be entitled to the exemptions created by this part with respect to transportation to or from such other point unless and until the Board shall advise the carrier that such other point is not deemed, with reference to the purposes of this part, to be located within said immediately adjacent area, or that said transportation to or from such other point is not in the public interest.

§ 295.5 *Duration of exemption.* Unless otherwise extended as to any particular carrier by appropriate order of the Board, the exemptions provided in this part shall apply to each noncertificated cargo carrier only until 60 days after the Board shall have made final disposition of any one application, or part thereof, on file with the Board by that carrier on May 5, 1947, for a certificate of public convenience and necessity authorizing the direct scheduled interstate or overseas air transportation of property only.

§ 295.6 *Exemptions.* Except as otherwise provided in this part, noncertificated cargo carriers shall be exempt from all provisions of Title IV of the Civil Aeronautics Act of 1938, as amended, other than the following:

(1) Subsection 401 (1) (Compliance with Labor Legislation);

(2) Section 403 (Tariffs);

(3) Subsection 404 (a) (Carrier's Duty to Provide Service, etc.), only insofar as said subsection requires air carriers to provide safe service, equipment, and facilities in connection with air transportation, and to establish, observe, and enforce just and reasonable individual and joint rates, fares, and charges, and just, reasonable, and equitable divisions thereof, and just, reasonable classifications, rules, regulations, and practices relating to air transportation;

(4) Subsection 404 (b) (Discrimination);

(5) Subsection 407 (a) (Filing of Reports): *Provided*, That no provision of any rule, regulation, term, condition, or limitation prescribed pursuant to said subsection 407 (a) shall be applicable to noncertificated cargo carriers unless such

rule, regulation, term, condition, or limitation expressly so provides;

(6) Subsection 407 (b) (Disclosure of Stock Ownership);

(7) Subsection 407 (c) (Disclosure of Stock Ownership by Officers or Directors);

(8) Subsection 407 (d) (Form of Accounts): *Provided*, That no provision of any rule, regulation, term, condition, or limitation prescribed pursuant to said subsection 407 (d) shall be applicable to noncertificated cargo carriers unless such rule, regulation, term, condition, or limitation expressly so provides;

(9) Subsection 407 (e) (Inspection of Accounts and Property);

(10) Section 408 (Consolidation, Merger, and Acquisition of Control);

(11) Subsection 409 (a) (Interlocking Relationships);

(12) Subsection 409 (b) (Profit from Transfer of Securities);

(13) Section 410 (Loans and Financial Aid);

(14) Section 411 (Methods of Competition);

(15) Section 412 (Pooling and Other Agreements): *Provided*, That noncertificated cargo carriers shall be exempt from said section 412 until 60 days after June 10, 1947: *Provided further*, That such exemption from said section 412 shall not constitute an order made under said section, within the meaning of section 414, and shall not confer any immunity or relief from operations of the "antitrust" laws, or any other statute (except the Civil Aeronautics Act of 1938, as amended), with respect to any contract or agreement otherwise within the purview of said section 412;

(16) Section 413 (Form of Control);

(17) Section 414 (Legal Restraints);

(18) Section 415 (Inquiry into Air Carrier Management);

(19) Section 416 (Classification and Exemption of Carriers).

§ 295.7 *Registration for exemption.* From and after 60 days after June 10, 1947 no noncertificated cargo carrier may engage in any form of air transportation unless there is then outstanding and in effect with respect to such air carrier a letter of registration issued by the Board: *Provided*, That if any noncertificated cargo carrier, otherwise authorized to engage in air transportation pursuant to this section, shall file with the Board, within 60 days after June 10, 1947, an application for a letter of registration, such applicant may engage in such air transportation until such letter has been issued or such applicant has been notified that it appears to the Board that such applicant is not entitled to the issuance of such letter.

§ 295.8 *Issuance of letter of registration.* Upon the filing, in duplicate, of proper application therefor, the Board shall issue, to any noncertificated cargo carrier, a letter of registration which, unless otherwise sooner rendered ineffective, shall expire and be of no further force and effect, upon a finding by the Board that enforcement of the provisions of section 401 (from which exemption is provided in this section) would be in the public interest and would no longer be an undue burden on such noncertificated

cargo carrier or class of noncertificated cargo carriers. Such application shall be certified to by a responsible official of such carrier as being correct, and shall contain the following information:

(a) Date;

(b) Name of carrier;

(c) Mailing address;

(d) Location of principal operating base;

(e) If a corporation, the place of incorporation, the name and citizenship of officers and directors, the name and address of each stockholder owning beneficially more than 5 percent of the voting interest, and a statement that at least 75 per centum of the voting interest is owned or controlled by persons who are citizens of the United States or of one of its possessions;

(f) If an individual or partnership, the name and citizenship of owners or partners;

(g) Reference, by date of filing and docket number, to pending applications for certificates of public convenience and necessity for interstate or overseas air transportation of property only, filed with the Board prior to May 5, 1947; and

(h) List of the carrier's established points, showing, as to each such point, the maximum number of its flights serving such point in any 1 month during the 12-month period ending May 5, 1947.

§ 295.9 *Nontransferability of letter of registration.* Letters of registration shall be nontransferable and shall be effective only with respect to the person named therein.

§ 295.10 *Suspension of letter of registration.* Letters of registration shall be subject to immediate suspension when, in the opinion of the Board, such action is required in the public interest.

§ 295.11 *Revocation of letter of registration.* Letters of registration shall be subject to revocation, after notice and hearing, for knowing and willful violation of any provision of the Civil Aeronautics Act of 1938, as amended, or of any order, rule, or regulation issued under any such provision, or of any term, condition, or limitation of any authority issued under said act or regulations.

§ 295.12 *Separability.* If any provision of this part or the application thereof, to any air transportation, person, class of persons, or circumstance is held invalid, the remainder of the part and the application of such provisions to other air transportation, persons, classes of persons, or circumstances shall not be affected thereby.

 296.15 Insurance.
 296.16 Payment of transportation charges.
 296.17 Nonapplicability.
 296.18 Separability.

AUTHORITY: §§ 296.1 to 296.18 issued under sec. 205 (a); 52 Stat. 984, 49 U. S. C. 425. Interpret or apply sec. 1, (2), 416; 52 Stat. 977, 1004; 49 U. S. C. 401, 496.

SOURCE: §§ 296.1 to 296.18 appear at 14 F. R. 3553.

§ 296.1 *Definitions.* An air freight forwarder shall be defined to mean any person which engages indirectly in air transportation of property only, and which, in the ordinary and usual course of his undertaking, (a) assembles and consolidates or provides for assembling and consolidating such property and performs or provides for the performance of break-bulk and distributing operations with respect to such consolidated shipments, (b) assumes responsibility for the transportation of such property from the point of receipt to point of destination, and (c) utilizes for the whole or any part of the transportation of such shipments, the services of a direct air carrier subject to the act.

§ 296.2 *Classification.* There is hereby established a classification of air carriers which are not directly engaged in the operation of aircraft in air transportation (herein referred to as "indirect air carriers") to be designated as "air freight forwarders."

§ 296.3 *Exemption.* Subject to the other provisions of this part, air freight forwarders are hereby relieved from the provisions of Title VI of the act, and from all provisions of Title IV of the act, other than the following:

- (a) Subsection 401 (1) (Compliance with Labor Legislation);
 (b) Section 403 (Tariffs);

(c) Subsection 404 (a) (Carrier's Duty to Provide Service, etc.), insofar as said subsection requires air carriers to provide safe service, equipment and facilities in connection with air transportation, and to establish, observe, and enforce just and reasonable individual rates, fares, and charges, and just and reasonable classifications, rules, regulations, and practices relating to air transportation;

(d) Subsection 404 (b) (Discrimination);

(e) Subsection 407 (a) (Filing of Reports); *Provided*, That no provision of any rule, regulation, term, condition, or limitation prescribed pursuant to said subsection 407 (a) shall be applicable to air freight forwarders unless such rule, regulation, term, condition, or limitation expressly so provides;

(f) Subsection 407 (b) (Disclosure of Stock Ownership);

(g) Subsection 407 (c) (Disclosure of Stock Ownership by Officers or Directors);

(h) Subsection 407 (d) (Form of Accounts); *Provided*, That no provision of any rule, regulation, term, condition, or limitation prescribed pursuant to said subsection 407 (d) shall be applicable to

air freight forwarders unless such rule, regulation, term, condition, or limitation expressly so provides;

(i) Subsection 407 (e) (Inspection of Accounts and Property);

(j) Section 408 (Consolidation, Merger and Acquisition of Control);

(k) Section 409 (Prohibited Interests);

(l) Section 410 (Loans and Financial Aid);

(m) Section 411 (Methods of Competition);

(n) Section 412 (Pooling and Other Agreements);

(o) Section 413 (Form of Control);

(p) Section 414 (Legal Restraints);

(q) Section 415 (Inquiry into Air Carrier Management); and

(r) Section 416 (Classification and Exemption of Carriers).

§ 296.4 *Duration.* The temporary authority provided by this part shall continue in effect until such time as the Board shall find that the exemption accorded herein is no longer in the public interest, but in no event longer than 5 years from October 15, 1948.

§ 296.5 *Limitation—(a) Use of aircraft.* In respect to operations conducted pursuant to the authority provided in this part no air freight forwarder shall ship property by air except upon aircraft operated in common carriage (1) by small irregular carriers (as defined in Part 291 of this chapter), or (2) by air carriers whose tariffs for the transportation services thus utilized have been filed with the Board.

(b) *Prohibition.* No freight forwarder shall ship property as an air carrier in air transportation except between places in the continental United States.

§ 296.6 *Necessity for letter of registration.* No person shall engage in air transportation pursuant to the exemption granted by this part unless there is in force with respect to such person a letter of registration issued by the Board.

§ 296.7 *Application for letter of registration.* Any person other than those specified in § 296.17 desiring to engage in operations as an air freight forwarder may apply to the Board for a letter of registration authorizing the conduct of such operations. Such application shall be submitted in duplicate in letter form, shall be certified to by a responsible official of such carrier as being correct, and shall contain the following information:

- (a) date; (b) name of air freight forwarder; (c) mailing address; (d) location of principal office; (e) if a corporation, the state of incorporation, the name and citizenship of officers and directors, and a statement that at least 75 percent of the voting interest is owned or controlled by persons who are citizens of the United States or one of its possessions; (f) the names of the largest stockholders, not exceeding 20, who hold, individually, 1 percent or more of the voting capital stock of the applicant; (g) if an individual or partnership, the name and citizenship of the owner or partners, and a statement of the respective interests of each; (h) a financial statement showing assets and liabilities as of a date not exceeding 6 months prior to the date of

filing the application, and a statement showing the types and amounts of insurance, which is in force for the protection of the forwarder's customers, and the public and the name or names of the insurers; (i) whether or not any of the persons required to be listed under (e), (f), and (g) above has at any time been issued, either in his own name or some other name, any letter of registration or other license or operating authority by the Board, either as an irregular air carrier or air freight forwarder or otherwise, or is, or has been, affiliated as owner, partner, officer, director, or stockholder holding a controlling interest, with any other air carrier or carriers, either certificated or noncertificated, direct or indirect, together with the names of such other air carrier or carriers; (j) the information required in a "Report of Ownership of Stock" (CAB Form 2786; available from the Board's Publications Section) with respect to each officer and director, if a corporation or association; with respect to each partner or member, if a partnership; or with respect to the owner where the business is conducted by an individual; (k) such other additional information pertinent to applicant's activities as may be requested by the Board with respect to any individual application.

§ 296.8 *Issuance of letter of registration.* (a) If, after the filing of an application for a letter of registration it appears that the conduct of air freight forwarder operations by the applicant will not be inconsistent with the public interest the applicant will be notified and advised that upon the filing of a valid tariff a letter of registration will be issued to such applicant. Subject to the restrictions provided herein, and upon the receipt by the Board of such a valid tariff, a Letter of Registration shall forthwith be issued to the applicant. If it appears that the granting of such letter may not be consistent with the public interest, the Board shall notify the applicant of its findings in this respect and will inform the applicant by letter that the Board does not believe that the applicant has made a proper showing of public interest. Thereupon applicant may file with the Board a petition for leave to withdraw the application, or may request that the application be assigned for hearing, or may submit, within such reasonable time as may be established by the Board, such additional information as applicant believes will result in a showing of public interest.

(b) In the event additional information is submitted, the Board on its own initiative, may assign the application for hearing or without notice of hearing enter an order of approval or an order of disapproval in accordance with its determination of the public interest.

§ 296.9 *Effective period.* Each letter of registration shall become effective only upon the date specified therein and shall continue in effect until suspended or revoked, or during such period as the authority provided by this part shall remain in effect.

§ 296.10 *Restrictions on issuance of letter of registration.* No letter of reg-

istration will be issued to any freight forwarder which has, or proposes to have, as owner, partner, officer, director, or stockholder holding a controlling interest, any person who is or has been connected in any such capacity with any other air freight forwarder, irregular air carrier, or noncertificated cargo carriers, if such forwarder or carrier was subject to suspension action by the Board at the time of such connection, unless the Board finds that the public interest and applicant's intention and ability to conform to the provisions of the Act and requirements thereunder are not adversely affected by such relationship or former relationship. A forwarder or carrier shall be considered to be subject to suspension action within the meaning of this provision if it conducts unauthorized operations which subsequently form the basis for Board action looking toward the revocation or suspension of its letter of registration.

§ 296.11 *Conditions of a letter of registration.* No air freight forwarder shall have and retain, as an owner, partner, officer, director, or stockholder holding a controlling interest, any person who was, or is, affiliated in any of said capacities with any other air freight forwarder, irregular air carrier, or noncertificated cargo carrier under the circumstances set forth in § 296.10 unless it has been shown to the Board by such air freight forwarder, irregular air carrier, or noncertificated cargo carrier, and the Board finds that the public interest and the carrier's intention and ability to conform to the provisions of the act and requirements thereunder will not be adversely affected thereby.

§ 296.12 *Nontransferability of letter of registration.* A letter of registration shall be nontransferable and shall be effective only with respect to the person named therein.

§ 296.13 *Suspension of letter of registration.* Letters of registration shall be subject to immediate suspension when, in the opinion of the Board, such action is required in the public interest. Letters of registration shall be further subject to suspension upon complaint, or upon motion of any person showing an interest therein, or upon the Board's own initiative, after not less than 10 days' notice to the air freight forwarder, but without hearing or further proceedings, for failure to comply with the provisions of the act or with any order, rule or regulation issued thereunder, or with any term, condition or limitation of any authority issued thereunder. Such suspension shall continue until the Board finds that such suspended air freight forwarder has complied with the provisions of the act, or with such rules, regulations, orders, terms, conditions, or limitations. Failure to seek reinstatement of a letter of registration suspended pursuant to the provisions of this section within a period of 60 days after the effective date of such suspension shall automatically terminate all rights under such letter of registration.

§ 296.14 *Revocation of letter of registration.* (a) Letters of registration shall be subject to revocation, after no-

tice and hearing, for knowing and willful violation of any provision of the act or of any order, rule, or regulation issued under any such provision, or of any term, condition, or limitation of any authority issued under said act or regulations.

(b) A letter of registration shall be revoked without prejudice upon the filing by an air freight forwarder of a written notice with the Board indicating the discontinuance of common carrier activities, together with a tender of the letter of registration for cancellation; *Provided*, That the Board may refuse to accept such notice or to cancel the letter if any proceeding or action is pending in which an air freight forwarder's authority may be subject to suspension or revocation action. The failure of any air freight forwarder, for two successive periods, to file the periodic reports required by this subchapter, may, for the purpose of this part, be deemed by the Board to constitute the filing of such written notice indicating the discontinuance of the common carrier activities, and in such case the tender of the letter of registration shall not be necessary.

§ 296.15 *Insurance*—(a) *Cargo.* No air freight forwarder shall engage in air transportation pursuant to this part unless the risks of loss of or damage to the property so transported by it are covered in the amounts prescribed in paragraph (c) of this section by insurance, a self-insurance fund or reserve, or surety bond.

(b) *Public liability and property damage.* No air freight forwarder shall engage in the performance of transfer, collection, or delivery services under the provisions of this section unless risks of bodily injury or death to persons or of damage to property (other than property covered by paragraph (a) of this section), resulting from the negligent operation, maintenance, or use of motor vehicles operated by it or under its direction and control, or resulting from other acts of its agents, employees and representatives in the performance of such transfer, collection, or delivery services are covered to the extent that legal liability may ensue, in the amounts prescribed in paragraphs (c) (2) and (3) of this section by insurance, a self-insurance fund or reserve, or surety bond.

(c) *Liability limits*—(1) *Cargo insurance.* For loss of or damage to property while carried on or resting in any one conveyance: \$2,000.

(2) *Public liability; property.* For loss or damage to property occurring at any one time or place: \$2,000.

(3) *Public liability; personal injury.* Claims for bodily injury or death: \$10,000; for one person subject to that limit per person and for all persons in any one accident: \$20,000.

§ 296.16 *Payment of transportation charges.* Freight bills from direct air carriers for all transportation charges shall be paid by every air freight forwarder within a reasonable period after the rendering of the transportation services. A reasonable maximum period for the payment of such charges shall be 7 days after being billed therefor.

§ 296.17 *Nonapplicability.* This section shall not apply (a) to any air carrier authorized by a certificate of public con-

venience and necessity to engage in air transportation, nor (b) to any noncertificated air carrier engaged in air transportation pursuant to any special or individual exemption order granted by the Board, nor (c) to any noncertificated air carrier engaged in air transportation pursuant to any general exemption granted by any other part of this subchapter.

§ 296.18 *Separability.* If any provision of this part or the application thereof to any air transportation, person, class of persons, or circumstance is held invalid, the remainder of the part and the application of such provisions to other air transportation, persons, classes of persons, or circumstances shall not be affected thereby.

Subchapter C—Procedural Regulations

PART 301—RULES OF PRACTICE IN AIR SAFETY PROCEEDINGS

NOTE: The Rules of Practice in Air Safety Proceedings currently in effect may be found in Part 97 of this chapter. For proposed revision of Part 97, to be designated Part 301 when adopted, see 14 F. R. 2574.

PART 302—RULES OF PRACTICE IN ECONOMIC PROCEEDINGS

- 302.1 Proceedings.
- 302.2 General requirements as to papers in proceedings.
- 302.3 Form and filing of documents.
- 302.4 Appearances and practice requirements.
- 302.5 Subpoenas and depositions.
- 302.6 Appearances by third persons and formal interventions.
- 302.7 Conference procedure.
- 302.8 Hearings, argument, recommended decisions and proceedings subsequent thereto.
- 302.9 Exhibits.
- 302.10 Hearings before the Board and before Boards of Examiners.
- 302.11 Petition for rehearing, reargument, or reconsideration.
- 302.12 Memoranda in opposition or support.
- 302.13 Procedure in rate proceedings.
- 302.14 Informal complaints.
- 302.15 Formal complaints.
- 302.16 Objection to public disclosure of information.
- 302.17 Representation of private parties by persons formerly associated with the Board.

AUTHORITY: §§ 302.1 to 302.17 issued under sec. 205 (a), 52 Stat. 984; 49 U. S. C. 425 (a). Interpret or apply secs. 1001, 1002, 52 Stat. 1017, 1018, as amended; 49 U. S. C. 641, 642.

SOURCE: §§ 302.1 to 302.17, contained in Regulations Serial No. 374, 11 F. R. 177A-351, as redesignated at 14 F. R. 3522, except as noted following section affected.

§ 302.1 *Proceedings.* There shall be one form of formal proceeding (to be known as a "proceeding") under Title IV and section 1002 of the act.

A proceeding may be instituted (a) by order to show cause or other process of the Board, (b) by the filing with the Board of a formal application, complaint or petition.

§ 302.2 *General requirements as to papers in proceedings*—(a) *Content of documents.* Any person wishing to institute a proceeding should consult the rules, regulations and orders of the Board under the various sections of the

act. In case there is no rule, regulation or order of the Board which prescribes the contents of the formal application, complaint or petition in a given case, the application, complaint or petition should contain a proper identification of the parties concerned, a reference to the statutory authority under which the document is filed, and a concise but complete statement of the facts relied upon and the relief sought.

(b) *Insufficient allegations.* In any case where the Board is of the opinion that a formal application, complaint or petition does not sufficiently set forth the material required to be set forth by any applicable rule, regulation or order of the Board, or is otherwise insufficient, the Board may advise the party filing the same of the deficiency and require that any additional information be supplied by amendment.

(c) *Answers.* Answers to formal complaints, petitions and orders to show cause will not usually be required. In case an answer is deemed desirable, the parties will be notified. The issues of the proceeding will ordinarily be formulated at the prehearing conference.

(d) *Retention of papers by the Board.* When any formal application, complaint or petition is denied, dismissed or permitted to be withdrawn, in whole or in part, said application, complaint or petition, and all documents filed with the Board pertaining thereto shall be retained in the files of the Board. When any proceeding instituted by the Board is dismissed, terminated or rescinded, all documents filed with the Board pertaining thereto shall be retained in the files of the Board: *Provided*, That this paragraph shall not apply to documents filed with the Board in any proceeding on the basis of a stipulation that such documents will be returned to the parties so filing when the purpose for which the documents are filed has been served: *And provided further*, That the Board in its discretion may permit the withdrawal of original documents upon the submission of properly authenticated copies to replace such documents.

§ 302.3 *Form and filing of documents—(a) Execution, number of copies and service.* Unless otherwise required by applicable rule or regulation, every application, petition and formal complaint relating to any of the provisions of Title IV or section 1002 of the act, and every answer or other formal document in any such proceeding shall be signed by, or on behalf of, the person filing the same, and shall be verified by the person signing the same, in the manner required by paragraph (b) of this section. Proposed findings and conclusions or exceptions and supporting reasons therefor shall be signed but need not be verified. Any general partner may sign on behalf of a partnership. Documents filed by a corporation, business trust or other similar organization must be signed by an officer who is duly authorized to take such action. An executed original copy of each such document, and nineteen true copies thereof, which need not be signed or verified, but which should have typed or facsimile signatures, shall be filed with the Board.

Each person filing any such document shall furnish such additional copies and shall make such service of the document on other persons as the Board may at any time require. Such documents shall be delivered in person, through the mails, or otherwise, to the Civil Aeronautics Board in Washington, D. C., and shall be deemed to have been filed on the date on which they are actually received by the Board.

(b) *Verification.* Every verification shall set forth that the person verifying the document has read and is familiar with the contents thereof and the attached exhibits, if any; that he intends and desires that in granting or denying the relief requested, the Board shall place full and complete reliance upon the accuracy of each and every statement therein contained; that he is familiar with the facts therein set forth; that to the best of his information and belief, every statement contained in the instrument is true and no such statement is misleading.

(c) *Formal specifications of papers.* All papers filed in proceedings should be on strong, durable paper not larger than 8½ by 13 inches in size except that tables, charts and other documents may be larger, folded to approximately that size. The left margin should be at least 1½ inches wide and, if the document is bound, it should be bound on the left side.

Papers may be reproduced by printing or by any other process, provided the copies are clear and legible. Appropriate notes or other indications should be used, so that the existence of deficits and any other matters normally shown in color will be accurately indicated on photostatic copies.

(d) *Waiver of strict compliance with rule.* The Board may, in its discretion, waive strict compliance with any requirement of this section.

§ 302.4 *Appearances and practice requirements—(a) Appearances.* Any party to a proceeding may appear and be heard in such proceeding in person or by attorney. So far as the orderly conduct of business permits, any person may appear and be heard in person or by attorney before the Board or its officers and employees for the presentation, adjustment, or determination of any issue, request or controversy in any proceeding or in connection with any function of the Board.

(b) *Practice requirements.* No register of attorneys who may practice before the Board is maintained and no application for admission to practice is required. Any attorney practicing before the Board or desiring so to practice may, for good cause shown, be disbarred or suspended from so practicing, but only after he has been afforded an opportunity to be heard in the matter.

§ 302.5 *Subpoenas and depositions—(a) Subpoenas.* Subpoenas requiring the attendance and testimony of witnesses and the production of books, papers and documents relating to any matter under investigation, may be issued by any member of the Board or any person designated as Examiner in any proceeding or investigation. Application

therefor may be made either to the Secretary of the Board or to the Examiner. Such application must be in writing and should specify as exactly as possible the competency, relevancy, and materiality of the evidence sought, and should describe in detail the documents desired.

(b) *Depositions.* Any party desiring to take the deposition of a witness shall make application in writing to the Secretary of the Board or the Examiner in the proceeding or investigation, stating the reasons why such deposition should be taken, the name of the witness, the time and place for taking of such deposition, and a general description of the matter or matters concerning which testimony is requested, or a list of questions or interrogatories to be propounded. Such application shall be accompanied by a proof of service upon all parties to the proceeding. If good cause be shown, an order will be issued authorizing such deposition and specifying the time and place, the subject matter to be covered, and designating, by name or otherwise, the person before whom such deposition is to be taken. After the deposition has been reduced to writing and properly certified, the original and two copies thereof shall be forwarded to the Board at its office in Washington, D. C., where, unless otherwise ordered by the Board for good cause shown, it shall be filed in the record in said proceeding or investigation. Depositions shall conform to the requirements of formal specifications of papers contained in § 302.3.

§ 302.6 *Appearances by third persons and formal interventions—(a) Appearances by third persons.* Any person, including any State, political subdivision thereof, State aviation commission, or other public body, may appear at any hearing and present any evidence which is relevant to the issues. Such persons may also suggest questions or interrogatories to be propounded by public counsel to witnesses called by other persons. With the consent of the examiner, or of the Board, if the hearing is held before the Board, such persons may also cross-examine witnesses directly.

(b) *Formal interventions.* (1) Any person having a substantial interest in the subject matter of any proceeding may petition for leave to intervene in such proceeding and may become a party thereto upon compliance with the provisions of this paragraph. In general, such petitions will not be granted unless it shall be found:

(i) That such person has a statutory right to be made a party to such proceeding; or,

(ii) That such person will or may be bound by the order to be entered in the proceeding; or,

(iii) That such person has a property or financial interest which may not be adequately represented by existing parties, if such intervention would not unduly broaden the issues or delay the proceeding.

However, the denial of such a petition for leave to intervene shall not prevent the petitioner from participating in the proceeding in the manner described in paragraph (a) of this section.

(2) Unless otherwise ordered by the Board every petition for leave to inter-

vene shall be filed with the Board prior to the first prehearing conference, or in the event that no such conference is to be held, not later than 10 days prior to the hearing. Copies of the petition shall be mailed or delivered to each party to the proceeding prior to the filing of the petition. The Board, however, may pass upon any such petition without receiving testimony or argument either from the petitioner or from other parties to the proceeding. The petition shall clearly set forth the interest of the petitioner, and shall otherwise comply with the requirements of § 302.3.

(3) No petition for leave to intervene, not filed within the time limited by subparagraph (2) of this paragraph, will be entertained unless the petitioner shall clearly show good cause for his failure to file such petition within the time so limited. In the event that such petition is heard by an examiner, his determination shall be governed by the standards set forth in this section, but no decision by an examiner on such petition shall be binding on the Board. Interventions provided in this section are for administrative purposes, and no decision to grant leave to intervene shall be deemed to constitute a finding or determination that the intervening party has such a substantial interest in the order that is to be entered in that proceeding as will entitle it to demand court review of such order.

§ 302.7 *Conference procedure—(a) Purpose.* In any proceeding, the examiner or any other person designated for the purpose of this section will, unless otherwise ordered by the Board, direct counsel for the parties to such proceeding to appear before him for a conference to consider the following:

(1) The formulation of the issues to be considered at the hearing by:

- (i) Agreement of the parties,
- (ii) Amendment of the application, complaint, or petition,
- (iii) Any other appropriate means;

(2) The position of all parties with respect to the issues so formulated. Unless responsive pleading is required by order of the Board it is intended that the position stated at the conference shall serve in lieu of formal answer or notice of issues controverted in fact or law. The person conducting the conference may order further conference to accomplish this purpose, or may require responsive pleadings from any party failing to give notice at the conference of its position respecting the issues.

(3) The simplification of proof by:

- (i) Stipulations concerning matters of which the Board can take notice, the admission in evidence of particular facts or documents or any other appropriate matter,

- (ii) Limitation of the number of witnesses,

- (iii) The preparation of exhibits, and the use thereof in lieu of oral testimony whenever possible,

- (iv) Any other appropriate means;

(4) The exchange prior to the date of the hearing of exhibits proposed to be introduced therein and any other material which will expedite the conduct of the same; and

(5) Such other matters as may, in the opinion of the person conducting the conference, aid in the conduct and disposition of the proceeding.

(b) *Notice.* Notice of the time and place of the conference shall be given by letter or otherwise to all parties to the proceeding.

(c) *Exchange of exhibits.* The person conducting the conference may require exchange of exhibits before the date set for the hearing, and if any exhibits are not exchanged in advance as required, or as agreed upon by counsel at the conference, the hearing shall be subject to postponement until such exchange is completed.

(d) *Conference report.* The person conducting the conference shall prepare a report of the same; which shall be served upon counsel for all of the parties and made of record. Counsel may object to the description of anything which occurred at the conference within five days after the receipt of the report, and such report may, in the discretion of the person preparing the same, be revised in accordance therewith. If revised, the report shall again be served upon counsel and made of record in the same manner as the original report. Exceptions may be taken on the basis of any written objection submitted within the time prescribed which has not been met by a revision of the report. Such report shall constitute the official account of all that transpired at the conference and shall control the subsequent course of the proceeding, but it may be reconsidered and modified at any time to prevent injustice.

§ 302.8 *Hearings, argument, recommended decisions, and proceedings subsequent thereto—(a) Oral argument before examiner, proposed findings and conclusions and supporting reasons therefor.* (1) Upon request of any party, an examiner may permit oral argument at the close of the hearing. Oral argument shall be transcribed, but shall not constitute part of the record.

(2) After the close of the hearing, and within the time announced by the Examiner, the parties may submit proposed findings and conclusions and supporting reasons therefor.

(b) *Transcript of hearings and corrections thereto.* (1) Hearings shall be recorded and transcribed by a contract reporter of the Board under supervision of the examiner. Copies of the transcript will be supplied to the parties to the proceeding by the reporter at rates not to exceed the maximum rates fixed by contract between the Board and the reporter.

(2) Changes in the official transcript may be made only when they involve errors affecting substance. Lists of proposed corrections shall be filed with the examiner together with proof of service upon other parties to the proceeding within ten days after receipt of the completed transcript by the Board. If no objections to the proposed corrections are received within ten days after proof of such service, the transcript will, upon the approval of the examiner, be changed to reflect such corrections. If exceptions are received, the proposed corrections

will be submitted to the official reporter for comparison with the stenographic record of the hearing. If such record indicates that the transcript is in error, it will be corrected. If the reporter states that the transcript is correct, the request for corrections will be denied.

(c) *Recommended decisions.* In each proceeding heard before an examiner, other than proceedings for the determination of rates, fares or charges, or the determination of compensation for the transportation of mail, unless the Board shall by order in the particular proceeding require the entire record to be certified to it for initial decision, the examiner shall recommend a decision. The examiner will also announce, or state in his recommended decision:

(1) The names of the persons who are to receive copies of the same;

(2) The time within which exceptions are to be filed and exchanged; and

(3) The time thereafter within which supporting reasons relating to such exceptions are to be filed and exchanged, and may give other instructions relating to procedure after the hearing.

(d) *Exceptions to recommended decisions and supporting reasons therefor.*

(1) Any party to the proceeding may take exceptions to the recommended decision. Exceptions to findings of fact shall designate, by exact and specific reference, the portions of the record which will be relied upon in support of such exceptions. Exceptions to conclusions of law shall briefly cite the statutory provisions or the principal authorities that will be relied upon in support of the exceptions to the conclusions of law.

(2) After the filing and exchange of exceptions, each party should prepare a single statement supporting its own exceptions and covering any points which it wishes to raise in connection with exceptions filed by others. Exceptions and supporting reasons therefor shall be filed with the Board and not with the Examiner.

(e) *Service and form of proposed findings and conclusions, exceptions and supporting reasons, postponement of date.* (1) Each set of proposed findings and conclusions, exceptions, and reasons in support thereof shall when filed, be accompanied by a proof of service thereof by mail upon all parties to the proceedings and upon such other persons designated by the examiner to receive copies of the report.

(2) Except by special permission of the Board, briefs shall not exceed fifty pages in length and reply briefs will not be received. The number of copies to be filed is governed by § 302.3 (a).

(3) After a date has been set for the submission of proposed findings or conclusions and reasons in support thereof to the examiner, or the filing of exceptions to the recommended decision and supporting reasons therefor, such date may be postponed upon proper cause shown, but any such postponement shall not be granted by the examiner less than three days prior to the date originally set for the filing thereof except in cases involving unusual circumstances imposing substantial hardship upon the requesting party or parties.

(f) *Oral argument before the Board.* If any person desires to argue a case orally before the Board he must request leave of the Board to make such argument. Such request should be filed with the briefs for the Board in the proceeding. The Board will advise the persons making such request as to its decision and if such argument is to be allowed all persons who have filed briefs in the proceedings will be advised of the date and hour set for such argument and the amount of time allowed to each such person.

§ 302.9 *Exhibits*—(a) *Copies.* Whenever practicable, one copy of each exhibit (in addition to the original offered in evidence at the hearing) should be furnished for the use of each examiner and two copies should be furnished to Public Counsel. One of such copies will be made available for inspection by all persons present at the hearing. One copy should also be furnished to each party and the examiner may, in his discretion, direct that any other person deemed by him to have sufficient interest shall receive copies of designated exhibits.

(b) *Excerpts from other documents.* Excerpts from lengthy documents or of portions of the record in other proceedings before the Board should be offered in the form of exhibits and copies furnished as above provided. Such exhibits may be received in evidence, subject to objection and rebuttal by Public Counsel or other counsel, after opportunity to examine the exhibit in question and the source from which the same was taken.

§ 302.10 *Hearings before the Board and before Boards of Examiners.* Provisions of this part governing the conduct of hearings before single examiners shall also govern, with necessary changes, in cases where such hearings are held before the Board, a member thereof, or a Board of more than one examiner.

§ 302.11 *Petition for rehearing, argument, or reconsideration*—(a) *Parties.* Any party may petition for rehearing, argument, or reconsideration of any final order by the Board in a proceeding, or for further hearing before decision by the Board.

(b) *Contents of petitions.* (1) The matters of record claimed to have been erroneously decided must be specified, and the alleged errors, and the grounds relied upon must be briefly and specifically stated in the petition.

(2) If a final order of the Board is sought to be vacated or modified by reason of matters which have arisen since the hearing, or of a consequence which would result from a compliance therewith, or both, the new matter, the resulting consequence, or both, which are relied upon by the petitioner must each be set forth in the petition. Where the petition is based wholly or in part upon new matter, the petition must contain a statement that the petitioner, with due diligence, could not have known or discovered the new matter prior to the time of the hearing.

(3) The petition must set forth a brief statement of the relief sought by the petitioner and conform to requirements of § 302.3.

(c) *Filing and service of petitions.* Such petition for rehearing, argument, or reconsideration, must be filed within thirty days after service of the order sought to be vacated or modified. After the expiration of said thirty days, such a petition may be filed only by leave of the Board granted pursuant to formal application upon a showing of reasonable grounds for failure to file the petition within the prescribed thirty-day period. Any such petition or application shall be served by the petitioner or applicant upon all parties to the proceeding or their attorneys of record.

(d) *Stay of orders.* No petition for rehearing, argument, or reconsideration filed in accordance with this section, or the granting thereof, shall operate as a stay of the effective date of the final order sought to be modified or vacated by such petition, unless specifically so ordered by the Board.

§ 302.12 *Memoranda in opposition or support.* Each protest or memorandum of opposition to or in support of the issuance, alteration, amendment, modification, suspension, revocation or abandonment of a certificate of public convenience and necessity or of a foreign air carrier permit which is desired to be filed with the Board pursuant to the provisions of section 401 or 402 of the act, shall conform to the requirements of § 302.3 with respect to size, style and number of copies, shall be signed by the person filing it, and shall be acknowledged before a person authorized to administer oaths. Each such protest or memorandum shall clearly state on its face the particular proceeding in which it is desired to be filed and shall contain a concise but clear statement of the grounds of opposition or support. At the time of filing any such protest or memorandum with the Board, the person filing it shall serve a copy thereof upon each party to the particular proceeding and upon such other persons as the Board may require. No such protest or memorandum will be received as, or be considered to constitute, evidence in the particular proceeding of any fact mentioned or discussed therein. However, evidence in support of any such protest or memorandum may be presented by or on behalf of the person filing it in the manner provided in § 302.6 (a).

§ 302.13 *Procedure in rate proceedings*—(a) *Institution of proceedings.* Proceedings for the determination of rates of compensation for the transportation of mail may be commenced by the filing of a petition by an air carrier or the Postmaster General, or upon the issuance of an order by the Board. Proceedings for the determination of rates, fares, or charges for the transportation of passengers or property may be commenced by the filing of a complaint, the filing of a petition by an air carrier or upon issuance of an order by the Board.

(b) *Order setting tentative rates, fares or charges.* Proceedings commenced by the Board will normally be instituted by the issuance of an order directing the parties to show cause why specified rates, fares, or charges set out in such order should not be fixed and determined by the Board.

(1) In proceedings instituted upon petition or complaint, the Board, before further procedural steps are taken, will normally issue an order directing the parties to show cause why specified rates, fares, or charges set out in such order should not be fixed and determined by the Board.

(2) The rates, fares, or charges specified in any order issued pursuant to this section will represent tentative rates, fares, or charges which appear to the Board to be fair and reasonable on the basis of the carrier's monthly and annual reports and other information available to the Board. Such orders will be accompanied by and incorporate exhibits setting forth the basis upon which the tentative rates, fares, or charges have been formulated.

(3) Rules, orders and notices issued hereunder will be served upon the carrier concerned, and any other parties to the proceeding, and public notice thereof will be given. Copies of rules, orders and notices entered in proceedings for the determination of rates of compensation for the transportation of mail will be transmitted to the Postmaster General.

(c) *Objection and answer to order setting tentative rates, fares, or charges.*

(1) After the issuance of an order of the Board pursuant to paragraph (b) of this section, any party having objections to the tentative rates, fares, or charges specified in such order or to the admissibility in evidence of the exhibits accompanying such order and information specified therein shall file with the Board, within such periods of time as may be prescribed in such order notice of the fact that such objections exist and, after such notice, a written answer setting out the objections of the party to the tentative rates, fares, or charges.

(2) Objections stated in an answer shall be specific, and the answer shall be accompanied by exhibits in support of the objections and by a statement of the effect of such objections upon the tentative rates, fares, or charges.

(d) *Procedure when no answer is filed to order setting tentative rates, fares, or charges.* (1) If no notice, or if after notice no answer, is filed as provided in paragraph (c) of this section within the periods of time prescribed in the order, the proceeding will be assigned for public hearing. The statutory public hearing thus assigned will be expected to require nothing more than the introduction in evidence of the exhibits provided for in paragraph (b) (2) of this section and the information specified therein.

(2) The Board, upon the close of such hearing, will adopt the tentative rates, fares, or charges specified in its order pursuant to paragraph (b) of this section as its tentative decision. If no exceptions are filed to such tentative decision within 10 days after such decision is published or made available to public inspection, such decision shall without further proceedings become the final decision of the Board.

(e) *Procedure when answer is filed to order setting tentative rates, fares, or charges.* (1) If an answer is filed as provided in paragraph (c) of this section a conference will be held. The conference will be attended by representatives of the

Board assigned to the particular case and representatives of the parties, and will be presided over by an examiner of the Board.

(2) If a party desires to introduce evidence in the proceeding he shall file written notice with the examiner at the time of such conference. If a party desires an opportunity to file proposed findings and conclusions with supporting reasons therefor, he shall file written notice thereof with the examiner not later than the close of the hearing provided for in this section. If a party desires an opportunity to present oral argument to the Board prior to issuance of a tentative decision, he shall file a written request therefor with the examiner not later than the close of the hearing provided for in this section.

(3) The examiner, at the close of the conference, will prepare and serve upon the parties a conference report stating the issues raised by the objections of the parties with respect to the tentative rates, fares, or charges. Any party may file exceptions to such report within such time as may be prescribed by the examiner.

(4) After service of the conference report, the proceeding will be assigned for public hearing before an examiner of the Board.

(5) The exhibits provided for in paragraph (b) (2) of this section and the information specified therein, and any exhibits filed by any party in support of any objections filed pursuant to paragraph (c) of this section shall constitute evidence of record in the proceeding, subject to the right of any party to object to the admissibility of such exhibits and information. Additional evidence may be presented by the parties at such hearing only if the notice provided for in paragraph (e) (2) of this section has been filed, and such evidence shall be limited to evidence relating to the issues as defined in the conference report issued by the examiner and exceptions filed thereto pursuant to paragraph (e) (3) of this section. A member (or members) of the Board's staff will be available at the hearing for examination by the parties on the evidence with respect to such issues.

(6) Upon the conclusion of the hearing and the filing of proposed findings and conclusions and reasons in support thereof, the examiner shall certify the entire record to the Board for a tentative decision.

(7) After certification of the record to the Board and completion of any oral argument, the Board will issue a tentative decision. Exceptions to a tentative decision and supporting reasons therefor may be filed within such time as may be prescribed in the tentative decision. Oral arguments to the Board on exceptions to tentative decisions will be permitted only in unusual and exceptional instances for good cause shown, and upon request set forth in the document containing the exceptions and supporting reasons.

(8) If no exceptions to a tentative decision are filed within the prescribed time, the tentative decision shall, without further proceedings, become the final decision of the Board. If exceptions are

taken to a tentative decision and oral argument is not entertained, the proceeding will be deemed submitted to the Board for final decision upon the filing of exceptions by the parties, or upon the expiration of the prescribed time for exceptions, whichever first occurs. Proceedings in which oral argument on exceptions to the tentative decision is entertained, will be deemed submitted to the Board for final decision upon the completion of such oral argument.

§ 302.14 Informal complaints. Complaints, other than formal complaints, may be made in writing with respect to anything done or omitted to be done by any person in contravention of any provision of the act, or of any requirement established pursuant thereto. Matters so presented may, if their nature warrants, be taken up by correspondence or conference with the person or persons complained of. Any matter not disposed of informally may, in the discretion of the Board, be made the subject of a formal proceeding. The filing of an informal complaint shall not prohibit the subsequent filing of a formal complaint.

§ 302.15 Formal complaints—(a) Form and content of formal complaints. Formal complaints must conform to the requirements of this part concerning form and filing of documents in proceedings. They should be so drawn as fully and completely to advise the persons complained against and the Board in what respect anything has been done or omitted to be done in contravention of any provision of the act or of any requirement established pursuant thereto, the facts claimed to constitute such action or omission, and the relief sought. Formal complaints filed with the Board must be accompanied by a proof of service personally or by mail upon the person or persons complained against.

(b) Satisfaction of formal complaints. If the person complained against satisfies a complaint at any time prior to final action by the Board on such complaint, a statement to that effect must be filed setting forth when and how the complaint has been satisfied. Upon receipt of satisfactory evidence of settlement, the complaint may be dismissed in the discretion of the Board. Voluntary settlements are encouraged, and in furtherance of such settlement a representative of the Board may attempt settlement by means of correspondence or conference with the parties. No statement, admission or offer of settlement made pursuant to such correspondence or conference shall be admissible in evidence over the objection of either party in any formal proceeding before the Board concerning the complaint.

(c) Complaints requesting suspension of tariffs. (1) Formal complaints seeking suspensions of tariffs pursuant to section 1002 (g) of the act shall fully identify the tariff and include reference to the name of the publishing carrier or agent, to the CAB number, and to specific items or particular provisions protested or complained against. In addition to conforming to the requirements of paragraph (a) of this section, such complaint should indicate in what respect the tariff is considered to be un-

lawful, and state what complainant suggests by way of substitution.

(2) A complaint requesting suspension of any tariff filed under the act ordinarily will not be considered unless made in conformity with this section and filed with the Board at least ten days before the effective date of the tariff. In an emergency satisfactorily shown by complainant, and within the time limits herein provided, a telegraphic complaint may be sent to the Board and to the publishing carrier or agent stating the grounds relied upon, but such telegraphic complaint must immediately be confirmed by complaint filed and served in accordance with this section.

§ 302.16 Objections to public disclosure of information—(a) Information contained in paper to be filed. Any person who objects to the public disclosure of any information contained in any paper filed in any proceeding, or in any application, report, or other document filed pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended, or any rule, regulation, or order of the Board thereunder, shall segregate, or request the segregation of, such information into a separate paper and shall file it, or request that it be filed, with the examiner or the person conducting the hearing or proceeding, as the case may be, or with the person with whom said application, report, or document is required to be filed, separately in a sealed envelope, bearing the caption of the enclosed paper and the notation "Confidential Information." At the time of filing such paper, or when the objection is made by a person not himself filing the paper, application, report, or other document, within five days after the filing of such paper, the objecting party shall file a motion to withhold the information from public disclosure, in accordance with the procedure outlined in paragraph (d) of this section, except as provided in paragraph (c) of this section. Notwithstanding any other provision of this section, copies of the filed paper and of the motion need not be served upon any other party unless so ordered by the Board.

(b) Information contained in oral testimony. Any person who objects to the public disclosure of any information sought to be elicited from a witness or deponent on oral examination shall, before such information is disclosed, make his objection known. Upon such objection duly made, the witness or deponent shall be compelled to disclose such information only in the presence of the examiner or the person before whom the deposition is being taken, as the case may be, the official stenographer and such attorneys for and lay representatives of each party as the examiner or person before whom the deposition is being taken, as the case may be, shall designate, and after all present have been sworn to secrecy. The transcript of testimony containing such information shall be segregated and filed in a sealed envelope, bearing the title and docket number of the proceeding, and the notation "Confidential Testimony Given by (name of witness or deponent)." Within 5 days after such testimony is given, the

objecting person shall file a motion, except as hereinafter provided in paragraph (c) of this section, in accordance with the procedure outlined in paragraph (d) of this section, to withhold the information from public disclosure. Notwithstanding any other provision of this section, copies of the segregated portion of the transcript and of the motion need not be served upon any other party unless so ordered by the Board.

(c) *Objection by government departments or representatives thereof.* In the case of objection to the public disclosure of any information filed by or elicited from any government department, or representative thereof, under paragraphs (a) or (b) of this section, the department, or person representing said department, making such objection shall be exempted from the provisions of paragraphs (a), (b), and (d) of this section insofar as said paragraphs require the filing of a written objection to such disclosure. However, any department, or person representing said department, if it so desires, may file a memorandum setting forth the reasons on the basis of which it is claimed that a public disclosure of the information should not be made. If such a memorandum is submitted, it shall be filed and handled as is provided by this section in the case of a motion to withhold information from public disclosure.

(d) *Form of motion to withhold information from public disclosure.* Subject to the exception of paragraph (c), no information covered by paragraphs (a) and (b) of this section need be withheld from public disclosure unless written objection to such disclosure is filed

with the Board in accordance with the following procedure:

(1) The motion shall be headed with the title and docket number of the proceeding and shall be signed and verified by the objecting person, any duly authorized officer or agent thereof, or by counsel representing such person in the proceeding.

(2) The motion shall include (i) a description of the information sought to be withheld, sufficient for identification of the same, and (ii) a full statement of the reasons on the basis of which it is claimed that a public disclosure of the information would adversely affect the interests of the objecting person and is not required in the interest of the public, or that the information is of a secret nature affecting the national defense.

(3) Such motion shall be filed with the examiner or the person conducting the hearing or proceeding, as the case may be, or with the person with whom said application, report, or document is required to be filed.

If such motion relates to contracts, agreements, understandings, or arrangements filed pursuant to section 412 (a) of the Civil Aeronautics Act of 1938, as amended, and Part 261 of this chapter, or pursuant to Part 262 of this chapter, an executed original copy and two copies of such motion shall be filed.

(e) *Motions referred to the Board.* The order of the Board containing its ruling upon each such motion will specify the extent to which, and the conditions upon which, the information may be disclosed to the parties and to the public, which order shall become effective upon the date stated therein, unless,

within five days after the date of the entry of the Board's order with respect thereto, a petition is filed by the objecting person requesting reconsideration by the Board, or a written and verified statement is filed indicating that the objecting person in good faith intends to seek judicial review of the Board's order.

(f) *Objections in proceeding before the Board.* Notwithstanding any of the provisions of this section, whenever the objection to disclosure of information shall have been made, in the first instance, before the Board itself, the written motion of objection contemplated by paragraphs (a), (b), and (d) of this section shall not be necessary, but may be submitted if the parties so desire or if the Board, in a particular case, shall so direct.

§ 302.17 *Representation of private parties by persons formerly associated with the Board.* (a) No person who has been associated with the Civil Aeronautics Board as a member, officer, or employee thereof shall be permitted, within six months from the date of the termination of such association, to appear before the Board in behalf of, or to represent in any manner, any private party in connection with any proceeding which was pending before the Board at the time of his association with the Board.

(b) This section shall not apply to any member, officer, or employee who has terminated his association with the Board, prior to January 27, 1941.

PART II Section 2

Washington, Saturday, July 16, 1949

TITLE 14—CIVIL AVIATION

Chapter II—Civil Aeronautics Administration, Department of Commerce

- Part
- 405 Procedure of the Civil Aeronautics Administration.
- 406 Rules of practice governing proceedings to alter, amend, or modify certificates.
- 407 Seizure of aircraft.
- 450 Inter-American aviation training grants.
- 501 Aircraft registration certificates.
- 502 Dealers' aircraft registration certificates.
- 503 Recordation of aircraft ownership.
- 504 Recordation of encumbrances against specifically identified aircraft engines.
- 505 Recordation of encumbrances against aircraft engines, propellers, appliances, or spare parts.
- 550 Federal aid to public agencies for development of public airports.
- 555 Acquisition by public agencies for public airport purposes of lands owned or controlled by the United States.
- 560 Reimbursement for damage to public airports by Federal agencies.
- 570 General regulations of Washington National Airport.
- 571 Aeronautical rules for the Washington National Airport.
- 600 Designation of civil airways.
- 601 Designation of control areas, control zones, and reporting points.
- 609 Standard instrument approach procedure.
- 610 IFR altitude minimums.
- 625 Notice of construction or alteration.
- 635 Reproduction and dissemination of current examination materials.

PART 405—PROCEDURE OF THE CIVIL AERONAUTICS ADMINISTRATION

SUBPART A—GENERAL PROVISIONS

- Sec.
- 405.1 General.
- 405.2 Forms and other documents.

SUBPART B—REGULATIONS AND INTERPRETATIONS

- 405.11 Regulations of the Administrator.
- 405.12 Safety regulation releases and manuals.
- 405.13 Petitions and informal appearances.

SUBPART C—ENFORCEMENT PROCEDURE

- 405.21 Violations of Titles V and VI of the Civil Aeronautics Act of 1938.
- 405.22 Denial of safety certificates.
- 405.23 Emergency suspensions.

No. 136—50

Part II of this issue is divided into two sections. Section 1 contains Chapter I, Parts 1-302, of Title 14, and Section 2 contains Chapter II, Parts 405-635.

SUBPART D—ISSUANCE OF CERTIFICATES

- Sec.
- 405.30 General.
- 405.31 Aircraft certificates.
- 405.32 Airman certificates.
- 405.33 Medical certificates.
- 405.34 Air carrier operating certificates.
- 405.35 Air agency certificates.
- 405.36 Air navigation facility certificates.
- 405.37 Designation of representatives of the Civil Aeronautics Administration.
- 405.38 Flight Plan and Control Record (Form ACA 398).

SUBPART E—RECORDATION OF CONVEYANCES

- 405.51 Recordation of aircraft ownership.
- 405.52 Recordation of encumbrances against specifically identified aircraft engines.
- 405.53 Recordation of encumbrances against aircraft engines, propellers, appliances, or spare parts maintained by or on behalf of certificated air carriers.

AUTHORITY: §§ 405.1 to 405.53 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 405.1 to 405.53 appear at 11 F. R. 177A-319, except as noted following sections affected. Redesignated by Amendment 1, 13 F. R. 3047.

SUBPART A—GENERAL PROVISIONS

§ 405.1 *General.* Under Reorganization Plans III and IV of 1940 (54 Stat. 1233, 1235, 1236), certain functions of the Civil Aeronautics Act of 1938 (52 Stat. 977, as amended; 49 U. S. C. 401 et seq.), are performed by the Civil Aeronautics Board, while others are performed by the Civil Aeronautics Administration. Accordingly, persons desiring information with respect to the procedure, or the general course and method for the discharge of a particular function pertaining to civil aviation should also consult the rules and regulations of the Civil Aeronautics Board (Chapter I of this title).

§ 405.2 *Forms and other documents.* Forms and other documents prescribed

in this part which contain references to specific units of organization shall not be affected by any changes in the titles of the units. Such forms or documents shall continue in use until they have been superseded or revoked.

[13 F. R. 3016]

SUBPART B—REGULATIONS AND INTERPRETATIONS

§ 405.11 *Regulations of the Administrator.* (a) Regulations of the Administrator of Civil Aeronautics are prepared and drafted by the technical offices of the Administration and submitted to the Administrator for final adoption and promulgation. Such regulations may result from recommendations from the industry or research and experimentation of the technical offices of the Administration. The Administration may, prior to the adoption of a regulation, issue a draft of the proposed regulation to the industry requesting its views and comments respecting the merits of the proposed regulation.

(b) The regulations of the Administrator are set forth in this chapter.

§ 405.12 *Safety regulation releases and manuals.* Safety regulation releases and manuals are prepared and drafted by the Office of Safety Regulation and are issued by the Assistant Administrator for Safety Regulation. These releases and manuals contain informative and explanatory material respecting the pertinent safety provisions of the Civil Air Regulations (Subchapter A of Chapter I of this title). Copies of the releases and manuals are available to all persons concerned and interested in civil aviation. Requests should be addressed to the Civil Aeronautics Administration, Washington 25, D. C.

§ 405.13 *Petitions and informal appearances—(a) Petitions.* Any interested person may petition the Civil Aeronautics Administration for the issuance, amendment, or repeal of any rule or regulation of the Administration, except such rules or regulations relating to Administration management or personnel or to public property, loans, grants, benefits, or contracts, by submitting such petition in writing to the Administrator of Civil Aeronautics, Washington 25, D. C. Such petition shall set forth

4361

STATE LIBRARY JUL 24 1949

AE 2.7
V. 14 No. 136 Pt. 2, Sec. 2

clearly and concisely (1) the petitioner's interest in the subject matter, (2) the specific action requested, and (3) the purpose of, and the facts claimed to constitute the grounds requiring or justifying such requested action.

(b) *Informal appearances.* Any interested person will be granted an opportunity to make an informal appearance before the proper official of the Civil Aeronautics Administration for the presentation, adjustment, or determination of any issue, request, or controversy before the Administration, or in connection with any function of the Administration, by submitting a request to the Civil Aeronautics Administration, Washington 25, D. C., or to the nearest Regional or District Office.

[11 F. R. 14063]

SUBPART C—ENFORCEMENT PROCEDURE

§ 405.21 *Violations of Titles V and VI of the Civil Aeronautics Act of 1938.* Any violation of the safety provisions of the Civil Aeronautics Act, or the regulations issued thereunder may be reported by any person to a representative of the Civil Aeronautics Administration at any Regional or District office of the Administration. The violation is then investigated by an appropriate representative of the Civil Aeronautics Administration and the results of such investigation, together with all obtainable evidence, are submitted to the Regional Attorney in charge of the area in which the violation occurred. If the violation involved an air carrier or air carrier personnel the report of investigation is submitted directly to the Office of the General Counsel in the Central Office of the Administration. The General Counsel, or the Regional Attorney, as the case may be, then determines the action, if any, which will be taken. Such action may be:

(a) *Letter of reprimand.* A letter of reprimand is sent to the violator, which calls attention to the fact that a violation has occurred and will be taken into consideration in the event of a repetition of any offense by the violator.

(b) *Civil penalty.* (1) Pursuant to section 901 of the Civil Aeronautics Act of 1938, as amended (52 Stat. 973, 1015, 54 Stat. 1233, 1235, 1236; 49 U. S. C. 401, 621), any person who violates any provisions of Titles V or VI of such act or section 11 of the Air Commerce Act of 1926, as amended (44 Stat. 568, 45 Stat. 933; 49 U. S. C. 171, 181), shall be subject to a civil penalty of not to exceed \$1,000 for each such violation, and any such penalty may be compromised by the Administrator. In the event a civil penalty is contemplated by the Administrator and it is considered advisable to compromise the amount of such civil penalty, the Regional Attorney, or an official of the office of the General Counsel sends a letter to the alleged violator advising him of the provisions of the act or the regulations alleged to have been violated and of his opportunity to compromise the civil penalty. If an offer of compromise in a specified amount is made, the offer is submitted to the Administrator of Civil Aeronautics with a recommendation respecting its acceptance. The Administrator in all cases, or a Deputy Adminis-

trator in all cases except those involving scheduled air carriers, may accept or refuse the offer of compromise. If the offer of compromise is accepted, the alleged violator is notified by letter of its acceptance and that such acceptance constitutes full settlement of any civil penalties due under the act by reason of the alleged violation.

(2) Any person, after receipt of a letter from a Regional Attorney or an official of the Office of the General Counsel informing him of an alleged violation, may submit to the official signing the notice of civil penalty, either orally or in writing, any material or information in answer to or tending to explain, mitigate or extenuate the alleged violation. Any material or information thus submitted will be considered in making the final determination of the amount at which the civil penalty will be compromised.

(3) If a compromise settlement of the civil penalty cannot be effected, the matter will be determined through trial of the case in the United States District Courts upon a civil complaint filed pursuant to section 903 of the Civil Aeronautics Act of 1938, as amended.

(c) *Filing of complaint with the Civil Aeronautics Board.* Such action may be taken with a view toward the suspension or revocation of a safety certificate issued by the Administrator to the alleged violator, or the imposition of a civil penalty pursuant to the provisions of section 901 of the Civil Aeronautics Act of 1938, or both. If such action is determined, the Complaint is prepared by the General Counsel's Office, or the Regional Attorney, and filed with the Docket Section of the Civil Aeronautics Board. The proceeding is then conducted in accordance with the procedure of the Civil Aeronautics Board.

[11 F. R. 177A-319, as amended at 12 F. R. 41 and 6131]

§ 405.22 *Denial of safety certificates—*

(a) *Denial of airman certificates.* Any applicant for an airman certificate who has been denied the issuance or renewal thereof, by the Civil Aeronautics Administration, may petition the Civil Aeronautics Board for a reconsideration of his application pursuant to the provisions of section 602 (b) of the Civil Aeronautics Act of 1938, as amended.

(b) *Denial of aircraft, air agency and air carrier operating certificates.* Any applicant for an aircraft, air agency, or air carrier operating certificate, who has been denied the issuance or renewal thereof, may appeal the order of denial by the Administrator to the Circuit Courts of Appeals of the United States, or the United States Court of Appeals for the District of Columbia, upon petition, filed within 60 days after the entry of such order, pursuant to the provisions of section 1006 of the Civil Aeronautics Act of 1938, as amended.

§ 405.23 *Emergency suspensions.* (a) Pursuant to the provisions of section 609 of the Civil Aeronautics Act of 1938, as amended (52 Stat. 973, 1011, 54 Stat. 1233, 1235, 1236; 49 U. S. C. 401, 559), the Administrator: (1) In cases of emergency, may suspend, in whole or in part, for a period not in excess of thirty days without regard to any requirement

as to notice and hearing, any type certificate, production certificate, airworthiness certificate, airman certificate, air carrier operating certificate, air navigation facility certificate or air agency certificate; (2) shall immediately give notice of such suspension to the holder of such certificate and shall enter upon a hearing which shall be disposed of as speedily as possible; and (3) may, during the pendency of the proceeding, further suspend such certificate, in whole or in part, for an additional period not in excess of thirty days.

(b) In the event the condition or conduct of a certificated airman or the operation of a certificated air agency or aircraft is such as to indicate immediate danger of injury to any person or damage to property, and the immediate suspension of the airman, aircraft, or air agency certificate might reasonably be expected to avert such injury or damage, an emergency shall be deemed to exist within the meaning of section 609 of the Civil Aeronautics Act of 1938, as amended. Under such circumstances any officer or employee of the Administration charged with the duty of examining airmen, inspecting aircraft or air agencies or enforcing such act and the Civil Air Regulations (Subchapter A of Chapter I of this title) shall be, and is hereby authorized to suspend such certificate for and on behalf of the Administrator for a period not to exceed 30 days. The officer or employee making the emergency suspension shall, if practicable, orally notify the party or parties involved that an emergency suspension of the particular certificate is made pursuant to the authority of section 609, and shall within a reasonable time thereafter confirm such notification in writing. Formal proceedings shall be immediately instituted during the pendency of which the Regional Administrator of the region in which the violation occurred, the Administrator or Deputy Administrator may further suspend such certificate, in whole or in part, for an additional period not in excess of 30 days.

[12 F. R. 6131]

SUBPART D—ISSUANCE OF CERTIFICATES

§ 405.30 *General.* (a) Except where hereinafter stated, applications for certificates may be obtained from, and submitted to, representatives of the Civil Aeronautics Administration, and the Regional, District, and Foreign offices of the Civil Aeronautics Administration. The requirements for the issuance of each type of certificate are set forth in the pertinent parts of the Civil Air Regulations (Subchapter A of Chapter I of this title) or the regulations in this chapter.

(b) In order to obtain an airman certificate the applicant is required to accomplish a medical, written, and, where applicable, a flight or practical examination. Medical examinations are given by designated medical examiners. Written examinations are given by Civil Aeronautics Administration inspectors, except student pilot tests on the Civil Air Regulations, which are given by any certificated flight instructor. For the convenience of the applicants, the inspectors conduct written examinations at all

recognized airports. The itinerary of the inspectors is posted in such airports.

§ 405.31 *Aircraft certificates.* The types of aircraft certificates issued by the Civil Aeronautics Administration are as follows:

(a) *Type certificates.* A type certificate (Form ACA 311) certifies that an aircraft, aircraft engine, propeller, or any appliance specified in the Civil Air Regulations as eligible for a type certificate is of proper design, material, specification and construction for safe operation, and meets the minimum requirements of the Civil Air Regulations.

(1) *Application.* Application for a type certificate shall be made on the Form "Application for Type Certificate" (ACA 312). This form is obtained from and submitted to the Director, Aircraft and Components Service, Civil Aeronautics Administration, Washington 25, D. C.

(2) *Requirements.* For the evidence required for the issuance and the general rules pertaining to the type certification of aircraft (see Part 2 of this title).

(3) *Reports—(i) Semiannual Production Report (ACA 503).* This report is required on January 1 and July 1 of each year, of every holder of a type certificate or a current right to the benefits of a type certificate under a licensing arrangement.

(ii) *Statement of Conformity (ACA 317).* Upon the initial transfer of any aircraft not manufactured for United States registry under the terms of a production certificate, the holder of a type certificate or of a current right to the benefits of a type certificate under a licensing arrangement submits a Form "Statement of Conformity" to The Director, Aircraft and Components Service, Washington 25, D. C., or to the nearest Regional Office.

(b) *Production certificate (Form ACA 333).* A production certificate authorizes the manufacture, at designated places, of duplicates of a product for which a type certificate has been issued. The type certificate is set forth in a production limitation record (Form ACA 332) which constitutes a part of the production certificate.

(1) *Application.* A single application for the production certificate and production limitation record is made on Form ACA 332 "Application for a Production Certificate". This form is obtained from, and is submitted to, the Aircraft and Components Branch of the Regional Office in the area in which the manufacturer's plant is located. If an amendment is desired, application should also be made to such Regional Office.

(2) *Requirements.* For further information with respect to production certificates and requirements, see Part 2 of this title and Manual 02, Production Certificates, issued by the Civil Aeronautics Administration.

(3) *Reports—(i) Changes.* The holder of a production certificate is required to notify the Regional Office, which issued such certificate, of any change of methods, procedures, facilities, or location of the manufacturing facilities which affect the product for which the certificate was issued.

(ii) *Production report.* Form ACA 503, "Semiannual Production Report," is required on January 1 and July 1 of each year, of the holder of a production certificate.

(c) *Aircraft registration certificates.* An aircraft registration certificate is conclusive evidence of the nationality of the aircraft for international purposes, but not in any proceeding under the laws of the United States. The registration of the aircraft by the Civil Aeronautics Administration is not evidence of ownership in any proceeding in which ownership by a particular person is or may be, in issue.

(1) Effective November 15, 1946, aircraft registration other than Dealers' Aircraft Registration will be accomplished by the use of Form ACA 500. This form contains three parts: part A, Registration Certificate, part B, Application for Registration, and part C, Bill of Sale.

(i) *Application and fee.* The applicant for such registration certificate will execute the original and duplicate of part A and part B, retain the original of part B in the aircraft as a temporary registration for 60 days, and mail all duplicates of parts A, B, and C together with the original of part A and a registration fee of \$4.00 to the Director, Aircraft and Components Service, Attention: Certification and Recordation Section, Civil Aeronautics Administration, Washington 25, D. C.

Effective November 15, 1946, Certificates of Ownership (Form ACA 1160) will not be issued by the Administration. However, such certificates issued prior to November 15, 1946, may be used subsequent to that date in effecting the transfer of ownership of an aircraft if it is accompanied by the registration fee of \$4.00. If the Form ACA 1160, Certificate of Ownership, is not used in effecting the transfer of ownership, it should be surrendered at the time the next application is made on Form ACA 500 for the registration of the aircraft.

(ii) *Requirements.* For the evidence required for the issuance of a registration certificate and the general rules pertaining to the registration of aircraft, see Part 501 of this chapter.

(2) *Dealers' aircraft registration certificates.* Form ACA 1707 provides an alternate form of registration permitting the operation, demonstration, and merchandizing of civil aircraft owned by the certificate holder, such as manufacturer, distributor, or dealer and moving in the ordinary trade channels from such manufacturer, distributor, or dealer to the ultimate purchaser.

(i) *Application and fee.* Application is made on a form, "Application for Issuance of Dealers' Aircraft Registration Certificate(s)" (ACA-1706) which requires a statement of the citizenship of the dealer and certain data as to his status as a bona fide dealer in aircraft. An application containing current data must be submitted each time certificates are requested and may cover as many certificates as are desired at that time. This application is obtained from, and is submitted to, the Aircraft and Components Branch of the Regional Office for the area in which the applicant's business is located. A fee of \$5.00 is

charged for the first certificate, and \$1.00 for each additional or subsequent certificate, issued to the same dealer. Certificates are valid for twelve months from date of issuance. Duplicates will not be issued.

(ii) *Requirements.* For further information as to the requirements pertaining to the issuance and use of Dealers' Aircraft Registration Certificates see Part 502 of this chapter.

(d) *Aircraft airworthiness certificates and aircraft operation record.* An aircraft airworthiness certificate (Form ACA 308) authorizes the operation of a civil aircraft of the United States within the United States, its Territories and possessions. However, there shall be attached to this certificate an aircraft operation record (Form ACA 309), which sets forth the limitations for safe operations prescribed and set forth by the Administrator in such record.

(1) *Application.* A single application for the certificate and record shall be made on Form "Application for Aircraft Airworthiness Certificate" (ACA 305). Usually the manufacturer obtains the airworthiness certificate, which thereafter remains with the aircraft. If no airworthiness certificate has been issued for the aircraft, or if it has expired, the application for an airworthiness certificate is made by the registered owner of the aircraft. An application for registration and airworthiness of an aircraft may be made simultaneously.

(2) *Requirements.* For further information with respect to airworthiness certificates and requirements, see Parts 1, 3, 4a, and 4b of this title and Manual 04, Airplane Airworthiness, issued by the Civil Aeronautics Administration.

(3) *Inspections and reports—(i) Annual inspection.* An annual inspection of the aircraft, given by a designated representative of the Administrator is required for all aircraft. A copy of such inspection report (ACA 305a) is attached to the aircraft operation record.

(ii) *Aircraft and engine logbooks.* An aircraft and engine logbook is required in accordance with Part 1 of this title.

(e) *Ferry permits—(1) Letter of authority for ferry flight.* This permit authorizes the flight of a civil aircraft of the United States between two specified points for the purpose of repair or to obtain certification of the aircraft. The applicant will be required to furnish evidence of the identification of the aircraft, the points between which the aircraft will be flown, duration of the flight, name of the mechanic certifying with respect to the airworthiness of the aircraft and a statement as to the reasons why the aircraft airworthiness certificate is not applicable.

(2) *Ferry permit, temporary registration and airworthiness certificate.* This permit authorizes the flight of a surplus military aircraft from the base of purchase to the owner's home base. An application for this permit may be made to the representative of the Civil Aeronautics Administration station at the surplus depot or by making application to the Regional or District Office having jurisdiction over the area in which the depot is located.

(f) *Foreign aircraft permit* (Form ACA 1452). This certificate authorizes flight in the United States, its Territories, and possessions (except the Canal Zone), of foreign aircraft with foreign markings.

(1) *Application*. Application is made on Form ACA 776A, "Application for Foreign Civil Aircraft Flight Permit," which requires identification of the owner and evidence of his citizenship, identification and markings of the aircraft, requested itinerary, estimated duration of flight in the United States, and an indication as to whether certain equipment is installed or carried in the aircraft. This form is obtained from and submitted to the Regional or District Office of the Administration which is nearest to the port of entry.

(g) *Certificate of Airworthiness for Export* (Form ACA 306). A certificate of airworthiness for export certifies that the type certificated product involved meets certain general and special requirements for export to particular foreign countries.

(1) *Application*. Application is made on Form ACA 306, "Application for Certificate of Airworthiness for Export".

[11 F. R. 177A-319 as amended at 12 F. R. 2309 and 2805]

§ 405.32 *Airman certificates*. The types, grades, and ratings of airman certificates issued by the Civil Aeronautics Administration are as follows:

(a) *Student pilot certificates*. A student pilot certificate (Form ACA 340) authorizes the holder to pilot in solo flight an aircraft of a specified type, class and model.

(1) *Application*. Application for such certificate is made on Form ACA 355, "Application for Airman Certificate".

(2) *Requirements*. For further information with respect to student pilot certificates and requirements, see Parts 20, 22 and 43 of this title.

(b) *Private, commercial, and air-line transport pilot certificates*. An airman pilot certificate (Form ACA 348) and airman rating record (Form ACA 545) issued for a private, commercial, air-line transport, or instructor rating authorizes the holder to pilot aircraft within the prescribed limitations of the applicable ratings.

(1) *Application*. Application for such certificates is made on Form ACA 355, "Application for Airman Certificate or Instrument Rating".

(2) *Requirements*. For further information with respect to, private, commercial, and air-line transport pilot certificates, see Parts 20, 21, 22, and 43 of this title.

(c) *Mechanic certificates*. A mechanic certificate (Form ACA 348) authorizes the holder to inspect, maintain or repair aircraft and aircraft engines and appliances in accordance with the limitations set forth on Form ACA 545 "Airman Rating Record", which is attached to such certificate.

(1) *Application*. A single application for such certificate and rating is made on Form ACA 363 "Application for Airman (Mechanic) Certificate".

(2) *Requirements*. For further information with respect to mechanic certificates

and requirements, see Part 24 of this title.

(3) *Reports*. A Form ACA 1130, "Periodic Activity Report" is required to be submitted to the Administration, annually, during the month of January.

(d) *Parachute technician certificate*. A Form ACA 348 "Airman (Parachute Technician) Certificate" authorizes the holder to inspect, pack, repair, construct, or jump and instruct in jumping, in accordance with the limitations prescribed on the form ACA 545 which is attached to such certificate.

(1) *Application*. A single application for the certificate and rating desired is made on Form ACA 363 "Application for Airman (Parachute Technician) Certificate".

(2) *Requirements*. For further information with respect to parachute technician certificates and requirements, see Part 25 of this title.

(3) *Reports*. A Form ACA 1130 "Periodic Activity Report" is required to be submitted to the Administration, annually, during the month of January.

(e) *Traffic control tower operator*. An "Airman (Traffic Control-Tower Operator) Certificate" (Form ACA 348) authorizes the holder to control air traffic in accordance with the limitations prescribed on the Form ACA 545 "Airman Rating Record", which is attached to the certificate.

(1) *Application*. A single application is made on Form ACA 372 "Air-Traffic Control-Tower Operator Application".

(2) *Requirements*. (See Part 26 of this title.)

(3) *Reports*. A Form ACA 1130 "Periodic Activity Report" is required.

(f) *Aircraft dispatcher*. An "Airman (Aircraft Dispatcher) Certificate" (Form ACA 348) authorizes the holder to act as a dispatcher for a certificated air carrier in accordance with the limitations prescribed on the airman rating record (Form ACA 545).

(1) *Application*. A single application for the certificate and rating is made on Form ACA 374 "Application for Airman (Aircraft Dispatcher) Certificate".

(2) *Requirements*. See Part 27 of this title.

(3) *Reports*. A Form ACA 1130, "Periodic Activity Report" is required to be submitted annually, during the month of January.

§ 405.33 *Medical certificates*. A medical certificate is required for the issuance of an airman certificate. Original applicants for a medical certificate may obtain such certificate by undergoing the required physical examination by a designated medical examiner of the Civil Aeronautics Administration. Any competent licensed physician may conduct the physical examination for a student or private pilot certificate or any airman certificate requiring a medical certificate of the third class. A list of the designated medical examiners in your area may be obtained by addressing a request to the Director, Aviation Medical Service, Civil Aeronautics Administration, Washington 25, D. C. The three classes of medical certificates and the types and grades of airman certificates included in each class are as follows:

(a) *First class*. A first class medical certificate includes an air-line transport pilot. The examination is conducted by a designated air-line medical examiner.

(b) *Second class*. A second class medical certificate includes, commercial pilots and air-traffic control-tower operators. The examination is conducted by a designated medical examiner.

(c) *Third class*. A third class medical certificate includes, students and private pilots and free balloon pilots. This examination is conducted by a designated medical examiner or a competent licensed physician. If the examination is performed by a nondesignated physician, the report of the examination is made on Form ACA 1345 and forwarded to the regional medical officer of the regional office having jurisdiction over the area in which such physician resides.

(d) *Waiver of physical standards*. Airmen with considerable aeronautical experience who do not meet the prescribed physical requirements may apply for a "Waiver of Physical Standards" (Form ACA 779), by making application to the Director, Medical Service, Civil Aeronautics Administration, Washington 25, D. C. In such instances a waiver may be issued if the applicant successfully demonstrates through a flight test that his physical deficiency is compensated for by his experience, ability and judgment. For further information with respect to the standards and requirements, see Part 29 of this title.

[11 F. R. 177A-319 as amended at 12 F. R. 95]

§ 405.34 *Air carrier operating certificates*. (a) An air carrier operating certificate is required for all air carriers engaged in scheduled and nonscheduled operations. This certificate describes the operations authorized and prescribes such operating specifications and limitations as may be reasonably required in the interest of safety.

(1) *Application*. (i) An application for a scheduled air carrier operating certificate is made by letter to the Regional Office in the area in which the headquarters of the air carrier is located.

(ii) An application for a nonscheduled air carrier operating certificate is made on Form ACA 1602, "Application for Non-Scheduled Air Carrier Operating Certificates."

(2) *Requirements and reports*. See Parts 40 and 42 of this title.

§ 405.35 *Air agency certificates*. An air agency certificate (Form ACA 390) is issued for:

- (a) Airman schools.
- (b) Ground instructors (Form ACA 545 is issued for this certificate).
- (c) Repair stations.
- (d) Mechanic schools.
- (e) Parachute lofts.

The requirements for such certificates are set forth in Parts 50 to 54 of this title.

§ 405.36 *Air navigation facility certificates*—(a) "Air Navigation Facility and Lawful Authority to Operate a True Light". This certificate authorizes the operation of an aeronautical light as a "true light" in the identification of a landing area suitable for use by civil

aircraft and in marking hazards to air navigation.

(1) *Application.* Application is made on Form ACA 114. The Regional Office issues a temporary certificate for a period of 60 days, but the permanent certificate is issued by the Office of the Director, Flight Operations Service, Washington 25, D. C.

(b) *Notice of Construction or Alteration of Structures Along or Near Civil Airways (Form 117).* This form is required to be submitted to the Administration in order to give proper notice to airmen of the construction or alteration of a structure located along or near a civil airway. Further information may be obtained by referring to Part 625 of this title.

§ 405.37 *Designation of representatives of the Civil Aeronautics Administration.* The Civil Aeronautics Administration designates the following representatives to perform the activities indicated below. The certificates required for the performance of such activities are:

(a) *Certificate of Authority—Flight Examiner (Form ACA 1382).* This certificate authorizes the holder to act as a flight examiner for the Civil Aeronautics Administration and to conduct flight examinations for issuance of pilot certificates and ratings.

(1) *Application.* Application is made on a Form "Pilot Examiner Qualification Record and Recommendations" (ACA 914).

(2) *Reports.* A report on Form "Pilot Examiner or Flight School Activity Report" (ACA 857) must be executed and submitted to a Civil Aeronautics Administration inspector when requested.

(b) *Designation of Airline Transport Pilot Flight Examiner (Form ACA 997).* This certificate authorizes the holder to conduct under the general supervision of the Flight Operations Service, within local limits, flight tests of applicants for airline transport pilot certificates and aircraft class, horsepower and instrument ratings and to recommend to the local inspector the issuance or denial of such certificates and ratings.

(1) *Application.* Application is made on a Form "Application for Designation as Airline Transport Pilot Flight Examiner" (ACA 993).

(c) *Authorized Medical Examiner and Letter of Designation (Form ACA 1668).* This certificate and letter authorizes a member of the medical profession to perform physical examinations as required to issue medical certificates.

(1) *Application.* Application is made on Form "Application for Designation as Medical Examiner" (ACA 861) and is submitted to any regional medical officer of the Civil Aeronautics Administration.

(2) *Reports.* A report on Form "Report of Physical Examination for Airman Certificate" (ACA 358) is required to be submitted within forty-eight hours to the Medical Director, Civil Aeronautics Administration, Washington 25, D. C., for each applicant examined. A copy of this report must be retained in the file of the designated medical examiner for three years.

(d) *Certificate of Authority—Designated Mechanic Examiner (Form ACA 1382).* This certificate certifies that the holder is authorized by the Civil Aeronautics Administration to conduct oral and practical examinations for the issuance of aircraft mechanic and aircraft engine mechanic certificates.

(1) *Application.* Application is made on a Form "Statement of Qualifications and Recommendations for Designated Mechanic Examiner" (ACA 1618).

(e) *Certificate of Authority (Form ACA 1382).* Certificates of authority are issued by the Civil Aeronautics Administration to qualify persons for the designation of:

(1) *Designated Manufacturing Representative.* This certificate authorizes the holder to determine the conformity and quality of articles produced under the production certificate listed on his authorization and to issue airworthiness certificates for aircraft and a certificate of airworthiness for export with respect to aircraft and components under the production certificate listed on his authorization.

(1) *Application.* Application is made on Form ACA 1381 "Statement of Qualifications and Recommendations for Designated Manufacturing Representatives".

(2) *Designated engineering representative.* This certificate authorizes the holder to certify that the technical data pertaining to a particular aircraft structure or power plant proves compliance with the Civil Air Regulations.

(1) *Application.* Application is made on Form ACA 1599 "Statement of Qualifications of Designated Engineering Representatives".

(3) *Designated aircraft maintenance inspector.* With respect to scheduled and nonscheduled air carrier aircraft this certificate authorizes the holder to determine the airworthiness of aircraft or to inspect repairs and alteration of aircraft for compliance with approved methods and practices, material and pertinent regulations; and approve the repair and alteration form and return the aircraft to service.

(1) *Application.* Application is submitted on Form ACA 751 "Statement of Qualifications and Recommendations for Designated Aircraft Maintenance Inspector".

§ 405.38 *Flight Plan and Control Record (Form ACA 398).* Serves as authorization for an aircraft to fly in a controlled area, an airport approach zone, or an airport traffic zone under instrument flight rules. A flight plan may also be filed for flight under contact flight rules.

(a) *Application.* Application may be made by telephone, radio, or in person to any Civil Aeronautics Administration Airway Communications Station, or Airway Traffic Control Center giving such information as aircraft identification, type of aircraft, pilot's name, route of flight and cruising altitudes, cruising air speed, radio frequencies available, proposed time of departure, estimated time en route, fuel supply in hours, and alternate airport(s). The approval to proceed together with any amending in-

structions are issued by an airway traffic controller. Such approval is usually oral and is delivered to the pilot through the radio facilities of an airport traffic control tower or airway communications station.

(b) *Requirements.* Regardless of whether the flight plan is filed under contact or instrument flight rules, the pilot in command of the flight files an arrival or completion notice with the nearest Civil Aeronautics Administration Communication Station or control tower upon landing or completion of the flight. For further information with respect to flight plans, see Part 60 of this title.

SUBPART E—RECORDATION OF CONVEYANCES

§ 405.51 *Recordation of aircraft ownership—(a) General.* All conveyances which affect the title to, or any interest in, any aircraft registered under the provisions of the Civil Aeronautics Act are eligible for recordation with the Civil Aeronautics Administration. A receipt showing the recording of any document evidencing indebtedness will be furnished to the holder of such document.

(b) *Forms of conveyance.* The following forms have been prepared by the Administrator for use in recording of conveyances and are available upon request to the Civil Aeronautics Administration, Office of Aviation Safety, Aircraft Service, Aircraft Records Section, Washington 25, D. C.

(1) *Form ACA 500: Part C, Bill of Sale.* (For further information concerning Form ACA 500, see § 405.31 (c).)

(2) *Form ACA 506: Release.* (This form appears on the back of a letter acknowledging receipt of a chattel mortgage, and should be in the possession of the mortgagee or his assignee to be used when the mortgage is cleared.)

(3) *Form ACA 818: Release Contract of Conditional Sale.* (This form appears on the back of a letter acknowledging receipt of a contract of conditional sale and should be in the possession of the seller or his assignee to be used when all conditions of the contract have been met.)

(4) *Form ACA 905: Aircraft Chattel Mortgage.*

(5) *Form ACA 906: Aircraft Conditional Sale Contract.*

(6) *Form ACA 909: Supplemental Affidavit to Application for Registration for All Types of Aircraft.* (To be filled in and submitted with Application for Registration (Form ACA 500, Part B) when the aircraft has been repossessed pursuant to the provisions of a chattel mortgage or contract of conditional sale and the person repossessing desires registration of the aircraft in his name.)

(c) *Application.* A conveyance may be recorded by submitting the original document, or a properly executed duplicate thereof, to the Civil Aeronautics Administration, Office of Aviation Safety, Aircraft Service, Aircraft Records Section, Washington 25, D. C. There is no fee (other than the \$4.00 registration fee) for recording a bill of sale. A fee of \$4.00 is charged for the recording of a lien covering one aircraft. If more than one aircraft is covered by such lien the

fee shall be \$4.00 for each aircraft. Fees shall be submitted in the form of a check or money order made payable to the Treasurer of the United States. No fee is required for the recording of a release, cancellation, discharge, or satisfaction relating to a lien covering an aircraft.

(d) *Requirements.* For further information with respect to the requirements and instructions for the recordation of aircraft conveyances, see Part 503 of this chapter, or mail requests to the Civil Aeronautics Administration, Office of Aviation Safety, Aircraft Service, Aircraft Records Section, Washington 25, D. C.

[Amdt. 1, 13 F. R. 5309]

§ 405.52 *Recordation of encumbrances against specifically identified aircraft engines—(a) General.* All conveyances affecting the title to, or any interest in, any specifically identified aircraft engine or engines of seven hundred and fifty or more rated take-off horsepower for each such engine or the equivalent of such horsepower are eligible for recordation with the Civil Aeronautics Administration. A receipt showing the recording of any such conveyance will be furnished to the holder thereof.

(b) *Forms of conveyance.* The Civil Aeronautics Administration has not prepared any sample forms of conveyance for use in taking a security interest in aircraft engines. However, Form ACA-1990 has been designed to serve as a receipt for the recording of aircraft engine conveyances.

(c) *Recording fee.* A fee of \$2.00 is charged for the recording of an instrument executed for security purposes covering one engine. If more than one aircraft engine is covered by such instrument the fee shall be \$2.00 for each aircraft engine. Fees shall be submitted in the form of a check or money order made payable to the Treasurer of the United States. No fee is required for the recording of a release, cancellation, discharge, or satisfaction relating to a conveyance covering an aircraft engine.

(d) *Requirements.* For further information with respect to the requirements and instructions for the recordation of encumbrances against specifically identified aircraft engines, see Part 504 of this chapter, or mail requests to the Civil Aeronautics Administration, Office of Aviation Safety, Aircraft Service, Aircraft Records Section, Washington 25, D. C.

[Amdt. 1, 13 F. R. 5309]

§ 405.53 *Recordation of encumbrances against aircraft engines, propellers, appliances, or spare parts maintained by or on behalf of certificated air carriers—*

(a) *General.* All conveyances affecting the title to, or any interest in, any aircraft engines, propellers, or appliances maintained by or on behalf of an air carrier certificated under section 604 (b) of the Civil Aeronautics Act of 1938, as amended, for installation or use in aircraft, aircraft engines, or propellers, or any spare parts maintained by or on behalf of such an air carrier, which instruments need only describe generally by types the engines, propellers, appliances, and spare parts covered thereby and

designate the location or locations thereof, are eligible for recordation with the Civil Aeronautics Administration. A receipt showing the recording of any such conveyance will be furnished to the holder thereof.

(b) *Forms of conveyance.* The Civil Aeronautics Administration has not prepared any sample forms of conveyance for use in taking a security interest in aircraft engines, propellers, appliances, or spare parts. However, Form ACA-1991 has been designed to serve as a receipt for the recording of such conveyances.

(c) *Recording fee.* A fee of \$2.00 is charged for the recording of an instrument executed for security purposes covering aircraft engines, propellers, appliances, or spare parts situated in one location. If the property covered by the instrument is situated in more than one location the fee shall be \$2.00 for each location. Fees shall be submitted in the form of a check or money order made payable to the Treasurer of the United States. No fee is required for the recording of a release, cancellation, discharge, or satisfaction relating to a conveyance covering aircraft engines, propellers, appliances, or spare parts.

(d) *Requirements.* For further information with respect to the requirements and instructions for the recordation of encumbrances against aircraft engines, propellers, appliances, or spare parts maintained by or on behalf of certificated air carriers, see Part 505 of this chapter, or mail requests to the Civil Aeronautics Administration, Office of Aviation Safety, Aircraft Service, Aircraft Records Section, Washington 25, D. C.

[Amdt. 1, 13 F. R. 5309]

PART 406—RULES OF PRACTICE GOVERNING PROCEEDINGS TO ALTER, AMEND, OR MODIFY CERTIFICATES

Sec.	
406.1	Definitions.
406.2	Initiation of proceedings.
406.3	Service of order to show cause.
406.4	Response to order to show cause.
406.5	Request for, or waiver of, hearing.
406.6	Notice of hearing.
406.7	Hearing.
406.8	Appearances.
406.9	Subpoenas.
406.10	Submission without hearing or appearance.
406.11	Stay of order pending judicial review.
406.12	Petition for rehearing, reargument, reconsideration or modification of order.
406.13	Authority of examiners.

AUTHORITY: §§ 406.1 to 406.13 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply 52 Stat. 1011, 1017-1025; 49 U. S. C. 559, 641-649.

SOURCE: §§ 406.1 to 406.13 appear at 12 F. R. 2014, redesignated by Amendment 1, 13 F. R. 3047.

§ 406.1 *Definitions.* (a) "Act" means Civil Aeronautics Act of 1938, as amended (52 Stat. 973, 54 Stat. 1231, 1233, 1234, 1235-1236; 49 U.S.C. 401).

(b) "Administrator" means Administrator of Civil Aeronautics.

§ 406.2 *Initiation of proceedings.* A proceeding shall be initiated by the Administrator or his authorized represent-

ative by the issuance of an order addressed to the certificate holder or other party in interest, directing him to show cause why the certificate shall not be altered, amended, or modified as specified in the order.

§ 406.3 *Service of order to show cause.* The order to show cause will be served upon the party in interest by mailing a copy thereof by registered mail, return receipt requested, addressed to the party at his last known address.

§ 406.4 *Response to order to show cause.* After service upon him of the order to show cause, the respondent shall have ten days within which to respond in writing to the order. Such answer shall be deemed filed as of the date of mailing to the General Counsel properly addressed and postage prepaid. If respondent fails to answer the order within ten days, the Administrator or the Examiner assigned to hear the matter may forthwith order that the certificate be amended in accordance with the show cause order.

§ 406.5 *Request for, or waiver of, hearing.* The respondent shall have the right to have the matter set for hearing and the issue determined on the basis of the facts presented at such hearing. If respondent fails to request a hearing within ten days after serving of the order to show cause, the issues may be decided upon the basis of facts and arguments presented in writing by the respondent and the counsel assigned to represent the Government.

§ 406.6 *Notice of hearing.* When a hearing has been requested, the respondent shall be given adequate notice of the date and place where such hearing will be held. In fixing the times and places for hearings, due regard shall be had for the convenience and necessity of the parties and their representatives.

§ 406.7 *Hearing.* A hearing shall be held before an Examiner duly designated by the Administrator.

§ 406.8 *Appearances.* Any party to a proceeding may appear and be heard in person or by attorney. No register of attorneys who may practice before the Administrator is maintained and no application for admission to practice is required. Any attorney practicing or desiring to practice before the Administrator may, upon hearing and good cause shown, be suspended or prohibited from so practicing.

§ 406.9 *Subpoenas.* Subpoenas requiring the attendance of witnesses, or the production of evidence, at a designated place of hearing, shall be issued to any party to a proceeding upon proper application to the Examiner.

§ 406.10 *Submission without hearing or appearance.* Where respondent does not request a hearing, the Examiner, on the basis of the pleadings and the documentary evidence submitted by the parties, shall prepare an initial decision. A copy of the initial decision shall be served upon the respondent or his counsel, by personal service or registered mail. The parties to the proceedings shall have ten days, or such other time

as the Examiner may specify, after the date of service of such initial decision within which to file exceptions and appeal to the Administrator. If no appeal to the Administrator is filed or action by the Administrator to review such decision is entered within the time allowed, such decision shall without further proceedings become the decision of the Administrator.

§ 406.11 *Stay of order pending judicial review.* The filing of a petition for a judicial review of an order made under this part as provided in section 1006 of the act shall not operate to stay the effectiveness of the order unless specifically so ordered by the Administrator. The petitioner may request, and if good cause is shown therefor, the Administrator will stay the effectiveness of the order from which an appeal is being taken.

§ 406.12 *Petition for rehearing, reargument, reconsideration or modification of order.* (a) Either party to a proceeding may petition for rehearing, reargument, reconsideration or modification of any final order of the Administrator within ten days after receipt thereof.

(b) The filing of a petition to rehear or reargue a proceeding or to reconsider or modify an order, shall not operate to stay the effectiveness of the order, unless otherwise ordered by the Administrator.

§ 406.13 *Authority of examiners.* Examiners shall have authority as follows:

(a) To give notice concerning, and hold, hearings;

(b) To administer oaths and affirmations;

(c) To examine witnesses;

(d) To take or cause depositions to be taken whenever the ends of justice would be served thereby;

(e) To rule upon offers of proof and receive competent evidence;

(f) To regulate the course of the hearing;

(g) To hold conferences, before or during the hearing, for the settlement or simplification of issues, by consent of the parties;

(h) To dispose of procedural requests or similar matters;

(i) Within his discretion, or upon the direction of the Administrator, to certify any question to the Administrator for his consideration and disposition;

(j) To issue subpoenas;

(k) To make initial decisions.

PART 407—SEIZURE OF AIRCRAFT

Sec.

407.1 Authority to seize aircraft.

407.2 Custody of seized aircraft.

407.3 Notice of seizure.

407.4 Report of seizure.

407.5 Release of seized aircraft.

AUTHORITY: §§ 407.1 to 407.5 issued under secs. 205, 901, 903 (b), 52 Stat. 984, 1015, 1017; 49 U. S. C. 425, 621, 623; Reorg. Plans III and IV of 1940, 3 CFR, Cum. Supp., Chapter IV, 5 F. R. 2107, 2421.

SOURCE: §§ 407.1 to 407.5 appear at 14 F. R. 778.

§ 407.1 *Authority to seize aircraft.* Whenever an aircraft is involved in a

violation of any provision of Titles V and VI of the Civil Aeronautics Act of 1938, as amended, or of section 11 (a) (1) of the Air Commerce Act of 1926, as amended, or of any rule or regulation issued pursuant thereto, and the violation is committed by the owner or person in command of the aircraft, such aircraft may be summarily seized by any state or Federal law enforcement officer or Federal aviation safety agent authorized in an order of seizure issued by the Regional Administrator of the region in which the aircraft is located.

§ 407.2 *Custody of seized aircraft.* Whenever an aircraft has been seized pursuant to this part, it shall be placed in the nearest available adequate public storage facility in the judicial district in which the seizure is made.

§ 407.3 *Notice of seizure.* Whenever an aircraft has been seized pursuant to this part, a written notice and a copy of this part shall be sent without delay by the Regional Administrator to the registered owner of, and to other persons having a recorded interest in, the aircraft. The written notice shall state:

(a) The time, date, and place of seizure;

(b) The name and address of the custodian of the aircraft;

(c) The reasons for the seizure, including the violations believed, or judicially determined, to have been committed; and

(d) The amount which may be tendered;

(1) As an offer in compromise of any civil penalties which might have been incurred as a result of the alleged violation, or

(2) As payment of civil penalties which have been imposed by a Federal court as a result of the established violations.

§ 407.4 *Report of seizure.* Whenever an aircraft has been seized pursuant to this part, a report of the cause shall be transmitted immediately by the Regional Administrator to the United States Attorney for the judicial district in which the seizure is made, requesting the United States Attorney to institute proceedings for the enforcement of the lien.

§ 407.5 *Release of seized aircraft.* Whenever an aircraft has been seized pursuant to this part, it shall be released by direction of the Regional Administrator under any one of the following conditions:

(a) Upon payment of the civil penalty or the amount agreed upon in compromise, and the costs incurred in connection with the seizure, storage, and maintenance of the aircraft;

(b) Upon seizure of the aircraft pursuant to process of a Federal court in proceedings in rem for enforcement of a lien against the aircraft, or notification by the United States Attorney of failure to institute such proceedings; or

(c) Upon deposit of a bond in such amount and with such sureties as the Regional Administrator may prescribe, conditioned upon payment of the penalty or the amount agreed upon in compromise, and the costs incurred in connection with the seizure, storage, and maintenance of the aircraft.

PART 450—INTER-AMERICAN AVIATION TRAINING GRANTS

Sec.

450.1 General.

450.2 Types of training.

450.3 Qualifications.

450.4 Award of training grants.

450.5 Types of training grants.

450.6 Allowances and expenses.

450.7 Duration of training grants.

450.8 Official notification.

AUTHORITY: §§ 450.1 to 450.8 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply sec. 1, 53 Stat. 1290, Pub. Laws 597, 647, 80th Cong.; 22 U. S. C. 501.

SOURCE: §§ 450.1 to 450.8 appear at 13 F. R. 2740, redesignated by Amendment 1, 13 F. R. 3047.

§ 450.1 *General.* Training grants may be awarded to qualified male applicants from other American republics.

§ 450.2 *Types of training.* Training grants may provide instruction, observation, study and practical training, in one or more of the following categories:

(a) Air traffic control and communications training, comprising such special courses of study as may be prescribed by the Administrator of Civil Aeronautics, on the basis of the qualifications and needs of the trainee and the purpose of the training as indicated by his government, in one or more of the various specialized technical branches of aviation, including airway communications, airway traffic control, airport traffic control, aviation meteorology, aviation navigation, aeronautical charting, and airline dispatching. The special courses of study scheduled over a period not to exceed one year will consist of (1) preliminary orientation, during which the trainee may receive intensive instruction in English, (2) physical education, (3) general and observational meteorology as related to airways service; International Morse Code, teletypewriting, and radio telegraph; radio telephone, interphone, broadcast and teletype communications, procedures, practices and phraseologies; Civil Air Regulations relating to air traffic rules; dead reckoning, navigation, radio navigation, radio aids to air navigation, and radio range monitoring; airport traffic control tower operations, procedures, practices and phraseologies; airway traffic control procedures, practices and phraseologies; organization, structure, and principal functions of the Civil Aeronautics Administration, and (4) assignment to one or more of the various offices and installations of the Civil Aeronautics Administration for practical on-the-job training in airport traffic control, airways communications, and airway traffic control, and assignment to United States Weather Bureau Station for practical on-the-job training in aviation meteorology. Upon satisfactory completion of the training course, a trainee is eligible to take examinations for Civil Aeronautics Administration airport traffic control tower operator and aircraft communicator certificates.

(b) Aviation industry training provides practical on-the-job training for a period of not to exceed 10 months in a special field in the aviation industry of the United States selected according to

the background and qualifications of the individual trainee and the special needs of his country in aviation. Such training is available in air-line operations; airline maintenance; aircraft, and aircraft engine, maintenance and overhaul; maintenance and overhaul of aircraft accessories; production and maintenance of single-engine aircraft; and air-line traffic and administration. One month of preliminary orientation, including intensive instruction in English, may be given each trainee.

(c) Civil aviation official training provides an opportunity for high-level government and private civil aviation officials, during an 8-week period, to study and observe the organization, administration, and operation of civil aviation as developed in the United States and/or the methods and techniques in specialized fields of aviation in which they are primarily interested. This type of training is available to government and private civil aviation officials who are already experienced in their field of specialization, but who would make further contributions to civil aviation if they were afforded this opportunity to observe advanced operations.

§ 450.3 Qualifications. Each applicant selected for an aviation training grant shall meet the following requirements:

(a) *Age.* (1) An air traffic control and communications trainee shall be in the age range of 21 to 31, inclusive, as of the closing date for receipt of applications;

(2) An aviation industry trainee shall be in the age range of 21 to 35, inclusive, as of the closing date for receipt of applications;

(3) A civil aviation official trainee shall be at least 21 years of age, as of the closing date for receipt of applications.

(b) *Citizenship.* A trainee shall be a bona fide citizen of one of the American Republics other than the United States.

(c) *Language.* (1) An air traffic control and communications trainee and an aviation industry trainee shall be able to speak, read, write, and understand the English language, and make a satisfactory score in an English written examination prescribed by the Administrator of Civil Aeronautics;

(2) A civil aviation official trainee should have a fair knowledge of English or an available interpreter, furnished at no expense to the Government of the United States.

(d) *Physical requirements.* (1) An air traffic control and communications trainee shall be in a satisfactory physical condition as evidenced by a Civil Aeronautics Administration medical certificate (Form ACA-1004) issued by a designated Civil Aeronautics Administration medical examiner attesting compliance with Civil Aeronautics Administration Second Class physical requirements and shall furnish a satisfactory laboratory report of blood test;

(2) An aviation industry trainee shall be in a satisfactory physical condition as evidenced by a statement of a physical examination issued by a licensed physician within 60 days of the date of appli-

cation, describing the applicant's physical condition and stating that he is free from any communicable disease or disability that would interfere with any activity incidental to the training grant, and he shall furnish a satisfactory laboratory report of blood test;

(3) A civil aviation official trainee shall be in a satisfactory physical condition.

(e) *Education.* (1) An air traffic control and communications trainee shall possess a diploma attesting the successful completion of a course of study with a degree of "Bachillerato" (or the equivalent) at a recognized institution of learning;

(2) An aviation industry trainee shall have completed at least six years of schooling and have sufficient training or experience in practical mathematics and mechanics to enable him to make a satisfactory grade in a written examination prescribed by the Administrator of Civil Aeronautics;

(3) A civil aviation official trainee shall have attained a high-ranking position in civil aviation, either commercial or government.

(f) *Purpose.* (1) An air traffic control and communications trainee or an aviation industry trainee shall have expressed in an original composition in Spanish or Portuguese, a sincere desire and intention to engage in civil aviation in the country of which he is a citizen and in that branch of aviation for which application for a training grant is made. The original composition shall constitute a part of the application papers;

(2) A civil aviation official trainee is not required to express a purpose.

(g) *Character.* (1) An air traffic control and communications trainee of an aviation industry trainee shall furnish the names of at least three responsible persons residing in the republic of which he is a citizen, who can testify to his dependability, spirit of initiative, industry, stability, honesty, perseverance, and aptitude in that branch of aviation for which application for training grant is made;

(2) A civil aviation official trainee is not required to furnish references.

(h) *Sponsor.* Preference will be given to an applicant who has at least one sponsor willing and able to employ him in that branch of aviation for which the training grant has qualified him upon his return to the republic of which he is a citizen.

(i) *Endorsement.* A trainee shall have received the endorsement of the United States Embassy in the country from which he applies.

§ 450.4 Award of training grants. Training grants will be awarded by the Administrator of Civil Aeronautics with the approval of the Secretary of Commerce and the Secretary of State of the United States, or their duly authorized representatives, upon the recommendation of the Inter-American Aviation Selection Committee appointed by the government of the American republic wherein the applicant resides. No applicant will be considered in the awarding of training grants unless his application and supporting papers shall have been

submitted by such Selection Committee through the Department of State to the Administrator of Civil Aeronautics for the elimination of unqualified applicants prior to the final recommendation of the Inter-American Aviation Selection Committee. After the elimination of any unqualified applicants by the Administrator of Civil Aeronautics, the Inter-American Aviation Selection Committees of the respective countries shall make final recommendations from those qualified applicants remaining.

§ 450.5 Types of training grants. Three types of training grants may be offered: Type A wherein the total cost of the training grant is paid for by the United States Government, Type B wherein the total cost of the training grant is paid for by an American republic other than the United States or by an aviation industrial concern, and Type C wherein a portion of the cost of the training grant is paid for by the United States Government and the remainder of the cost of the training grant is paid for by an American republic other than the United States or by an aviation industrial concern.

§ 450.6 Allowances and expenses. An applicant awarded a Type B training grant will not be entitled to any allowances and expenses paid from funds appropriated by the United States Government. An applicant awarded a Type A or a Type C training grant may be paid the appropriate allowances and expenses as provided in 22 CFR Part 65, as interpreted, modified, or altered by the Department of State, and as provided in Department of Commerce Administrative Order No. 202-3.¹

§ 450.7 Duration of training grants. Air traffic control and communications training grants will be awarded for periods of one year; aviation industry training grants will be awarded for periods of 10 months; and civil aviation official training grants will be awarded for periods of 2 months. Subject to the availability of appropriations, training grants may be extended by the Administrator of Civil Aeronautics not to exceed four months. Training grants may be canceled for cause by the Administrator of Civil Aeronautics with the approval of the Secretary of Commerce and the Secretary of State, or their duly authorized representatives.

§ 450.8 Official notification. Each applicant selected for a training grant shall be notified of his award through diplomatic channels by a letter of award, which shall describe the training, state the duration and type of training grant and the allowances authorized. The amounts originally specified for allowances and expenses may be amended by the Administrator of Civil Aeronautics or his duly authorized representative, if necessary, provided that such amounts are kept within the maximum limits specified by regulations of the Department of State. The Administrator of Civil Aeronautics may amend the types of training or duration of training grants

¹ Not filed with the Division of the Federal Register.

in the interest of obtaining instruction better suited to the needs and capabilities of trainees than those prescribed in the original letter of award.

PART 501—AIRCRAFT REGISTRATION CERTIFICATES

Sec.	
501.1	Basis and purpose.
501.2	Scope.
501.3	Application.
501.4	Issuance of registration certificate.
501.5	Effective date.
501.6	Transferability.
501.7	Duration.
501.8	Display.
501.9	Invalidation.
501.10	Surrender.
501.11	Notice of change of address.

AUTHORITY: §§ 501.1 to 501.11 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 501.1 to 501.11 appear at 12 F. R. 2802.

§ 501.1 *Basis and purpose.* The purpose of this part is to prescribe the regulations under which persons may register aircraft in accordance with the requirements of section 501 of the Civil Aeronautics Act of 1938, as amended. The basis for this part is found in sections 308 and 501 of the Civil Aeronautics Act of 1938, as amended.

§ 501.2 *Scope.* Except as provided in Part 502 of this chapter with respect to Dealers' Aircraft Registration Certificates, the requirements for aircraft registration certificates shall be as prescribed in this part.

§ 501.3 *Application.* Application for the registration of an aircraft shall be made upon the applicable form prescribed (and furnished) by the Administrator.

§ 501.4 *Issuance of registration certificate—(a) New or previously unregistered aircraft.* A registration certificate will be issued by the Administrator for aircraft not previously registered under the provisions of the Civil Aeronautics Act of 1938, as amended: *Provided*, That the applicant: (1) Mails or delivers a duly executed application for registration to the Administrator¹ accompanied by the required registration fee (see § 405.31 (c) (1) of this chapter); (2) certifies that applicant is a citizen of the United States;² and (3) submits with the appli-

cation proof satisfactory to the Administrator that the applicant is the owner of such aircraft.

(b) *Previously registered aircraft.* A registration certificate will be issued by the Administrator for aircraft previously registered under the provisions of the Civil Aeronautics Act of 1938, as amended, if the applicant: (1) Mails or delivers a duly executed application for registration to the Administrator¹ accompanied by the required registration fee (see § 401.31 (c) (1) of this chapter); (2) certifies that applicant is a citizen of the United States;² and (3) submits with the application for registration a conveyance which meets the requirements prescribed in Part 503 of this chapter, evidencing applicant's ownership of the aircraft; and (4) the conveyance submitted with the above application establishes in the recordation system of the Administrator, title to the aircraft in the applicant: *Provided*, That this requirement shall not be applicable to contracts of conditional sale in which the seller is the recorded owner of the aircraft.

§ 501.5 *Effective date.* An aircraft will be deemed to be registered upon the date the documents required by § 501.4 (a) and (b), whichever is applicable, are mailed or delivered to the Administrator.

§ 501.6 *Transferability.* A registration certificate is not transferable.¹

§ 501.7 *Duration.* Upon application for registration made upon the prescribed form, an aircraft may be operated for a period of sixty (60) days pending registration by the Administrator (see § 405.31 (c) (1) of this chapter). The registration and the certificate issued by the Administrator pursuant thereto shall remain in effect indefinitely unless suspended or revoked: *Provided*, That such registration and certificate shall immediately expire on the date: (a) The aircraft is registered under the laws of any foreign country; or (b) the registration of the aircraft is canceled at the written request of the owner; or (c) the aircraft is totally destroyed or scrapped; or (d) the ownership of the aircraft is transferred.

§ 501.8 *Display.* The registration certificate issued for any aircraft shall be carried at all times in such aircraft and shall be presented upon request of any duly authorized representative for the Administrator (see § 405.31 (c) (1) of this chapter), or any State or municipal official charged with enforcing local laws or regulations involving Federal compliance.

§ 501.9 *Invalidation.* Any registration of an aircraft shall be null and void if at the time of registration: (a) The aircraft was registered under the laws of any foreign country; (b) the person registered as owner was not the true and lawful owner of the aircraft; (c) the person registered as owner was not a citizen of the United States; or the interest of such person in the aircraft was created by any transaction not entered into in good faith, but for the purpose

of avoiding, with or without the knowledge of the registered owner, the provision of the Civil Aeronautics Act of 1938, as amended, prohibiting the registration of an aircraft in the name of a person not a citizen of the United States.

§ 501.10 *Surrender.* Upon the suspension, revocation, expiration or invalidation of a registration certificate, the owner of the aircraft shall, upon request, surrender such certificate to any authorized representative of the Administrator.

§ 501.11 *Notice of change of address.* The registered owner of any aircraft shall notify the Administrator immediately of any change of address.

PART 502—DEALERS' AIRCRAFT REGISTRATION CERTIFICATES

Sec.	
502.1	Basis and purposes.
502.2	Application.
502.3	Requirements.
502.4	Limitations.
502.5	Rules.
502.6	Notice.

AUTHORITY: §§ 502.1 to 502.6 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 502.1 to 502.6 appear at 12 F. R. 2803.

§ 502.1 *Basis and purposes.* The purposes of this part are: (a) To prescribe regulations for the registration of aircraft by persons engaged in the business of manufacturing, distributing or selling of aircraft, (b) to facilitate the operation, demonstration, and merchandising of aircraft moving in the ordinary trade channels from the manufacturer, distributor, or dealer to the ultimate purchaser without imposing upon the manufacturer, distributor, or dealer the burden of obtaining an individual registration certificate for such aircraft with each transfer of title as required under the registration provisions of Part 501 of this chapter, and (c) to permit manufacturers to conduct required production flight tests. A dealer's aircraft registration certificate is an alternate form for the registration of civil aircraft from that prescribed by Part 501 of this chapter. Persons engaged in the business of manufacturing, distributing or selling aircraft, upon application, may obtain one or more dealers' aircraft registration certificates issued under the provisions of this part. The basis for this part is found in sections 308 and 501 of the Civil Aeronautics Act of 1938 as amended.

§ 502.2 *Application.* Application for a dealers' aircraft registration certificate shall be made upon a form prescribed by the Administrator and shall be accompanied by the required registration fee. (See § 405.31 (c) (2) (i) of this chapter.)

§ 502.3 *Requirements.* To be eligible for a dealers' aircraft registration certificate an applicant shall be a citizen of the

¹ Effective November 15, 1946, the Administrator issued a new Form ACA 500 with complete instruction for the execution of each part on the back of the form. Each transfer of aircraft ownership effected subsequent to November 15, 1946, and registration of the aircraft in the new owner's name will be accomplished by using the new Form ACA 500.

² As defined by section 1 (13) of the Civil Aeronautics Act of 1938, as amended, "Citizen of the United States" means (a) an individual who is a citizen of the United States or of one of its possessions, or (b) a partnership of which each member is such an individual, or (c) a corporation or association created or organized under the laws of the United States or of any State, Territory or possession of the United States, of which the president and two-thirds or more of the board of directors and other managing officers thereof are such individuals and in which at least 75 per centum of the voting interest is owned or controlled by persons who are citizens of the United States or of one of its possessions."

United States¹ with an established place of business located in the United States or any Territory or possession of the United States, engaged in the following activities:

- (a) The manufacture of aircraft, or
- (b) The distribution or sale of new aircraft under authority of a franchise, license, letter of authority, agreement, or other arrangement from the manufacturer or his authorized agent, or
- (c) The distribution or sale of used aircraft to ultimate purchasers through ordinary trade channels.

§ 502.4 Limitations—(a) Operation. (1) A dealers' aircraft registration certificate shall be valid for the operation of an aircraft only by a person to whom such certificate was issued or by his duly authorized agent or employee.

(2) A dealers' aircraft registration certificate is valid only for an aircraft owned by a person to whom such certificate was issued and which is being operated, (i) in the ordinary trade channels between any two of the following persons: The manufacturer, the distributor, the dealer, or the purchaser from any of such persons, (ii) for demonstration purposes necessary to the sale of such aircraft, or (iii) to conduct required production flight tests.

(b) *Transfer of ownership.* Whenever the ownership of an aircraft is transferred to a person who is not the possessor of a valid dealers' aircraft registration certificate, the purchaser shall make application for registration of the aircraft in his name in accordance with the provisions of Part 501 of this chapter prior to the operation of the aircraft.²

§ 502.5 Rules—(a) Display. The dealers' aircraft registration certificate shall be carried in the aircraft when operated by the person to whom the certificate was issued, or by his authorized agent or employee.

(b) *Duration.* A dealers' aircraft registration certificate shall expire one year from the date of issuance thereof.

(c) *Transferability.* A dealers' aircraft registration certificate is not transferable.

¹ As defined by section 1 (13) of the Civil Aeronautics Act of 1938 as amended, "Citizen of the United States" means (a) an individual who is a citizen of the United States or of one of its possessions, or (b) a partnership of which each member is such an individual, or (c) a corporation or association created or organized under the laws of the United States or of any State, Territory, or possession of the United States of which the president and two-thirds or more of the board of directors and other managing officers thereof are such individuals and in which at least 75 per centum of the voting interest is owned or controlled by persons who are citizens of the United States or of one of its possessions."

² Upon the transfer of the ownership of the aircraft to a person who is not the possessor of a valid dealers' registration certificate, the parties to the sale will execute the new form ACA 500 in accordance with the instructions on the reverse side thereof. The portion marked "part B" shall be retained in the aircraft and will entitle the purchaser to operate the aircraft for 60 days pending registration in his name by the Administrator.

§ 502.6 Notice. The holder of a dealers' registration certificate shall notify the Administrator immediately of any change which affects his status as a citizen of the United States as defined in section 1 (13) of the Civil Aeronautics Act of 1938, or other change of the conduct of his business which affects his eligibility for a dealers' aircraft registration certificate.

PART 503—RECORDATION OF AIRCRAFT OWNERSHIP

- Sec.
503.1 Basis and purpose.
503.2 Definitions.
503.3 Eligibility of conveyances.

AUTHORITY: §§ 503.1 to 503.3 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 503.1 to 503.3 appear at 13 F. R. 5310.

§ 503.1 Basis and purpose. The purpose of this part is to prescribe regulations for recordation of conveyances affecting the title to, or any interest in, any aircraft registered under the provisions of section 501 of the Civil Aeronautics Act of 1938, as amended, and Part 501 or Part 502 of this chapter. The basis for this part is found in sections 308 and 503 of the Civil Aeronautics Act of 1938, as amended.

§ 503.2 Definitions. As used in this part, "conveyance" means:

- (a) A bill of sale, contract of conditional sale, mortgage, assignment of mortgage, or other instrument affecting title to, or interest in, aircraft; and
- (b) Any release, cancellation, discharge, or satisfaction relating to any conveyance or other instrument recorded under this part.

§ 503.3 Eligibility of conveyances. A conveyance shall be eligible for recordation only if:

- (a) It is executed upon the form prescribed by the Administrator for such type of conveyance, or upon a form deemed by the Administrator to be its equivalent;
- (b) It is accompanied by a duly executed application for registration and the required registration fee, and complies with the other provisions of either § 501.3 (a) or (b) of this chapter, whichever is applicable: *Provided*, That this paragraph shall not apply to conveyances affecting an interest in, but not title to, the aircraft;
- (c) It affects an aircraft currently registered under the terms of the Civil Aeronautics Act of 1938, as amended;
- (d) It is accompanied by the required recordation fee (see § 405.51 (c)): *Provided*, That this paragraph shall apply only to conveyances executed for security purposes, and not to any release, cancellation, discharge, or satisfaction thereof; and
- (e) It is acknowledged before a notary public or other officer authorized by law of the United States, or of a State, Territory or possession thereof, or the District of Columbia, to take acknowledgment of deeds.

(c) It affects an aircraft currently registered under the terms of the Civil Aeronautics Act of 1938, as amended;

(d) It is accompanied by the required recordation fee (see § 405.51 (c)): *Provided*, That this paragraph shall apply only to conveyances executed for security purposes, and not to any release, cancellation, discharge, or satisfaction thereof; and

(e) It is acknowledged before a notary public or other officer authorized by law of the United States, or of a State, Territory or possession thereof, or the District of Columbia, to take acknowledgment of deeds.

PART 504—RECORDATION OF ENCUMBRANCES AGAINST SPECIFICALLY IDENTIFIED AIRCRAFT ENGINES

- Sec.
504.1 Basis and purpose.
504.2 Definitions.
504.3 Eligibility of conveyances.

AUTHORITY: §§ 504.1 to 504.3 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 504.1 to 504.3 appear at 13 F. R. 5310.

§ 504.1 Basis and purpose. The purpose of this part is to prescribe regulations for recordation of conveyances affecting the title to, or any interest in, any specifically identified aircraft engine or engines of seven hundred and fifty or more rated take-off horsepower for each such engine or the equivalent of such horsepower. The basis for this part is found in sections 308 and 503 of the Civil Aeronautics Act of 1938, as amended.

§ 504.2 Definitions. As used in this part, "conveyance" means:

- (a) Any lease, mortgage, equipment trust, contract of conditional sale, or other instrument executed for security purposes, which instrument affects the title to, or any interest in, any specifically identified aircraft engine or engines of seven hundred and fifty or more rated take-off horsepower for each such engine or the equivalent of such horsepower;
- (b) Any assignment, amendment, or supplement of or to any of the instruments set forth in paragraph (a) of this section; and
- (c) Any release, cancellation, discharge, or satisfaction relating to any of the instruments set forth in paragraphs (a) and (b) of this section.

§ 504.3 Eligibility of conveyances. A conveyance shall be eligible for recordation only if:

- (a) It affects an aircraft engine which is specifically identified by make, model, and by manufacturer's serial number;
- (b) It affects an aircraft engine of seven hundred and fifty or more rated take-off horsepower or the equivalent of such horsepower;
- (c) It is accompanied by the required recordation fee (see § 405.52 (c)): *Provided*, That this paragraph shall not apply to any release, cancellation, discharge, or satisfaction relating to any conveyance recorded under this part; and
- (d) It is acknowledged before a notary public or other officer authorized by law of the United States, or of a State, Territory, or possession thereof, or the District of Columbia, to take acknowledgment of deeds.

PART 505—RECORDATION OF ENCUMBRANCES AGAINST AIRCRAFT ENGINES, PROPELLERS, APPLIANCES, OR SPARE PARTS

- Sec.
505.1 Basis and purpose.
505.2 Definitions.
505.3 Eligibility of conveyances.

AUTHORITY: §§ 505.1 to 505.3 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458.

SOURCE: §§ 505.1 to 505.3 appear at 13 F. R. 5311.

§ 505.1 *Basis and purpose.* The purpose of this part is to prescribe regulations for recordation of conveyances affecting the title to, or any interest in, any aircraft engines, propellers, or appliances maintained by or on behalf of an air carrier certificated under section 604 (b) of the Civil Aeronautics Act of 1938, as amended, for installation or use in aircraft, aircraft engines, or propellers, or any spare parts maintained by or on behalf of such an air carrier, which instrument need only describe generally by types the engines, propellers, appliances, and spare parts covered thereby and designate the location or locations thereof. The basis for this part is found in sections 308 and 503 of the Civil Aeronautics Act of 1938, as amended.

§ 505.2 *Definitions.* As used in this part, "conveyance" means:

(a) Any lease, mortgage, equipment trust, contract of conditional sale, or other instrument executed for security purposes, which instrument affects the title to, or any interest in, any aircraft engines, propellers, appliances, or spare parts maintained by or on behalf of an air carrier certificated under section 604 (b) of the Civil Aeronautics Act of 1938, as amended;

(b) Any assignment, amendment, or supplement of or to any of the instruments set forth in paragraph (a) of this section; and

(c) Any release, cancellation, discharge, or satisfaction relating to any of

the instruments set forth in paragraphs (a) and (b) of this section.

§ 505.3 *Eligibility of conveyances.* A conveyance shall be eligible for recordation only if:

(a) It affects aircraft engines, propellers, appliances, or spare parts maintained by or on behalf of an air carrier certificated under section 604 (b) of the Civil Aeronautics Act of 1938, as amended;

(b) It specifically describes the location or locations of the aircraft engines, propellers, appliances, and spare parts covered thereby;

(c) It is accompanied by the required recordation fee (see § 405.53 (c)): *Provided*, That this paragraph shall not apply to any release, cancellation, discharge, or satisfaction relating to any conveyance recorded under this part; and

(d) It is acknowledged before a notary public or other officer authorized by law of the United States, or of a State, Territory, or possession thereof, or the District of Columbia, to take acknowledgment of deeds.

PART 550—FEDERAL AID TO PUBLIC AGENCIES FOR DEVELOPMENT OF PUBLIC AIRPORTS

Sec.	Definitions.
550.1	Eligible sponsors.
550.2	Eligible airport development.
550.3	Project costs.
550.4	Procedure.
550.5	

Sec.	Definitions.
550.6	Agency and co-sponsorship.
550.7	Performance of construction work.
550.8	Accounting and audit.
550.9	Grant payments.
550.10	Memoranda and hearings.
550.11	Forms.

AUTHORITY: §§ 550.1 to 550.11 issued under 60 Stat. 170.

SOURCE: §§ 550.1 to 550.11 appear at 14 F. R. 2402.

§ 550.1 *Definitions.* All terms in the regulations in this part which are defined in the Federal Airport Act and are not defined in this section shall have the meaning given to them in the act. As used in this part, unless the context otherwise requires, the following terms shall have the meaning indicated:

(a) "Act" means the Federal Airport Act (60 Stat. 170; 49 U. S. C. 1101), as amended.

(b) "Administrator" means the Administrator of Civil Aeronautics or his duly authorized representative.

(c) "CAA" means the Civil Aeronautics Administration of the United States Department of Commerce.

(d) "Class 4 or larger airport" means an airport which, in the opinion of the Administrator, upon completion of the project proposed would meet generally the standards for a Class 4 or larger airport as set forth in the following Table of the Civil Aeronautics Administration Bulletin, "Airport Design," dated April 1, 1944:

Recommended minimum standards	Class I	Class II	Class III	Class IV	Class V
Length of landing strips ¹	1,800 to 2,700 feet	2,700 to 3,700 feet	3,700 to 4,700 feet	4,700 to 5,700 feet	5,700 feet and over
Width of usable landing strips	300 feet	500 feet	500 feet	500 feet	500 feet
Length of runways	None	2,500 to 3,500 feet	3,500 to 4,500 feet	4,500 to 5,500 feet	5,500 feet and over
Width of runways	None	150 feet (night operations)	200 feet (instrument)	200 feet (instrument)	200 feet (instrument)
		100 feet (day operations only)	150 feet (night operations)	150 feet (night operations)	150 feet (night operations)
Number of landing strips and runways ² determined by percentage of winds including calms ³ covered by landing strip and runway alignment	70 percent	75 percent	80 percent	90 percent	90 percent
Facilities	Drainage; fencing; marking; wind direction indicator; hangar; basic lighting (optional)	Include class I facilities and lighting; hangar and shop; fueling; weather information; office space; parking.	Include class II facilities and Weather Bureau 2-way radio; visual traffic control; instrument approach system (when required); administration building, taxiways and aprons.	Same as class III	Same as class IV.

¹ All of the above landing strip and runway lengths are based on sea-level conditions; for higher altitudes increases are necessary. One surfaced runway of dimensions shown above is recommended for each landing strip for airports in classes II, III, IV and V.

² Landing strips and runways should be sufficient in number to permit take-offs and

landings to be made within 22½° of the true direction for the percentage shown above of winds 4 miles per hour and over, based on at least a 10-year Weather Bureau wind record where possible.

³ Calms: Negligible wind conditions of 3 miles per hour and under.

(e) "District Airport Engineer" means the director of a district office of the Airports Branch of a CAA regional office or his duly authorized representative.

(f) "Joint project" means any project sponsored by two or more sponsors.

(g) "National Airport Plan" means a plan for the development of public airports in the United States, the Territory of Alaska, the Territory of Hawaii, Puerto Rico, and the Virgin Islands, prepared and revised annually by the Administrator.

(h) "Program" means a program prepared by the Administrator listing proposed projects to be undertaken within the limits of currently available funds.

(i) "Project" means a project for the accomplishment of airport development with respect to a particular airport as set

forth in a Grant Agreement or Project Application submitted in accordance with the regulations in this part.

(j) "Regional Administrator" means the director of a CAA regional office or his duly authorized representative.

(k) "Superintendent of Airports" means the director of the Airports Branch of a CAA regional office or his duly authorized representative.

§ 550.2 *Eligible sponsors.* To be eligible to submit a Project Application under the regulations in this part, a sponsor must meet the following requirements:

(a) A sponsor must be a "public agency" as said term is defined and used in the act and may not be the United States or any agency thereof unless the project is located in the Territory of

Alaska, in the Territory of Hawaii, in Puerto Rico, in the Virgin Islands or in a national park, national recreation area, national monument, or national forest;

(b) A sponsor (or the sponsors of a joint project, between them) must be legally, financially, and otherwise able and in a position: (1) To make all certifications, representations, and warranties contained in the Project Application Form, Form ACA-1624 (§550.11 (b)); (2) to make, keep and perform all assurances, agreements, and covenants contained in Parts III and IV of said Form; and (3) to meet all other applicable requirements of the act and of the regulations of this part.

(c) A sponsor (or the sponsors of a joint project, between them) must have

or be in a position to obtain sufficient funds to meet the requirements of § 550.5 (c) (1), and must have or be in a position to acquire property interests meeting the requirements of § 550.5 (c) (2).

§ 550.3 *Eligible airport development*—(a) *Minimum requirements.* Each proposed project shall include sufficient airport development to provide a safe, usable, and useful airport facility or add materially to the safety or utility of an existing airport: *Provided*, That the Administrator may approve a project which does not meet this requirement when special conditions so warrant and in so doing may prescribe such special conditions as he determines to be necessary to protect the interests of the United States. To be eligible for inclusion in a project, an item of airport development must meet the following minimum requirements:

(1) The proposed airport development shall be within the scope of the latest revision of the National Airport Plan.

(2) The proposed airport development shall be in accordance with standards established or approved by the Administrator for the various types of development involved.

(3) If the proposed airport development involves further development of an existing Class 4 or larger airport, or the development of an airport which upon completion of the project will be a Class 4 or larger airport, current Congressional authorization for such development must have been granted pursuant to section 8 of the act.

(4) Unless specifically authorized by the Administrator, the proposed airport development shall not include any work which the sponsor of the project or any other non-Federal public agency is obligated to accomplish by reason of any previous agreement with or commitment to the United States.

(b) *Eligible types of airport development.* The Administrator will approve only airport development which falls within one or more of the classifications set forth in the following subparagraphs.

(1) *Construction work.* The following types of construction work shall be eligible for inclusion in a project:

(i) Preparation of an airport site or any portion thereof, including clearing, grubbing, filling and grading.

(ii) Dredging of seaplane anchorages and channels.

(iii) Drainage work either on or off an airport or airport site.

(iv) Construction, alteration and repair of administration, terminal and service buildings; airport control tower structures; shops for repair and maintenance of airport equipment, plant, and structures; seaplane ramps and docks; and any other buildings and structures necessary for the proper use, operation, management and maintenance of an airport as a public facility other than hangars and living quarters.

(v) Construction, alteration and repair of runways, taxiways, aprons, and automobile parking areas within the limits of an airport or airport site.

(vi) Construction, alteration and repair of access roads and walks either on or off an airport or airport site.

(vii) Fencing, landscaping, seeding and sodding of an airport or airport site.

(viii) Installation, alteration and repair of airport markers and airport lighting facilities and equipment.

(ix) Construction, installation and connection of utilities either on or off an airport or airport site.

(x) Removal, lowering, relocating, marking and lighting of airport hazards.

(xi) Clearing, grading, and filling to permit the installation of landing aids.

(xii) Relocation of roads and utilities necessary to permit airport development.

(xiii) Such other work as may be specifically approved by the Administrator.

(2) *Land acquisition.* The acquisition of land or of any interest therein, or of any easement through or other interest in air space, shall be eligible for inclusion in a project when such acquisition is necessary:

(i) To permit the accomplishment of other airport development, whether or not such development is to be accomplished as part of the Federal-aid Airport Program; or

(ii) To prevent or limit the establishment of airport hazards; or

(iii) To permit the removal, lowering, relocation, or marking and lighting of existing airport hazards; or

(iv) To permit the installation of landing aids; or

(v) To permit proper use, operation, management, and maintenance of the airport as a public facility.

The term "acquisition of land" as used in this subparagraph shall include acquisition of lands already developed as a privately owned airport and of all structures, fixtures, and improvements thereon constituting a part of the realty.

§ 550.4 *Project costs*—(a) *Eligibility.* All project costs, as defined in section 2 (a) (6) of the act, including the value of land, labor, materials and equipment donated, contributed or loaned to the sponsor and appropriated to the project by the sponsor, shall be eligible for consideration as to their allowability except the following:

(1) Any cost of obtaining title to or the use of any lands or any interests in air space under section 16 of the act.

(2) That portion of the cost of rehabilitation or repair for which funds have been appropriated by the Congress under section 17 of the act.

(3) That portion of the cost of acquiring a privately owned existing airport which represents the cost of acquiring buildings which are subsequently to be used as hangars or living quarters at such airport.

(4) The costs of materials and supplies owned by the sponsor or furnished from a source of supply owned by the sponsor where (i) such materials and supplies were used for airport development prior to the execution of the Grant Agreement, or (ii) such costs are not supported by proper evidence of quantity and value.

(5) The purchase price of machinery, tools, or equipment purchased by a sponsor

for use in accomplishing work under a project by sponsor's force account.¹

(6) The costs of general area, urban, or state-wide planning of airports, as distinguished from the planning of a specific project.

(b) *Allowability.* In order to be an allowable project cost, for the purpose of computing the amount of a grant, each item of project costs paid or incurred must, in the opinion of the Administrator, meet the following conditions:

(1) It must have been a necessary cost incurred in accomplishing airport development in conformity with the approved plans and specifications for an approved project and with the terms and conditions of the Grant Agreement entered into in connection with such project.

(2) It must be reasonable in amount (if not reasonable in amount, it shall be subject to partial disallowance in accordance with section 13 (3) of the act).

(3) It must have been incurred subsequent to the date of execution of the Grant Agreement, except that costs of land acquisition, field surveys, planning, and the preparation of plans and specification, and administrative and incidental costs, shall be allowable though incurred prior to the execution of such Grant Agreement: *Provided*, That no item of project cost shall be allowable if incurred prior to May 13, 1946.

(c) *United States share of project costs.* The United States share of the allowable project costs of a project shall be determined as provided in the following subparagraphs.

(1) *Project costs other than land acquisition costs*—(i) *Class 3 or smaller airports.* The United States share of the project costs (other than costs of land acquisition) of an approved project for the development of a Class 3 or smaller airport, wherever located, shall be 50 percent of the allowable project costs of the project (other than costs of land acquisition), except that this share, in the case of any State containing unappropriated and unreserved public lands and nontaxable Indian lands (individual and tribal) exceeding 5 percent of the total area of all lands therein shall be increased as provided in section 10 (b) of the act, and except that the United States share shall be 75 percent in the case of the Territory of Alaska and the Virgin Islands, all as set forth in the following table:

UNITED STATES PERCENTAGE SHARE OF ALLOWABLE PROJECTS COSTS IN STATES CONTAINING UNAPPROPRIATED AND UNRESERVED PUBLIC LANDS AND NONTAXABLE INDIAN LANDS

State	Percentage	State	Percentage
Arizona	60.83	Oklahoma	51.39
California	54.16	Oregon	56.02
Colorado	53.33	South Dakota	53.09
Idaho	56.29	Utah	61.88
Montana	53.53	Washington	51.78
Nevada	62.50	Wyoming	57.49
New Mexico	56.90		

NOTE: The percentages listed in this table will vary as changes occur with respect to

¹ This is not to be construed as excluding the fair rental value of machinery, tools, or equipment owned by a sponsor as project costs eligible for consideration as to their allowability.

the area of unappropriated and unreserved public lands and nontaxable Indian lands in the several States, in which event such changed percentages will be used by the Administrator in determining the United States share of allowable project costs other than costs of land acquisition.

(ii) *Class 4 or larger airports.* The United States share of the project costs (other than costs of land acquisition) of an approved project for the development of a Class 4 or larger airport, wherever located, shall be computed as follows:

(a) For that portion of the total allowable project costs of such a project (other than costs of land acquisition) which when added to all such costs of other projects for development of the same airport, is \$5,000,000 or less, the percentage used in determining the United States share of such costs shall be the percentage which would apply if the project were one for the development of a Class 3 or smaller airport, as prescribed in subdivision (i) of this subparagraph;

(b) For each additional \$1,000,000 or portion thereof over and above such \$5,000,000 figure and up to and including \$11,000,000, the percentage used in determining the United States share of such portion of the allowable project costs of such a project (other than costs of land acquisition) shall be 5 percent less than the percentage applicable to the next lower \$1,000,000;

(c) For that portion of the allowable project costs of such a project (other than costs of land acquisition) above such \$11,000,000 figure, the percentage used in determining the United States share of such portion shall be the same as the percentage applicable to allowable project costs between \$10,000,000 and \$11,000,000.

The application of this formula in the Territories, Puerto Rico, the Virgin Islands, and States other than public lands States, is shown in the following table:

Increments of aggregate allowable project costs (other than land acquisition costs)	United States share in Territory of Hawaii, Puerto Rico, the Virgin Islands, and States other than public lands States			United States share in Alaska and the Virgin Islands
	Percentage	Federal share	Cumulative Federal share	
First \$5,000,000	50	\$2,500,000	\$2,500,000	75
Next \$1,000,000	45	450,000	2,950,000	70
Next \$1,000,000	40	400,000	3,350,000	65
Next \$1,000,000	35	350,000	3,700,000	60
Next \$1,000,000	30	300,000	4,000,000	55
Next \$1,000,000	25	250,000	4,250,000	50
Next \$1,000,000	20	200,000	4,450,000	45
Portion exceeding \$11,000,000	20			45

(2) *Land acquisition costs.* The United States share of the project costs of an approved project which represent costs of land acquisition shall be 25 percent of the allowable costs of such acquisition regardless of the size or location of the airport to be developed.

§ 550.5 *Procedure.*—(a) *Request for Federal aid.* An eligible sponsor desiring to obtain Federal aid for the accomplishment of eligible airport development

shall submit to the District Airport Engineer of the District in which the sponsor is located a Request for Federal Aid on Form ACA-1623 (§ 550.11 (a)). All such Requests for Federal Aid will serve as the basis and justification for inclusion of proposed projects in the Program and will be considered as preliminary notices of intent on the part of sponsors to participate in the Federal-Aid Airport Program.

(b) *Tentative allocation of funds.* If a proposed project is selected by the Administrator for inclusion in the Program, the Administrator will make a tentative allocation of funds for such project and will transmit a notice of such allocation to the sponsor through the District Airport Engineer. Such tentative allocation will be subject to withdrawal upon failure of the sponsor to submit an acceptable Project Application pursuant to paragraph (c) of this section or to proceed with the project with due diligence.

(c) *Project application.* As soon as practicable after receipt of notice of tentative allocation for a proposed project, a sponsor shall prepare a Project Application on Form ACA-1624 (§ 550.11 (b)) and submit such Application to the District Airport Engineer. A Project Application shall be executed by the sponsor without change in the language of the form unless prior approval for deviation therefrom has been obtained from the Administrator: *Provided*, That in the case of a joint project, each sponsor may execute only those provisions of the Project Application which are applicable to the particular sponsor. At the discretion of the Regional Administrator a sponsor which has executed a Grant Agreement for a project for development of an airport under the Program will be permitted to submit additional project applications for further development of such airport on Form ACA-1624.1 (§ 550.11 (c)).

(1) *Funds.* Each Project Application submitted by a sponsor which is to furnish all or any portion of the project funds not to be furnished by the United States, shall state that such sponsor has on hand, or show that it is in a position to obtain as and when needed, funds sufficient to pay all estimated costs of the proposed project which are not to be borne by the United States or by another sponsor: *Provided*, That if any of such funds are to be furnished to a sponsor, or used to pay project costs on behalf of a sponsor by a State agency or any other public agency which is not itself to be a sponsor of the proposed project, evidence satisfactory to the Administrator that such funds will be so provided if the proposed project is approved may be submitted by the public agency which is to provide the funds rather than by the sponsor.

(2) *Lands.* Each Project Application submitted by a sponsor shall state all of the property interests which the sponsor then holds in all lands² to be developed

² As used herein, the term "lands" includes among other areas, landing areas, building areas, and areas required for "off-site" construction, access roads, drainage, protection of approaches, installation of air navigation facilities, or other airport purposes.

or used as part of or in connection with the airport as it will be upon completion of the proposed project. In addition, each Project Application shall contain a covenant on the part of the sponsor to acquire prior to the start of any construction work under the project, or if the lands in question are not needed for such construction, within a reasonable time, property interests satisfactory to the Administrator in all of the lands² in which it does not hold such property interests at the time its Project Application is submitted: *Provided*, That in the case of a joint project, the necessary property interests may be held or acquired by any one or combination of the sponsors, in which event, the Project Application of each individual sponsor may show only those property interests which that particular sponsor holds or is to acquire. Each Project Application shall be accompanied by a property map designated as "Exhibit A" which shall clearly identify and show all lands described above, designating all prior and proposed acquisitions of property interests in any of such lands for which Federal aid is requested under the proposed project.

(3) *Property interests.* In general, the property interest which a sponsor or sponsors must have or agree to acquire in all lands to be used for landing area or building area purposes in order to meet the requirements of subparagraph (2) of this paragraph is either: (1) Title free and clear of any reversionary interest, lien, easement, lease or other encumbrance which, in the opinion of the Administrator, would be of such a nature as to create an undue risk that its existence might deprive the sponsor or sponsors of possession or control of such lands, interfere with their use for public airport purposes, or make it impossible for the sponsor (or any sponsor of a joint project) to carry out and perform any of the assurances, agreements, and covenants contained in Parts III and IV of the Project Application Form (§ 550.11 (b)); or (2) a long-term leasehold estate granted to the sponsor or sponsors by another public agency having such title, on terms and conditions satisfactory to the Administrator. With respect to "off-site" areas, the minimum property interest which a sponsor or sponsors must have or agree to acquire in the lands comprising such areas, in order to meet the requirements of subparagraph (2) of this paragraph, is an easement or leasehold estate which, in the opinion of the Administrator, is sufficient to provide reasonable assurance that the sponsor or sponsors will not be deprived of its or their right to occupy and use such lands for the purpose intended during whatever period of time such use may be necessary in order to meet the requirements of the regulations in this part.

(4) *Plans and specifications.* Each Project Application shall incorporate by reference plans and specifications describing all items of airport development for which Federal aid is requested under the proposed project, which plans and specifications shall be submitted with the Project Application unless previously submitted or submitted with the Project Application of another sponsor of the proposed project. Such plans and speci-

fications shall be prepared so as to provide for accomplishment of the proposed project in accordance with the provisions of the regulations of this part and with all applicable local laws and ordinances and regulations and shall be in final form: *Provided*, That in special cases, the Administrator may authorize postponement of the submission of final plans and specifications until a later date to be specified in the Grant Agreement, if the sponsor has submitted preliminary plans and specifications prepared in sufficient detail to identify all items of airport development included in the project.

(d) *Offer*. Upon approval of a project the Administrator will make an offer to the sponsor or sponsors to pay the United States share of the allowable project costs of the project. Such offer will be transmitted to the sponsor or sponsors and will state a definite amount as the maximum obligation of the United States. Such offer shall be subject to revision, amendment, modification or withdrawal by the Administrator at his discretion at any time prior to acceptance thereof by the sponsor or sponsors (see § 550.11 (d) for description of general form of offer).

(e) *Amendment of offer*. If, in the opinion of the sponsor or sponsors, the amount of the maximum obligation of the United States stated in an offer is insufficient to cover the United States share of the allowable project costs, the sponsor or sponsors may request a revised offer, transmitting such request to the Administrator through the District Airport Engineer.

(f) *Acceptance of offer*. An offer shall be accepted by the sponsor or sponsors within sixty (60) days from the date thereof unless otherwise authorized by the Administrator. Such acceptance shall be made by execution of the offer in the manner prescribed therein, by an official of the sponsor who has been duly authorized to take such action by resolution or ordinance of the governing body of the sponsor. Said resolution or ordinance shall be adopted by the sponsor's governing body at a meeting held pursuant to all applicable local laws and ordinances and shall set forth at length the terms of the offer and shall specifically ratify and adopt all statements, representations, warranties, covenants and agreements contained in the Project Application. A certified copy of such resolution or ordinance shall be attached to each executed copy of an accepted offer or Grant Agreement delivered to the Administrator.

(g) *Grant agreement*. An offer of the Administrator to pay a portion of the allowable project costs and an acceptance thereof by the sponsor or sponsors in accordance with paragraph (f) of this section shall constitute a Grant Agreement between the sponsor or sponsors and the United States. Unless and until such a Grant Agreement has been executed with respect to a project in accordance with the requirements of the regulations in this part, the United States shall not pay or be obligated to pay any portion of the project costs which have been or may be incurred in carrying out the project. (See § 550.11 (d) for de-

scription of general form of grant agreement.)

(h) *Amendment of grant agreement*. When mutually agreed upon between the Administrator and the sponsor or sponsors of a project, a Grant Agreement may be amended after execution thereof, if:

(1) The amendment will not increase the maximum obligation of the United States under such Grant agreement,

(2) The amendment provides only for airport development within the scope of the latest revision of the National Airport Plan, and

(3) The Administrator determines that such amendment is necessary to protect or advance the interests of the United States in civil aviation.

Upon agreement for amendment, the Administrator will issue to the sponsor or sponsors a supplementary agreement incorporating the amendments as approved. Such agreement shall be executed by the sponsor or sponsors in accordance with the regulations governing acceptance of an offer (paragraph (f) of this section).

(i) *Projects for rehabilitation or repair for which the sponsors have requested reimbursement under section 17 of the act*. Section 17 of the act and Part 560 of the regulations of the Administrator provide for reimbursement to public agencies for the necessary rehabilitation or repair of public airports substantially damaged by Federal agencies. The rehabilitation or repair of a damaged area (as defined in § 560.1 (f) of this chapter) or damaged facility (as defined in § 560.1 (g)) may be accomplished by restoration (as defined in § 560.1 (o)) of the area or facility or by betterment (as defined in § 560.1 (d)) of such area or facility. In either case, the amount of reimbursement payable under section 17 is limited to and may not exceed the cost of restoration. Ordinarily, in cases involving betterment, the cost of the rehabilitation or repair to be accomplished will exceed the amount of reimbursement payable therefor. If the estimated cost of such an item or items of rehabilitation or repair (item of betterment) does exceed the amount of reimbursement payable therefor, the public agency may submit, subject to the applicable requirements of the act and the regulations in this part, a Project Application on Form ACA-1624 requesting approval of a project under this part for the accomplishment of such item or items of betterment. Such a Project Application should describe the item or items of betterment as the airport development to be accomplished and should be limited to such development, should identify the request for reimbursement which has been made by the sponsor, state the current status of such request as known to the sponsor, and set out in the summary of estimated project costs all costs involved. Such a Project Application should be submitted prior to certification to the Congress (pursuant to section 17) of the cost of the rehabilitation or repair which would result from accomplishment of the item or items of betterment contemplated if a project under the Federal-aid Airport Program

is planned at that time, or as soon thereafter as possible. If such a certification is made and the project is approved by the Administrator, the grant offer tendered to the sponsor will provide for payment of the United States share, not to exceed a stated maximum amount, of the allowable project costs of the items of betterment included in the project, in excess of the amount of reimbursement for such items included in said certification. If such an offer is accepted by the sponsor, partial grant payments of the United States share of allowable project costs will be made as the project work progresses and costs are incurred therefor, in accordance with the provisions of the grant agreement and the principles stated in § 550.9 (b), and if funds for the items of betterment included in the project have been appropriated pursuant to the certification, progress reimbursement payments may be made simultaneously in accordance with Part 560 of this chapter.

§ 550.6 Agency and co-sponsorship—

(a) *General*. In the case of any project in which two or more public agencies desire to participate to any extent, either in accomplishing airport development under the project or in the maintenance and operation of the airport, the participating public agencies shall comply with the provisions of this section with respect to either co-sponsorship or agency: *Provided*, That a public agency which desires to participate in a project only by contributing funds to a sponsor need not become a sponsor of the project nor an agent of the sponsor as provided in this section, and any funds so contributed will be considered as funds of the sponsor for purposes of the act and the regulations in this part.

(b) *Co-sponsorship*. Any two or more public agencies desiring to participate in a project may serve as sponsors of such a project if they meet all applicable requirements of the regulations in this part including the following:

(1) Each sponsor shall meet the eligibility requirements of § 550.2.

(2) The sponsor shall submit a single Project Application, executed by all of the sponsors, clearly indicating the certifications, representations, warranties and obligations made or assumed by each individual sponsor: *Provided*, That if the sponsors so desire, each sponsor may submit a separate Project Application which does not meet all the requirements of the regulations in this part if, in the opinion of the Administrator, the Project Applications submitted by all sponsors collectively meet the requirements of the regulations in this part as applied to a project sponsored by a single sponsor.

(3) Each Project Application submitted by sponsors which are not willing to assume, jointly and severally, all of the obligations to the United States required to be assumed by a sponsor, shall be accompanied by a true copy of an agreement between the sponsors, satisfactory to the Administrator, which will be incorporated in and become a part of the executed Grant Agreement. Each such sponsor's agreement shall set forth:

(i) The responsibilities of each sponsor to the others with respect to the accomplishment of the development proposed and the subsequent operation and maintenance of the airport;

(ii) The obligations which each proposes to assume to the United States; and

(iii) The sponsor or sponsors which will accept, receipt for, and disburse grant payments.

If an offer is made to the sponsors of a joint project as provided in § 550.5 (d), such offer will contain a specific condition stating that the offer is made in accordance with the terms of the agreement between the sponsors, which agreement will be incorporated therein by reference, and that, by acceptance of the offer, each of the sponsors assumes only its respective obligations as agreed upon in said agreement between the sponsors.

(c) *Agency.* If a public agency so desires and such action is required or permitted under state or local laws, it may, with or without participating financially, serve as agent of the public agency which is to own and operate the airport and need not itself become a sponsor of the project. In all such cases, an agency agreement clearly outlining the terms and conditions of the agency and the authority vested in the agent to act for and on behalf of the sponsor shall have been entered into, which agreement must be satisfactory to the Administrator. Such agency agreement shall have been executed on behalf of the sponsor pursuant to authority granted by its governing body at a meeting held in accordance with all applicable state and local laws. A true copy of the agency agreement shall be submitted with the sponsor's Project Application. If an offer is made to a sponsor as provided in § 550.5 (d) where an agency relationship exists between such sponsor and some other public agency, such offer may be accepted by the agent in the name and on behalf of the sponsor only if such acceptance has been specifically and lawfully authorized by the governing body of the sponsor and such authority is specifically set forth in the agency agreement.

§ 550.7 *Performance of construction work—(a) General.* All construction work under any project shall be accomplished by contract unless the District Airport Engineer determines that the project, or any portion thereof, can be more effectively and economically accomplished through use of sponsor's force account. In no instance will such use of force account be approved for work under any one project in the continental United States if the estimated United States share of the cost of all work accomplished or to be accomplished under such project by force account (including related engineering costs but excluding costs incurred in the preparation of plans and specifications) exceeds \$15,000.

(b) *Letting of contracts.* A sponsor shall comply with the following requirements in awarding construction contracts with respect to the performance of any work under a project:

(1) Unless some other method is approved by the Regional Administrator for use on a particular project, all such contracts in excess of \$2,000 shall be awarded on the basis of public advertisement and open competitive bidding in the same manner as provided by local law for the letting of public contracts.

(2) There shall be no advertisement for bids on or negotiation of such a contract until the Regional Administrator has approved the plans and specifications and has furnished the sponsor a schedule of the minimum wage rates which the contractor shall pay skilled and unskilled labor, as determined by the Secretary of Labor. Such minimum wage rates shall be stated in the invitation for bids or incorporated therein by reference to a schedule of minimum wage rates contained in the advertised specifications. Prior thereto, at a time specified by the District Airport Engineer, the sponsor shall submit to the District Airport Engineer a list of the various classes of labor to be employed in the proposed work, together with a suggested schedule of the minimum wage rates for each such class.

(3) No such contract shall be awarded except with the written concurrence of the District Airport Engineer as to the reasonableness of the contract prices and conformity of the contract to the sponsor's Grant Agreement with the United States. The sponsor shall submit to the District Airport Engineer after the opening of bids a tabulation thereof and its recommendations for award. Ordinarily, such concurrence will not be given for acceptance of other than the lowest bid received. However, if the sponsor considers the lowest bidder unqualified, incapable, or not responsible, the next lowest bidder may be recommended for approval, giving full justification for the proposed action.

(c) *Compliance with local laws.* All contracts shall meet the requirements of local laws.

(d) *Contract requirements.* All construction contracts let by a sponsor with respect to any project shall contain, in addition to such other provisions as may be necessary to ensure accomplishment of the work involved in accordance with the sponsor's Grant Agreement provisions requiring:

(1) That the contractor obtain the prior written consent of the sponsor to any proposed assignment of any interest in or part of the contract.

(2) That no convict labor be employed under the contract, and that in the employment of labor (except executive, administrative, or supervisory) preference be given, where they are qualified, to individuals who served in the military services of the United States as defined in section 101 (1) of the Soldiers and Sailors Civil Relief Act of 1940 and who have been honorably discharged from such service: *Provided*, That such preference shall apply only where such labor is available locally and qualified to perform work to which the employment relates.

(3) That the contractor pay all skilled and unskilled labor employed under the contract not less than minimum wage

rates pre-determined by the Secretary of Labor for such labor.

(4) That the contractor comply with the so-called "Kick-back Statute", Public Law 324, 73d Congress (48 Stat. 948), and the regulations issued by the Secretary of Labor pursuant thereto, 29 CFR, Supps., Part 3, 13 F. R. 524.

(5) That the contractor permit the Administrator or his duly authorized representatives to inspect and review all work, materials, payrolls, records of personnel, conditions of employment, invoices of materials, books of account, and other relevant data and records with respect to the contract.

(e) *Notices to proceed.* No sponsor shall permit any contractor or subcontractor to begin work under an approved project until the sponsor has issued to the contractor a written notice to proceed with such work. No such notice to proceed shall be issued until the sponsor has furnished the District Airport Engineer three conformed copies of the construction contract and has satisfied the Regional Administrator that the required property interests in all lands on which construction work will be performed under the project have been acquired by such sponsor or some other sponsor of the project.

(f) *Change orders.* No sponsor shall issue any change order under any of its construction contracts unless such change order has been approved in writing by the District Airport Engineer. Such change orders shall be on a form satisfactory to the District Airport Engineer and three copies thereof shall be submitted to the District Airport Engineer at the time approval is requested.

(g) *Payments to the contractor.* A sponsor may make partial payments to a contractor on the basis of an estimate of work performed and materials delivered to the site as may be provided for in the contract.

(h) *Force account work.* Before undertaking any construction work by sponsor's force account, a sponsor shall obtain the written approval of the District Airport Engineer. In requesting such approval a sponsor shall submit to the District Airport Engineer the following:

(1) Adequate plans and specifications showing the nature and extent of the construction work to be accomplished by sponsor's force account;

(2) A schedule of the proposed construction and of the construction equipment that will be available for the project;

(3) Assurance that adequate labor, material and equipment, together with adequate supervisory, engineering, and inspection personnel will be provided;

(4) A detailed estimate of cost of such force account work, broken down for each class of costs involved, such as labor, materials, rental of equipment, and other pertinent items of cost.

Whenever an application for grant payment involving sponsor's force account work is made by a sponsor pursuant to § 550.9, such application shall be accompanied by a periodic cost estimate for such work on Form ACA-1629 (§ 550.11 (e)).

(1) *Owner contracts.* Contracts with the owners of airport hazards, buildings, pipe lines, power lines, or other structures or facilities, for the installation, extension, removal or relocation thereof, are exempt from the requirements of this section except that a sponsor shall obtain the approval of the District Airport Engineer before entering into any such contract.

§ 550.8 *Accounting and audit—(a) Accounting procedure.* Each sponsor shall establish and maintain an accounting system adequate to permit determination by the Administrator of the allowable costs of the project. Project costs shall be so segregated and grouped that the sponsor will be able to furnish, whenever required, cost data in the following cost classifications:

- (1) Purchase price or value of land.
- (2) Incidental costs of land acquisition.
- (3) Costs of contract construction.
- (4) Costs of force account construction.
- (5) Engineering costs of plans and designs.
- (6) Engineering costs of supervision and inspection.
- (7) Other administrative costs.

(b) *Project accounts and records—(1) Project accounts.* All funds to be expended in payment of project costs (including funds of the sponsor and funds received from the United States or from other sources) shall be deposited with an official, or officials, or depository, authorized by law to receive public funds, as may be designated by the sponsor or sponsors, and shall be maintained in an account separate and distinct from all other funds, designated "Federal Airport Project (name of airport)." *Provided,* That no separate project account need be maintained for a project consisting of land acquisition only. No funds so deposited shall be withdrawn except in payment of project costs of the project or as reimbursement for funds advanced for such purpose by the sponsor or some other public agency.

(2) *Cost evidence.* A sponsor shall secure and retain in its files documentary evidence such as invoices, cost estimates, and pay rolls supporting each item of project costs.

(3) *Payment evidence.* A sponsor shall retain in its files evidence of all payments for items of project costs including vouchers, cancelled checks or warrants, and receipts for cash payments.

(c) *Audits.* A sponsor shall permit authorized representatives of the Administrator to audit the project records and accounts to determine the allowability of project costs and the amount of Federal participation in the cost of the project. Progress audits may be made at any time during the life of the project at the discretion of the Regional Administrator. If work is suspended on the project for an appreciable length of time, an audit will be made prior to a semifinal grant payment, as provided in § 550.9 (c). A final audit will be made prior to final payment, as provided in § 550.9 (d).

§ 550.9 *Grant payments—(a) Land acquisition payments.* If an approved project includes land acquisition as an item of airport development, the sponsor, may at any time after it has executed the Grant Agreement, make application to the Administrator, as provided in paragraph (e) of this section, for payment of the United States share of the allowable project costs of any such land acquisition, including any acquisition completed prior to execution of the Grant Agreement which is part of the airport development included in the project.

(b) *Partial grant payments—(1) General.* Partial grant payments for all allowable project costs will be made to a sponsor from time to time as the work on a project progresses and such costs are incurred, upon application therefor as provided in paragraph (e) of this section. In the absence of an agreement otherwise, a sponsor may apply for such partial payments on a monthly basis.

(2) *Amount of partial grant payments.* Except as otherwise provided, partial grant payments will be made in amounts sufficient to bring the aggregate amount of all partial payments to the estimated United States share of the project costs of the airport development accomplished under the project as of the date of the sponsor's latest application for such payment. No such payment will be made which would bring the aggregate amount of all partial payments for a project to more than 90% of the estimated United States share of the total estimated costs of all airport development included in the project, or 90% of the maximum obligation of the United States as stated in the Grant Agreement, whichever amount is lower. In determining the amount of a partial grant payment, the Regional Administrator will deduct both from the amount of project costs incurred and from the amount of the estimated total project costs, those project costs which he may deem of questionable allowability.

(c) *Semi-final grant payments.* Whenever construction work on a project is suspended for an appreciable length of time and the allowability of the project costs of all airport development completed has been determined on the basis of an audit and review of all such costs, a semi-final grant payment may be made in an amount sufficient to bring the aggregate amount of all partial grant payments for the project to the United States share of all allowable project costs incurred even though such amount may be in excess of the 90% limitations specified in paragraph (b) (2) of this section, but in no event to an amount in excess of the maximum obligation of the United States as stated in the Grant Agreement.

(d) *Final grant payments—(1) General.* At such time as a project has been wholly completed in accordance with the terms of the Grant Agreement, an application for final grant payment may be filed as provided in paragraph (e) of this section. The Administrator will make final grant payment thereon only when he has determined that the following conditions have been met:

(i) A final inspection of all work at the project site has been conducted by

the representatives of the Administrator, the sponsor, and the contractor;

(ii) A final audit of the project account has been completed by representatives of the Administrator;

(iii) The sponsor has furnished the final "as constructed" plans, unless otherwise agreed to by the Regional Administrator.

(2) *Amount of final grant payments.* Based upon the final inspection, the final audit, the plans, and the documents and supporting information required by paragraph (e) of this section, the Administrator will determine the total amount of the allowable project costs of a project and pay the sponsor the United States share of such amount less the total amount of all prior grant payments: *Provided,* That the aggregate of all grant payments for a project shall not exceed the amount stated in the Grant Agreement for such project as the maximum obligation of the United States with respect thereto.

(e) *Application for grant payments.* All applications for grant payments shall be made on Form ACA-1625.1 (§ 550.11 (f)), accompanied by (1) a summary of project costs on Form ACA-1630 (§ 550.11 (g)), (2) a periodic cost estimate on Form ACA-1629 (§ 550.11 (e)) for each contract or force account representing costs for which payment is requested, and (3) such supporting information, including appraisals of property interests, as may be required by the Regional Administrator to permit the determination of the allowability of any costs for which payment has been requested.

(f) *Excess grant payments.* If upon final determination of the allowability of all project costs of a project, it is found that the total of grant payments made to the sponsor is in excess of the total United States' share of allowable project costs of the project, such excess shall be returned promptly by the sponsor to the United States.

§ 550.10 *Memoranda and hearings—*

(a) *Memoranda.* At any time prior to the issuance of a grant offer for a project by the Administrator, any public agency, person, association, firm, or corporation having a substantial interest in the disposition of the project application for such project, may file a memorandum in support thereof, or in opposition thereto with the Administrator through the District Airport Engineer of the district in which the project is located. Such party may request a public hearing with respect to the location of the airport the development of which is proposed. If, in the opinion of the Administrator, the party filing the memorandum has a substantial interest in the matter, a public hearing will be held in accordance with paragraph (b) of this section.

(b) *Hearings.* If a request for a public hearing is made and approved as set forth in paragraph (a) of this section, the time and place of the hearing will be set by the Administrator. The time will be set so as to avoid undue delay in disposing of the subject project application but so as to afford reasonable time for all parties concerned to prepare for the hearing. The place of hearing will be at a place convenient to the sponsor.

The Administrator will give notice of time and place by mail to the party filing the memorandum, to the sponsor or sponsors, and to such other persons as the Administrator deems necessary.

(c) *Procedure.* Any public hearing under paragraph (b) of this section will be conducted on behalf of the Administrator by such examiner or examiners as the Administrator may designate. Such examiner or examiners shall decide the time to be consumed, the type of testimony to be heard, and all other matters with respect to the conduct of the hearing.

(d) *Records.* A hearing will be recorded in such form and manner as may be determined by the examiner or examiners and the record so made shall become a part of the record of the project application.

§ 550.11 *Forms.* The purpose of this section is to describe the various forms referred to in the foregoing sections of this part. Copies of such forms and assistance in the completion and execution thereof may be obtained by a sponsor from the District Airport Engineer of the CAA district in which the project is located.

(a) *Request for Federal aid, Form ACA-1623 (4-48).* This form consists of a statement requesting Federal aid in carrying out a project under the act, together with appropriate spaces for insertion of information relating to: The location of the airport or airport site; the amount and source of funds to be used by the sponsor in payment of that part of the project costs which are not to be paid with United States funds; a general description of the proposed work; and the estimated cost of the proposed work. It is to be executed by an appropriate official of the prospective project sponsor.

(b) *Project Application, Form ACA-1624 (5-49).* This form, which is also to be executed by an appropriate official of the project sponsor, consists of four parts, as follows:

(1) *Part I: Project information.* This part contains the sponsor's application for a grant of Federal funds to aid in financing a particular project. Appropriate spaces are provided for insertion of the name of the sponsor, the name and location of the airport to be developed, the description of the proposed airport development, and an estimate of the costs of the project.

(2) *Part II: Representations.* This part contains six representations and certifications of the sponsor of the project, reading as follows:

1. *Legal authority.* The sponsor has the legal power and authority: (1) To do all things necessary in order to undertake and carry out the Project in conformity with the Act and the Regulations; (2) to accept, receive, and disburse grants of funds from the United States in aid of the Project, on the terms and conditions stated in the Act and the Regulations; and (3) to carry out all of the provisions of Parts III and IV of this Project Application.

2. *Funds.* The Sponsor now has on deposit, or is in a position to secure, \$_____ for use in defraying the costs of the Project. The present status of these funds is as follows: [Space is provided here in which the sponsor is to insert sufficiently detailed and documented information to permit it to be

determined that "sufficient funds are available for that portion of the project costs which is not to be paid by the United States", as required by Section 9 (d) of the Act. This information should include the amount of money available for the project which is then on deposit to the credit of the sponsor, the amount available from any other source but not then in the possession or control of the sponsor (together with the nature of any assurances received by the sponsor that such funds will be furnished), and the amount which remains to be raised by the sponsor by the sale of bonds or any other method (indicating the steps thus far taken to raise such funds). In addition, this information should include an itemization of all contributions or donations of land, materials, equipment, labor, or other assets to be made to the project and claimed by the sponsor as project costs, showing the estimated value or cost of each such contributed or donated item.]

Depository: The Sponsor will deposit all project funds in _____ which is qualified by law to act as a depository of public funds. The Sponsor hereby designates _____ to receive payments representing the United States share of the project costs.

3. *Land.* The sponsor holds the following property interests in the following areas of land which are to be developed or used as part of or in connection with the airport, subject to the following exceptions, encumbrances and adverse interests, all of which lands are identified on the property map which is attached hereto as Exhibit "A": [Space is provided here in which the sponsor is to list all areas of airport lands which have been acquired by it prior to the submission of the project application, identifying them by area numbers as shown on the attached property map and indicating, with respect to each such area, the interest held by the sponsor therein. In the case of each area in which the sponsor holds title in fee, such interest should be described as "title in fee, free and clear of all liens, easements, leases, and other encumbrances and adverse interests", or if there are any such encumbrances or adverse interests, they should be specified and the title described as title in fee, subject only to such named encumbrances or adverse interests. Similarly, where the sponsor holds some lesser property interest, such interest should be specified, indicating if it is less than title, the authority under which such interest is held. If the interest is a leasehold estate granted by some other public agency, a certified copy of the instrument creating such interest should be attached.]

The sponsor further certifies that the above is based on a title examination by a qualified attorney or title company and that such attorney or title company has determined that the sponsor holds the above property interests.

4. *Approvals of other agencies.* The project has been approved by all non-Federal agencies whose approval is required, namely: [Space is provided here in which the sponsor is to list all non-Federal agencies whose approval of the project is required.]

5. *Defaults.* The sponsor is not in default on any obligation to the United States or any agency of the United States Government relative to the development, operation, or maintenance of any airport, except as stated herewith: [Space is provided here in which the sponsor is to describe any existing obligations of the nature indicated, on which it is in default.]

6. *Possible disabilities.* There are no facts or circumstances (including the existence of effective or proposed leases, use agreements, or other legal instruments affecting use of the airport or the existence of pending litigation or other legal proceedings) which: (a) are known or by due diligence might be

known; (b) in reasonable probability might make it impossible for the sponsor to carry out and complete the project or carry out the provisions of Part III and IV of the Project Application, either by limiting its legal or financial ability or otherwise; and (c) have not been brought to the attention of an authorized representative of the Administrator.

(3) *Part III: Sponsor's assurances.* This part contains the following assurances and covenants on the part of the sponsor, all of which are to become effective upon acceptance by the sponsor of a grant offer for the project and remain in force and effect throughout the useful life of the facilities developed under the project but in any event not to exceed 20 years from the date of such acceptance:

2. The sponsor will operate the airport as such for the use and benefit of the public. In furtherance of this covenant (but without limiting its general applicability and effect), the sponsor specifically agrees that it will keep the airport open to all types, kinds, and classes of aeronautical use without discrimination between such types, kinds, and classes; *Provided,* That the sponsor may establish such fair, equal, and non-discriminatory conditions to be met by all users of the airport as may be necessary for the safe and efficient operation of the airport; *And provided further,* That the sponsor may prohibit any given type, kind, or class of aeronautical use of the airport if such action will best serve the aeronautical needs of the area served by the airport.

3. The sponsor will not exercise, grant, or permit any exclusive right for the use of the airport forbidden by Section 303 of the Civil Aeronautics Act of 1938, as amended. In furtherance of this covenant (but without limiting its general applicability and effect), the sponsor specifically agrees that it will not either directly or indirectly exercise, or grant to any person, firm or corporation, or permit any persons, firm, or corporation to exercise, any exclusive right for the use of the airport for commercial flight operations, including air carrier transportation, rental of aircraft, conduct of charter flights, operation of flight schools or the carrying on of any other service or operation requiring the use of aircraft.

4. The sponsor agrees that it will operate the airport for the use and benefit of the public, on fair and reasonable terms and without unjust discrimination. In furtherance of this covenant (but without limiting its general applicability and effect), the sponsor specifically covenants and agrees:

(a) That in any agreement, contract, lease, or other arrangement under which a right or privilege at the airport is granted to any person, firm, or corporation to render any service or furnish any parts, materials, or supplies (including the sale thereof) essential to the operation of aircraft at the airport, the sponsor will insert and enforce provisions requiring the contractor:

(1) To furnish good, prompt, and efficient service³ adequate to meet all the demands for its service³ at the airport.

(2) To furnish said services³ on a fair, equal, and nondiscriminatory basis to all users thereof, and

(3) To charge fair, reasonable, and non-discriminatory prices for each unit of sale or service:³ *Provided,* That the contractor may be allowed to make reasonable and non-discriminatory discounts, rebates, or other

³ As used in these subsections the words "service" shall include furnishing of parts, materials, and supplies (including sale thereof) as well as furnishing of service.

similar types of price reductions to volume purchasers.

(b) That it will not exercise or grant any right or privilege which would operate to prevent any person, firm, or corporation operating aircraft on the airport from performing any services on its own aircraft with its own employees (including, but not limited to, maintenance and repair) that it may choose to perform.

(c) That if the sponsor exercises any of the rights or privileges set forth in subsection (a) of this paragraph it will be bound by and adhere to the condition specified for contractors set forth in said subsection (a).

5. Nothing contained herein shall be construed to prohibit the granting or exercise of an exclusive right for the furnishing of nonaviation products and supplies or any service of a nonaeronautical nature.

6. The sponsor will suitably operate and maintain the airport and all facilities thereon or connected therewith which are necessary for airport purposes other than facilities owned or controlled by the United States, and will not permit any activity thereon which would interfere with its use for aeronautical purposes: *Provided*, That nothing contained herein shall be construed to require that the airport be operated and maintained for aeronautical uses during temporary periods when snow, flood, or other climatic conditions interfere substantially with such operation and maintenance. Essential facilities, including night lighting systems, when installed, will be operated in such a manner as to assure their availability to all users of the airport.

7. Insofar as is within its powers and reasonably possible, the sponsor will prevent the use of any land either within or outside the boundaries of the airport in any manner (including the construction, erection, alteration, or growth of any structure or other object thereon) which would create a hazard to the landing, taking-off, or maneuvering of aircraft at the airport, or otherwise limit the usefulness of the airport. This objective will be accomplished either by the adoption and enforcement of a zoning ordinance and regulations or by the acquisition of easements or other interests in lands or airspace, or by both such methods. With respect to land outside the boundaries of the airport, the sponsor will also remove or cause to be removed any growth, structure, or other object thereon which would be a hazard to the landing, taking-off, or maneuvering of aircraft at the airport, or if such removal is not feasible, will mark or light such growth, structure, or other object as an airport obstruction or cause it to be so marked or lighted. The airport approach standards to be followed in performing the covenants contained in this paragraph shall be those established by the Administrator in Office of Airports Drawing No. 672, dated September 1, 1946, unless otherwise authorized by the Administrator.

8. All facilities of the airport developed with Federal aid and all those usable for the landing and taking-off of aircraft will be available to the United States at all times, without charge, for use by military and naval aircraft in common with other aircraft, except that if the use by military and naval aircraft is substantial, a reasonable share, proportional to such use, of the cost of operating and maintaining facilities so used, may be charged. The amount of use to be considered "substantial" and the charges to be made therefor shall be determined by the sponsor and the using agency.

9. Whenever so requested by the Administrator, the sponsor will furnish to any civil agency of the United States, without charge (except for light, heat, janitor service, and similar facilities and services at the reasonable cost thereof), such space in airport buildings as may be determined by the Administrator to be reasonably adequate for use in connection with any airport air traffic

control activities, weather-reporting activities, and communications activities related to airport air traffic control, which are necessary to the safe and efficient operation of the airport and which such agency may deem it necessary to establish and maintain at the airport for such purposes: *Provided*, however, That the amounts of space the sponsor may be required to furnish for such purposes and on such conditions, shall not be in excess of the maximum amounts prescribed in the Grant Agreement relating to the Project. Such space or any portion thereof will be made available as provided herein within six months after receipt of written request from the Administrator. Additional building space for such purposes may be furnished to any civil agency of the United States upon such terms as may be agreed upon between such civil agency and the sponsor.

10. After completion of the Project and during the term of these covenants, the Sponsor will maintain a current system of Airport accounts and records, using a system of its own choice, sufficient to provide annual statements of income and expense. It will furnish the Administrator with such annual or special Airport financial and operational reports as he may reasonably request. Such reports may be submitted to the Administrator on forms furnished by him, or may be submitted in such other manner as the Sponsor elects, provided the essential data are furnished. The Airport and all airport records and documents affecting the Airport, including deeds, leases, operation and use agreements, regulations, and other instruments, will be available for inspection by any duly authorized representative of the Administrator upon reasonable request. The Sponsor will furnish to the Administrator, upon request a true copy of any such document.

11. The Sponsor will not enter into any transaction which would operate to deprive it of any of the rights and powers necessary to perform any or all of the covenants made herein, unless by such transaction the obligation to perform all such covenants is assumed by another public agency eligible under the Act and the Regulations to assume such obligations and having the power, authority and financial resources to carry out all such obligations. If an arrangement is made for management or operation of the airport by any agency or person other than the Sponsor or an employee of the Sponsor, the Sponsor will reserve sufficient powers and authority to insure that the Airport will be operated and maintained in accordance with the Act, the Regulations, and these covenants.

12. The Sponsor will maintain a master plan layout of the Airport having the current approval of the Administrator. Such layout shall show building areas, approach areas, and landing areas, indicating present and future proposed development. The Sponsor will conform to such master plan layout in making any future improvements or changes at the Airport which, if made contrary to the master plan layout, might adversely affect the safety, utility, or efficiency of the Airport.

13. (a) The Sponsor will acquire within a reasonable time but in any event prior to the start of any construction work under the Project, the following property interests in the following areas of land on which such construction work is to be performed, all of which lands are identified on the property map which is attached hereto and identified as Exhibit "A": [Space is provided here in which the sponsor is to state the exact property interests which the sponsor will acquire, prior to the start of any construction work under the project, in all areas of land on which any such construction work is to be performed, identifying such areas by numbers or other symbols as shown on the attached property map. Where the property interest to be acquired is title in fee, such

title should be described as "title in fee, free and clear of all liens, easements, leases, and other encumbrances and adverse interests," or if it is expected that there will be such encumbrances or adverse interests, they should be specified and the title described as title in fee, subject only to such named encumbrances or adverse interests. Similarly where the sponsor is to acquire some lesser property interest, such interest should be specified.]

(b) The Sponsor will acquire within a reasonable time and if feasible prior to the completion of all construction work under the Project, the following property interests in the following areas of land which are to be developed or used as part of or in connection with the Airport as it will be upon completion of the Project, all of which lands are identified on the property map which is attached hereto and identified as Exhibit "A": [Space is provided here in which the sponsor is to state the exact property interests that the sponsor will acquire in all areas of land needed for airport purposes other than those covered in paragraph 13 (a) of Part III and in paragraph 3 of Part II. Such interests should be described with the same particularity as those described in paragraph 14 (a).]

14. If at any time it is determined by the Administrator that there is any outstanding right or claim of right in or to the airport property, other than those set forth in paragraph 3 of Part II and paragraphs 13 (a) and 13 (b) of this Part, the existence of which creates an undue risk of interference with the operation of the airport or the performance of the covenants of this Part, the sponsor will acquire, extinguish or modify said right, or claim of right, in a manner acceptable to the Administrator.

(4) *Part IV: Project agreement.* This part contains an agreement on the part of the sponsor, conditional upon execution of a Grant Agreement for the project, to accomplish the project in accordance with the Act, the Regulations, the plans and specifications, as approved by the Administrator, and the Grant Agreement.

Printed on the last page of the form is a form of certification to be executed by the sponsor's attorney, stating that all statements of law made in the Project Application and all legal conclusions upon which the representations and covenants are based, in his opinion, are true and correct.

(c) *Project Application for Additional Project, Form ACA-1624.1 (5-49).* This form, which is also to be executed by an appropriate official of the project sponsor, is a modification of the Project Application, Form ACA-1624, and may be used by the sponsor, at the discretion of the Regional Administrator, for second and subsequent projects at the same airport. Form ACA-1624.1 is identical with Form ACA-1624 except that, with respect to the former, certain of the representations and assurances are incorporated by reference in lieu of being set forth in their entirety.

(d) *Grant Agreement Form.* This form consists of two parts, as follows:

(1) *Part I: Offer.* This part sets forth an offer and agreement on the part of the United States, to be executed by the Regional Administrator on behalf of the Administrator, to pay a certain stated percentage of the allowable project costs of an approved project, not to exceed a specified maximum amount, on the following terms and conditions together with such other special terms and con-

ditions as may be determined by the Administrator to be necessary with respect to the particular project, to insure compliance with the act and the regulations:

2. The Sponsor shall:

(a) Begin accomplishment of the Project within a reasonable time after acceptance of this offer, and

(b) Carry out and complete the Project in accordance with the terms of this Offer, and the Federal Airport Act and the Regulations promulgated thereunder by the Administrator in effect on the date of this Offer, which Act and Regulations are incorporated herein and made a part hereof, and

(c) Carry out and complete the Project in accordance with the plans and specifications and property map, incorporated herein, as they may be revised or modified with the approval of the Administrator or his duly authorized representatives.

3. The Sponsor shall operate and maintain the Airport as provided in the Project Application incorporated herein.

4. (First alternate.) The maximum amounts of building space which the Sponsor shall be obligated to furnish civil agencies of the United States for the purposes and on the terms and conditions stated in paragraph 9 of Part III of the Project Application, shall be as set forth in the attached schedule of maximum space requirements which is incorporated herein and made a part hereof.

4. (Second alternate.) The Administrator having determined that no space in airport buildings will be required by any civil agency of the United States for the purposes set forth in paragraph 9 of Part III of the Project Application, the provisions of the said paragraph shall be deemed to be of no force or effect.

5. Any misrepresentation or omission of a material fact by the Sponsor concerning the Project or the Sponsor's authority or ability to carry out the obligations assumed by the Sponsor in accepting this Offer shall terminate the obligation of the United States, and it is understood and agreed by the Sponsor in accepting this Offer that if a material fact has been misrepresented or omitted by the Sponsor, the Administrator on behalf of the United States may recover all grant payments made.

6. The Administrator reserves the right to amend or withdraw this Offer at any time prior to its acceptance by the Sponsor.

7. This Offer shall expire and the United States shall not be obligated to pay any of the allowable costs of the Project unless this Offer has been accepted by the Sponsor within 60 days from the above date of Offer or such longer time as may be prescribed by the Administrator in writing.

This offer also provides that it is to constitute a Grant Agreement upon its acceptance by the sponsor and that such Grant Agreement shall remain in effect throughout the useful life of the facilities developed under the project but in any event not to exceed twenty years from the date of acceptance.

(2) *Part II: Acceptance.* This part, which is to be executed by an appropriate officer of the sponsor, contains an acceptance of the offer by the sponsor.

Printed on the last page of the form is a form of certification to be executed by the sponsor's attorney, stating that the acceptance of the offer by the sponsor was due and proper and in accordance with State and local law and that the Grant Agreement constitutes a legal and binding obligation of the sponsor.

(e) *Periodic Cost Estimate, Form ACA-1629 (5-49).* This form contains two certifications, as follows:

(1) A certification to be executed by the contractor (or the sponsor with respect to force account work) that "the work performed and the materials supplied to date, as shown on this Periodic Cost Estimate, represent the actual value of accomplishment under the terms of this contract in conformity with approved plans and specifications, that the quantities shown were properly determined and are correct, and that there has been full compliance with all labor provisions included in the contract identified above"; and

(2) An "acknowledgment and concurrence" of the sponsor's engineer, concurring in the contractor's certification (to be omitted in the case of force account work).

These certifications are preceded by spaces for inserting information regarding the progress of construction work, including the dates when notice to proceed with the work was given, when the work was commenced, and when completion of the work is anticipated, the percentage of physical completion of the contract work, the latest revised estimate of the quantity and cost of each item of the work to be accomplished, and a statement of the quantities and value of all construction work actually accomplished as of the end of the period for which the report is prepared.

Instructions for the preparation of this form are appended thereto and a Continuation Sheet (Form ACA-1629a) is provided for use where additional space is needed.

(f) *Application for Grant Payment, Form ACA-1625.1 (5-49).* This form contains a formal statement of application for grant payment in a specified amount, the sponsor indicating whether such payment is for a partial, semi-final, or final grant payment. This form also contains appropriate spaces for inserting a summary of the total costs incurred as of a certain specified date, the estimated United States share of total costs, the total amount of previous applications for grant payments, and the amount of the current application for grant payment broken down into the following four classifications of costs: (1) Land (including cost of acquiring land and administrative costs incident thereto); (2) construction (value of work performed to date); (3) engineering; and (4) administrative. There is also a form of certification on the part of the sponsor, reading as follows:

I certify that the above application for grant payment is correct and just, and for a payment which has not been received. I further certify that the cost estimates and statement of costs incurred as set forth on this application are true and correct, and relate only to items of airport development contemplated by the grant agreement for this project; and that all such costs have been incurred in connection with airport development accomplished in accordance with the grant agreement and applicable plans and specifications,

together with a certification of the District Airport Engineer reading as follows:

I hereby certify that the physical construction work reflected on this application has been inspected under my direction at reasonably frequent intervals by qualified employees of the Civil Aeronautics Administra-

tion. Through such inspections, and by other means and checks recognized as good engineering practice, I am satisfied that the work accomplished is in accordance with the plans and specifications and provisions of the contract. The value of construction work performed as claimed above is supported in detail by periodic cost estimates previously approved by this office. Other claimed project costs appear to be reasonable. Subject to actual verification of all stated costs by CAA audit prior to the payment of final grant, I recommend payment of this application for grant funds.

Appended to this form are instructions for its preparation.

(g) *Summary of Project Costs, Form ACA-1630 (5-48).* This form contains spaces in which the sponsor is to insert the latest revised estimate of total project costs, the total costs incurred to date, and the percentage that the latter bears to the former, all of these figures to be broken down into five main cost classifications: (1) Land costs (including cost of acquiring land and administrative costs incident thereto), (2) construction, (3) engineering, (4) administrative, and (5) contingencies. Instructions for the preparation of this form are appended thereto.

PART 555—ACQUISITION BY PUBLIC AGENCIES FOR PUBLIC AIRPORT PURPOSES OF LANDS OWNED OR CONTROLLED BY THE UNITED STATES

Sec.	Definitions.
555.1	Purpose of regulations.
555.2	Requests for conveyance required.
555.3	Public agencies eligible to file requests for conveyance.
555.4	Form and content of requests for conveyance.
555.5	Place of filing requests for conveyance.
555.6	Findings and recommendations of the Regional Administrator.
555.7	Determination by the Administrator.
555.8	Determination by the head of the controlling department or agency.
555.9	Conveyances.
555.10	Covenants, reservation clause, and reverter clause in instruments of conveyance.
555.11	

AUTHORITY: §§ 555.1 to 555.11 issued under sec. 16, 60 Stat. 179; 49 U. S. C. 1115.

SOURCE: §§ 555.1 to 555.11 appear at 12 F. R. 144, except as noted following sections affected.

§ 555.1 *Definitions.* (a) All terms used in this part which are defined in the Federal Airport Act and are not defined in paragraph (b) of this section shall have the meaning given to them in the act.

(b) As used in this part, unless the context otherwise requires, the following terms shall have the meaning indicated:

(1) "CAA" means the Civil Aeronautics Administration of the United States Department of Commerce.

(2) "Administrator" means the Administrator of Civil Aeronautics or his duly authorized representative.

(3) "Regional Administrator" means the directing head of a regional office of the CAA or his duly authorized representative.

(4) "District Airport Engineer" means the directing head of a district office of the airports branch of a CAA regional

office or his duly authorized representative.

(5) "Department or agency" means any executive department, board, bureau, commission, or other agency in the executive branch of the Federal Government or any corporation wholly owned (either directly or through one or more corporations) by the United States.

(6) "Lands owned by the United States" means any lands in which the United States or any department or agency has title.

(7) "Lands controlled by the United States" means any lands not owned by the United States or a department or agency, the use of which is subject to the approval of the United States or any department or agency.

(8) "Property interest" means the title to or any other interest in land or any easement through or other interest in air space.

§ 555.2 Purpose of regulations. The regulations in this part apply to the acquisition by public agencies, under section 16 of the Federal Airport Act, of property interests in lands owned or controlled by the United States, the use of which is necessary either for carrying out a project under the Federal-aid Airport Program authorized by the act, or for the operation of a public airport. Section 16 of the act provides that if the Administrator determines that the use of any such lands is reasonably necessary for carrying out a project under the Federal-aid Airport Program or for operation of a public airport, he shall request the head of the department or agency having control of such lands to convey to the public agency sponsoring the project in question or owning or controlling the airport, such a property interest therein as he may deem necessary. The head of such department or agency is directed to determine whether the requested conveyance is inconsistent with the needs of the department or agency, and upon his determination that the requested conveyance is not so inconsistent is authorized and directed, with the approval of the President and the Attorney General of the United States, and without expense to the United States, to make the conveyance requested.

§ 555.3 Requests for conveyance required. Any public agency which desires to acquire, under section 16 of the Federal Airport Act, a property interest in lands owned or controlled by the United States, and which is eligible under § 555.4, shall file with the Administrator through the District Airport Engineer a request for conveyance as provided in §§ 555.5 and 555.6.

§ 555.4 Public agencies eligible to file requests for conveyance. (a) A public agency shall be eligible to file with the Administrator a request for conveyance to it of a property interest in any lands owned or controlled by the United States, only if such public agency meets the following requirements:

(1) The public agency must be a state, the Territory of Alaska, the Territory of Hawaii, or Puerto Rico, or any agency of any of them; a municipality or other

political subdivision; or a tax-supported organization.

(2) The public agency must be planning to use the lands in question for or in connection with (i) the development of a public airport as a project under the Federal-aid Airport Program, or (ii) the improvement, development, or protection of an existing public airport, whether or not work in connection therewith is to be done as a project under the Federal-aid Airport Program, or (iii) the establishment or construction of a new public airport, whether or not work in connection therewith is to be done as a project under the Federal-aid Airport Program.

(3) The agency must have the legal power and authority to accept the conveyance requested; to engage in any airport development, improvement, or construction necessary to derive full benefit from the conveyance requested; to establish, operate, and maintain the proposed or existing airport; and to raise the funds necessary to accomplish the proposed development, improvement, or construction and to finance the operation and maintenance of the airport.

(4) The public agency must have sufficient funds available, or be able to obtain sufficient funds, to defray the costs of any development, improvement, or construction which may be necessary to derive reasonable benefit from the conveyance requested, and to operate and maintain the proposed or existing airport.

(5) The public agency must not be in default on any obligation to the Government relative to the development, operation, or maintenance of an airport.

§ 555.5 Form and content of requests for conveyance. (a) No special form is required for a request for conveyance under the regulations of this part. However, sufficient facts must be given in order to enable the Administrator to determine that the public agency making the request is eligible to do so, that the use of the lands requested is reasonably necessary for carrying out a project under the Federal-aid Airport Program or for the operation of a public airport, and what property interest therein will be required to accomplish such purpose.

(b) In any event, each public agency filing a request for conveyance must submit with its request, or furnish as soon thereafter as possible, the following information if applicable and available or procurable, together with any further information that may be requested by the Administrator:

(1) Name and address of the public agency requesting the conveyance.

(2) Name, location, and ownership of the subject airport. If the airport is not in existence, the proposed name, the approved location, and the prospective ownership of the airport should be indicated. If the airport is in existence and is being operated under a lease or agreement from the requesting public agency, a copy of such lease or agreement should be submitted.

(3) Statement of the legal power and authority, and financial ability of the requesting public agency to develop, improve, construct, establish, operate, and maintain the subject airport.

(4) Name of the Federal agency owning or having control of the lands requested.

(5) Legal description and acreage of the lands requested.

(6) Description of the specific property interest (title, a leasehold estate, an easement, a permit or license, or an easement or other interest in airspace) necessary to meet the needs of the requesting public agency.

(7) Complete justification of the need for acquisition of the property interest in question, supported by such maps, charts, photographs, or documents as may be necessary to show the necessity for the use of the lands requested. If the use of other lands might be suitable to meet the needs of the requesting agency, the particular advantages of the Federally owned lands over such other suitable lands should be explained.

(8) A statement as to the plans and commitments which have been made concerning the financing or accomplishment of any development, improvement, or construction requiring the use of the lands or the property interest requested. An estimated date at which the use of the subject lands or interest will be required should be stated.

(9) The status of any project for the development of the subject airport under the Federal-aid Airport Program.

(c) Each request for conveyance shall state that the requesting public agency has the legal power and authority to accept a conveyance subject to covenants and conditions such as those contemplated by § 555.11.

(d) Each request for conveyance shall be signed by an officer of the requesting agency duly authorized and designated to file such request for and on behalf of the requesting public agency.

[12 F. R. 144, as amended by Amdt. 2, 13 F. R. 1792]

§ 555.6 Place of filing requests for conveyance. A request for conveyance of a property interest in lands owned or controlled by the United States must be filed in quadruplicate with the District Airport Engineer for the area in which such lands are located.

§ 555.7 Findings and recommendations of the Regional Administrator. The Regional Administrator will consider each request for conveyance and forward such request with his findings and recommendations to the Administrator.

§ 555.8 Determination by the Administrator. The Administrator will review each request for conveyance together with the findings and recommendations of the Regional Administrator and will determine whether or not the requesting public agency is eligible, and a conveyance is proper, under section 16 of the act and the regulations of this part. In the event such determination is in the affirmative, the Administrator will request the head of the department or agency having control of the lands in question to convey to the requesting public agency such a property interest in the lands as he may deem necessary. In all cases, it will be requested that the conveyance be made without consideration other than the benefits to accrue to the

public and the United States by virtue of the use of the lands for public airport purposes. In addition, the Administrator will request that the instrument of conveyance include certain covenants and clauses as provided in § 555.11.

§ 555.9 *Determination by the head of the controlling department or agency.* The act provides that the head of any department or agency having control of lands owned or controlled by the United States, upon receipt of a request from the Administrator that an interest in such lands be conveyed to a public agency for airport purposes, shall determine whether the requested conveyance is inconsistent with the needs of the department or agency and shall notify the Administrator of his determination within a period of four months after receipt of the Administrator's request.

§ 555.10 *Conveyances.* The act provides that if the head of a department or agency determines that a requested conveyance is not inconsistent with the needs of that department or agency, such department or agency head is authorized and directed, with the approval of the President and the Attorney General of the United States, and without any expense to the United States, to perform any acts and to execute any instruments necessary to make the conveyance requested.

§ 555.11 *Covenants, reservation clause, and reverter clause in instruments of conveyance.* (a) The Administrator, in a request to the head of a department or agency for the conveyance of a described property interest in lands owned or controlled by the United States, will request that the instrument of conveyance contain certain covenants, a clause reserving fissionable materials to the United States, and a reverter clause, as follows:

(1) *Covenants.* The Administrator will request the inclusion in the instrument of conveyance of such covenants as he may deem necessary in the specific case involved to assure that the lands requested will be used for the operation, or the development and operation, of a public airport, and in addition, a covenant to the effect that any subsequent transfer will be subject to all the covenants, conditions and limitations contained in said instrument of conveyance.

(2) *Clause reserving fissionable materials.* Pursuant to Executive Order 9908 (3 CFR, 1947 Supp.) or the Atomic Energy Act of 1946 (60 Stat. 761), whichever is applicable, the Administrator will request the inclusion in the instrument of conveyance of a clause reserving to the United States all fissionable materials in the lands in question with the right to enter upon the lands and prospect for, mine and remove such materials.

(3) *Reverter clause.* The Administrator will request that the instrument of conveyance include a provision that the conveyance is made on condition that the property interest thereby conveyed shall automatically revert to the United States, pursuant to section 16 of the Federal Airport Act, in the event the lands thereby transferred are not de-

veloped or have ceased to be used for airport purposes, the grantee agreeing for itself, its successors in interest, and assigns, by the acceptance of such conveyance, that a determination by the Administrator of Civil Aeronautics, or his successor in function, that the lands are not developed, or have ceased to be used for airport purposes, shall be conclusive of these facts.

[12 F. R. 144, as amended by 12 F. R. 1190, Amdt. 2, 13 F. R. 1792]

PART 560—REIMBURSEMENT FOR DAMAGE TO PUBLIC AIRPORTS BY FEDERAL AGENCIES

Sec.	
560.1	Definitions.
560.2	Purpose of regulations.
560.3	Eligible requests for reimbursement.
560.4	Eligible petitioners.
560.5	Eligible airports.
560.6	Time limitations.
560.7	Eligible rehabilitation or repair.
560.8	Amount of reimbursement.
560.9	Claims filed with other Federal agencies.
560.10	Form and content of requests.
560.11	Submission of requests.
560.12	Consideration and determination of requests; notifications to petitioners.
560.13	Certification of request to the Congress; notifications to petitioners.
560.14	Notification of appropriation.
560.15	Accomplishment of rehabilitation or repair.
560.16	Inspection, audit, and records.
560.17	Payments from funds appropriated by the Congress.
560.18	Supplemental requests.
560.19	Projects for rehabilitation or repair in the Federal-aid Airport Program.
560.20	Forms.

AUTHORITY: §§ 560.1 to 560.20 issued under sec. 17, 60 Stat. 179, as amended by Pub. Law 840, 80th Cong.; 49 U. S. C. 1116.

SOURCE: §§ 560.1 to 560.20 appear at 14 F. R. 2375.

§ 560.1 *Definitions.* (a) "Act" means the Federal Airport Act (60 Stat. 170; Pub. Law 377, 79th Cong.), as amended by act of June 29, 1948 (62 Stat. 1111; Pub. Law 840, 80th Cong.).

(b) "Administrator" means the Administrator of Civil Aeronautics or his duly authorized representative.

(c) "Airport" means any area of land or water which is used, or intended for use, for the landing and take-off of aircraft, and any appurtenant areas which are used, or intended for use, for airport buildings or other airport facilities or rights-of-way, together with all airport buildings and facilities located thereon.

(d) "Betterment" means the construction or development of a new area or facility replacing a damaged area or damaged facility, or the repair or improvement of a damaged area or damaged facility to a condition better than its condition at the time specified in § 560.8 (a) or § 560.8 (b), whichever is applicable, or in accordance with higher standards of construction than its original construction.

(e) "CAA" means the Civil Aeronautics Administration of the United States Department of Commerce.

(f) "Damaged area" means any area of a public airport where damage has occurred, for the cost of the necessary

rehabilitation or repair of which reimbursement is requested under the regulations in this part, and which, in the opinion of the Administrator, is or was identifiable as a functional unit of the airport, contributing materially to its safety or utility.

(g) "Damaged facility" means any airport building, or other airport facility, which has suffered damage, for the cost of the necessary rehabilitation or repair of which reimbursement is requested under the regulations in this part, and which, in the opinion of the Administrator, is or was identifiable as a functional unit of the airport, contributing materially to its safety or utility.

(h) "District Airport Engineer" means the director of a District Office of the Airports Branch of a CAA Regional Office or his duly authorized representative.

(i) "Federal agency" means any executive department, board, bureau, commission, or other agency in the executive branch of the Government of the United States or any corporation wholly owned (either directly or indirectly through one or more corporations) by the United States.

(j) "Petitioner" means a public agency which submits to the Administrator a request for reimbursement for the cost of the necessary rehabilitation or repair of a public airport pursuant to the provisions of section 17 of the act.

(k) "Public agency" means the United States Government or any agency thereof; a State, the Territory of Alaska, the Territory of Hawaii, Puerto Rico, or the Virgin Islands or an agency of any of them; a municipality or other political subdivision; or a tax-supported organization.

(l) "Public airport" means any airport which is used or to be used for public purposes, under the control of a public agency, the landing area of which is publicly owned.

(m) "Regional Administrator" means the director of a CAA Regional Office or his duly authorized representative.

(n) "Rehabilitation or repair" means either restoration or betterment.

(o) "Restoration" means the repair of a damaged area or damaged facility to a condition equivalent to its condition at the time specified in § 560.8 (a) or § 560.8 (b), whichever is applicable.

(p) "Reimbursement" means the payment of money by the United States to a petitioner pursuant to the provisions of section 17 of the act.

§ 560.2 *Purpose of regulations.* The regulations in this part apply to requests for reimbursement submitted pursuant to the provisions of section 17 of the act, for the cost of the necessary rehabilitation or repair of public airports substantially damaged by Federal agencies. Section 17 of the act authorizes the Administrator to render such assistance to public agencies as he deems necessary in the preparation of such requests for reimbursement. Upon receipt of such a request from a public agency, the Administrator is further authorized, on behalf of the United States, to consider, ascertain, and determine, in accordance with regulations prescribed by him, the actual or estimated cost of such neces-

sary rehabilitation or repair for which such public agency is entitled to reimbursement from the United States and to certify to the Congress the amount of such cost, which certification shall be deemed a contractual obligation of the United States. Section 17 further authorizes such amounts to be appropriated by the Congress as may be necessary to enable the Administrator to make payments to public agencies as provided therein, either upon completion of the rehabilitation or repair involved or as such rehabilitation or repair progresses.

§ 560.3 Eligible requests for reimbursement. To be eligible for consideration by the Administrator, a request for reimbursement must:

- (a) Be submitted by an eligible petitioner (see § 560.4);
- (b) Cover damage to an eligible airport (see § 560.5);
- (c) Be submitted within certain time limitations (see § 560.6); and
- (d) Cover eligible rehabilitation or repair (see § 560.7).

§ 560.4 Eligible petitioners. To be eligible, a petitioner must meet the following requirements:

- (a) The petitioner must be a State, the Territory of Alaska, the Territory of Hawaii, Puerto Rico, or the Virgin Islands, or an agency of any of them; a municipality or other political subdivision; or a tax-supported organization.
- (b) The petitioner must have control or management of the airport to which the request relates at the time of submitting the request. Control or management may be established by an interim permit or an approved application for a surplus airport in those cases where the airport in question is subject to an outstanding lease or other conveyance to the United States.

§ 560.5 Eligible airports. (a) To be eligible, an airport must meet the following requirements:

- (1) The airport must be located in the continental United States, the Territory of Hawaii, the Territory of Alaska, Puerto Rico, or the Virgin Islands.
- (2) The landing area of the airport must be owned by a public agency at the time the request is submitted and must have been owned by a public agency at the time the damage occurred.
- (3) The airport must be used, or intended to be used, by and for the benefit of the public at the time the request is submitted, must be under the control of a public agency at such time, and must have been used for public purposes under the control of a public agency, at the time the damage occurred.
- (4) If the airport was damaged while owned by the United States or a Federal agency, the nucleus of such airport must have been developed or used as a non-Federal public airport prior to the occurrence of the damage.

(b) To meet the requirements of paragraph (a) of this section, it is not necessary that the public agency controlling an airport be the public agency owning its landing area, or that the public agency controlling an airport or owning its landing area, at the time a request is submitted, be the public agency which

controlled the airport or owned the landing area at the time the damage occurred.

(c) If an airport is operated by a private person or concern under a lease or contract from a public agency, such airport will be regarded as "used by and for the benefit of the public" and "under the control of a public agency", as required by paragraph (a) (3) of this section, if the airport is being so used and the lease or contract reserves to the public agency sufficient control over the manner in which the airport is operated to permit such public agency to compel its operation for the use and benefit of the public.

§ 560.6 Time limitations. (a) A request may be submitted before, during, or after the accomplishment of the rehabilitation or repair for the cost of which reimbursement is requested.

(b) No request will be considered by the Administrator unless such request is submitted within six months after the occurrence of the damage upon which the request is based: *Provided, however*, That in the event the damage was caused by operations of a military nature during time of war, such request may be submitted within six months after the time of termination of war, unless the airport is under the control or management of the United States at the time of the termination of such war, in which event, the request may be submitted to the Administrator within six months after transfer of such control or management of the airport to the public agency involved.

(c) The Administrator will consider a request which is based upon damage which occurred prior to the date of approval of the act: *Provided*, That the foregoing time limitations are complied with.

§ 560.7 Eligible rehabilitation or repair. In order to be eligible, rehabilitation or repair must meet the following requirements:

- (a) The rehabilitation or repair must be, or have been, necessary to remedy substantial damage to an eligible airport caused or permitted by a Federal agency.
- (b) The rehabilitation or repair must be, or have been, for the purpose of remedying damage to an area or facility which was owned by the petitioner or other non-Federal public agency at the time the damage occurred, unless, at that time, the area or facility was owned by the United States or a Federal agency, in which case the area or facility must have been a part of a non-Federal public airport prior to the occurrence of the damage.
- (c) The rehabilitation or repair must have, or have had, as its principal object the remedying of damage for which the petitioner, the airport owner, or any other person or agency has never been adequately compensated, reimbursed, or recompensed by the United States or any Federal agency.
- (d) The circumstances must be such that reimbursement would be in the public interest.

§ 560.8 Amount of reimbursement. The amount of reimbursement due for the eligible rehabilitation or repair of any specific damaged area or damaged

facility will be determined by the Administrator as provided below:¹

(a) If the damage occurred while the airport was under the management or control of the United States or a Federal agency, the amount determined to be due will be an amount equal to the actual or estimated cost of restoration of the damaged area or damaged facility to a condition equivalent to its condition on the date the United States or a Federal agency assumed management or control of the airport.

(b) If the damage occurred while the airport was not under the management or control of the United States or a Federal agency, the amount determined to be due will be an amount equal to the actual or estimated cost of restoration of the damaged area or damaged facility to a condition equivalent to its condition immediately prior to such damage.

(c) The principles stated in paragraphs (a) and (b) of this section will apply whether the rehabilitation or repair of a damaged area or damaged facility consists of restoration or betterment.

§ 560.9 Claims filed with other Federal agencies. A request for reimbursement may be submitted under the regulations in this part notwithstanding the fact that the petitioner has filed prior thereto a claim against the United States relating to the subject matters of such request. In such a case, however, the petitioner shall notify the Administrator, as hereinafter provided, as to the basis for and the current status of, such claim.

§ 560.10 Form and content of requests.

(a) A request for reimbursement which a petitioner must submit under the regulations in this part is not required to be in any particular form. However, a request must state that it is made pursuant to section 17 of the act and the regulations in this part, and should contain the following pertinent information: (Documents, maps, affidavits, records, and other materials necessary to support the request should be submitted with such requests or as soon thereafter as possible, if available or procurable).

- (1) Name and address of petitioner.
- (2) Name and location of airport.
- (3) Ownership of airport at time of submitting request; if petitioner or another public agency is operating the airport under a lease, permit, license, or agreement from another public agency, copies of such instruments must be submitted; if a lessee or assignee of the petitioner or another public agency is operating the airport, copies of the operating lease or agreement must be submitted.
- (4) Extent to which the airport has ever been operated other than for the use and benefit for the public.
- (5) The name of the Federal agency causing or permitting the damage.
- (6) Date or period when damage occurred.

(7) Ownership of airport, damaged areas, and damaged facilities at time damage occurred; if a Federal agency was at that time in possession under a lease or agreement with the petitioner

¹ See also § 560.17.

or another public agency, copies of such documents must be submitted.

(8) (i) If the damage occurred while the airport was in possession or control of a Federal agency, evidence or information must be submitted as to the condition of the airport at the time the Federal agency assumed possession or control and its condition at the time such possession or control was relinquished.

(ii) If the damage occurred while the airport was not in possession or control of a Federal agency, evidence or information must be submitted as to its condition immediately prior to such damage.

(9) Type, extent, and period of operation of the airport by the Federal agency.

(10) Specific cause of the damage, giving full facts known relative to what specific acts or omissions on the part of a Federal agency damaged the airport.

(11) Nature and extent of the damage, illustrated by maps of the airport with the damage area delineated thereon, photographs, and such other evidence pertaining thereto as may be available.

(12) Extent to which the damage was covered by insurance.

(13) Itemized lists of all rehabilitation or repair work accomplished, with breakdowns of such work by items and cost; vouchers or other evidence of payment must be submitted, together with maps, photographs and other pertinent material.

(14) Itemized lists of all proposed rehabilitation or repair considered necessary, with an estimate of costs of each item and accompanied by such plans and specifications as have been prepared.

(15) Such other records, documents, or data as may be necessary to support the request for reimbursement.

(16) Statement to the effect that the request does not include reimbursement for the cost of rehabilitation or repair of improvements and facilities constructed with United States funds by the Federal agency which owned, managed, or controlled the airport or caused or permitted the damage.

(17) Nature and current status of any claim filed with a Federal agency, or any litigation arising out of or in connection with the subject damage; copies of any such claim or the pleadings in any such litigation must be submitted.

(b) Each request shall be signed and verified by an officer of the petitioner, duly authorized and designated to file such request for and on behalf of the petitioner.

(c) In addition, each request must be accompanied by evidence that the petitioner has granted, or caused to be granted, authority to the District Airport Engineer or other representatives of the Administrator to inspect the airport and the damaged areas and damaged facilities, to interview representatives of the petitioner and airport owner, and to examine airport records and documents as may be deemed necessary by such representatives of the Administrator.

§ 560.11 *Submission of requests.* All requests shall be submitted to the appropriate District Airport Engineer in quadruplicate. The date of receipt of a request by a District Airport Engineer will be considered the date on which such

request was submitted to the Administrator.

§ 560.12 *Consideration and determination of requests; notifications to petitioners.* (a) Consideration by the Regional Administrator: The Regional Administrator, upon receipt of a request, will review it and forward it to the Administrator with such comments and information as may be pertinent to the issues presented.

(b) Preliminary finding; notification to petitioner; filing of additional information: After receipt of a request, the Administrator will obtain the views of the Federal agency or agencies alleged to have caused the damage, and will thereafter make a preliminary and tentative finding of the eligibility of the rehabilitation or repair and the amount of reimbursement due. The petitioner will be notified of such preliminary and tentative finding. The notification will designate each of the damaged areas and damaged facilities which are to be, or have been, rehabilitated or repaired, and for each of such areas and facilities the notification will state the rehabilitation or repair for which reimbursement was requested, the amount requested therefor, and the amount tentatively allowed therefor. The petitioner will be given twenty days, or such additional time as may be granted, to file additional information in support of any amount which has not been tentatively allowed. Any additional information filed will be considered in the final determination of the amount of reimbursement due.

(c) Final determination by the Administrator: The Administrator will thereafter consider, ascertain, and finally determine the amount of reimbursement due for the actual or estimated cost of the eligible rehabilitation or repair.

§ 560.13 *Certification of requests to the Congress; notifications to petitioners.*

(a) The Administrator will certify to the Congress such amount as he has determined to be the actual or estimated cost of the eligible rehabilitation or repair. The certification will include a brief statement of the character of the damage upon which the request is based and of the work performed or to be performed to accomplish the eligible rehabilitation or repair.

(b) The petitioner will be notified by the Administrator of the certification to the Congress. The notification will designate the damaged areas and damaged facilities of the airport which are to be, or have been, rehabilitated or repaired and for each of such areas and facilities the notification will state the rehabilitation or repair for which reimbursement was requested, the amount requested therefor, and the amount included therefor in the certification to the Congress.

§ 560.14 *Notification of appropriation.* As soon as possible after an appropriation has been made by the Congress pursuant to a certification by the Administrator, the petitioner will be notified of the amount so appropriated.

§ 560.15 *Accomplishment of rehabilitation or repair—(a) Time of performance.* Rehabilitation or repair may be accomplished before a request for re-

imbursement is submitted pursuant to the provisions of § 560.10, or may be accomplished at any time thereafter. However, if there is to be betterment of a damaged area or damaged facility, and such item of betterment is, or is to be, included as airport development in a project in the Federal-Aid Airport Program (see § 560.19), such item of betterment should not be undertaken prior to the date of execution of a Grant Agreement therefor.

(b) *Separable rehabilitation or repair.* A petitioner may accomplish the rehabilitation or repair of an airport as a whole or, if it desires to do so, may accomplish separately the rehabilitation or repair of any damaged area or damaged facility.

(c) *Plans and specifications.* Plans and specifications for the accomplishment of rehabilitation or repair shall be submitted to the Administrator for his approval, unless in the opinion of the Administrator the work involved in rehabilitation or repair is of a type not requiring plans and specifications for satisfactory accomplishment. Such plans and specifications shall be submitted prior to the start of construction unless the rehabilitation or repair has been completed at the time a request for reimbursement is submitted therefor, in which event the plans and specifications for such rehabilitation or repair shall be submitted with such request for reimbursement or as soon thereafter as possible. Early submission of plans and specifications may avoid delays in the making of payments.

§ 560.16 *Inspection, audit, and records.* A petitioner shall permit authorized representatives of the Administrator to inspect the airport to determine that rehabilitation or repair is being or has been accomplished satisfactorily, and to audit its records and accounts to determine the amount of reimbursement due therefor. If a request for reimbursement includes a substantial amount of rehabilitation or repair completed prior to the request, or includes entirely completed rehabilitation or repair of a damaged area or damaged facility, an inspection of such completed rehabilitation or repair and an audit of the costs thereof may be made prior to certification to the Congress. Progress inspections and audits may be made at any time at the discretion of the Regional Administrator during the accomplishment of the rehabilitation or repair. A final inspection and audit will be made prior to lump-sum payment or final payment as provided for in § 560.17 (a) and § 560.17 (b). In order to facilitate the determination by the Administrator of the actual costs of rehabilitation or repair, a petitioner should secure and retain in its files documentary evidence of costs and payments therefor, such as invoices, cost estimates, pay rolls, vouchers, cancelled checks or warrants, and receipts.

§ 560.17 *Payments from funds appropriated by the Congress.* Funds appropriated by the Congress pursuant to a certification by the Administrator may be paid to a petitioner, as provided in this section, either in a lump-sum payment or in progress payments.

(a) *Lump-sum payments.* A lump-sum payment may be applied for by a petitioner either after completion of all eligible rehabilitation or repair for which certification was made or after completion of the rehabilitation or repair of any damaged area or damaged facility covered by such certification. Such a payment will be made only after an inspection and audit have been made by the CAA pursuant to the provisions of § 560.16 and only if the rehabilitation or repair has been completed to the satisfaction of the Administrator. If the completed rehabilitation or repair has been paid for by the petitioner, payment will be made in an amount equivalent to the actual cost of the rehabilitation or repair, or the amount included in the certification therefor, or the amount of appropriated funds available for reimbursement therefor, whichever of such amounts is the least. If the rehabilitation or repair has been accomplished but not paid for, the Administrator will pay not to exceed 90% of the actual cost of such rehabilitation or repair, or 90% of the amount included in the certification therefor, or 90% of the amount of appropriated funds available for reimbursement therefor, whichever of such amounts is the least; thereafter, when the rehabilitation or repair has been paid for, the petitioner may apply for and receive payment of the balance of the total amount which would have been payable as a lump-sum payment under this section if such rehabilitation or repair had been paid for at the time the original application for such payment was made.

(b) *Progress payments.*—(1) *Agreements for progress payments.* Progress payments may be made either for all eligible rehabilitation or repair for which certification was made or for the rehabilitation or repair of any damaged area or damaged facility covered by such certification, as such rehabilitation or repair progresses. Such payments will be made, as provided herein, to a petitioner at its request provided an agreement therefor has been entered into between the petitioner and the Administrator on Form ACA 2045 (§ 560.20 (a)). A petitioner desiring progress payments should so notify the Administrator, describing the rehabilitation or repair to be accomplished, for which progress payments will be requested, and distinguishing between items of restoration and items of betterment. Such a notice may be submitted at any time after certification and should be submitted as far as possible in advance of the date it is anticipated a request for payment will be made. After monies have been appropriated by the Congress for payment of rehabilitation or repair included in such a notice, the Administrator will prepare and execute a proposed agreement on Form ACA 2045 (§ 560.20 (a)) based upon such notice and will submit it to the petitioner as soon as circumstances permit, for execution by a duly authorized official of the petitioner. When so executed, an agreement should be returned to the District Airport Engineer.

(2) *Time and amount of progress payments.* A petitioner may apply for progress payments, as the work pro-

gresses, on a monthly basis or such other basis as may be set forth in the agreement entered into pursuant to § 560.17 (b) (1). The amount of a progress payment will be based upon the percentage of physical completion of the rehabilitation or repair for which payment is applied for. To determine the aggregate amount of progress payments earned as of a specified date for any particular item of rehabilitation or repair, such percentage will be applied to the agreed-upon maximum amount of reimbursement for such item, or to the latest revised total estimated cost of such item, whichever is the lesser. The progress payment due as of such date will equal such aggregate amount less the total of all prior progress payments for the item. No progress payment will be made, however, which would bring the aggregate of such payments to an amount in excess of 90% of the agreed-upon maximum amount of reimbursement for the item or to an amount in excess of 90% of the latest revised total estimated cost thereof, whichever is the lesser.² *Provided,* That where the rehabilitation or repair has been more than 90% completed, and where all of the rehabilitation or repair accomplished has been paid for by the petitioner, and where the remainder of the rehabilitation or repair to be accomplished will be suspended for an appreciable length of time due to weather conditions or other causes beyond the control of the petitioner, a progress payment may, at the discretion of the Administrator, be made in an amount which will bring the aggregate of such payments to an amount computed on the basis of the percentage of physical completion reached, such payment to be made on the basis of an inspection by the CAA and a CAA audit.

(3) *Final payments.* Final payment for any particular item of rehabilitation or repair will be made after such item has been accomplished to the satisfaction of the Administrator, and has been paid for by the petitioner, and after an inspection has been made by the CAA and the amount of reimbursement has been established by a final CAA audit. Such a final payment will be made in an amount computed by deducting the aggregate amount of all progress payments made for the item from the smallest of the three following amounts: (i) The actual cost of the item of rehabilitation or repair; (ii) the amount included therefor in the certification; (iii) the amount of appropriated funds available for reimbursement therefor.

(c) *Applications for payments.* All applications for progress, final, and

² Under the formula in § 560.16 (b) (2), in a case in which only restoration is involved and in which the agreed-upon maximum amount exceeds or is equal to the latest revised total estimated cost of such restoration, the aggregate amount of progress payments earned as of a particular date, will be equal to the actual cost of work accomplished to such date. Where betterment is involved and the agreed-upon maximum amount is equal to or less than the latest revised total estimated cost of such betterment, the aggregate amount of progress payments earned as of a particular date, will be a percentage of the agreed-upon maximum amount.

lump-sum payments shall be made on Form ACA-2044 (§ 560.20 (b)), accompanied by a summary of costs of rehabilitation or repair on Form ACA-1630 (§ 560.20 (c)) and a separate Periodic Cost Estimate on Form ACA-1629 (§ 560.20 (d)) for each construction contract or petitioner's force account representing costs for which payment is requested.

(d) *Recovery in event of excess payments.* If the Administrator determines at any time that the aggregate of payments for an item of rehabilitation or repair exceeds the actual cost of the work then performed therefor, or the maximum amount included in the certification therefor, the United States shall be entitled to recover such excess.

§ 560.18 *Supplemental requests.* (a) A petitioner may submit a supplemental request for reimbursement in the amount by which the actual cost of a completed item of restoration exceeds its estimated cost as previously included in a certification made by the Administrator to the Congress. Such a supplemental request shall identify the original request, shall set forth the additional amount requested, which shall be supported by vouchers or other evidence of the actual cost, shall state the cause of the variation between the estimated and actual costs of such restoration, shall be verified in the same manner as an original request, and shall be submitted to the District Airport Engineer in quadruplicate.

(b) If upon receipt of a supplemental request, and after an inspection and audit of the completed rehabilitation or repair, the Administrator determines that the actual cost of a completed item of restoration exceeds the amount of the estimated cost of such item included by him in a certification to the Congress, the Administrator will certify to the Congress the amount by which such actual cost exceeds such estimate, including in the certification a brief statement of the cause of the variation between the estimated and actual costs of the rehabilitation or repair.

§ 560.19 *Projects for rehabilitation or repair in the Federal-aid Airport Program.* Subject to the applicable requirements of the act relative to the Federal-aid Airport Program and Part 550 of the regulations of the Administrator, a petitioner may sponsor a project in that Program for any item of betterment which has not yet been accomplished, the estimated cost of which exceeds the amount of reimbursement therefor included in a certification to the Congress under this part. The participation by the United States in such a project in the Federal-aid Airport Program will be a percentage share of the allowable project costs of the item of betterment over and above the amount of reimbursement therefor included in the certification.

§ 560.20 *Forms.* The purpose of this section is to describe the various forms referred to in the foregoing sections of this part. Copies of such forms and assistance in the completion and execution thereof may be obtained by a petitioner

² See also § 560.15 (a) and § 550.5 (1).

from the District Airport Engineer of the CAA district in which the airport to be rehabilitated or repaired is located.

(a) *Agreement for progress payments for airport rehabilitation or repair, Form ACA-2045 (3-49)*. This form, when executed by the Administrator on behalf of the United States and by a petitioner, constitutes an agreement between the United States and the petitioner for the making of progress payments of monies appropriated by the Congress in reimbursement of the cost of rehabilitation or repair. This agreement describes the items of rehabilitation or repair for which progress payments will be made, indicating whether they are items of restoration or items of betterment, and specifies the maximum amount of the United States obligation therefor. Such agreement includes a promise by the petitioner to complete the rehabilitation or repair in accordance with plans and specifications (including subsequent revisions and modifications thereof) having the approval of the Administrator or his duly authorized representative, and to refund to the United States all such payments for any item of rehabilitation or repair in the event such item of rehabilitation or repair is not so completed. It provides also that in the event it is determined by the Administrator upon completion of any item of restoration that the actual cost thereof is in excess of the agreed-upon maximum amount for such item, acceptance by the petitioner of progress payments aggregating said maximum amount shall not be deemed full reimbursement of the cost of such rehabilitation or repair and shall not prejudice the right of the petitioner to submit a supplementary request for reimbursement in the amount of such excess. In addition, it will include such special terms and conditions as the Administrator determines to be necessary in the particular case to insure compliance with section 17 of the act and the regulations in this part.

(b) *Application for payment for rehabilitation or repair, Form ACA-2044 (3-49)*. This form contains a formal statement of application for payment for rehabilitation or repair in a specified amount. It identifies the appropriate letter of notification of certification from the Administrator and the agreement, if any, between the petitioner and Administrator for progress payments. It contains spaces for describing briefly the items of restoration and betterment involved and for stating for each of such items the agreed-upon maximum amount of reimbursement, the revised total estimated cost, the costs of rehabilitation or repair incurred as of a specified date, the amount of reimbursement earned as of that date, the amount of all previous payments and unpaid applications, and the amount applied for. The following certification to be executed by a responsible official of the sponsor is provided for:

I certify that the above application for payment is correct and just, and for a payment which has not been received. I further certify that the cost estimates and statements of costs incurred, as set forth in this application, are true and correct, and relate only to items of rehabilitation or repair contemplated

by the letter of notification of certification from the Administrator of Civil Aeronautics dated _____, 19____ and the agreement entered into between the Petitioner and the United States dated _____, 19____; and that all such costs have been incurred in connection with rehabilitation or repair accomplished in accordance with said letter of notification and agreement¹ and applicable plans and specifications.

¹ This reference to an agreement should be stricken if no such agreement exists.

In addition, a certification is provided for signature by the District Airport Engineer.

Instructions for the preparation of this form are appended thereto.

(c) *Summary of Project Costs, Form ACA-1630 (5-48)*. This form contains spaces in which the petitioner is to insert a description of the rehabilitation or repair accomplished, the latest revised total estimated costs, the actual costs incurred to date, and the percentage that the latter bears to the former, all of these figures to be broken down into four main cost classifications: (1) Construction costs, (2) engineering costs, (3) administrative expenses, and (4) contingencies. Instructions for the preparation of this form are appended thereto.

(d) *Periodic Cost Estimate, Form ACA-1629 (5-49)*. This form contains two certifications, as follows:

(1) A certification to be executed by the contractor (or the petitioner with respect to force account work) that "the work performed and the materials supplied to date, as shown on this Periodic Cost Estimate, represent the actual value of accomplishment under the terms of this contract in conformity with approved plans and specifications, and that the quantities shown were properly determined and are correct."

(2) An "acknowledgment and concurrence of the petitioner's engineer, concurring in the contractor's certification (to be omitted in the case of force account work).

These certifications are preceded by spaces for inserting information regarding the progress of rehabilitation or repair, including the dates when the work was commenced and when completion is anticipated, the percentage of physical completion of rehabilitation or repair, the latest revised estimate of the quantity and cost of the various work items to be accomplished, and a statement of the quantities and value of all work items actually accomplished as of the end of the period for which the report is prepared.

Instructions for the preparation of this form are appended thereto.

AUTHORITY: §§ 570.1 to 570.60 issued under sec. 2, 54 Stat. 688; 2 D. C. Code 1602.

SOURCE: §§ 570.1 to 570.60 appear at 12 F. R. 462, except as noted following section affected. Redesignated at 13 F. R. 3045.

§ 570.1 *Definitions.* (a) "Airport" means the Washington National Airport.

(b) "Administrator" means the Administrator of Civil Aeronautics.

(c) "Airport Administrator" means the Airport Administrator appointed by the Administrator of Civil Aeronautics to govern, superintend, control, and protect the Washington National Airport.

(d) "Person" means any individual, firm, copartnership, corporation, company, association, joint-stock association, or body political; and includes any trustee, receiver, assignee, or other similar representative thereof.

(e) "Board" means Civil Aeronautics Board.

GENERAL RULES AND REGULATIONS

§ 570.4 *Airport Administrator.* All persons on any part of the property comprising the airport shall be governed by the regulations prescribed in this part and by orders and instructions of the Airport Administrator relative to the use or occupation of any part of the property comprising the airport.

§ 570.5 *Restricted areas.* No person shall enter any restricted areas posted as being closed to the public except upon written permission of the Airport Administrator.

§ 570.6 *Particular areas.* No person shall enter upon the levy road, landing field, runways, taxi strips, ground floor of the Terminal Building, nor enter the Control Tower, mirador room, third floor offices of the Terminal Building, any hangar, or the apron of the airport except:

- (a) Persons assigned to duty therein;
- (b) Authorized representatives of the Administrator, or the Board;
- (c) Persons authorized by the Airport Administrator;
- (d) Passengers under appropriate supervision, entering the apron for the purpose of embarkation and debarkation.

§ 570.7 *Observation terrace and balcony.* No person shall throw paper, cigars, cigarettes, bottles, or any other material from the Observation Terrace, Observation Balcony, or any other balcony in the Terminal Building.

§ 570.8 *Conduct of business or commercial activity.* No person shall engage in any business or commercial activity of any nature whatsoever on the airport except with the approval of the Administrator or Airport Administrator, and under such terms and conditions as may be prescribed.

§ 570.9 *Soliciting.* No person shall solicit funds for any purpose on the airport without the permission of the Airport Administrator.

§ 570.10 *Taxicabs.* No person shall operate any taxicab carrying passengers for hire from the airport unless such operation is with the approval of the Administrator and under such terms and conditions as he may prescribe.

§ 570.11 *Advertisements.* No person shall post, distribute, or display signs, advertisements, circulars, printed or written matter at the airport except with the approval of the Administrator and in such manner as he may prescribe.

§ 570.12 *Commercial photography.* No person shall take still, motion, or sound pictures for commercial purposes on the airport without permission of the Administrator except that the following persons may take pictures for commercial purposes with permission of the Airport Administrator only:

- (a) Professional photographers and motion picture cameramen taking scenes of events in the airport as representatives of news concerns and bona fide news publications.
- (b) Professional photographers and motion picture cameramen taking scenes of events in the airport, for nonprofit exhibits, for the purpose of stimulating general interest in air commerce or travel.
- (c) Professional photographers and motion picture cameramen taking scenes of events in the airport for nonprofit educational purposes.
- (d) Professional photographers taking scenes in the airport for general artistic purposes.

§ 570.13 *Use of roads and walks.* (a) No person shall travel on the airport other than on the roads, walks or places provided for the particular class of traffic.

(b) No person shall occupy the roads or walks in such manner as to hinder or obstruct their proper use.

(c) No person shall operate any type of vehicle for the disposal of garbage, ashes or other waste material on the airport without the approval of the Airport Administrator.

§ 570.14 *Dogs.* No person shall enter the Terminal Building or landing area of the airport with a dog or other animal except that seeing-eye dogs may be permitted in the Terminal Building for appropriate purposes, and where dogs are to be transported by air and are restrained by leash or properly confined. Dogs and other animal may be permitted in other areas of the airport if restrained by leash or confined in such manner as to be under control.

§ 570.15 *Lost articles.* Any person finding lost articles shall deposit them at the office of the Airport Administrator. Articles unclaimed within 60 days may be turned over to the finders thereof.

§ 570.16 *Discrimination or segregation.* In the operation of all facilities of the Washington National Airport, services shall be rendered without discrimination or segregation as to race, color, or creed.

[Amdt. 1, 13 F. R. 8736]

MOTOR VEHICLE REGULATIONS

§ 570.20 *General.* No person shall operate any motor vehicle on the airport otherwise than in accordance with the general rules prescribed by the Airport Administrator for the control of such vehicles, except when given special instructions by authorized employees of the airport, or in cases of emergency involving danger to life or property.

§ 570.21 *Motorized equipment.* No person shall operate any motorized equipment on the apron of the Terminal Building or anywhere on the aircraft landing area or levy road or in the inner-baggage tractor concourse of the Terminal Building except:

- (a) Persons assigned to duty thereon and who have been issued an operator's certificate by the Airport Administrator;
- (b) Persons specifically authorized by the Airport Administrator.

§ 570.22 *Operator's certificate.* No person shall operate motorized equipment of any kind on the roadways of the airport unless possessed of a valid operator's license issued by some legal political jurisdiction or by the Airport Administrator. No person shall operate motorized equipment of the CAA other than aircraft on the airport unless possessed of a valid CAA Operator's Certificate.

§ 570.23 *Speed.* (a) No person shall operate a motor vehicle of any kind on the roadways of the airport in excess of the speed limits prescribed by the Airport Administrator and indicated by posted

traffic signs. Motor vehicles shall be so operated as to be under safe control at all times, weather and traffic conditions considered. No person shall operate a motor vehicle of any kind on the apron of the airport in excess of 25 miles per hour. No person shall operate a motor vehicle of any kind in the inner-baggage concourse at a speed greater than 6 miles per hour.

§ 570.24 *Operation rules.* (a) Any person operating a vehicle traveling slowly on any road in the airport, when overtaken by a faster moving vehicle, and upon suitable signal from such overtaking vehicle, shall move to the right to allow safe passage.

(b) Pedestrians within pedestrian lane markings shall have the right-of-way over vehicular traffic.

(c) No person shall operate a vehicle following another vehicle on the airport closer than 15 feet to the preceding vehicle.

(d) No person shall sound a motor vehicle horn except as a warning signal.

(e) No person shall cause or permit a motor vehicle under his control to obstruct traffic by making right or left turns from the wrong traffic lane or by weaving in and out of traffic or in any other improper manner.

(f) No person operating a motor vehicle on the airport shall fail to give proper hand signals. The following signals shall be given by extending the hand and arm from the left side in the following manner:

(1) *Left turn.* The hand and arm shall be extended horizontally.

(2) *Right turn.* The hand and arm shall be extended upward.

(3) *Stop or decrease speed.* The hand and arm shall be extended downward: *Provided, however,* That in lieu of such hand signals, signals may be given by a signal lamp or a signal device which conveys an intelligible warning to another driver approaching from the front or rear.

(g) No person shall operate a motor vehicle on the airport contrary to the directions of posted traffic signs.

(h) No person under the influence of liquor or narcotic drugs shall operate a motor vehicle or aircraft of any kind on the airport.

(i) No person shall operate any motor vehicle on the airport overloaded or carrying more passengers than that for which the vehicles were designed. Riding on the running board, standing up in the body of moving vehicles, riding on the outside of the body of a vehicle, or with arms or legs protruding from the body of motor vehicles are prohibited.

§ 570.25 *Accident reports.* All persons involved in any accidents on the airport and all witnesses thereto shall make a full report thereof to the Airport Administrator or to the nearest airport guard or police officer as soon after the accident as possible, together with their names and addresses.

§ 570.26 *Parking.* No person shall park a motor vehicle on the airport other than in areas specifically established for parking and in the manner

prescribed by the Airport Administrator. No person shall abandon or park as dead storage any motor vehicle on the airport. No person shall park any motor vehicle in excess of the time limit prescribed by the Airport Administrator, nor in restricted or reserved areas unless authorized to do so.

§ 570.27 *Motor vehicle lights.* All motor vehicles, except motorcycles, shall be equipped with two headlights and one or more red tail lights, the headlights to be of sufficient brilliance to assure safety in driving at night, and all lights shall be kept lighted after sunset when the vehicle is on any roadway of the airport, and at all times when passing through unlighted tunnels. Headlights shall be dimmed when meeting other vehicles or pedestrians.

§ 570.28 *Repair of motor vehicles.* No person shall clean or make any repairs to motor vehicles on the roadways or in the parking areas of the airport except those minor repairs necessary to remove such motor vehicle from the airport unless authorized by the Airport Administrator, nor shall any person move, interfere, or tamper with any motor vehicle, or put in motion the engine, or take, or use any motor vehicle part, instrument, or tool thereof, without the permission of the owner or satisfactory evidence of the right to do so duly presented to the Airport Administrator.

§ 570.29 *Busses.* No carrier by motor bus for hire shall load or unload passengers at the airport at any place other than that designated by the Airport Administrator.

GENERAL RULES OF CONDUCT

§ 570.32 *Disorderly conduct.* No person shall commit any disorderly, obscene or indecent act or commit any act of nuisance on the airport.

§ 570.33 *Gambling.* No person shall engage in or conduct gambling in any form or operate gambling devices anywhere on the airport.

§ 570.34 *Sanitation.* (a) No person shall dispose of garbage, papers, or refuse or other material on the airport except in the receptacles provided for that purpose.

(b) No person shall use a comfort station other than in a clean and sanitary manner.

§ 570.35 *Preservation of property.* No person shall: (a) Destroy, injure, deface or disturb in any way any building, sign, equipment, marker, or other structure, tree, flower, lawn or other public property on the airport.

(b) Trespass on lawns and seeded areas on the airport.

(c) Abandon any personal property on the airport.

§ 570.36 *Airport and equipment.* No person shall interfere with, tamper with or injure any part of the airport or any of the equipment thereof.

§ 570.37 *Weapons, explosives and inflammable material.* (a) No persons except peace officers, duly authorized post office, airport, and air carrier em-

ployees or members of the armed forces of the United States on official duty shall carry any weapons, explosives, or inflammable material on the airport without the written permission of the Airport Administrator.

(b) All persons other than the excepted classes shall surrender all such objects in their possession to the first officer or guard on the airport.

(c) The Government and the Airport Administrator assume no responsibility for the loss or damage to any such objects so surrendered to the airport guard or officer.

FIRE HAZARDS

§ 570.43 *Cleaning of aircraft.* No person shall use inflammable volatile liquids in the cleaning of aircraft, aircraft engines, propellers, and appliances unless such cleaning operations are conducted in open air, or in a room specifically set aside for that purpose, which room must be properly fireproofed and equipped with adequate and readily accessible fire extinguishing apparatus.

§ 570.44 *Open-flame operations.* No person shall conduct any open-flame operation in any hangar, or on the airport grounds, or part thereof unless specifically authorized by the Airport Administrator.

§ 570.45 *Storage.* No person shall store or stock material or equipment on the airport in such manner as to constitute a fire hazard.

(a) *Storage of inflammable material.* No person shall keep or store any inflammable liquids, gases, signal flares or other similar material in the hangars or in any building on the airport: *Provided*, That such materials may be kept in an aircraft in the proper receptacles installed in the aircraft for such purpose, or in rooms or areas specifically approved for such storage by the Airport Administrator.

(b) *Lubricating oils.* No person shall keep or store lubricating oils in or about the hangars: *Provided*, That such material may be kept in aircraft in the proper receptacles installed in the aircraft for such purpose or in containers provided with suitable draw-off devices.

(c) *Waste.* Lessees of hangars shall provide suitable metal receptacles with self-closing covers for the storage of oily wastes, rags, and other rubbish. All such waste shall be removed by the lessees daily.

§ 570.46 *Smoking.* No person shall smoke in any hangar or shop or in any building, room, or place on the airport where it is specifically prohibited by the Airport Administrator.

§ 570.47 *Cleaning fluids.* No person shall use volatile inflammable substances for cleaning floors in the hangars or in other buildings of the airport.

§ 570.48 *Floor care.* All lessees on the airport shall keep the floors of the hangars and hangar and terminal apron pits and areas adjacent thereto, leased by them respectively, free and clear of oil, grease and other inflammable material.

§ 570.49 *Doping.* "Doping" processes shall be conducted only in properly de-

signed, fireproofed and ventilated rooms or buildings in which:

(a) All illumination, wiring, heating, ventilation equipment, switches, outlets, and fixtures shall be sparkproof and vaporproof and;

(b) All windows and doors shall open easily;

(c) No person shall enter or work in a "dope" room while "doping" processes are being conducted unless such person wears sparkproof shoes.

§ 570.50 *Fueling operations.* The following rules govern the draining and fueling of aircraft:

(a) No aircraft shall be fueled or drained while the engine is running, or being warmed by applications of exterior heat, or while such aircraft is in a hangar or enclosed space.

(b) No smoking shall be permitted within 100 feet of an aircraft being fueled or drained.

(c) No person shall operate any radio transmitter or receiver, or switch electrical appliances off or on in an aircraft during fueling or draining.

(d) During refueling the aircraft and the fueling dispensing apparatus shall both be grounded to a point or points of zero electrical potential.

(e) Persons engaged in the fueling and draining of aircraft shall exercise care to prevent overflow of fuel.

(f) No passenger shall be permitted in any aircraft during fueling unless a cabin attendant is present at or near the cabin door.

(g) Only personnel engaged in the fueling, maintenance, and operation of an aircraft shall be permitted within 100 feet of such aircraft during any such operation.

(h) No person shall use any material during fueling or draining of aircraft which is likely to cause a static spark.

(i) Adequate fire extinguishers shall be within ready reach of all fueling and draining operations.

(j) No person shall start the engine of any aircraft when there is any gasoline on the ground under such aircraft.

(k) Fueling hoses and draining equipment shall be maintained in a safe, sound, and non-leaking condition.

(l) All hoses, funnels, and appurtenances used in fueling and draining operations shall be equipped with a grounding device to prevent ignition of volatile liquids.

(m) The fueling and draining of aircraft shall be conducted at least 50 feet from any hangar or other building.

§ 570.51 *Radio operation.* No person shall operate any radio equipment in any aircraft when such aircraft is in a hangar.

§ 570.52 *Motor vehicle operation in hangar.* No person shall operate a tractor in any hangar unless the tractor exhaust is protected by screens or baffles to prevent the escape of sparks or the propagation of flame. Motor scooters, trucks, and other motor vehicles shall not be operated in any hangar proper at any time.

OBLIGATIONS OF TENANTS

§ 570.55 *Signs and bulletin boards.* The lessees of hangars shall maintain a

bulletin board in a conspicuous place for the purpose of posting any and all notices issued by the Administrator and his representatives.

§ 570.56 *Workmen's compensation.* The lessees of hangars shall post on the bulletin board workmen's compensation notices, lists of competent physicians, and names of liability insurance carriers.

§ 570.57 *First aid equipment.* All tenants or lessees of hangars or shop facilities on the airport shall provide in such hangars or shops conveniently accessible first aid kits approved by the Airport Administrator.

§ 570.58 *Storage of equipment.* No tenant or lessee of any hangar or shop facility on the airport shall store or stack material or equipment in such a manner as to constitute a hazard to personnel or property.

§ 570.59 *Fire apparatus.* All tenants or lessees of hangars or shop facilities shall supply and maintain such adequate and readily accessible fire extinguishers and fire equipment and provide for such periodic fire drills as the Airport Administrator may prescribe.

PENALTIES

§ 570.60 *Penalties.* Any person who violates any rule or regulation prescribed in this part, or any order or instruction issued by the Airport Administrator authorized in this part, may be removed or ejected from the airport by the Airport Administrator and his representatives and may be deprived of the further use of the airport and its facilities for such time as may be necessary to insure the safety of the airport and the public.

PART 571—AERONAUTICAL RULES FOR THE WASHINGTON NATIONAL AIRPORT

Sec.

- 571.1 General aeronautical rules.
- 571.2 Definitions.
- 571.3 Radio contact.
- 571.4 Report of arrival.
- 571.5 Aircraft operation rules.
- 571.6 Aircraft equipment rules.
- 571.7 Landing area.
- 571.8 Taxiing rules.
- 571.9 Landing and take-off rules.
- 571.10 Visual signal procedures.
- 571.11 Penalties.

AUTHORITY: §§ 571.1 to 571.11 issued under sec. 2, 54 Stat. 688; 2 D. C. Code 1602.

SOURCE: §§ 571.1 to 571.11 appear at 12 F. R. 464, redesignated at 13 F. R. 3045.

§ 571.1 *General aeronautical rules.* All aeronautical activities at the Washington National Airport, and all flying of aircraft departing from or arriving at the Washington National Airport, in the airspace which constitutes the control zone of the Washington National Airport, shall be conducted in conformity with the current pertinent provisions of the Civil Air Regulations (Subchapter A of Chapter I of this title) and orders issued by the Airport Administrator or air-traffic control-tower operator, not in conflict with the said regulations.

§ 571.2 *Definitions.* The term "person" means any individual, firm, co-partnership, corporation, company, association, joint-stock association, or body politic; and includes any trustee,

receiver, assignee, or other similar representative thereof.

§ 571.3 *Radio contact.* (a) Radio contacts between pilots of aircraft and air-traffic control-tower operators shall be conducted in accordance with the procedures and by means of the phraseologies prescribed by the Administrator of Civil Aeronautics whenever practicable.

(b) Pilots of out-bound aircraft equipped with functioning two-way radio shall not taxi or take off without a control tower clearance.

(c) Pilots of aircraft not equipped with functioning two-way radio shall not land, taxi, or take off without a clearance by radio or light signal: *Provided, however,* That this shall not prohibit sufficient movement of an out-bound aircraft not equipped with a functioning transmitter to attract the attention of the control-tower operator.

§ 571.4 *Report of arrival.* Unless impracticable because of weather conditions or unless Airway Traffic Control instructions preclude such action, pilots of in-bound aircraft equipped with functioning two-way radio shall report at or near a contact reporting point and as they enter the airport zone.

§ 571.5 *Aircraft operation rules—(a) Confinement of aircraft operations.* Aircraft operations shall be confined to hard surfaced areas. Taxi strips shall not be used for take-offs or landings.

(b) *Parking of aircraft.* No person shall park aircraft in any area on the Airport other than that prescribed by the Airport Administrator or his authorized representative.

(c) *Payment.* Payment for use of Airport facilities, storage, repairs, supplies, or other service rendered by the Airport shall be made before flight clearance will be granted unless satisfactory credit arrangements have been made with the Airport Administrator.

(d) *Disabled aircraft.* Aircraft owners, their pilot, or agent, shall be responsible for the prompt disposal of disabled aircraft and parts thereof unless required or directed to delay such action pending an investigation of an accident.

(e) *Accident reports.* Witnesses of and participants in accidents on or within the environs of the Airport shall make a full report thereof to the Airport Administrator as soon after an accident as possible, together with their names and addresses.

(f) *Refusal of clearance.* The Airport Administrator may delay or restrict any flight or other operations at the Airport and may refuse take-off clearance to any aircraft for any reason he believes justifiable.

§ 571.6 *Aircraft equipment rules—(a) Required equipment.* No aircraft shall be operated on the Washington National Airport unless it is equipped with two-way radio, tail or nose wheel, and wheel brakes.

(b) *Interfering and tampering with aircraft.* No person shall interfere or tamper with any aircraft or put in motion the engine of such aircraft, or use any aircraft, aircraft parts, instruments

or tools without permission of the owner, or satisfactory evidence of the right to do so presented to the Airport Administrator.

(c) *Repairing of aircraft.* No aircraft, aircraft engines, propellers, and apparatus shall be repaired in any area of the Airport other than that specifically designated by the Airport Administrator.

§ 571.7 *Landing area.* The Anacostia Naval Air Station, Bolling Field, and the Washington National Airport shall be regarded as one landing area in observing the circling requirements of the Civil Air Regulations (Subchapter A of Chapter I of this title).

§ 571.8 *Taxiing rules.* (a) No person shall taxi an aircraft to or from the hangar line or to or from an approved parking space until he has ascertained that there will be no danger of collision with any person or object in the immediate area by visual inspection of the area and, when available, through information furnished by airport attendants.

(b) No aircraft shall be taxed except at a safe and reasonable speed.

(c) Pilots shall not taxi onto or across runway in use until specifically cleared to do so by radio or visual signal.

(d) No aircraft not equipped with adequate brakes shall be taxed near buildings or parked aircraft unless an attendant is at the wing of the aircraft to assist the pilot.

(e) Aircraft shall be taxed in accordance with the taxiing patterns prescribed when any particular runway is in use.

(f) No person shall start or run any engine in aircraft, unless a competent person is in the aircraft attending the engine controls. Blocks shall always be placed in front of the wheels before starting the engine or engines, unless the aircraft is provided with adequate parking brakes.

§ 571.9 *Landing and take-off rules.* (a) Landings and take-offs shall be made on the runway according to the direction given by the Control Tower.

(b) No landing or take-off shall be made except at a safe distance from buildings and aircraft.

(c) Aircraft landing or taking off shall conform to the air traffic pattern published jointly by the Anacostia Naval Air Station, Bolling Field and the Washington National Airport.

§ 571.10 *Visual signal procedures.* (a) Visual signal procedures prescribed by the Administrator of Civil Aeronautics shall be observed.

(b) To an aircraft approaching for a landing:

(1) An illuminated red cross at the end of a runway shall mean: "Runway Not Clear for Landing."

(2) An illuminated green arrow shall mean: "Runway To Be Used In Direction Of Arrow."

(c) To an aircraft on the ground:

(1) A red light at the take-off end of the runway in use shall mean: "Do Not Taxi Onto Runway."

(2) A red light at far end of runway in use shall mean: "Hold, Do Not Take Off."

(3) A green light at take-off end of a runway in use shall mean: "Cleared To Take Off."

(4) A green flush light at junction of taxi lane and runway shall mean: "Cleared To Taxi."

(5) A red flush light at any junction shall mean: "Do Not Taxi Beyond This Point."

§ 571.11 *Penalties.* In addition to penalties otherwise provided, any person operating or handling any aircraft in violation of the regulations in this part, or refusing to comply therewith, may promptly be removed or ejected from the airport by or under the authority of the Airport Administrator and upon the order of the Airport Administrator, may be deprived of the further use of the airport and its facilities for such length of time as may be required to insure the safeguarding of the same and the public and its interest therein.

PART 600—DESIGNATION OF CIVIL AIRWAYS

GENERAL

Sec.	
600.1	Definition.
600.2	Scope.
600.3	Basis and purpose.

CIVIL AIRWAYS

600.10 Designation of civil airways.

GREEN CIVIL AIRWAYS

600.11	Green civil airway No. 1 (United States-Canadian Border to Forest City, Maine).
600.12	Green civil airway No. 2 (Seattle, Wash., to Boston, Mass.).
600.13	Green civil airway No. 3 (San Francisco, Calif., to New York, N. Y.).
600.14	Green civil airway No. 4 (Los Angeles, Calif., to Philadelphia, Pa.).
600.15	Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.).
600.16	Green civil airway No. 6 (Laredo, Tex., to Norfolk, Va.).
600.17	Green civil airway No. 7 (Nome, Alaska, to Fairbanks, Alaska).
600.18	Green civil airway No. 8 (Attu, Alaska, to Northway, Alaska).

AMBER CIVIL AIRWAYS

600.101	Amber civil airway No. 1 (United States-Mexican Border to Nome, Alaska).
600.102	Amber civil airway No. 2 (Long Beach, Calif., to Point Barrow, Alaska).
600.103	Amber civil airway No. 3 (El Paso, Tex., to Great Falls, Mont.).
600.104	Amber civil airway No. 4 (Brownsville, Tex., to Minot, N. Dak.).
600.105	Amber civil airway No. 5 (Grand Isle, La., to Milwaukee, Wis.).
600.106	Amber civil airway No. 6 (Jacksonville, Fla., to United States-Canadian Border).
600.107	Amber civil airway No. 7 (Key West, Fla., to Caribou, Maine).
600.108	Amber civil airway No. 8 (Los Angeles, Calif., to The Dalles, Oreg.).
600.109	Amber civil airway No. 9 (Charleston, S. C., to New York, N. Y.).

RED CIVIL AIRWAYS

600.201	Red civil airway No. 1 (Portland, Oreg., to Kansas City, Mo.).
600.202	Red civil airway No. 2 (Butte, Mont., to Rapid City, S. Dak.).
600.203	Red civil airway No. 3 (Phillipsburg, Pa., to Hartford, Conn.).
600.204	Red civil airway No. 4 (Otto, N. Mex., to Las Vegas, N. Mex.).
600.205	Red civil airway No. 5 (Sioux Falls, S. Dak., to St. Paul, Minn.).

Sec.

600.206	Red civil airway No. 6 (Las Vegas, Nev., to Omaha, Nebr.).
600.207	Red civil airway No. 7 (Atlanta, Ga., to Greensboro, N. C.).
600.208	Red civil airway No. 8 (Altoona, Pa., to Wilkes-Barre, Pa.).
600.209	Red civil airway No. 9 (San Diego, Calif., to Winslow, Ariz.).
600.210	Red civil airway No. 10 (Pueblo, Colo., to Charleston, S. C.).
600.211	Red civil airway No. 11 (Tulsa, Okla., to Boston, Mass.).
600.212	Red civil airway No. 12 (Kansas City, Mo., to Detroit, Mich.).
600.213	Red civil airway No. 13 (Sunbury, Pa., to Boston, Mass.).
600.214	Red civil airway No. 14 (Lone Rock, Wis., to Louisville, Ky.).
600.215	Red civil airway No. 15 (Las Vegas, Nev., to Gila Bend, Ariz.).
600.216	Red civil airway No. 16 (Tallahassee, Fla., to Florence, S. C.).
600.217	Red civil airway No. 17 (Fort Wayne, Ind., to Baltimore, Md.).
600.218	Red civil airway No. 18 (Indianapolis, Ind., to Washington, D. C.).
600.219	Red civil airway No. 19 (Washington, D. C., to Grand Rapids, Mich.).
600.220	Red civil airway No. 20 (Lansing, Mich., to Washington, D. C.).
600.221	Red civil airway No. 21 (Pittsburgh, Pa., to Boston, Mass.).
600.222	Red civil airway No. 22 (United States-Canadian Border to Rochester, N. Y.).
600.223	Red civil airway No. 23 (United States-Canadian Border to New York, N. Y.).
600.224	Red civil airway No. 24 (Amarillo, Tex., to Oklahoma City, Okla.).
600.225	Red civil airway No. 25 (Tallahassee, Fla., to Miami, Fla.).
600.226	Red civil airway No. 26 (Syracuse, N. Y., to Millville, N. J.).
600.227	Red civil airway No. 27 (Knoxville, Tenn., to Detroit, Mich.).
600.228	Red civil airway No. 28 (Rockford, Ill., to Detroit, Mich.).
600.229	Red civil airway No. 29 (Rochester, N. Y., to Baltimore, Md.).
600.230	Red civil airway No. 30 (Shreveport, La., to Jacksonville, Fla.).
600.231	Red civil airway No. 31 (Denver, Colo., to Minneapolis, Minn.).
600.232	Red civil airway No. 32 (Laredo, Tex., to Houston, Tex.).
600.233	Red civil airway No. 33 (Richmond, Va., to New Hackensack, N. Y.).
600.234	Red civil airway No. 34 (Pulaski, Va., to Elizabeth City, N. C.).
600.235	Red civil airway No. 35 (Pueblo, Colo., to Wichita, Kans.).
600.236	Red civil airway No. 36 (Rochester, Minn., to La Crosse, Wis.).
600.237	Red civil airway No. 37 (Dallas, Tex., to Washington, D. C.).
600.238	Red civil airway No. 38 (Big Spring, Tex., to San Antonio, Tex.).
600.239	Red civil airway No. 39 (Bethel, Alaska, to Fairbanks, Alaska).
600.240	Red civil airway No. 40 (Shemya, Alaska, to Anchorage, Alaska).
600.241	Red civil airway No. 41 (Yakutat, Alaska, to Gustavus, Alaska).
600.242	Red civil airway No. 42 (Joliet, Ill., to La Fayette, Ind.).
600.243	Red civil airway No. 43 (Chicago, Ill., to La Fayette, Ind.).
600.244	Red civil airway No. 44 (Bellingham, Wash., to United States-Canadian Border).
600.245	Red civil airway No. 45 (Washington, D. C., to Allentown, Pa.).
600.246	Red civil airway No. 46 (Aberdeen, S. Dak., to Watertown, S. Dak.).
600.247	Red civil airway No. 47 (Tampa, Fla., to Daytona Beach, Fla.).
600.248	Red civil airway No. 48 (Missoula, Mont., to Livingston, Mont.).
600.249	Red civil airway No. 49 (Elko, Nev., to Fort Bridger, Wyo.).

Sec.

600.250	Red civil airway No. 50 (Galena, Alaska, to Fairbanks, Alaska).
600.251	Red civil airway No. 51 (El Paso, Tex., to U. S.-Mexican Border).
600.252	Red civil airway No. 52 (Memphis, Tenn., to Birmingham, Ala.).
600.253	Red civil airway No. 53 (Joplin, Mo., to Springfield, Mo.).
600.254	Red civil airway No. 54 (Burley, Idaho, to Salt Lake City, Utah).
600.255	Red civil airway No. 55 (Burlington, Iowa, to Columbus, Ohio).
600.256	Red civil airway No. 56 (Red Bluff, Calif., to Whitmore, Calif.).
600.257	Red civil airway No. 57 (Moline, Ill., to Youngstown, Ohio).
600.258	Red civil airway No. 58 (Salinas, Calif., to Hollister, Calif.).
600.259	Red civil airway No. 59 (Gage, Okla., to Oklahoma City, Okla.).
600.260	Red civil airway No. 60 (San Jose, Calif., to Stockton, Calif.).
600.261	Red civil airway No. 61 (Pittsburgh, Pa., to Washington, D. C.).
600.262	Red civil airway No. 62 (Lansing, Mich., to Pittsburgh, Pa.).
600.263	Red civil airway No. 63 (Battle Creek, Mich., to the United States-Canadian Border).
600.264	Red civil airway No. 64 (U. S.-Canadian Border to Annette Island, Alaska).
600.265	Red civil airway No. 65 (Oceanside, Calif., to Blythe, Calif.).
600.266	Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif.).
600.267	Red civil airway No. 67 (Crestview, Fla., to Dothan, Ala.).
600.268	Red civil airway No. 68 (El Paso, Tex., to Shreveport, La.).
600.269	Red civil airway No. 69 (El Paso, Tex., to Big Spring, Tex.).
600.270	Red civil airway No. 70 (Midland, Tex., to Oklahoma City, Okla.).
600.271	Red civil airway No. 71 (Lubbock, Tex., to Wichita Falls, Tex.).
600.272	Red civil airway No. 72 (Millville, N. J., to Newark, N. J.).
600.273	Red civil airway No. 73 (Baltimore, Md., to Millville, N. J.).
600.274	Red civil airway No. 74 (Louisville, Ky., to Cincinnati, Ohio).
600.275	Red civil airway No. 75 (U. S.-Canadian Border, Vancouver, B. C., to the U. S.-Canadian Border, Abbotsford, B. C.).
600.276	Red civil airway No. 76 (Williams, Calif., to Auburn, Calif.).
600.277	Red civil airway No. 77 (Richmond, Va., to Millville, N. J.).
600.278	Red civil airway No. 78 (Medford, Oreg., to Klamath Falls, Oreg.).
600.279	Red civil airway No. 79 (Port Angeles, Wash., to Everett, Wash.).
600.280	Red civil airway No. 80 (Lewistown, Mont., to Miles City, Mont.).
600.281	Red civil airway No. 81 (Parkersburg, W. Va., to Elkins, W. Va.).
600.282	Red civil airway No. 82 (Skwentna, Alaska, to Anchorage, Alaska).
600.283	Red civil airway No. 83 (Tucson, Ariz., to Rodeo, N. Mex.).
600.284	Red civil airway No. 84 (New Orleans, La., to Biloxi, Miss.).
600.285	Red civil airway No. 85 (Dayton, Ohio, to Mansfield, Ohio).

BLUE CIVIL AIRWAYS

600.601	Blue civil airway No. 1 (Pendleton, Oreg., to Spokane, Wash.).
600.602	Blue civil airway No. 2 (Birmingham, Ala., to Erie, Pa.).
600.603	Blue civil airway No. 3 (Tallahassee, Fla., to La Fayette, Ind.).
600.604	Blue civil airway No. 4 (Nantucket, Mass., to United States-Canadian Border).
600.605	Blue civil airway No. 5 (Galveston, Tex., to Salina, Kans.).
600.606	Blue civil airway No. 6 (Abilene, Tex., to Muskegon, Mich.).

Sec.
 600.607 Blue civil airway No. 7 (Paso Robles, Calif., to Williams, Calif.).
 600.608 Blue civil airway No. 8 (Fargo, N. Dak., to United States-Canadian Border).
 600.609 Blue civil airway No. 9 (Columbia, Mo., to United States-Canadian Border).
 600.610 Blue civil airway No. 10 (Fresno, Calif., to Williams, Calif.).
 600.611 Blue civil airway No. 11 (Cleveland, Ohio, to Niagara Falls, N. Y.).
 600.612 Blue civil airway No. 12 (The Dalles, Oreg., to Ellensburg, Wash.).
 600.613 Blue civil airway No. 13 (Houston, Tex., to Minneapolis, Minn.).
 600.614 Blue civil airway No. 14 (El Centro, Calif., to Sacramento, Calif.).
 600.615 Blue civil airway No. 15 (Huntington, W. Va., to Erie, Pa.).
 600.616 Blue civil airway No. 16 (Dillon, Mont., to Helena, Mont.).
 600.617 Blue civil airway No. 17 (Millinocket, Maine, to Presque Isle, Maine).
 600.618 Blue civil airway No. 18 (Philadelphia, Pa., to Burlington, Vt.).
 600.619 Blue civil airway No. 19 (Miami, Fla., to Orlando, Fla.).
 600.620 Blue civil airway No. 20 (Atlantic City, N. J., to Allentown, Pa.).
 600.621 Blue civil airway No. 21 (Charleston, W. Va., to Erie, Pa.).
 600.622 Blue civil airway No. 22 (Memphis, Tenn., to Wichita, Kans.).
 600.623 Blue civil airway No. 23 (Detroit, Mich., to Flint, Mich.).
 600.624 Blue civil airway No. 24 (El Centro, Calif., to Riverside, Calif.).
 600.625 Blue civil airway No. 25 (Cordova, Alaska, to Big Delta, Alaska).
 600.626 Blue civil airway No. 26 (Anchorage, Alaska, to Nenana, Alaska).
 600.627 Blue civil airway No. 27 (Kodiak, Alaska, to Kotzebue, Alaska).
 600.628 Blue civil airway No. 28 (Charleston, S. C., to Spartanburg, S. C.).
 600.629 Blue civil airway No. 29 (Raleigh, N. C., to Lynchburg, Va.).
 600.630 Blue civil airway No. 30 (Brownsville, Tex., to Amarillo, Tex.).
 600.631 Blue civil airway No. 31 (New Florence, Mo., to Moline, Ill.).
 600.632 Blue civil airway No. 32 (Pendleton, Oreg., to Fairbanks, Alaska).
 600.633 Blue civil airway No. 33 (Archbold, Ohio, to Detroit, Mich.).
 600.634 Blue civil airway No. 34 (Little Rock, Ark., to Tulsa, Okla.).
 600.635 Blue civil airway No. 35 (Topeka, Kans., to Kirksville, Mo.).
 600.636 Blue civil airway No. 36 (Thurman, Colo., to North Platte, Nebr.).
 600.637 Blue civil airway No. 37 (Casper, Wyo., to Rapid City, S. Dak.).
 600.638 Blue civil airway No. 38 (Annette Island, Alaska, to United States-Canadian Border).
 600.639 Blue civil airway No. 39 (Knoxville, Tenn., to United States-Canadian Border).
 600.640 Blue civil airway No. 40 (Concord, N. H., to Burlington, Vt.).
 600.641 Blue civil airway No. 41 (New York, N. Y., to United States-Canadian Border).
 600.642 Blue civil airway No. 42 (South Bend, Ind., to Battle Creek, Mich.).
 600.643 Blue civil airway No. 43 (Birmingham, Ala., to Nashville, Tenn.).
 600.644 Blue civil airway No. 44 (Advance, Mo., to United States-Canadian Border).
 600.645 Blue civil airway No. 45 (Lake Charles, La., to Baton Rouge, La.).
 600.646 Blue civil airway No. 46 (Los Angeles, Calif., to Oakland, Calif.).
 600.647 Blue civil airway No. 47 (Martinsburg, W. Va., to Phillipsburg, Pa.).

Sec.
 600.648 Blue civil airway No. 48 (New York, N. Y., to New Hackensack, N. Y.).
 600.649 Blue civil airway No. 49 (Atlantic City, N. J., to Philadelphia, Pa.).
 600.650 Blue civil airway No. 50 (Bangor, Maine, to the United States-Canadian Border).
 600.651 Blue civil airway No. 51 (Wendover, Utah, to Dubois, Idaho).
 600.652 Blue civil airway No. 52 (Paso Robles, Calif., to Fresno, Calif.).
 600.653 Blue civil airway No. 53 (Providence, R. I., to Hartford, Conn.).
 600.654 Blue civil airway No. 54 (Salinas, Calif., to Hamilton Field, Calif.).
 600.655 Blue civil airway No. 55 (Crestview, Fla., to Montgomery, Ala.).
 600.656 Blue civil airway No. 56 (Elizabeth City, N. C., to Washington, D. C.).
 600.657 Blue civil airway No. 57 (Elko, Nev., to Burley, Idaho).
 600.658 Blue civil airway No. 58 (Sioux Falls, S. Dak., to Watertown, S. Dak.).
 600.659 Blue civil airway No. 59 (Pensacola, Fla., to Goodway, Ala.).
 600.660 Blue civil airway No. 60 (Sunnyvale, Calif., to Stockton, Calif.).
 600.661 Blue civil airway No. 61 (Springfield, Mo., to Kansas City, Mo.).
 600.662 Blue civil airway No. 62 (Ypsilanti, Mich., to Flint, Mich.).
 600.663 Blue civil airway No. 63 (Olathe, Kans., to Topeka, Kans.).
 600.664 Blue civil airway No. 64 (Lebo, Kans., to Topeka, Kans.).
 600.665 Blue civil airway No. 65 (Garden City, Kans., to Goodland, Kans.).
 600.666 Blue civil airway No. 66 (Bridgeport, Conn., to Poughkeepsie, N. Y.).
 600.667 Blue civil airway No. 67 (Yuma, Ariz., to Las Vegas, Nev.).

OTHER CIVIL AIRWAYS

600.1001 Dubois, Idaho, to West Yellowstone, Mont., civil airway.
 600.1002 Rapid City, S. Dak., to Spearfish, S. Dak., civil airway.
 600.1003 St. Louis, Mo., to Des Moines, Iowa, civil airway.
 600.1004 Winslow, Ariz., to Las Vegas, Nev., civil airway.

AUTHORITY: §§ 600.1 to 600.1004 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply secs. 301, 302, 307, 52 Stat. 985, 986; 49 U. S. C. 451, 452, 457.

SOURCE: §§ 600.1 to 600.1004 appear at 12 F. R. 4200, except as noted following sections affected.

GENERAL

§ 600.1 *Definition.* As used in this part, "civil airway" means a path through the navigable airspace of the United States suitable for interstate, overseas, or foreign air commerce.

§ 600.2 *Scope.* (a) Each civil airway, except as provided in §§ 600.10-600.1004, shall include the navigable airspace of the United States above all that area on the surface of the earth lying within 5 miles of the center of the center line prescribed for each such airway, but shall not include any of the airspace of an airspace reservation as provided for in section 4 of the Air Commerce Act of 1926.

(b) The center line of each civil airway shall be a line extended in the manner hereinafter prescribed through the center of the points or intersections specified for such airway.

§ 600.3 *Basis and purpose.* The basis of this part is found in section 302 of the Civil Aeronautics Act of 1938, as amended

(52 Stat. 985, 54 Stat. 1233, 1235, 1236; 49 U. S. C. 452). The purpose of this part is to designate civil airways in order to provide suitable, and insofar as possible, safe routes for aircraft operating in interstate, overseas, or foreign air commerce.

CIVIL AIRWAYS

§ 600.10 *Designation of civil airways.* The paths through the navigable air space of the United States described in §§ 600.11-600.1004 are designated as civil airways.

GREEN CIVIL AIRWAYS

§ 600.11 *Green civil airway No. 1 (United States-Canadian Border to Forest City, Maine).* From the intersection of the east course of the Megantic, Quebec, Canada, radio range and the United States-Canadian Border, via the Millinocket, Maine, radio range station to Forest City, Maine (United States-Canadian Border).

§ 600.12 *Green civil airway No. 2 (Seattle, Wash., to Boston, Mass.).* From the King County Airport, Seattle, Wash., via the Seattle, Wash., radio range station; Ellensburg, Wash., radio range station; Ephrata, Wash., radio range station; Spokane, Wash., radio range station; Coeur D'Alene, Idaho, radio range station; Mullan Pass, Idaho, radio range station; Superior, Mont., radio range station; Missoula, Mont., radio range station; Drummond, Mont., radio range station; Helena, Mont., radio range station; the intersection of the southeast course of the Helena, Mont., radio range and the northwest course of the Bozeman, Mont., radio range; Bozeman, Mont., radio range station; the intersection of the southeast course of the Bozeman, Mont., radio range and the west course of the Livingston, Mont., radio range; Livingston, Mont., radio range station; Billings, Mont., radio range station; Custer, Mont., radio range station; Miles City, Mont., radio range station; the intersection of the northeast course of the Miles City, Mont., radio range and the west course of the Dickinson, N. Dak., radio range; Dickinson, N. Dak., radio range station; Bismarck, N. Dak., radio range station; the Jamestown, N. Dak., radio range station; the intersection of the east course of the Jamestown, N. Dak., radio range and the west course of the Fargo, N. Dak., radio range; Fargo, N. Dak., radio range station; Alexandria, Minn., radio range station; Minneapolis, Minn., radio range station; La Crosse, Wis., radio range station; Lone Rock, Wis., radio range station; Madison, Wis., radio range station; Milwaukee, Wis., radio range station; Muskegon, Mich., radio range station; Grand Rapids, Mich., radio range station; Lansing, Mich., radio range station; the intersection of the east course of the Lansing, Mich., radio range and the north course of the Romulus, Mich., radio range; the Romulus, Mich., radio range station to the intersection of the east course of the Romulus, Mich., radio range and the United States-Canadian Border. From the intersection of the east course of the Clear Creek, Ontario, Canada, radio range and the United States-Canadian Border via the intersection of the east

course of the Clear Creek, Ontario, radio range and the southwest course of the Buffalo, N. Y., radio range; Buffalo, N. Y., radio range station; the intersection of the east course of the Buffalo, N. Y., radio range and the southwest course of the Rochester, N. Y., radio range; Rochester, N. Y., radio range station; the intersection of the southeast course of the Rochester, N. Y., radio range and the west course of the Syracuse, N. Y., radio range; Syracuse, N. Y., radio range station; Utica, N. Y., radio range station; Albany, N. Y., radio range station; Westfield, Mass., radio range station; the intersection of the southeast course of the Westfield, Mass., radio range and the southwest course of the Boston, Mass., radio range to the Boston, Mass., radio range station.

§ 600.13 *Green civil airway No. 3 (San Francisco, Calif., to New York, N. Y.)*. From the intersection of the northwest course of the San Francisco, Calif., radio range and the southwest course of the Fairfield-Suisun, Calif., radio range via the San Francisco, Calif., radio range station; Oakland, Calif., radio range station; Sacramento, Calif., radio range station; the intersection of the northeast course of the Sacramento, Calif., radio range and the southwest course of the Donner Summit, Calif., radio range; Donner Summit, Calif., radio range station; Reno, Nev., radio range station; Humboldt, Nev., radio range station; Battle Mountain, Nev., radio range station; Elko, Nev., radio range station; the intersection of the northeast course of the Elko, Nev., radio range and the west course of the Lucin, Utah, radio range; Lucin, Utah, radio range station; Ogden, Utah, radio range station; Fort Bridger, Wyo., radio range station; Rock Springs, Wyo., radio range station; Sinclair, Wyo., radio range station; the intersection of the east course of the Sinclair, Wyo., radio range and the northwest course of the Laramie, Wyo., radio range; the intersection of the northwest course of the Laramie, Wyo., radio range and the northwest course of the Cheyenne, Wyo., radio range; Cheyenne, Wyo., radio range station; Sidney, Nebr., radio marker station; North Platte, Nebr., radio range station; Grand Island, Nebr., radio range station; Omaha, Nebr., radio range station; Des Moines, Iowa, radio range station; Moline, Ill., radio range station; the intersection of the southeast course of the Rockford, Ill., radio range and the west course of the Chicago, Ill., radio range; the intersection of the southeast course of the Rockford, Ill., radio range and the west course of the Goshen, Ind., radio range; Goshen, Ind., radio range station; Toledo, Ohio, radio range station; Cleveland, Ohio, radio range station; Youngstown, Ohio, radio range station; the intersection of the east course of the Youngstown, Ohio, radio range and the west course of the Philipsburg, Pa., radio range; Philipsburg, Pa., radio range station; Allentown, Pa., radio range station; the intersection of the east course of the Allentown, Pa., radio range and the southwest course of the New York, N. Y. (LaGuardia Field), radio range to the

New York, N. Y. (LaGuardia Field), radio range station.

[Amdt. 3, 13 F. R. 1224]

§ 600.14 *Green civil airway No. 4 (Los Angeles, Calif., to Philadelphia, Pa.)*. From the Municipal Airport, Los Angeles, Calif., via the Los Angeles, Calif., radio range station; the intersection of the north course of the Los Angeles, Calif., radio range and the southwest course of the Palmdale, Calif., radio range; Palmdale, Calif., radio range station; Daggett, Calif., radio range station; the Needles, Calif., radio range station; the Prescott, Ariz., radio range station; Winslow, Ariz., radio range station; El Morro, N. Mex., radio range station; Acomita, N. Mex., radio range station; Albuquerque, N. Mex., radio range station; Otto, N. Mex., radio range station; Tucumcari, N. Mex., radio range station; Amarillo, Tex., radio range station; the intersection of the east course of the Amarillo, Tex., radio range and the southwest course of the Gage, Okla., radio range; Gage, Okla., radio range station; Wichita, Kans., radio range station; Lebo, Kans., radio range station; Kansas City, Mo., radio range station; the intersection of the northeast course of the Kansas City, Mo., radio range and the west course of the Columbia, Mo., radio range; Columbia, Mo., radio range station; St. Louis, Mo., radio range station; Effingham, Ill., radio range station; Terre Haute, Ind., radio range station; Indianapolis, Ind., radio range station; the intersection of the east course of the Indianapolis, Ind., radio range and the west course of the Columbus, Ohio, radio range; Columbus, Ohio, radio range station; the intersection of the east course of the Columbus, Ohio, radio range and the west course of the Pittsburgh, Pa., radio range; Pittsburgh, Pa., radio range station; the intersection of the northeast course of the Pittsburgh, Pa., radio range and the west course of the Altoona, Pa., radio range; Altoona, Pa., radio range station; Harrisburg, Pa., radio range station; the intersection of the east course of the Harrisburg, Pa., radio range and the southwest course of the Philadelphia, Pa., radio range and the Philadelphia, Pa., radio range station to the Municipal Airport, Philadelphia, Pa.

[Amdt. 1, 12 F. R. 6126]

§ 600.15 *Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.)*. From the Los Angeles, Calif., radio range station via the Riverside, Calif., radio range station; the intersection of the east course of the Riverside, Calif., radio range and the west course of the Blythe, Calif., radio range; Blythe, Calif., radio range station; Phoenix, Ariz., radio range station; the intersection of the south course of the Phoenix, Ariz., radio range and the northwest course of the Tucson, Ariz., radio range; Tucson, Ariz., radio range station; the intersection of the southeast course of the Tucson, Ariz., radio range and the west course of the Cochise, N. Mex., radio range; Cochise, Ariz., radio range station; Rodeo, N. Mex., radio range station; Columbus, N. Mex., radio range station; El Paso, Tex., radio range station; Salt Flat, Tex., radio range sta-

tion; Wink, Tex., radio range station; Big Spring, Tex., radio range station; Abilene, Tex., radio range station; Fort Worth, Tex., radio range station; Texarkana, Ark., radio range station; Memphis, Tenn., radio range station; Jackson, Tenn., radio range station; Nashville, Tenn., radio range station; the intersection of the northeast course of the Nashville, Tenn., radio range and the northwest course of the Smithville, Tenn., radio range; Smithville, Tenn., radio range station; the intersection of the east course of the Smithville, Tenn., radio range and the west course of the Knoxville, Tenn., radio range, excluding that portion which lies more than two miles north of the west course of the Knoxville, Tenn., radio range between the intersection of the east course of the Smithville, Tenn., radio range and the west course of the Knoxville, Tenn., radio range, excluding that portion which lies more than two miles north of the west course of the Knoxville, Tenn., radio range between the intersection of the east course of the Smithville, Tenn., radio range and the west course of the Knoxville, Tenn., radio range and a point thirteen miles west of the Knoxville, Tenn., radio range station; Knoxville, Tenn., radio range station; Tri-City, Tenn., radio range station; Pulaski, Va., radio range station; Roanoke, Va., radio range station; Gordonsville, Va., radio range station; the intersection of the northeast course of the Gordonsville, Va., radio range and the south course of the Washington, D. C., radio range; Brandywine, Md., radio range station; Millville, N. J., radio range station, excluding that portion below 3,000 feet which lies within the Little Creek, Del., Danger Area; the intersection of the northeast course of the Millville, N. J., radio range and the southwest course of the Mitchel Field, N. Y. (Army) radio range; the Mitchel Field, N. Y. (Army) radio range station; the intersection of the northeast course of the Mitchel Field, N. Y. (Army) radio range and the southwest course of the Boston, Mass., radio range to the intersection of the southwest course of the Boston, Mass., radio range and the southeast course of the Westfield, Mass., radio range.

[Amdt. 18, 14 F. R. 3466]

NOTE: § 600.15 as printed above is effective from July 1, 1949, to 0001 e. s. t. Sept. 1, 1949. At the end of that period the following text will again become effective:

§ 600.15 *Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.)*. From the Los Angeles, Calif., radio range station via the Riverside, Calif., radio range station; the intersection of the east course of the Riverside, Calif., radio range and the west course of the Blythe, Calif., radio range; Blythe, Calif., radio range station; Phoenix, Ariz., radio range station; the intersection of the south course of the Phoenix, Ariz., radio range and the northwest course of the Tucson, Ariz., radio range; Tucson, Ariz., radio range station; the intersection of the southeast course of the Tucson, Ariz., radio range and the west course of the Cochise, N. Mex., radio range; Cochise, N. Mex., radio range station; Rodeo, N. Mex., radio range station; Columbus, N. Mex., radio range station; El Paso, Tex., radio range station; Salt Flat, Tex., radio range station; Wink, Tex.,

radio range station; Big Spring, Tex., radio range station; Abilene, Tex., radio range station; Fort Worth, Tex., radio range station; Texarkana, Ark., radio range station; Memphis, Tenn., radio range station; Jack's Creek, Tenn., radio range station; Nashville, Tenn., radio range station; the intersection of the northeast course of the Nashville, Tenn., radio range and the northwest course of the Smithville, Tenn., radio range; Smithville, Tenn., radio range station; the intersection of the east course of the Smithville, Tenn., radio range and the west course of the Knoxville, Tenn., radio range, excluding that portion which lies more than two miles north of the west course of the Knoxville, Tenn., radio range between the intersection of the east course of the Smithville, Tenn., radio range and the west course of the Knoxville, Tenn., radio range and a point thirteen miles west of the Knoxville, Tenn., radio range station; Knoxville, Tenn., radio range station; Tri-City, Tenn., radio range station; Pulaski, Va., radio range station; Roanoke, Va., radio range station; Gordonsville, Va., radio range station; the intersection of the northeast course of the Gordonsville, Va., radio range and the south course of the Washington, D. C., radio range; Brandywine, Md., radio range station; Millville, N. J., radio range station; the intersection of the northeast course of the Millville, N. J., radio range and the southwest course of the Mitchell Field, N. Y. (Army), radio range; the Mitchell Field, N. Y. (Army), radio range station; the intersection of the northeast course of the Mitchell Field, N. Y. (Army), radio range and the southwest course of the Boston, Mass., radio range to the intersection of the southwest course of the Boston, Mass., radio range and the southeast course of the Westfield, Mass., radio range.

§ 600.16 *Green civil airway No. 6 (Laredo, Tex., to Norfolk, Va.)*. From the Laredo, Tex., radio range station via the Alice, Tex., radio range station; Corpus Christi, Tex., radio range station; Palacios, Tex., radio range station; Houston, Tex., radio range station; Beaumont, Tex., radio range station; Lake Charles, La., radio range station; New Orleans, La., radio range station; Mobile, Ala., radio range station; Maxwell Field, Ala., radio range station; the intersection of the east course of the Maxwell Field, Ala., radio range and the southwest course of the Atlanta, Ga., radio range; Atlanta, Ga., radio range station; Spartanburg, S. C., radio range station; the intersection of the northeast course of the Spartanburg, S. C., radio range and the west course of the Charlotte, N. C., radio range; the intersection of the north course of the Charlotte, N. C., radio range and the southwest course of the Greensboro, N. C., radio range; Greensboro, N. C., radio range station; Blackstone, Va., radio range station; the intersection of the northeast course of the Blackstone, Va., radio range and the southwest course of the Richmond, Va., radio range; Richmond, Va., radio range station; and the Norfolk, Va., radio range station to the Municipal Airport, Norfolk, Va.

[Amdt. 1, 12 F. R. 6127]

§ 600.17 *Green civil airway No. 7 (Nome, Alaska, to Fairbanks, Alaska)*. From the Nome, Alaska, radio range station via the Moses Point, Alaska, radio range station; the intersection of the east course of the Moses Point, Alaska, radio range and the north course of the Unalakleet, Alaska, radio range; Galena,

Alaska, radio range station; the intersection of the east course of the Galena, Alaska, radio range and the west course of the Fairbanks, Alaska, radio range to the Fairbanks, Alaska, radio range station.

[Amdt. 7, 13 F. R. 4729]

§ 600.18 *Green civil airway No. 8 (Attu, Alaska, to Northway, Alaska)*. From the Attu (Casco), Alaska, radio range station via the Shemya, Alaska, radio range station; Adak, Alaska, radio range station; the intersection of the northeast course of the Adak, Alaska, radio range and the west course of the Atka, Alaska, radio range; Atka, Alaska, radio range station; Umnak (North Shore), Alaska, radio range station; the intersection of the northeast course of the Umnak (North Shore), Alaska, radio range and the west course of the Cold Bay (Randall), Alaska, radio range; Cold Bay (Randall), Alaska, radio range station; Heiden, Alaska, radio range station; Naknek, Alaska, radio range station; the intersection of the northeast course of the Naknek, Alaska, radio range and the southwest course of the Homer, Alaska, radio range; Homer, Alaska, radio range station; the intersection of the northeast course of the Homer, Alaska, radio range and the southwest course of the Anchorage, Alaska, radio range; Anchorage, Alaska, radio range station; the intersection of the northeast course of the Anchorage, Alaska, radio range and the southwest of the Gulkana, Alaska, radio range; Gulkana, Alaska, radio range station; and the intersection of the northeast course of the Gulkana, Alaska, radio range and the southwest course of the Northway, Alaska, radio range to the Northway, Alaska, radio range station.

[Amdt. 4, 13 F. R. 2255]

AMBER CIVIL AIRWAYS

§ 600.101 *Amber civil airway No. 1 (United States-Mexican Border to Nome, Alaska)*. From the intersection of the southeast course of the San Diego, Calif., radio range and the United States-Mexican Border via the San Diego, Calif., radio range station; the intersection of the northwest course of the San Diego, Calif., radio range and the southeast course of the Long Beach, Calif., radio range; Long Beach, Calif., radio range station to the Los Angeles, Calif., radio range station. From the intersection of the north course of the Los Angeles, Calif., radio range and the southwest course of the Palmdale, Calif., radio range via the Bakersfield, Calif., radio range station; Fresno, Calif., radio range station; Sacramento, Calif., radio range station; Williams, Calif., radio range station; Red Bluff, Calif., radio range station; Fort Jones, Calif., radio range station; Medford, Oreg., radio range station; Eugene, Oreg., radio range station; Portland, Oreg., radio range station; Toledo, Wash., radio range station; Seattle, Wash., radio range station; Everett, Wash., radio range station; Bellingham, Wash., radio range station to the intersection of the northwest course of the Bellingham, Wash., radio range and the United States-Canadian Border. From the intersection of the northwest course of the Massett, B. C., radio range

and the United States-Canadian Border via the intersection of the northwest course of the Massett, B. C., radio range and the southeast course of the Sitka (Biorka Island), Alaska, radio range; Sitka (Biorka Island), Alaska, radio range station; Yakutat, Alaska, radio range station; the intersection of the northwest course of the Yakutat, Alaska, radio range and the southeast course of the Cordova (Hinchinbrook Island), Alaska, radio range; Cordova (Hinchinbrook Island), Alaska, radio range station; the intersection of the northwest course of the Cordova (Hinchinbrook Island), Alaska, radio range and the southeast course of the Anchorage, Alaska, radio range; Anchorage, Alaska, radio range station; Skwentna, Alaska, radio range station; the intersection of the northwest course of the Skwentna, Alaska, radio range and the southeast course of the Farewell, Alaska, radio range; Farewell, Alaska, radio range station; McGrath, Alaska, radio range station; Unalakleet, Alaska, radio range station to the Nome, Alaska, radio range station.

[Amdt. 17, 14 F. R. 2889]

§ 600.102 *Amber civil airway No. 2 (Long Beach, Calif., to Point Barrow, Alaska)*. From the Long Beach, Calif., radio range station via the intersection of the northeast course of the Long Beach, Calif., radio range and the east course of the Los Angeles, Calif., radio range; Daggett, Calif., radio range station; Silver Lake, Calif., radio range station; the intersection of the northeast course of the Silver Lake, Calif., radio range and the southwest course of the Las Vegas, Nev., radio range; Las Vegas, Nev., radio range station; the intersection of the northeast course of the Las Vegas, Nev., radio range and the southwest course of the Enterprise, Utah, radio range; Enterprise, Utah, radio range station; Milford, Utah, radio range station; Delta, Utah, radio range station; Fairfield, Utah, radio range station; the intersection of the northeast course of the Fairfield, Utah, radio range and the south course of the Salt Lake City, Utah, radio range; Salt Lake City, Utah, radio range station; Ogden, Utah, radio range station; Malad City, Idaho, radio range station; Pocatello, Idaho, radio range station; Idaho Falls, Idaho, radio range station; DuBois, Idaho, radio range station; Dillon, Mont., radio range station; Whitehall, Mont., radio range station; Helena, Mont., radio range station; the intersection of the north course of the Helena, Mont., radio range and the southwest course of the Great Falls, Mont., radio range; Great Falls, Mont., radio range station; Cut Bank, Mont., radio range station to the intersection of the northwest course of the Cut Bank, Mont., radio range and the United States-Canadian Border. From the intersection of the northwest course of the Snag, Yukon Territory, radio range and the United States-Canadian Border via the Northway, Alaska, radio range station; the intersection of the northwest course of the Northway, Alaska, radio range and the north course of the Tanacross, Alaska, radio range; Big Delta, Alaska, radio range station; the intersection of

the northwest course of the Big Delta, Alaska, radio range and the east course of the Fairbanks, Alaska, radio range to the Fairbanks, Alaska, radio range station. From the intersection of the west course of the Fairbanks, Alaska, radio range and the northwest course of the Nenana, Alaska, radio range via the Bettles, Alaska, non-directional marker beacon; Umiat, Alaska, radio range station to the Point Barrow, Alaska, radio range station.

[Amdt. 7, 13 F. R. 4729]

§ 600.103 *Amber civil airway No. 3 (El Paso, Tex., to Great Falls, Mont.)*. From the intersection of the west course of the El Paso, Tex., radio range and the south course of the Engle, N. Mex., radio range via the Engle, N. Mex., radio range station; to the Albuquerque, N. Mex., radio range station. From the intersection of the east course of the Otto, N. Mex., radio range and the southwest course of the Las Vegas, N. Mex., radio range, via the Las Vegas, N. Mex., radio range station; the intersection of the northeast course of the Las Vegas, N. Mex., radio range and the south course of the Trinidad, Colo., radio range; Trinidad, Colo., radio range station; Pueblo, Colo., radio range station; the intersection of the north course of the Pueblo, Colo., radio range and the south course of the Denver, Colo., radio range; Denver, Colo., radio range station; Cheyenne, Wyo., radio range station; the intersection of the north course of the Cheyenne, Wyo., radio range and the southwest course of the Douglas, Wyo., radio range; Douglas, Wyo., radio range station; the intersection of the northwest course of the Douglas, Wyo., radio range and the east course of the Casper, Wyo., radio range; Casper, Wyo., radio range station; the intersection of the north course of the Casper, Wyo., radio range and the southeast course of the Sheridan, Wyo., radio range; Sheridan, Wyo., radio range station; Billings, Mont., radio range station; the intersection of the northwest course of the Billings, Mont., radio range and the southeast course of the Lewistown, Mont., radio range and the Lewistown, Mont., radio range station; to the Great Falls, Mont., radio range station.

§ 600.104 *Amber civil airway No. 4 (Brownsville, Tex., to Minot, N. Dak.)*. From the Municipal Airport, Brownsville, Tex., via the Brownsville, Tex., radio range station; the intersection of the northwest course of the Brownsville, Tex., radio range and the south course of the Alice, Tex., radio range; the Alice, Tex., radio range station; the intersection of the north course of the Alice, Tex., radio range and the south course of the Alamo radio range, San Antonio, Texas; the Alamo radio range station, San Antonio, Tex.; the intersection of the north course of the Alamo radio range, San Antonio, Tex., and the southwest course of the Austin, Tex., radio range; Austin, Tex., radio range station; Waco, Tex., radio range station; the intersection of the northwest course of the Waco, Tex., radio range and the south course of the Fort Worth, Tex., radio range; Fort Worth, Tex., radio range station; the intersection of the north course of the Fort Worth, Tex., radio range and the south

course of the Oklahoma City, Okla., radio range; Oklahoma City, Okla., radio range station; the intersection of the east course of the Oklahoma City, Okla., radio range and the southwest course of the Tulsa, Okla., radio range; Tulsa, Okla., radio range station; the intersection of the northeast course of the Tulsa, Okla., radio range and the south course of the Chanute, Kans., radio range; Chanute, Kans., radio range station; the intersection of the northeast course of the Chanute, Kans., radio range and the southwest course of the Kansas City, Mo., radio range; Kansas City, Mo., radio range station; St. Joseph, Mo., radio range station; Omaha, Nebr., radio range station; Sioux City, Iowa, radio range station; Sioux Falls, S. Dak., radio range station; Huron, S. Dak., radio range station; Aberdeen, S. Dak., radio range station; Bismarck, N. Dak., radio range station; the intersection of the north course of the Bismarck, N. Dak., radio range and the southeast course of the Minot, N. Dak., radio range to the Minot, N. Dak., radio range station.

[Amdt. 3, 13 F. R. 1225]

§ 600.105 *Amber civil airway No. 5 (Grand Isle, La., to Milwaukee, Wis.)*. From the Grand Isle, La., nondirectional radio marker beacon via Latitude 29°14'00", Longitude 90°09'00"; New Orleans, La., radio range station; Jackson, Miss., radio range station; Greenwood, Miss., radio range station; Memphis, Tenn., radio range station; Advance, Mo., radio range station; St. Louis, Mo., radio range station; the intersection of the north course of the St. Louis, Mo., radio range and the southwest course of the Springfield, Ill., radio range; Springfield, Ill., radio range station; Joliet, Ill., radio range station; the intersection of the northeast course of the Joliet, Ill., radio range and the south course of the Milwaukee, Wis., radio range to the Milwaukee, Wis., radio range station.

[Amdt. 8, 13 F. R. 5656]

§ 600.106 *Amber civil airway No. 6 (Jacksonville, Fla., to United States-Canadian Border)*. From the Jacksonville, Fla., radio range station; via the Alma, Ga., radio range station; Macon, Ga., radio range station; Atlanta, Ga., radio range station; Chattanooga, Tenn., radio range station; Nashville, Tenn., radio range station; the intersection of the northwest course of the Nashville, Tenn., radio range and the southwest course of the Bowling Green, Ky., radio range; Bowling Green, Ky., radio range station; the intersection of the northeast course of the Bowling Green, Ky., radio range and the south course of the Louisville, Ky., radio range; Louisville, Ky., radio range station to the Cincinnati, Ohio, radio range station. From the Columbus, Ohio, radio range station to the intersection of the northeast course of the Columbus, Ohio, radio range and the west course of the Cleveland, Ohio, radio range. From the intersection of the east course of the Cleveland, Ohio, radio range and the southwest course of the Clear Creek, Ontario, Canada, radio range to the intersection of the southwest

course of the Clear Creek, Ontario, Canada, radio range and the United States-Canadian Border.

[Amdt. 7, 13 F. R. 4729]

§ 600.107 *Amber civil airway No. 7 (Key West, Fla., to Caribou, Maine)*. From the Key West, Fla., radio range station via the intersection of the northeast course of the Key West, Fla., radio range and the southwest course of the Homestead, Fla., radio range; Homestead, Fla., radio range station; Miami, Fla., radio range station; the intersection of the east course of the Miami, Fla., radio range and the south course of the West Palm Beach, Fla., radio range; West Palm Beach, Fla., radio range station; the intersection of the north course of the West Palm Beach, Fla., radio range and the southeast course of the Melbourne, Fla., radio range; Melbourne, Fla., radio range station; Daytona Beach, Fla., radio range station; Jacksonville, Fla., radio range station; Savannah, Ga., radio range station; Charleston, S. C., radio range station; the intersection of the northeast course of the Charleston, S. C., radio range and the southeast course of the Florence, S. C., radio range; Florence, S. C., radio range station; the intersection of the northeast course of the Florence, S. C., radio range and the south course of the Raleigh, N. C., radio range; Raleigh, N. C., radio range station; Richmond, Va., radio range station; the intersection of the north course of the Richmond, Va., radio range and the south course of the Washington, D. C., radio range; Washington, D. C., radio range station; the intersection of the northeast course of the Washington, D. C., radio range and the southwest course of the Philadelphia, Pa., radio range; Philadelphia, Pa., radio range station; Newark, N. J., radio range station; the intersection of the northeast course of the Newark, N. J., radio range and the northeast course of the New York, N. Y. (LaGuardia) radio range; Hartford, Conn., radio range station; the intersection of the northeast course of the Hartford, Conn., radio range and the west course of the Boston, Mass., radio range; Boston, Mass., radio range station; the intersection of the northeast course of the Boston, Mass., radio range and the southwest course of the Portland, Maine, radio range; Portland, Maine, radio range station; Augusta, Maine, radio range station; the intersection of the northeast course of the Augusta, Maine, radio range and the southwest course of the Bangor, Maine, radio range; Bangor, Maine, radio range station; the intersection of the northwest course of the Bangor, Maine, radio range and the southwest of the Millinocket, Maine, radio range; Millinocket, Maine, radio range station; Presque Isle, Maine, radio range station; to the Municipal Airport, Caribou, Maine."

[Amdt. 6, 13 F. R. 3579]

§ 600.108 *Amber civil airway No. 8 (Los Angeles, Calif., to The Dalles, Oreg.)*. From the Los Angeles, Calif., VHF radio range station via the intersection of the west course of the Los Angeles, Calif., VHF radio range and the southeast course of the Santa Barbara, Calif., VHF radio

RED CIVIL AIRWAYS

range station; the intersection of the northwest course of the Santa Barbara, Calif., VHF radio range and the southeast course of the Paso Robles, Calif., VHF radio range; Paso Robles, Calif., VHF radio range station; the intersection of the northwest course of the Paso Robles, Calif., VHF radio range and the southeast course of the Salinas, Calif., VHF radio range; Salinas, Calif., VHF radio range station; the intersection of the northwest course of the Salinas, Calif., VHF radio range and the southwest course of the Fairfield-Suisun, Calif., radio range; Fairfield-Suisun, Calif., radio range station to the intersection of the northeast course of the Fairfield-Suisun, Calif., radio range and the northwest course of the Sacramento, Calif., radio range. From the Red Bluff, Calif., radio range station via the Whitmore, Calif., radio range station; the intersection of the northeast course of the Whitmore, Calif., radio range and the south course of the Klamath Falls, Oreg., radio range; the Klamath Falls, Oreg., radio range station; the intersection of the north course of the Klamath Falls, Oreg., radio range and the southwest course of the Redmond, Oreg., radio range and the Redmond, Oreg., radio range station to The Dalles, Oreg., radio range station.

[Amdt. 1, 12 F. R. 6128]

§ 600.109 *Amber civil airway No. 9 (Charleston, S. C., to New York, N. Y.)*. From the intersection of the northeast course of the Charleston, S. C., radio range and the southwest course of the Myrtle Beach, S. C., VHF radio range via the Myrtle Beach, S. C., VHF radio range station; Wilmington, N. C., VHF radio range station; New Bern, N. C., VHF radio range station; Williamston, N. C., VHF radio range station (excluding the area between 9,500 feet and 18,500 feet mean sea level during the hours of darkness between the Wilmington, N. C. VHF radio range station and the Williamston, N. C., VHF radio range station); the intersection of the northeast course of the Williamston, N. C., VHF radio range and the southwest course of the Norfolk, Va., radio range; Norfolk, Va., radio range station. From the Norfolk, Va., VHF radio range station via the intersection of the north course of the Norfolk, Va., VHF radio range and the southwest course of the Salisbury, Md., VHF radio range; Salisbury, Md., VHF radio range station; the intersection of the northeast course of the Salisbury, Md., VHF radio range and the southwest course of the Atlantic City, N. J., VHF radio range; Atlantic City, N. J., VHF radio range station; the intersection of the northeast course of the Atlantic City, N. J., VHF radio range and the south course of the Matawan, N. J., VHF radio range; Matawan, N. J., VHF radio range station (excluding that portion more than 2 miles either side of the northeast course of the Atlantic City, N. J., VHF radio range and the south course of the Matawan, N. J., VHF radio range) to the intersection of the north course of the Matawan, N. J., VHF radio range and the east course of the Allentown, Pa., radio range.

[Amdt. 11, 13 F. R. 7296]

§ 600.201 *Red civil airway No. 1 (Portland, Oreg., to Kansas City, Mo.)*. From the Portland, Oreg., radio range station via the intersection of the east course of the Portland, Oreg., radio range and the northwest course of The Dalles, Oreg., radio range; The Dalles, Oreg., radio range station; Pendleton, Oreg., radio range station; Baker, Oreg., radio range station; Boise, Idaho, radio range station; the intersection of the southeast course of the Boise, Idaho, radio range and the northwest course of the Burley, Idaho, radio range; Burley, Idaho, radio range station; Malad City, Idaho, radio range station to the Rock Spring, Wyo., radio range station. From the intersection of the northwest course of the Laramie, Wyo., radio range and the northwest course of the Cheyenne, Wyo., radio range via the Laramie, Wyo., radio range station to the intersection of the southeast course of the Laramie, Wyo., radio range and the north course of the Denver, Colo., radio range. From the Denver, Colo., VHF radio range via the intersection of the east course of the Denver, Colo., VHF radio range and the northwest course of the Thurman, Colo., VHF radio range; Thurman, Colo., VHF radio range station; Goodland, Kans., VHF radio range station; Hill City, Kans., VHF radio range station; the intersection of the east course of the Hill City, Kans., VHF radio range and the northwest course of the Waldo, Kans., VHF radio range; Waldo, Kans., VHF radio range station; Salina, Kans., VHF radio range station; Topeka, Kans., VHF radio range station to the intersection of the east course of the Topeka, Kans., VHF radio range and the northwest course of the Kansas City, Mo., radio range. From the intersection of the northwest course of the Kansas City, Mo., radio range and the west course of the Columbia, Mo., radio range to the intersection of the northeast course of the Kansas City, Mo., radio range and the west course of the Columbia, Mo., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.202 *Red civil airway No. 2 (Butte, Mont., to Rapid City, S. Dak.)*. From the Butte, Mont., radio range station via the Whitehall, Mont., radio range station to the Bozeman, Mont., radio range station. From the intersection of the southeast course of the Sheridan, Wyo., radio range and the north course of the Casper, Wyo., radio range via the intersection of the southeast course of the Sheridan, Wyo., radio range and the west course of the Rapid City, S. Dak., radio range to the Rapid City, S. Dak., radio range station.

§ 600.203 *Red civil airway No. 3 (Phillipsburg, Pa., to Hartford, Conn.)*. From the Phillipsburg, Pa., radio range station to the Harrisburg, Pa., radio range station. From the Philadelphia, Pa., radio range station via the intersection of the northeast course of the Philadelphia, Pa., radio range and the southwest course of the New York, N. Y. (New York, LaGuardia Field), radio range to the intersection of the east course of the Allentown, Pa., radio range and the southwest course of the New York, N. Y. (New York, LaGuardia Field), radio range. From the New

York, N. Y. (New York, LaGuardia Field), radio range station to the intersection of the northeast course of the New York, N. Y. (New York, LaGuardia Field), radio range and the northeast course of the Newark, N. J., radio range.

§ 600.204 *Red civil airway No. 4 (Otto, N. Mex., to Las Vegas, N. Mex.)*. From the Otto, N. Mex., radio range station via the Santa Fe, N. Mex., Municipal Airport and the Las Vegas, N. Mex., radio range station to the intersection of the southeast course of the Las Vegas, N. Mex., radio range and the west course of the Tucumcari, N. Mex., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.205 *Red civil airway No. 5 (Sioux Falls, S. Dak., to St. Paul, Minn.)*. From the Sioux Falls, S. Dak., radio range station, via the Minneapolis, Minn., radio range station to the St. Paul Airport, St. Paul, Minn.

§ 600.206 *Red civil airway No. 6 (Las Vegas, Nev., to Omaha, Nebr.)*. From the intersection of the northeast course of the Las Vegas, Nev., radio range and the southwest course of the St. George, Utah, VHF radio range via the St. George, Utah, VHF radio range station; the Bryce Canyon, Utah, VHF radio range station; the Hanksville, Utah, VHF radio range station; the intersection of the northeast course of the Hanksville, Utah, VHF radio range and the southwest course of the Grand Junction, Colo., VHF radio range; the Grand Junction, Colo., VHF radio range station; the intersection of the northeast course of the Grand Junction, Colo., VHF radio range and the southwest course of the Eagle, Colo., VHF radio range; the Eagle, Colo., VHF radio range station; the intersection of the northeast course of the Eagle, Colo., VHF radio range and the west course of the Denver, Colo., VHF radio range to the Denver, Colo., VHF radio range station. From the Denver, Colo., radio range station via the Akron, Colo., radio range station; the Hayes Center, Nebr., radio range station; the Grand Island, Nebr., radio range station; and the Lincoln, Nebr., radio range station to the Omaha, Nebr., radio range station.

§ 600.207 *Red civil airway No. 7 (Atlanta, Ga., to Greensboro, N. C.)*. From the intersection of the south course of the Greenville, S. C., radio range and the southwest course of the Spartanburg, S. C., radio range, via the Greenville, S. C., radio range station to the intersection of the east course of the Greenville, S. C., radio range and the southwest course of the Spartanburg, S. C., radio range. From the intersection of the northeast course of the Spartanburg, S. C., radio range and the west course of the Charlotte, N. C., radio range, via the Charlotte, N. C., radio range station to the intersection of the north course of the Charlotte, N. C., radio range and the southwest course of the Greensboro, N. C., radio range. From the intersection of the southwest course of the Greensboro, N. C., radio range and the southeast course of the Winston-Salem, N. C., radio range via the Winston-Salem, N. C., radio range station and the Winston-Salem, N. C., Municipal Airport to the Greensboro, N. C., radio range station.

§ 600.208 *Red civil airway No. 8 (Altoona, Pa., to Wilkes-Barre, Pa.).* From the Brookville, Pa., non-directional radio beacon via the intersection of the southwest course of the Elmira, N. Y., radio range and the west course of the Williamsport, Pa., radio range; Williamsport, Pa., radio range station to the intersection of the east course of the Williamsport, Pa., radio range and the southwest course of the Wilkes-Barre, Pa., radio range.

[Amdt. 3, 13 F. R. 1226]

§ 600.209 *Red civil airway No. 9 (San Diego, Calif., to Winslow, Ariz.).* From the San Diego, Calif., radio range station via the El Centro, Calif., radio range station; Yuma, Ariz., radio range station; Gila Bend, Ariz., radio range station to the intersection of the east course of the Gila Bend, Ariz., radio range and the northwest course of the Tucson, Ariz., radio range. From the Phoenix, Ariz., VHF radio range station to the Winslow, Ariz., VHF radio range station.

[Amdt. 17, 14 F. R. 2891]

§ 600.210 *Red civil airway No. 10 (Pueblo, Colo., to Charleston, S. C.).* From the Pueblo, Colo., radio range station via the intersection of the northwest course of the Dalhart, Tex., VHF radio range and the east course of the Trinidad, Colo., radio range; Dalhart, Tex., VHF radio range station; the intersection of the southeast course of the Dalhart, Tex., VHF radio range and the north course of the Amarillo, Tex., radio range; Amarillo, Tex., radio range station; Wichita Falls, Tex., radio range station; to the intersection of the southeast course of the Wichita Falls, Tex., radio range and the north course of the Fort Worth, Tex., radio range; Dallas, Tex., radio range station; Shreveport, La., radio range station; Monroe, La., radio range station; Jackson, Miss., radio range station; Meridian, Miss., radio range station; Birmingham, Ala., radio range station; the intersection of the east course of the Birmingham, Ala., radio range and the west course of the Campbellton, Ga., radio range; Campbellton, Ga., radio range station to the Atlanta, Ga., radio range station. From the intersection of the northeast course of the Atlanta, Ga., radio range and the northwest course of the Augusta, Ga., radio range via the Augusta, Ga., radio range station to the Charleston, S. C., radio range station.

[Amdt. 17, 14 F. R. 2891]

§ 600.211 *Red civil airway No. 11 (Tulsa, Okla., to Boston, Mass.).* From the Tulsa, Okla., radio range station via Springfield, Mo., radio range station and the Vichy, Mo., radio range station to the intersection of the northeast course of the Vichy, Mo., radio range and the west course of the St. Louis, Mo., radio range. From the intersection of the east course of the St. Louis, Mo., radio range and the west course of the Evansville, Ind., radio range via the Evansville, Ind., radio range station; Louisville, Ky., radio range station; the intersection of the east course of the Louisville, Ky., radio range and the southwest course of the Huntington, W. Va., radio range to the Hunt-

ington, W. Va., radio range station. From the intersection of the east course of the Clear Creek, Ont., Canada, radio range and the southwest course of the Buffalo, N. Y., radio range to the Dansville, N. Y., nondirectional radio marker beacon. From the Elmira, N. Y., radio range station via the Albany, N. Y., radio range station; Boston, Mass., radio range station to the intersection of the east course of the Boston, Mass., radio range and the northeast course of the Squantum, Mass. (Navy), radio range.

[Amdt. 17, 14 F. R. 2891]

§ 600.212 *Red civil airway No. 12 (Kansas City, Mo., to Detroit, Mich.).* From the intersection of the northeast course of the Kansas City, Mo., radio range and the west course of the Columbia, Mo., radio range via the Kirksville, Mo., radio range station; Burlington, Iowa, radio range station; Joliet, Ill., radio range station; the intersection of the east course of the Joliet, Ill., radio range and the west course of the South Bend, Ind., radio range; South Bend, Ind., radio range station to the Romulus, Mich., radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.213 *Red civil airway No. 13 (Sunnyvale, Pa., to Boston, Mass.).* From the intersection of the east course of the Philipsburg, Pa., radio range and the southwest course of the Wilkes-Barre, Pa., radio range via the Wilkes-Barre, Pa., radio range station; Stewart Field, N. Y., radio range station; New Hackensack, N. Y., radio range station; Hartford, Conn., radio range station and the Providence, R. I., radio range station to the intersection of the northeast course of the Providence, R. I., radio range and the southwest course of the Boston, Mass., radio range.

§ 600.214 *Red civil airway No. 14 (Lone Rock, Wis., to Louisville, Ky.).* From the Lone Rock, Wis., radio range station via the Rockford, Ill., radio range station; the intersection of the southeast course of the Rockford, Ill., radio range and the west course of the Chicago, Ill., radio range; Chicago, Ill., radio range station; Indianapolis, Ind., radio range station to the intersection of the south course of the Indianapolis, Ind., radio range and the west course of the Louisville, Ky., radio range.

[Amdt. 8, 13 F. R. 5656]

§ 600.215 *Red civil airway No. 15 (Las Vegas, Nev., to Gila Bend, Ariz.).* From the Las Vegas, Nev., radio range station to the intersection of the southeast course of the Las Vegas, Nev., radio range and the west course of the Prescott, Ariz., radio range. From the Prescott, Ariz., radio range station via the intersection of the southeast course of the Prescott, Ariz., radio range and the northwest course of the Phoenix, Ariz., radio range to the Phoenix, Ariz., radio range station. From the intersection of the west course of the Phoenix, Ariz., radio range and the north course of the Gila Bend, Ariz., radio range to the Gila Bend, Ariz., radio range station.

[Amdt. 2, 12 F. R. 8043]

§ 600.216 *Red civil airway No. 16 (Tallahassee, Fla., to Florence, S. C.).* From the Tallahassee, Fla., radio range station via the Albany, Ga., radio range station; the intersection of the north course of the Albany, Ga., radio range and the southwest course of the Macon, Ga., radio range to the Macon, Ga., radio range station. From the Augusta, Ga., radio range station via the Columbia, S. C., radio range station; the intersection of the east course of the Columbia, S. C., radio range and the southwest course of the Florence, S. C., radio range to the Florence, S. C., radio range station.

[Amdt. 14, 14 F. R. 455]

§ 600.217 *Red civil airway No. 17 (Fort Wayne, Ind., to Baltimore, Md.).* From the Fort Wayne, Ind., radio range station via the Findlay, Ohio, non-directional radio marker station and the Mansfield, Ohio, non-directional radio marker station to the Pittsburgh, Pa., radio range station. From the Martinsburg, W. Va., radio range station to the Baltimore, Md., radio range station.

[Amdt. 8, 13 F. R. 5656]

§ 600.218 *Red civil airway No. 18 (Indianapolis, Ind., to Washington, D. C.).* From the intersection of the northwest course of the Indianapolis, Ind., radio range and the northwest course of the Cincinnati, Ohio, radio range via the Cincinnati, Ohio, radio range station; the intersection of the southeast course of the Cincinnati, Ohio, radio range and the northwest course of the Huntington, W. Va., radio range; Huntington, W. Va., radio range station; Charleston, W. Va., radio marker station; Elkins, W. Va., radio range station; Front Royal, Va., radio range station to the intersection of the east course of the Front Royal, Va., radio range and the northwest course of the Washington, D. C., radio range.

[Amdt. 7, 13 F. R. 4729]

§ 600.219 *Red civil airway No. 19 (Washington, D. C., to Grand Rapids, Mich.).* From the intersection of the west course of the Front Royal, Va., radio range and the southeast course of the Morgantown, W. Va., radio range via the Morgantown, W. Va., radio range station to the intersection of the northwest course of the Morgantown, W. Va., radio range and the west course of the Pittsburgh, Pa., radio range. From the Dayton, Ohio, radio range station via the Fort Wayne, Ind., radio range station; to the intersection of the northwest course of the Fort Wayne, Ind., radio range and the east course of the Goshen, Ind., radio range. From the Goshen, Ind., radio range station via the intersection of the north course of the Goshen, Ind., radio range and the southwest course of the Grand Rapids, Mich., radio range to the Grand Rapids, Mich., radio range station.

§ 600.220 *Red civil airway No. 20 (Lansing, Mich., to Washington, D. C.).* From the Lansing, Mich., radio range station via the intersection of the northwest course of the Detroit, Mich., radio range and the northwest course of the Selfridge Field, Mich., radio range and the intersection of the northwest course of the Windsor, Ontario, Canada, radio

range and the northwest course of the Selfridge Field, Mich., radio range to the intersection of the northwest course of the Windsor, Ontario, Canada, radio range and the United States-Canadian Border. From the intersection of the northwest course of the Cleveland, Ohio, radio range and the United States-Canadian Border via the Cleveland, Ohio, radio range station; Akron, Ohio, radio range station; Pittsburgh, Pa., radio range station; the intersection of the southeast course of the Pittsburgh, Pa., radio range and the northwest course of the Washington, D. C., radio range; the Washington, D. C., radio range station to the intersection of the southeast course of the Washington, D. C., radio range with Red civil airway No. 77, excluding that portion which lies more than 3 miles north of the southeast course of the Washington, D. C., radio range between the intersection of the Southeast course of the Washington, D. C., radio range and the south course of the Baltimore, Md., radio range and Red civil airway No. 77.

[Amdt. 17, 14 F. R. 2891]

§ 600.221 *Red civil airway No. 21 (Pittsburgh, Pa., to Boston, Mass.)*. From the Pittsburgh, Pa., radio range station via the intersection of the northeast course of the Pittsburgh, Pa., radio range and the north course of the Altoona, Pa., radio range to the Sunbury, Pa., radio marker station. From the intersection of the southeast course of the Wilkes-Barre, Pa., radio range and the west course of the Newark, N. J., radio range to the Newark, N. J., radio range station. From the intersection of the east course of the New York, N. Y. (La Guardia) radio range and the southwest course of the Bridgeport, Conn., radio range via the Bridgeport, Conn., radio range station to the intersection of the northeast course of the Bridgeport, Conn., radio range and the southeast course of the Hartford, Conn., radio range. From the intersection of the southeast course of the Hartford, Conn., radio range and the west course of the Quonset Point, R. I. (Navy) radio range via the intersection of the west course of the Quonset Point, R. I. (Navy) radio range and the southwest course of the Providence, R. I., radio range; Providence, R. I., radio range station, excluding that portion more than 2 miles east of the southwest course of the Providence, R. I., radio range; Squantum, Mass. (Navy) radio range station, excluding that portion which lies more than 4 miles east of the southwest course of the Squantum, Mass. (Navy) radio range between the Providence, R. I., radio range station and a point 5 miles northeast to the intersection of the northeast course of the Squantum, Mass. (Navy) radio range and the east course of the Boston, Mass., radio range.

[Amdt. 17, 14 F. R. 2891]

§ 600.222 *Red civil airway No. 22 (United States-Canadian Border to Rochester, N. Y.)*. From the intersection of the west course of the Buffalo, N. Y., radio range and the United States-Canadian Border via the Buffalo, N. Y., radio range station; the intersection of the northeast

course of the Buffalo, N. Y., radio range and the northwest course of the Rochester, N. Y., radio range to the Rochester, N. Y., radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.223 *Red civil airway No. 23 (United States-Canadian Border to New York, N. Y.)*. From the intersection of the southeast course of the Fort Williams, Ontario, Canada, radio range and the United States-Canadian Border via the Houghton, Mich., radio range station; Grand Marais, Mich., radio range station; the Sault Ste. Marie, Mich., radio range station to the intersection of the southeast course of the Sault Ste. Marie, Mich., radio range and the United States-Canadian Border. From the intersection of the southeast course of the Toronto, Ontario, Canada, radio range and the United States-Canadian Border via the intersection of the southeast course of the Toronto, Ontario, Canada, radio range and the northeast course of the Buffalo, N. Y., radio range; the intersection of the east course of the Buffalo, N. Y., radio range and the northwest course of the Elmira, N. Y., radio range; Elmira, N. Y., radio range station; the intersection of the southeast course of the Elmira, N. Y., radio range and the northwest course of the New York, N. Y. (La Guardia), radio range; the New York, N. Y. (La Guardia), radio range station to the intersection of the east course of the New York, N. Y. (La Guardia), radio range and the northeast course of the Mitchell Field, N. Y. (Army), radio range.

[Amdt. 17, 14 F. R. 2891]

§ 600.224 *Red civil airway No. 24 (Amarillo, Tex., to Oklahoma City, Okla.)*. From the Amarillo, Tex., radio range station via the intersection of the east course of the Amarillo, Tex., radio range and the southwest course of the Oklahoma City, Okla., radio range to the Oklahoma City, Okla., radio range station.

§ 600.225 *Red civil airway No. 25 (Tallahassee, Fla., to Miami, Fla.)*. From the intersection of the east course of the Tallahassee, Fla., radio range and the northwest course of the Cross City, Fla., radio range via the Cross City, Fla., radio range station; the intersection of the southeast course of the Cross City, Fla., radio range and the north course of the Tampa, Fla., radio range; Tampa, Fla., radio range station; Fort Myers, Fla., radio range station and the intersection of the southeast course of the Fort Myers, Fla., radio range and the west course of the Miami, Fla., radio range to the Miami, Fla., radio range station.

§ 600.226 *Red civil airway No. 26 (Syracuse, N. Y., to Millville, N. J.)*. From the Syracuse, N. Y., radio range station via the Wilkes-Barre, Pa., radio range station to the intersection of the southeast course of the Wilkes-Barre, Pa., radio range and the west course of the Allentown, Pa., radio range. From the intersection of the southeast course of the North Philadelphia, Pa., radio range and the northeast course of the Philadelphia, Pa., radio range to the intersection of the southeast course of the North Philadelphia, Pa., radio range and the north-

east course of the Millville, N. J., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.227 *Red civil airway No. 27 (Knoxville, Tenn., to Detroit, Mich.)*. From the Knoxville, Tenn., radio range station via a point located at latitude 36°25' north and longitude 83°50' west; Lexington, Ky., VHF radio range station; the intersection of the north course of the Lexington, Ky., VHF radio range and the southwest course of the Cincinnati, Ohio, radio range; Dayton, Ohio, radio range station; Toledo, Ohio, radio range station to the intersection of the north course of the Toledo, Ohio, radio range and the west course of the Romulus, Mich., radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.228 *Red civil airway No. 28 (Rockford, Ill., to Detroit, Mich.)*. From the Rockford, Ill., radio range station via the intersection of the east course of the Rockford, Ill., radio range and the northwest course of the Chicago, Ill., radio range; Chicago, Ill., radio range station; the intersection of the northeast course of the Chicago, Ill., radio range and the southwest course of the Grand Rapids, Mich., radio range to the Grand Rapids, Mich., radio range station. From the Lansing, Mich., radio range station to the Willow Run Airport, Ypsilanti, Mich.

[Amdt. 17, 14 F. R. 2891]

§ 600.229 *Red civil airway No. 29 (Rochester, N. Y., to Baltimore, Md.)*. From the intersection of the southwest course of the Rochester, N. Y., radio range and the east course of the Buffalo, N. Y., radio range to the intersection of the southwest course of the Rochester, N. Y., radio range and the northwest course of the Elmira, N. Y., radio range. From the intersection of the southeast course of the Elmira, N. Y., radio range and the north course of the Williamsport, Pa., radio range via the Williamsport, Pa., radio range station and the Harrisburg, Pa., radio range station; the Baltimore, Md., radio range station to the intersection of the south course of the Baltimore, Md., radio range and the southeast course of the Washington, D. C., radio range, excluding that portion which lies more than two miles east of the south course of the Baltimore, Md., radio range between the intersection of the south course of the Baltimore, Md., radio range and the southern boundary of Red civil airway No. 45 and the intersection of the south course of the Baltimore, Md., radio range and the southeast course of the Washington, D. C., radio range.

§ 600.230 *Red civil airway No. 30 (Shreveport, La., to Jacksonville, Fla.)*. From the Shreveport, La., radio range station via the intersection of the south course of the Shreveport, La., radio range and the northwest course of the Alexandria, La., radio range; Alexandria, La., radio range station; intersection of the southeast course of the Alexandria, La., radio range and the northwest course of the Baton Rouge, La., radio range; Baton Rouge, La., radio range station to the intersection of the southeast course of the Baton Rouge, La., radio range and the

west course of the New Orleans, La., radio range. From the intersection of the northeast course of the Mobile, Ala., radio range and the west course of the Crestview, Fla., radio range via the Crestview, Fla., radio range station; the intersection of the east course of the Crestview, Fla., radio range and the northwest course of the Tallahassee, Fla., radio range; the Tallahassee, Fla., radio range station to the Jacksonville, Fla., radio range station.

[Amdt. 15, 14 F. R. 1487]

§ 600.231 *Red civil airway No. 31 (Denver, Colo., to Minneapolis, Minn.)*. From the Denver, Colo., VHF radio range station to the intersection of the north course of the Denver, Colo., VHF radio range and the east course of the Cheyenne, Wyo., radio range. From the intersection of the east course of the Cheyenne, Wyo., radio range and the southwest course of the Scottsbluff, Nebr., radio range via the Scottsbluff, Nebr., radio range station; the intersection of the northeast course of the Scottsbluff, Nebr., radio range and the south course of the Rapid City, S. Dak., radio range; Rapid City, S. Dak., radio range station; Pierre, S. Dak., radio range station; the intersection of the east course of the Pierre, S. Dak., radio range and the southwest course of the Huron, S. Dak., radio range; Huron, S. Dak., radio range station; Watertown, S. Dak., radio range station; Willmar, Minn., radio range station to the intersection of the east course of the Willmar, Minn., radio range and the northwest course of the Minneapolis, Minn., radio range. From the Minneapolis, Minn., radio range station via the Stanton, Minn., non-directional radio beacon to the Lake City, Minn., airport.

[Amdt. 4, 13 F. R. 2256]

§ 600.232 *Red civil airway No. 32 (Laredo, Tex., to Houston, Tex.)*. From the Laredo, Tex., radio range station via the intersection of the northeast course of the Laredo, Tex., radio range and the southwest course of the San Antonio, Tex. (Kelly), radio range; San Antonio, Tex. (Kelly), radio range station to the intersection of the northeast course of the San Antonio, Tex. (Kelly), radio range and the west course of the San Antonio, Tex. (Alamo), radio range. From the Austin, Tex., radio range station via the intersection of the southeast course of the Austin, Tex., radio range and the northwest course of the Richmond, Tex., radio range and the Richmond, Tex., radio range station to the intersection of the southeast course of the Richmond, Tex., radio range and the southwest course of the Houston, Tex., radio range.

§ 600.233 *Red civil airway No. 33 (Richmond, Va., to New Hackensack, N. Y.)*. From the Richmond, Va., radio range station via the Gordonsville, Va., radio range station; the Arcola, Va., radio range station; the intersection of the northeast course of the Arcola, Va., radio range and the southwest course of the Allentown, Pa., radio range; the Allentown, Pa., radio range station to the Stewart Field, N. Y., radio range station.

§ 600.234 *Red civil airway No. 34 (Pulaski, Va., to Elizabeth City, N. C.)*. From the Pulaski, Va., radio range station to the Greensboro, N. C., radio range station. From the intersection of the northeast course of the Greensboro, N. C., radio range and the northwest course of the Raleigh, N. C., radio range; Raleigh, N. C., radio range station; the intersection of the southeast course of the Raleigh, N. C., radio range and the southwest course of the Rocky Mount, N. C., VHF radio range; Rocky Mount, N. C., VHF radio range station; the intersection of the northeast course of the Rocky Mount, N. C., VHF radio range and the west course of the Elizabeth City, N. C., VHF radio range; Elizabeth City, N. C., VHF radio range station to the Weeksville, N. C. (Coast Guard), radio range station excluding that portion overlapping danger areas.

[Amdt. 13, 13 F. R. 8603]

§ 600.235 *Red civil airway No. 35 (Pueblo, Colo., to Wichita, Kans.)*. From the Pueblo, Colo., radio range station via the La Junta, Colo., radio range station; Garden City, Kans., radio range station; Hutchinson, Kans., radio range station; the intersection of the east course of the Hutchinson, Kans., radio range and the northeast course of the Wichita, Kans., radio range.

[Amdt. 17, 14 F. R. 2891]

§ 600.236 *Red civil airway No. 36 (Rochester, Minn., to La Crosse, Wis.)*. From the Stanton, Minn., non-directional beacon via the Rochester, Minn., radio range station to the intersection of the east course of the Rochester, Minn., radio range and the northwest course of the La Crosse, Wis. radio range.

[Amdt. 4, 13 F. R. 2256]

§ 600.237 *Red civil airway No. 37 (Dallas, Tex., to Washington, D. C.)*. From the intersection of the northwest course of the Tyler, Tex., radio range and the east course of the Dallas, Tex., radio range via the Tyler, Tex., radio range station to the intersection of the northeast course of the Tyler, Tex., radio range and the west course of the Shreveport, La., radio range. From the intersection of the northeast course of the Texarkana, Ark., radio range and the southwest course of the Little Rock, Ark., radio range via the Little Rock, Ark., radio range station; the Stuttgart, Ark., radio range station to the intersection of the east course of the Stuttgart, Ark., radio range and the west course of the Memphis, Tenn., radio range. From the Roanoke, Va., radio range station via the Lynchburg, Va., radio range station to the Gordonsville, Va., radio range station. From the intersection of the south course of the Quantico, Va. (Navy), radio range and the southwest course of the Washington, D. C., radio range via the Quantico, Va. (Navy), radio range station to the intersection of the north course of the Quantico, Va. (Navy), radio range and the northwest course of the Washington, D. C., radio range, excluding that portion which lies more than two miles west of the north course of the Quantico, Va. (Navy), radio range between the range

station and the intersection of the north course of the Quantico, Va. (Navy), radio range and the northwest course of the Washington, D. C., radio range.

§ 600.238 *Red civil airway No. 38 (Big Spring, Tex., to San Antonio, Tex.)*. From the intersection of the southeast course of the Big Spring, Tex., radio range and the southwest course of the San Angelo, Tex., radio range via the San Angelo, Tex., radio range station to the intersection of the southeast course of the San Angelo, Tex., radio range and the southeast course of the Big Spring, Tex., radio range. From the intersection of the northwest course of the San Antonio, Tex. (Kelly), radio range and the west course of the San Antonio, Tex. (Alamo), radio range to the San Antonio, Tex. (Alamo), radio range station.

[Amdt. 1, 12 F. R. 6128]

§ 600.239 *Red civil airway No. 39 (Bethel, Alaska, to Fairbanks, Alaska)*. From the Bethel, Alaska, radio range station via the Aniak, Alaska, radio range station; the McGrath, Alaska, radio range station; the Minchumina, Alaska, radio range station and the Nenana, Alaska, radio range station to the Fairbanks, Alaska, radio range station.

§ 600.240 *Red civil airway No. 40 (Shemya, Alaska, to Anchorage, Alaska)*. From the Shemya, Alaska, radio range station via the Amchitka, Alaska, radio range station and the intersection of the east course of the Amchitka, Alaska, radio range and the southwest course of the Adak, Alaska, radio range to the Adak, Alaska, radio range station. From the Heiden, Alaska, radio range station via the intersection of the west course of the Kodiak, Alaska, radio range and the southeast course of the Naknek, Alaska, radio range; Kodiak, Alaska, radio range station; the intersection of the north course of the Kodiak, Alaska, radio range and the south course of the Homer, Alaska, radio range to the Homer, Alaska, radio range station. From the intersection of the west course of the Homer, Alaska, radio range and the southwest course of the Kenai, Alaska, radio range via the Kenai, Alaska, radio range station; the intersection of the northeast course of the Kenai, Alaska, radio range and the west course of the Anchorage (Merrill), Alaska, radio range to the Anchorage (Merrill), Alaska, radio range station.

[Amdt. 7, 13 F. R. 4730]

§ 600.241 *Red civil airway No. 41 (Yakutat, Alaska, to Gustavus, Alaska)*. From the intersection of the southeast course of the Yakutat, Alaska, radio range and the southwest course of the Gustavus, Alaska, radio range to the Gustavus, Alaska, radio range station.

§ 600.242 *Red civil airway No. 42 (Joliet, Ill., to La Fayette, Ind.)*. From the intersection of the southeast course of the Rockford, Ill., radio range and the west course of the Goshen, Ind., radio range to the intersection of the southeast course of the Rockford, Ill., radio range and the southeast course of the Chicago, Ill., radio range.

[Amdt. 2, 12 F. R. 8043]

§ 600.243 *Red civil airway No. 43 (Chicago, Ill., to La Fayette, Ind.)*. From the intersection of the east course of the Rockford, Ill., radio range and the northwest course of the Chicago, Ill., radio range via the intersection of the east course of the Rockford, Ill., radio range and the north course of the Harvey, Ill., radio range; Harvey, Ill., radio range station to the intersection of the south course of the Harvey, Ill., radio range and the southeast course of the Rockford, Ill., radio range.

[Amdt. 2, 12 F. R. 8043]

§ 600.244 *Red civil airway No. 44 (Bellingham, Wash., to United States-Canadian Border)*. From the Bellingham, Wash., radio range station to the intersection of the northeast course of the Bellingham, Wash., radio range and the United States-Canadian Border.

§ 600.245 *Red civil airway No. 45 (Washington, D. C., to Allentown, Pa.)*. From the Washington, D. C., radio range station via a point located at 39°01' north latitude and 76°33'30" west longitude; the Baltimore, Md., radio range station to the intersection of the north course of the Baltimore, Md., radio range and southwest course of the Allentown, Pa., radio range.

§ 600.246 *Red civil airway No. 46 (Aberdeen, S. Dak., to Watertown, S. Dak.)*. From the Aberdeen, S. Dak., radio range station to the Watertown, S. Dak., radio range station.

[Amdt. 1, 12 F. R. 6128]

§ 600.247 *Red civil airway No. 47 (Tampa, Fla., to Daytona Beach, Fla.)*. From the Tampa, Fla., radio range station via the Orlando, Fla., radio range station to the Daytona Beach, Fla., radio range station.

§ 600.248 *Red civil airway No. 48 (Missoula, Mont., to Livingston, Mont.)*. From the Missoula, Mont., radio range station to the intersection of the southwest course of the Great Falls, Mont., radio range and the north course of the Helena, Mont., radio range. From the intersection of the southeast course of the Helena, Mont., radio range and the northwest course of the Bozeman, Mont., radio range via a point located at 46°15' north latitude and 111°00' west longitude to the Livingston, Mont., radio marker station.

§ 600.249 *Red civil airway No. 49 (Elko, Nev., to Fort Bridger, Wyo.)*. From the Elko, Nev., radio range station via the Wendover, Utah, radio range station; the intersection of the east course of the Wendover, Utah, radio range and the west course of the Salt Lake City, Utah, radio range; the Salt Lake City, Utah, radio range station; Fort Bridger, Wyo., radio range station to the intersection of the north course of the Fort Bridger, Wyo., radio range and the southeast course of the Malad City, Idaho, radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.250 *Red civil airway No. 50 (Galena, Alaska, to Fairbanks, Alaska)*. From the intersection of the east course of the Galena, Alaska, radio range and

the southwest course of the Tanana, Alaska, radio range via the Tanana, Alaska, radio range station to the intersection of the southeast course of the Tanana, Alaska, radio range and the west course of the Fairbanks, Alaska, radio range.

[Amdt. 5, 13 F. R. 2648]

§ 600.251 *Red civil airway No. 51 (El Paso, Tex., to U. S.-Mexican Border)*. From the El Paso, Tex., radio range station via the Van Horn, Tex., VHF radio range station; Marfa, Tex., VHF radio range station; Big Ben, Tex., VHF radio range station to the intersection of the southeast course of the Big Bend, Tex., VHF radio range and the U. S.-Mexican Border.

[Amdt. 4, 13 F. R. 2256]

§ 600.252 *Red civil airway No. 52 (Memphis, Tenn., to Birmingham, Ala.)*. From the intersection of the northeast course of the Memphis, Tenn., radio range and the northwest course of the Muscle Shoals, Ala., radio range via the Muscle Shoals, Ala., radio range station to the intersection of the southeast course of the Muscle Shoals, Ala., radio range and the north course of the Birmingham, Ala., radio range.

§ 600.253 *Red civil airway No. 53 (Joplin, Mo., to Springfield, Mo.)*. From the Joplin, Mo., radio range station to the intersection of the east course of the Joplin, Mo., radio range and the southwest course of the Springfield, Mo., radio range.

§ 600.254 *Red civil airway No. 54 (Burley, Idaho, to Salt Lake City, Utah)*. From the Burley, Idaho, radio range station to a point located at 40°56' north latitude and 112°16' west longitude.

§ 600.255 *Red civil airway No. 55 (Burlington, Iowa, to Columbus, Ohio)*. From the Burlington, Iowa, radio range station via the Peoria, Ill., radio range to the intersection of the east course of the Peoria, Ill., radio range and the southwest course of the Joliet, Ill., radio range. From the Goshen, Ind., radio range station via the Findlay, Ohio, non-directional radio marker beacon to the Columbus, Ohio, radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.256 *Red civil airway No. 56 (Red Bluff, Calif., to Whitmore, Calif.)*. From the intersection of the northwest course of the Red Bluff, Calif., radio range and the northwest course of the Whitmore, Calif., radio range to the Whitmore, Calif., radio range station.

[Amdt. 1, 12 E. R. 6128]

§ 600.257 *Red civil airway No. 57 (Moline, Ill., to Youngstown, Ohio)*. From the Moline, Ill., radio range station via the Rockford, Ill., radio range station; Milwaukee, Wis., radio range station; Battle Creek, Mich., radio range station to the Toledo, Ohio, radio range station. From the intersection of the west course of the Cleveland, Ohio, radio range and the northwest course of the Akron, Ohio, radio range via the Akron, Ohio, radio range station to the Youngstown, Ohio, radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.258 *Red civil airway No. 58 (Salinas, Calif., to Hollister, Calif.)*. From the Salinas, Calif., VHF radio range station to the intersection of the northeast course of the Salinas, Calif., VHF radio range and the southeast course of the Oakland, Calif., radio range.

[Amdt. 2, 12 F. R. 8043]

§ 600.259 *Red civil airway No. 59 (Gage, Okla., to Oklahoma City, Okla.)*. From the Gage, Okla., radio range station to the Oklahoma City, Okla., radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.260 *Red civil airway No. 60 (San Jose, Calif., to Stockton, Calif.)*. From the intersection of the northwest course of the Salinas, Calif., VHF radio range and the west course of the Moffett Field (Sunnyvale), Calif., Navy radio range to the Moffett Field (Sunnyvale), Calif., Navy radio range station. From the Oakland, Calif., radio range station via the Stockton, Calif., radio range station to the intersection of the east course of the Stockton, Calif., radio range and the southeast course of the Sacramento, Calif., radio range.

[Amdt. 2, 12 F. R. 8043]

§ 600.261 *Red civil airway No. 61 (Pittsburgh, Pa., to Washington, D. C.)*. From the intersection of the southeast course of the Pittsburgh, Pa., radio range and the northwest course of the Arcola, Va., radio range via the Arcola, Va., radio range and the south course of the Washington, D. C., radio range.

§ 600.262 *Red civil airway No. 62 (Lansing, Mich., to Pittsburgh, Pa.)*. From the Lansing, Mich., radio range station to the intersection of the southeast course of the Lansing, Mich., radio range and the west course of the Detroit, Mich., radio range. From the Detroit, Mich., radio range station via the intersection of the southeast course of the Detroit, Mich., radio range and the west course of the Wellington, Ohio, VHF radio range; Wellington, Ohio, VHF radio range station to the intersection of the east course of the Wellington, Ohio, VHF radio range and the northwest course of the Akron, Ohio, radio range. From the Akron, Ohio, radio range station to the intersection of the southeast course of the Cleveland, Ohio, radio range and the west course of the Pittsburgh, Pa., radio range.

[Amdt. 17, 14 F. R. 2892]

§ 600.263 *Red civil airway No. 63 (Battle Creek, Mich., to the United States-Canadian Border)*. From the intersection of the southwest course of the Grand Rapids, Mich., radio range and the west course of the Battle Creek, Mich., radio range via the Battle Creek, Mich., radio range station; the intersection of the east course of the Battle Creek, Mich., radio range and the west course of the Salem, Mich., VHF radio range; the Salem, Mich., VHF radio range station to the intersection of the east course of the Salem, Mich., VHF radio range and the northwest course of the Windsor, Ontario, Canada, radio range. From the intersection of the northwest course of the Romulus, Mich., radio range and

the west course of the Sarnia, Ontario, Canada, radio range to the United States-Canadian Border.

[Amdt. 2, 12 F. R. 8043]

§ 600.264 *Red civil airway No. 64 (U. S.-Canadian Border to Annette Island, Alaska)*. From the intersection of the southwest course of the Annette Island, Alaska, radio range and the U. S.-Canadian Border to the Annette Island, Alaska, radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.265 *Red civil airway No. 65 (Oceanside, Calif., to Blythe, Calif.)*. From the Oceanside, Calif., non-directional radio beacon via a point at Latitude 33°07'00", Longitude 116°36'00" to a point at Latitude 33°44'30", Longitude 115°21'30".

[Amdt. 3, 13 F. R. 1226]

§ 600.266 *Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif.)*. From the Santa Barbara, Calif., radio range station to the Newhall, Calif., radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.267 *Red civil airway No. 67 (Crestview, Fla., to Dothan, Ala.)*. From the Crestview, Fla., radio range station to the Dothan, Ala., radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.268 *Red civil airway No. 68 (El Paso, Tex., to Shreveport, La.)*. From the El Paso, Tex., radio range station via the intersection of the south course of the El Paso, Tex., radio range and the west course of the Hudspeth, Tex., VHF radio range; Hudspeth, Tex., VHF radio range station; Culberson, Tex., VHF radio range station; the intersection of the east course of the Culberson, Tex., VHF radio range and the southwest course of the Midland, Tex., radio range; Midland, Tex., radio range station; San Angelo, Tex., radio range station; the intersection of the northeast course of the San Angelo, Tex., radio range and the south course of the Abilene, Tex., radio range to the Abilene, Tex., radio range station. From the intersection of the west course of the Fort Worth, Tex., radio range and the northwest course of the Waco, Tex., radio range via the intersection of the northwest course of the Waco, Tex., radio range and the west course of the Dallas, Tex., radio range to the Dallas, Tex., radio range station. From the Tyler, Tex., radio range station via the Longview, Tex., Gregg County Airport, to the Shreveport, La., radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.269 *Red civil airway No. 69 (El Paso, Tex., to Big Spring, Tex.)*. From the intersection of the east course of the Culberson, Tex., VHF radio range and the southwest course of the Wink, Tex., VHF radio range to the intersection of the southwest course of the Wink, Tex., VHF radio range and the west course of the Wink, Tex., (low frequency) radio range. From the Midland, Tex., radio range station to the intersection of the northeast course of the Midland, Tex., radio range and the southwest course of the Big Spring, Tex., radio range.

[Amdt. 4, 13 F. R. 2256]

§ 600.270 *Red civil airway No. 70 (Midland, Tex., to Oklahoma City, Okla.)*. From the Midland, Tex., radio range station via the intersection of the south course of the Lubbock, Tex., radio range and the northwest course of the Big Spring, Tex., radio range; Lubbock, Tex., radio range station; Childress, Tex., VHF radio range station; Hobart, Okla., VHF radio range station to the Oklahoma City, Okla., radio range station.

[Amdt. 13, 13 F. R. 8603]

§ 600.271 *Red civil airway No. 71 (Lubbock, Tex., to Wichita Falls, Tex.)*. From the Lubbock, Tex., radio range station via the intersection of the east course of the Lubbock, Tex., radio range and the west course of the Guthrie, Tex., VHF radio range; Guthrie, Tex., VHF radio range station to the Wichita Falls, Tex., radio range station.

[Amdt. 7, 13 F. R. 4730]

§ 600.272 *Red civil airway No. 72 (Millville, N. J., to Newark, N. J.)*. From the intersection of the southwest course of the Millville, N. J., radio range and the south course of the New Castle, Del., radio range via the New Castle, Del., radio range station to the intersection of the north course of the New Castle, Del., radio range and the west course of the Philadelphia, Penn., radio range. From the intersection of the east course of the Harrisburg, Penn., radio range and the southwest course of the Willow Grove, Penn., radio range via the Willow Grove, Penn., radio range to the intersection of the northeast course of the Willow Grove, Penn., radio range and the east course of the Allentown, Penn., radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.273 *Red civil airway No. 73 (Baltimore, Md., to Millville, N. J.)*. From the intersection of the west course of the New Castle, Del., radio range and the west course of the Philadelphia, Penn., radio range via the New Castle, Del., radio range station to the intersection of the east course of the New Castle, Del., radio range and the northeast course of the Millville, N. J., radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.274 *Red civil airway No. 74 (Louisville, Ky., to Cincinnati, Ohio)*. From the Louisville, Ky., radio range station via the intersection of the north course of the Louisville, Ky., radio range and a line 250° magnetic from the Covington, Ky., VOR radio range station to the Covington, Ky., VOR radio range station.

[Amdt. 7, 13 F. R. 4730]

§ 600.275 *Red civil airway No. 75 (U. S.-Canadian Border, Vancouver, B. C., to U. S.-Canadian Border, Abbotsford, B. C.)*. From the Vancouver, B. C., radio range station to the intersection of the northwest course of the Bellingham, Wash., radio range and the west course of the Abbotsford, B. C., radio range; Abbotsford, B. C., radio range station to the intersection of the east course of the Abbotsford, B. C., radio range and the northeast course of the Bellingham, Wash., radio range, excluding those portions lying outside the limits of the continental United States.

[Amdt. 11, 13 F. R. 7297]

§ 600.276 *Red civil airway No. 76 (Williams, Calif., to Auburn, Calif.)*. From the Williams, Calif., radio range station to the intersection of the east course of the Williams, Calif., radio range and the northeast course of the Sacramento, Calif., radio range.

[Amdt. 12, 13 F. R. 7399]

§ 600.277 *Red civil airway No. 77 (Richmond, Va., to Millville, N. J.)*. From the intersection of the north course of the Richmond, Va., radio range and the southwest course of the Patuxent River, Md. (Navy), radio range via the Patuxent River, Md. (Navy), radio range station to the Millville, N. J., radio range station excluding that portion below 6,000 feet between the eastern boundary of Blue civil airway No. 56 and the southwest boundary of Red civil airway No. 20, and excluding that portion below 3,000 feet which lies within the Little Creek, Del., Danger Area.

[Amdt. 18, 14 F. R. 3467]

NOTE: § 600.277 as printed above is effective from July 1, 1949, to 0001 e. s. t. Sept. 1, 1949. At the end of that period the following text will again become effective:

§ 600.277 *Red civil airway No. 77 (Richmond, Va., to Millville, N. J.)*. From the intersection of the north course of the Richmond, Va., radio range and the southwest course of the Patuxent River, Md. (Navy), radio range via the Patuxent River, Md. (Navy), radio range station to the Millville, N. J., radio range station, excluding that portion below 6,000 feet between the eastern boundary of Blue civil airway No. 56 and the southwest boundary of Red civil airway No. 20.

[Amdt. 11, 13 F. R. 7297]

§ 600.278 *Red civil airway No. 78 (Medford, Ore., to Klamath Falls, Ore.)*. From the intersection of the south course of the Medford, Ore., radio range and the west course of the Klamath Falls, Ore., radio range to the Klamath Falls, Ore., radio range station.

[Amdt. 13, 13 F. R. 8603]

§ 600.279 *Red civil airway No. 79 (Port Angeles, Wash., to Everett, Wash.)*. From the intersection of the west course of the Everett, Wash., radio range and the northwest course of the Seattle, Wash., radio range to the Everett, Wash., radio range station.

[Amdt. 13, 13 F. R. 8603]

§ 600.280 *Red civil airway No. 80 (Lewistown, Mont., to Miles City, Mont.)*. From the intersection of the southeast course of the Lewistown, Mont., radio range and the north course of the Billings, Mont., radio range to the Miles City, Mont., radio range station.

[Amdt. 13, 13 F. R. 8603]

§ 600.281 *Red civil airway No. 81 (Parkersburg, W. Va., to Elkins, W. Va.)*. From the Parkersburg, W. Va., VHF radio range station to the intersection of the southeast course of the Parkersburg, W. Va., VHF radio range and the west course of the Elkins, W. Va., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.282 *Red civil airway No. 82 (Skwentna, Alaska, to Anchorage,*

Alaska). From the Skwentna, Alaska, radio range station to the intersection of the southeast course of the Skwentna, Alaska, radio range and the northeast course of the Anchorage, Alaska, radio range.

[Amdt. 14, 14 F. R. 455]

§ 600.283 *Red civil airway No. 83 (Tucson, Ariz., to Rodeo, N. Mex.)*. From the intersection of the southeast course of the Tucson, Ariz., radio range and the west course of the Cochise, Ariz., radio range via the intersection of the southeast course of the Tucson, Ariz., radio range and the northwest course of the Douglas, Ariz., radio range; Douglas, Ariz., radio range station; the intersection of the northeast course of the Douglas, Ariz., radio range and the southwest course of the Rodeo, N. Mex., radio range to the Rodeo, N. Mex., radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.284 *Red civil airway No. 84 (New Orleans, La., to Biloxi, Miss.)*. From the Callendar, La., nondirectional radio marker beacon via the intersection of a bearing 70° true from the Callendar, La., nondirectional radio marker beacon with the southwest course of the Biloxi, Miss. (Keesler AFB) radio range to the Biloxi, Miss. (Keesler AFB) radio range station.

[Amdt. 17, 14 F. R. 2892]

§ 600.285 *Red civil airway No. 85 (Dayton, Ohio, to Mansfield, Ohio)*. From the Dayton, Ohio, radio range station to the Mansfield, Ohio, nondirectional radio marker beacon.

[Amdt. 17, 14 F. R. 2892]

BLUE CIVIL AIRWAYS

§ 600.601 *Blue civil airway No. 1 (Pendleton, Oreg., to Spokane, Wash.)*. From the Pendleton, Oreg., radio range station, via the intersection of the east course of the Pendleton, Oreg., radio range and the southwest course of the Walla Walla, Wash., radio range and the Walla Walla, Wash., radio range station to the Spokane, Wash., radio range station.

§ 600.602 *Blue civil airway No. 2 (Birmingham, Ala., to Erie, Pa.)*. From the Birmingham, Ala., radio range station via the intersection of the north course of the Birmingham, Ala., radio range and the southwest course of the Chattanooga, Tenn., radio range, via the Chattanooga, Tenn., radio range station to the intersection of the northeast course of the Chattanooga, Tenn., radio range and the west course of the Knoxville, Tenn., radio range. From the Elkins, W. Va., radio marker station, via the Pittsburgh, Pa., radio range station; the intersection of the east course of the Youngstown, Ohio, radio range and the south course of the Erie, Pa., radio range; to the Erie, Pa., radio range station.

§ 600.603 *Blue civil airway No. 3 (Tallahassee, Fla., to La Fayette, Ind.)*. From the intersection of the northwest course of the Tallahassee, Fla., radio range and the southeast course of the Dothan, Ala., radio range via the Dothan, Ala., radio range station; the intersection of the northwest course of the Dothan,

Ala., radio range and the east course of the Maxwell Field, Ala. (AFB), radio range, excluding that portion which lies more than 2 miles west of the northwest course of the Dothan, Ala., radio range between Lat. 31°20'00" Long. 85°34'00" and Lat. 31°34'00" Long. 85°42'00"; Maxwell Field, Ala. (AFB), radio range station; the intersection of the west course of the Maxwell Field, Ala. (AFB), radio range and the south course of the Birmingham, Ala., radio range to the Birmingham, Ala., radio range station. From the Muscle Shoals, Ala., radio range station to the intersection of the northeast course of the Muscle Shoals, Ala., radio range and the southwest course of the Nashville, Tenn., radio range. From the Nashville, Tenn., radio range station via the intersection of the northwest course of the Nashville, Tenn., radio range and the south course of the Evansville, Ind., radio range; Evansville, Ind., radio range station; Terre Haute, Ind., radio range station; the intersection of the north course of the Terre Haute, Ind., radio range and the southwest course of the La Fayette, Ind., radio range; La Fayette, Ind., radio range station to the intersection of the northeast course of the La Fayette, Ind., radio range and the north course of the Indianapolis, Ind., radio range.

[Amdt. 17, 14 F. R. 2892]

§ 600.604 *Blue civil airway No. 4 (Nantucket, Mass., to United States-Canadian Border)*. From the Nantucket, Mass., VHF radio range station via the intersection of the northwest course of the Nantucket, Mass., VHF radio range and the southeast course of the Squantum, Mass. (Navy) radio range to the Squantum, Mass. (Navy) radio range station. From the Boston, Mass., radio range station, via the intersection of the northeast course of the Boston, Mass., radio range and the southeast course of the Concord, N. H., radio range; Concord, N. H., radio range station; Burlington, Vt., radio range station to the intersection of the northwest course of the Burlington, Vt., radio range and the United States-Canadian Border.

[Amdt. 17, 14 F. R. 2892]

§ 600.605 *Blue civil airway No. 5 (Galveston, Tex., to Salina, Kans.)*. From the Municipal Airport, Galveston, Tex., via the Galveston, Tex., radio range station; Houston, Tex., radio range station; the intersection of the northwest course of the Houston, Tex., radio range and the southeast course of the Bryan, Tex., radio range; Bryan, Tex., (radio range station); Waco, Tex., radio range station; the intersection of the northeast course of the Waco, Tex., radio range and the south course of the Dallas, Tex., radio range; Dallas, Tex., radio range station to the intersection of the northwest course of the Dallas, Tex., radio range and the north course of the Fort Worth, Tex., radio range. From the Oklahoma City, Okla., radio range station via the intersection of the north course of the Oklahoma City, Okla., radio range and the southeast course of the Wichita, Kans., radio range; Wichita, Kans., radio range station to the intersection of the north course of the Wichita, Kans.,

radio range and the east course of the Hutchinson, Kans., radio range. From the intersection of the east course of the Hutchinson, Kans., radio range and the south course of the Salina, Kans. (Smoky Hill AFB) radio range to the Salina, Kans. (Smoky Hill AFB) radio range station, excluding those portions which overlap danger areas.

[Amdt. 17, 14 F. R. 2892]

§ 600.606 *Blue civil airway No. 6 (Abilene, Tex., to Muskegon, Mich.)*. From the Abilene, Tex., radio range station via the Wichita Falls, Tex., radio range station to the intersection of the northeast course of the Wichita Falls, Tex., radio range and the south course of the Oklahoma City, Okla., radio range. From the Springfield, Ill., radio range station via the Peoria, Ill., radio range station to the intersection of the north course of the Peoria, Ill., radio range and the northeast course of the Burlington, Iowa, radio range. From the intersection of the west course of the Goshen, Ind., radio range and the south course of the South Bend, Ind., radio range via the South Bend, Ind., radio range station to the intersection of the north course of the South Bend, Ind., radio range and the northeast course of the Chicago, Ill., radio range. From the intersection of the northeast course of the Chicago, Ill., radio range and the southwest course of the Grand Rapids, Mich., radio range to the Muskegon, Mich., radio range station.

[Amdt. 8, 13 F. R. 5656]

§ 600.607 *Blue civil airway No. 7 (Paso Robles, Calif., to Williams, Calif.)*. From the Paso Robles, Calif., VHF radio range station via the intersection of the northwest course of the Paso Robles, Calif., VHF radio range and the southeast course of the Oakland, Calif., radio range to the intersection of the southeast course of the Oakland, Calif., radio range and the northwest course of the Fresno, Calif., radio range. From the intersection of the west course of the Fresno, Calif., radio range and the south course of the Fairfield-Suisun, Calif. (AFB), radio range via the Fairfield-Suisun, Calif. (AFB), radio range station to the Williams, Calif., radio range station.

[Amdt. 12, 13 F. R. 7399]

§ 600.608 *Blue civil airway No. 8 (Fargo, N. Dak., to United States-Canadian Border)*. From the Fargo, N. Dak., radio range station, via the Grand Forks, N. Dak., radio range station and the Pembina, N. Dak., radio range station to the intersection of the north course of the Pembina, N. Dak., radio range and the United States-Canadian Border.

§ 600.609 *Blue civil airway No. 9 (Columbia, Mo., to United States-Canadian Border)*. From the Columbia, Mo., radio range station via the Kirksville, Mo., radio range station; the intersection of the northwest course of the Kirksville, Mo., radio range and the south course of the Des Moines, Iowa, radio range; Des Moines, Iowa, radio range station; the intersection of the north course of the Des Moines, Iowa, radio range and the southwest course of the La Crosse, Wis., radio range; the intersection of the southwest

course of the La Crosse, Wis., radio range and the south course of the Rochester, Minn., radio range; the Rochester, Minn., radio range station to the intersection of the north course of the Rochester, Minn., radio range and the southeast course of the Minneapolis, Minn., radio range. From the Minneapolis, Minn., radio range station via the Duluth, Minn., radio range station to the intersection of the southwest course of the Lakehead, Canada, radio range and the United States-Canadian Border.

[Amdt. 7, 13 F. R. 4730]

§ 600.610 *Blue civil airway No. 10 (Fresno, Calif., to Williams, Calif.)*. From the Fresno, Calif., radio range station via the intersection of the west course of the Fresno, Calif., radio range and the southeast course of the Oakland, Calif., radio range; the intersection of the northwest course of the Oakland, Calif., radio range and the southwest course of the Williams, Calif., radio range to the Williams, Calif., radio range station.

[Amdt. 12, 13 F. R. 7399]

§ 600.611 *Blue civil airway No. 11 (Cleveland, Ohio, to Niagara Falls, N. Y.)*. From the Cleveland, Ohio, radio range station via the Erie, Pa., radio range station; the intersection of the northeast course of the Erie, Pa., radio range and the southwest course of the Buffalo, N. Y., radio range and the Buffalo, N. Y., radio range station to the Niagara Falls Airport, Niagara Falls, N. Y.

§ 600.612 *Blue civil airway No. 12 (The Dalles, Oreg., to Ellensburg, Wash.)*. From The Dalles, Oreg., radio range station via the Yakima, Wash., radio range station to the Ellensburg, Wash., radio range station.

§ 600.613 *Blue civil airway No. 13 (Houston, Tex., to Minneapolis, Minn.)*. From the Houston, Tex., radio range station via the Shreveport, La., radio range station to the intersection of the northwest course of the Shreveport, La., radio range and the southwest course of the Texarkana, Ark., radio range. From the Texarkana, Ark., radio range station via the Fort Smith, Ark., Airport; the Joplin, Mo., radio range station and the intersection of the north course of the Joplin, Mo., radio range and the southeast course of the Kansas City, Mo., radio range to the Kansas City, Mo., radio range station. From the intersection of the northeast course of the Kansas City, Mo., radio range and the south course of the Des Moines, Iowa, radio range to the Des Moines, Iowa, radio range station. From the Mason City, Iowa, non-directional radio marker beacon to the Stanton, Minn., non-directional radio marker beacon.

[Amdt. 17, 14 F. R. 2893]

§ 600.614 *Blue civil airway No. 14 (El Centro, Calif., to Sacramento, Calif.)*. From the Mount Laguna, Calif., non-directional radio marker beacon to the Oceanside, Calif., non-directional radio marker beacon. From the Riverside, Calif., radio range station via the intersection of the northwest course of the Riverside, Calif., radio range and the southeast course of the Palmdale, Calif.,

radio range and the Palmdale, Calif., radio range station to the intersection of the northwest course of the Palmdale, Calif., radio range and the south course of the Bakersfield, Calif., radio range. From the intersection of the northwest course of the Fresno, Calif., radio range and the south course of the Stockton, Calif., radio range via the Stockton, Calif., radio range station to the intersection of the north course of the Stockton, Calif., radio range and the southeast course of the Sacramento, Calif., radio range.

[Amdt. 2, 12 F. R. 8043]

§ 600.615 *Blue civil airway No. 15 (Huntington, W. Va., to Erie, Pa.)*. From the intersection of the northwest course of the Huntington, W. Va., radio range and the south course of the Columbus, Ohio, radio range to the Columbus, Ohio, radio range station. From the intersection of the east course of the Columbus, Ohio, radio range and the southwest course of the Akron, Ohio, radio range via the Akron, Ohio, radio range station to the intersection of the northeast course of the Akron, Ohio, radio range and the southwest course of the Erie, Pa., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.616 *Blue civil airway No. 16 (Dillon, Mont., to Helena, Mont.)*. From the Dillon, Mont., radio range station via the Butte, Mont., radio range station to the intersection of the north course of the Butte, Mont., radio range and the east course of the Drummond, Mont., radio range. From the intersection of the west course of the Helena, Mont., radio range and the southwest course of the Great Falls, Mont., radio range to the intersection of the southwest course of the Great Falls, Mont., radio range and the north course of the Helena, Mont., radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.617 *Blue civil airway No. 17 (Millinocket, Maine, to Presque Isle, Maine)*. From the intersection of the northeast course of the Millinocket, Maine, radio range and the northwest course of the Houlton, Maine, radio range, via the Houlton, Maine, radio range station and the intersection of the north course of the Houlton, Maine, radio range and the southeast course of the Presque Isle, Maine, radio range to the Presque Isle, Maine, radio range station.

§ 600.618 *Blue civil airway No. 18 (Philadelphia, Pa., to Burlington, Vt.)*. From the intersection of the northeast course of the Philadelphia, Pa., radio range and the southwest course of the New York, N. Y. (LaGuardia), radio range via the intersection of the northeast course of the Philadelphia, Pa., radio range and the southwest course of the Idlewild, N. Y., radio range; the Idlewild, N. Y., radio range station to the intersection of the northeast course of the Idlewild, N. Y., radio range and the east course of the New York, N. Y. (LaGuardia), radio range. From the intersection of the northwest course of the New York, N. Y. (LaGuardia), radio range and the southwest course of the New Hackensack, N. Y., radio range via the

New Hackensack, N. Y., radio range station, excluding that portion which lies more than two miles west of the southwest course of the New Hackensack, N. Y., radio range between a point 25 miles northeast from the intersection of the northwest course of the New York, N. Y. (LaGuardia), radio range and the southwest course of the New Hackensack, N. Y., radio range and a point 10 miles south of the New Hackensack, N. Y., radio range; the Albany, N. Y., radio range station to the Burlington, Vt., radio range station.

§ 600.619 *Blue civil airway No. 19 (Miami, Fla., to Orlando, Fla.)*. From the Miami, Fla., radio range station via the intersection of the north course of the Miami, Fla., radio range and the southeast course of the Orlando, Fla., radio range, excluding that portion which lies more than 2 miles east of the north course of the Miami, Fla., radio range between Latitude 25°58'00" and Latitude 26°17'00", to the Orlando, Fla., radio range station.

[Amdt. 9, 13 F. R. 6045]

§ 600.620 *Blue civil airway No. 20 (Atlantic City, N. J., to Allentown, Pa.)*. From the Atlantic City, N. J. (Navy), radio range station via the intersection of the west course of the Atlantic City, N. J. (Navy), radio range and the southeast course of the Millville, N. J., radio range; Millville, N. J., radio range station; the intersection of the northwest course of the Millville, N. J., radio range and the southwest course of the Philadelphia, Pa., radio range; Philadelphia, Pa., radio range station to the Allentown, Pa., radio range station.

[Amdt. 11, 13 F. R. 7297]

§ 600.621 *Blue civil airway No. 21 (Charleston, W. Va., to Erie, Pa.)*. From the Charleston, W. Va., VHF radio range station via the Parkersburg, W. Va., VHF radio range station; the intersection of the northeast course of the Parkersburg, W. Va., VHF radio range and the southwest course of the Wheeling, W. Va., VHF radio range to the Wheeling, W. Va., VHF radio range station. From the intersection of the northwest course of the Pittsburgh, Pa., radio range and the south course of the Youngstown, Ohio, radio range via the Youngstown, Ohio, radio range station to the intersection of the north course of the Youngstown, Ohio, radio range and the southwest course of the Erie, Pa., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.622 *Blue civil airway No. 22 (Memphis, Tenn., to Wichita, Kans.)*. From the intersection of the southwest course of the Memphis, Tenn., radio range and the southeast course of the Little Rock, Ark., radio range via the Little Rock, Ark., radio range station and the Tulsa, Okla., radio range station to the intersection of the northwest course of the Tulsa, Okla., radio range and the southeast course of the Wichita, Kans., radio range.

§ 600.623 *Blue civil airway No. 23 (Detroit, Mich., to Flint, Mich.)*. From the Romulus, Mich., radio range station to the Bishop Airport, Flint, Mich.

§ 600.624 *Blue civil airway No. 24 (El Centro, Calif., to Riverside, Calif.)*. From the El Centro, Calif., radio range station via the intersection of the northwest course of the El Centro, Calif., radio range and the southeast course of the Indio, Calif., radio range; Indio, Calif., radio range station to the intersection of the northwest course of the Indio, Calif., radio range and the east course of the Riverside, Calif., radio range. [Amdt. 1, 12 F. R. 6128]

§ 600.625 *Blue civil airway No. 25 (Cordova, Alaska, to Big Delta, Alaska)*. From the Cordova (Hinchinbrook Island), Alaska, radio range station via the intersection of the northeast course of the Cordova (Hinchinbrook Island), Alaska, radio range and the south course of the Gulkana, Alaska, radio range; Gulkana, Alaska, radio range station and the intersection of the north course of the Gulkana, Alaska, radio range and the south course of the Big Delta, Alaska, radio range to the Big Delta, Alaska, radio range station.

§ 600.626 *Blue civil airway No. 26 (Anchorage, Alaska, to Nenana, Alaska)*. From the Anchorage, Alaska, radio range station via the Talkeetna, Alaska, airport; Summit, Alaska, radio range station; the intersection of the northeast course of the Summit, Alaska, radio range and the southeast course of the Nenana, Alaska, radio range to the Nenana, Alaska, radio range station.

[Amdt. 5, 13 F. R. 2649]

§ 600.627 *Blue civil airway No. 27 (Kodiak, Alaska, to Kotzebue, Alaska)*. From the intersection of the west course of the Kodiak, Alaska, radio range and the southeast course of the Naknek, Alaska, radio range via the Naknek, Alaska, radio range station; Bethel, Alaska, radio range station and the Nome, Alaska, radio range station to the Kotzebue, Alaska, airport.

[Amdt. 7, 13 F. R. 4730]

§ 600.628 *Blue civil airway No. 28 (Charleston, S. C., to Spartanburg, S. C.)*. From the Charleston, S. C., radio range station via the intersection of the northwest course of the Charleston, S. C., radio range and the southeast course of the Columbia, S. C., radio range; Columbia, S. C., radio range station; the intersection of the west course of the Columbia, S. C., radio range and the southeast course of the Spartanburg, S. C., radio range to the Spartanburg, S. C., radio range station.

[Amdt. 3, 13 F. R. 1226]

§ 600.629 *Blue civil airway No. 29 (Raleigh, N. C., to Lynchburg, Va.)*. From the intersection of the northeast course of the Raleigh, N. C., radio range and the southeast course of the Lynchburg, Va., radio range to the Lynchburg, Va., radio range station.

[Amdt. 1, 12 F. R. 6128]

§ 600.630 *Blue civil airway No. 30 (Brownsville, Tex., to Amarillo, Tex.)*. From the intersection of the southeast course of the Alice, Tex., radio range and the southwest course of the Corpus Christi, Tex., radio range via the Corpus Christi, Tex., radio range station, exclud-

ing that portion which lies more than 2 miles southeast of the southwest course of the Corpus Christi, Tex., radio range; San Antonio, Tex. (Kelly), radio range station; the intersection of the northwest course of the San Antonio, Tex. (Kelly), radio range and the southeast course of the Big Spring, Tex., radio range; Big Spring, Tex., radio range station; the intersection of the northwest course of the Big Spring, Tex., radio range and the south course of the Lubbock, Tex., radio range; Lubbock, Tex., radio range station; the intersection of the north course of the Lubbock, Tex., radio range and the south course of the Amarillo, Tex., radio range to the Amarillo, Tex., radio range station.

[Amdt. 8, 13 F. R. 5656]

§ 600.631 *Blue civil airway No. 31 (New Florence, Mo., to Moline, Ill.)*. From the New Florence, Mo., non-directional radio marker beacon to the Kirksville, Mo., radio range station. From the intersection of the northeast course of the Burlington, Iowa, radio range and the south course of the Moline, Ill., radio range to the Moline, Ill., radio range station.

[Amdt. 17, 14 F. R. 2893]

§ 600.632 *Blue civil airway No. 32 (Pendleton, Ore., to Fairbanks, Alaska)*. From the Pendleton, Ore., radio range station via the intersection of the northwest course of the Pendleton, Ore., radio range and the southeast course of the Yakima, Wash., radio range to the Yakima, Wash., radio range station. From the Seattle, Wash., radio range station via the intersection of the northwest course of the Seattle, Wash., radio range and the south course of the Patricia Bay, B. C., radio range to the intersection of the south course of the Patricia Bay, B. C., radio range and the United States-Canadian Border. From the Skwentna, Alaska, radio range station via the intersection of the northeast course of the Skwentna, Alaska, radio range and the southwest course of the Summit, Alaska, radio range to the Summit, Alaska, radio range station.

[Amdt. 11, 13 F. R. 7297]

§ 600.633 *Blue civil airway No. 33 (Archbold, Ohio, to Detroit, Mich.)*. From the Archbold, Ohio, nondirectional radio marker beacon to a point at the intersection of a straight line between the Archbold, Ohio, nondirectional radio marker beacon and the Jackson, Mich., nondirectional radio marker beacon with the west course of the Detroit, Mich., radio range.

[Amdt. 13, 13 F. R. 8604]

§ 600.634 *Blue civil airway No. 34 (Little Rock, Ark., to Tulsa, Okla.)*. From a point located at 35°27' north latitude and 94°00' west longitude via the Fort Smith, Ark., Airport; Muskogee (Davis), Okla., Airport located at 35°39'30" north latitude and 95°21'45" west longitude to the Tulsa, Okla., radio range station.

[Amdt. 8, 13 F. R. 1227]

§ 600.635 *Blue civil airway No. 35 (Topeka, Kans., to Kirksville, Mo.)*. From the intersection of the southwest course of the Topeka, Kans. (AFB) radio range

and a point 20 miles southwest of the Topeka, Kans. (AFB) radio range station via the Topeka, Kans. (AFB) radio range station to the intersection of the northeast course of the Topeka, Kans. (AFB) radio range and the northwest course of the Kansas City, Mo., radio range. From the St. Joseph, Mo., radio range station to the intersection of the east course of the St. Joseph, Mo., radio range and the northeast course of the Kansas City, Mo., radio range.

[Amdt. 17, 14 F. R. 2893]

§ 600.636 *Blue civil airway No. 36 (Thurman, Colo., to North Platte, Nebr.)*. From the intersection of the east course of the Thurman, Colo., VHF radio range and the south course of the Akron, Colo., radio range via the Akron, Colo., radio range station to the North Platte, Nebr., radio range station.

[Amdt. 17, 14 F. R. 2893]

§ 600.637 *Blue civil airway No. 37 (Casper, Wyo., to Rapid City, S. Dak.)*. From the Casper, Wyo., radio range station to the intersection of the southeast course of the Sheridan, Wyo., radio range S. Dak., radio range.

§ 600.638 *Blue civil airway No. 38 (Annette Island, Alaska, to United States-Canadian Border)*. From the intersection of the south course of the Annette Island, Alaska, radio range and the United States-Canadian Border via the Annette Island, Alaska, radio range station; the Petersburg, Alaska, radio range station; the intersection of the northwest course of the Petersburg, Alaska, radio range and the southeast course of the Gustavus, Alaska, radio range; Gustavus, Alaska, radio range station; Haines, Alaska, radio range station to the intersection of the northeast course of the Haines, Alaska, radio range and the United States-Canadian Border.

[Amdt. 3, 13 F. R. 1227]

§ 600.639 *Blue civil airway No. 39 (Knoxville, Tenn., to United States-Canadian Border)*. From the Tri-City, Tenn., radio range station via a point located at latitude 37°20' and longitude 81°52'40" to the Charleston, W. Va., radio range station. From the intersection of the west course of the Elkins, W. Va., radio range and the southwest course of the Morgantown, W. Va., radio range via the Morgantown, W. Va., radio range station to the intersection of the northeast course of the Morgantown, W. Va., radio range and the east course of the Pittsburgh, Pa., radio range. From the intersection of the northeast course of the Altoona, Pa., radio range and the northeast course of the Pittsburgh, Pa., radio range via the intersection of the northeast course of the Altoona, Pa., radio range and the southwest course of the Elmira, N. Y., radio range; the Elmira, N. Y., radio range station to the intersection of the northeast course of the Elmira, N. Y., radio range and the south course of the Syracuse, N. Y., radio range. From the Syracuse, N. Y., radio range station via the intersection of the northwest course of the Syracuse, N. Y., radio range and the southwest course of the Watertown, N. Y., VHF radio range; Watertown,

N. Y., VHF radio range station; the intersection of the northeast course of the Watertown, N. Y., VHF radio range and the southwest course of Massena, N. Y., VHF radio range station to the intersection of the northeast course of the Massena, N. Y., VHF radio range and the United States-Canadian Border.

[Amdt. 1, 12 F. R. 6129]

§ 600.640 *Blue civil airway No. 40* (Concord, N. H., to Burlington, Vt.). From the Concord, N. H., radio range station via a point at 43°38' north latitude and 72°20' west longitude and a point at 44°12' north latitude and 72°34' west longitude to the Burlington, Vt., radio range station.

§ 600.641 *Blue civil airway No. 41* (New York, N. Y., to United States-Canadian Border). From the intersection of the northeast course of the Newark, N. J., radio range and the southeast course of the Stewart Field, N. Y., radio range via the New Haven, Conn., Municipal Airport; the Hartford, Conn., radio range station; the intersection of the northwest course of the Hartford, Conn., radio range and the south course of the Westfield, Mass., radio range to the Westfield, Mass., radio range station. From the Concord, N. H., radio range station to the Portland, Maine, radio range station. From the Bangor, Maine, radio range station to the intersection of the northeast course of the Bangor, Maine, radio range and the United States-Canadian Border excluding that portion lying more than 3 miles southeast of the northeast course of the Bangor, Maine, radio range between the radio range station and a point 25 miles northeast.

[Amdt. 6, 13 F. R. 3580]

§ 600.642 *Blue civil airway No. 42* (South Bend, Ind., to Battle Creek, Mich.). From the intersection of the east course of the South Bend, Ind., radio range and the south course of the Battle Creek, Mich., radio range to the Battle Creek, Mich., radio range station.

§ 600.643 *Blue civil airway No. 43* (Birmingham, Ala., to Nashville, Tenn.). From the intersection of the north course of the Birmingham, Ala., radio range and the southwest course of the Chattanooga, Tenn., radio range to a point located at 35°50' north latitude and 86°19' west longitude.

§ 600.644 *Blue civil airway No. 44* (Advance, Mo., to the United States-Canadian Border). From the Advance, Mo., radio range station via the Paducah, Ky., Paducah-McCracken County Airport, to the Evansville, Ind., radio range station. From the intersection of the east course of the Evansville, Ind., radio range and the southwest course of the Scotland, Ind., VHF radio range via Scotland, Ind., VHF radio range station to the intersection of the northeast course of the Scotland, Ind., VHF radio range and the west course of the Indianapolis, Ind., radio range. From the Indianapolis, Ind., radio range station via the Fort Wayne, Ind., radio range station; the intersection of the northeast course of the Fort Wayne, Ind., radio range and the east course of the Goshen, Ind., radio range; the intersection of the north

course of the Toledo, Ohio, radio range and the southwest course of the Windsor, Ontario, Canada, radio range to the intersection of the southwest course of the Windsor, Ontario, Canada, radio range and the United States-Canadian Border.

[Amdt. 17, 14 F. R. 2893]

§ 600.645 *Blue civil airway No. 45* (Lake Charles, La., to Baton Rouge, La.). From the intersection of the west course of the New Orleans, La., radio range and the southwest course of the Baton Rouge, La., radio range to the Baton Rouge, La., radio range station.

[Amdt. 1, 12 F. R. 6129]

§ 600.646 *Blue civil airway No. 46* (Los Angeles, Calif., to Oakland, Calif.). From the Lebec, Calif., fan marker to the Morgan Hill, Calif., fan marker.

[Amdt. 13, 13 F. R. 8603]

§ 600.647 *Blue civil airway No. 47* (Martinsburg, W. Va., to Philipsburg, Pa.). From the intersection of the southeast course of the Pittsburgh, Pa., radio range and the south course of the Altoona, Pa., radio range via the Altoona, Pa., radio range station to the intersection of the northeast course of the Altoona, Pa., radio range and the northeast course of the Pittsburgh, Pa., radio range.

§ 600.648 *Blue civil airway No. 48* (New York, N. Y., to New Hackensack, N. Y.). From the intersection of the northeast course of the Newark, N. J., radio range and the southeast course of the Stewart Field, N. Y., radio range to the intersection of the southeast course of the Stewart Field, N. Y., radio range and the south course of the New Hackensack, N. Y., radio range.

[Amdt. 1, 12 F. R. 6129]

§ 600.649 *Blue civil airway No. 49* (Atlantic City, N. J., to Philadelphia, Pa.). From the intersection of the southeast course of the Philadelphia, Pa., radio range and the southwest course of the Atlantic City, N. J., VHF radio range to the Philadelphia, Pa., radio range station.

[Amdt. 14, 14 F. R. 455]

§ 600.650 *Blue civil airway No. 50* (Bangor, Maine, to the United States-Canadian Border). From the intersection of the southeast course of the Bangor, Maine, radio range and the southwest course of the Pennfield Ridge, New Brunswick, Canada, radio range to the intersection of the southwest course of the Pennfield Ridge, New Brunswick, Canada, radio range and United States-Canadian Border.

[Amdt. 6, 13 F. R. 3580]

§ 600.651 *Blue civil airway No. 51* (Wendover, Utah, to Dubois, Idaho). From the intersection of the east course of the Wendover, Utah, radio range and the south course of the Lucin, Utah, radio range via the Lucin, Utah, radio range station; the intersection of the north course of the Lucin, Utah, radio range and the southwest course of the Burley, Idaho, radio range; Burley, Idaho, radio range station; the intersection of the northeast course of the Burley, Idaho,

radio range and the southwest course of the Pocatello, Idaho, radio range; Pocatello, Idaho, radio range station to the Dubois, Idaho, radio range station.

[Amdt. 13, 13 F. R. 8603]

§ 600.652 *Blue civil airway No. 52* (Paso Robles, Calif., to Fresno, Calif.). From the intersection of the southeast course of the Salinas, Calif., VHF radio range and the southwest course of the Fresno, Calif., radio range to the Fresno, Calif., radio range station.

[Amdt. 2, 12 F. R. 8044]

§ 600.653 *Blue civil airway No. 53* (Providence, R. I., to Hartford, Conn.). From the intersection of the southwest course of the Boston, Mass., radio range and the southeast course of the Hartford, Conn., radio range to the Hartford, Conn., radio range station.

[Amdt. 3, 13 F. R. 1227]

§ 600.654 *Blue civil airway No. 54* (Salinas, Calif., to Hamilton Field, Calif.). From the Salinas, Calif., VHF radio range station via the Evergreen, Calif., non-directional radio beacon to the San Francisco, Calif., radio range station. From the intersection of the northwest course of the Oakland, Calif., radio range and the southwest course of the Fairfield-Suisun, Calif. (AFB), radio range to a point at Latitude 38°02'45" Longitude 122°31'40".

[Amdt. 12, 13 F. R. 7399]

§ 600.655 *Blue civil airway No. 55* (Crestview, Fla., to Montgomery, Ala.). From the Crestview, Fla., radio range station to the Maxwell Field, Montgomery, Ala., radio range station.

[Amdt. 4, 13 F. R. 2257]

§ 600.656 *Blue civil airway No. 56* (Elizabeth City, N. C., to Washington, D. C.). From the Weeksville, N. C. (Coast Guard), radio range station via the intersection of the northwest course of the Weeksville, N. C. (Coast Guard), radio range and the southwest course of the Norfolk, Va., VHF radio range to the Norfolk, Va., VHF radio range station. From the intersection of the northwest course of the Norfolk, Va., radio range and the south course of the Langley Field, Va. (AFB), radio range via the Langley Field, Va. (AFB), radio range station; the intersection of the north course of the Langley Field, Va. (AFB), radio range and the southeast course of the Brandywine, Md., radio range to the Brandywine, Md., radio range station, excluding that portion more than 3 miles east of the south and north courses of the Langley Field, Va. (AFB), radio range and the southeast course of the Brandywine, Md., radio range, and excluding that portion more than 3 miles west of the southeast course of the Brandywine, Md., radio range and the north course of the Langley Field, Va. (AFB), radio range between the Brandywine, Md., radio range station and a point 18 miles south of the intersection of the north course of the Langley Field, Va. (AFB), radio range and the southeast course of the Brandywine, Md., radio range.

[Amdt. 11, 13 F. R. 7297]

§ 600.657 *Blue civil airway No. 57 (Elko, Nev., to Burley, Idaho)*. From the intersection of the northeast course of the Elko, Nev., radio range and the west course of the Lucin, Utah, radio range via the intersection of the northeast course of the Elko, Nev., radio range and the southwest course of the Burley, Idaho, radio range to the intersection of the southwest course of the Burley, Idaho, radio range and the north course of the Lucin, Utah, radio range.

[Amdt. 7, 13 F. R. 4730]

§ 600.658 *Blue civil airway No. 58 (Sioux Falls, S. Dak., to Watertown, S. Dak.)*. From the Sioux Falls, S. Dak., radio range station to the Watertown, S. Dak., radio range station.

[Amdt. 8, 13 F. R. 5656]

§ 600.659 *Blue civil airway No. 59 (Pensacola, Fla., to Goodway, Ala.)*. From the Pensacola, Fla., radio range station to the intersection of the north course of the Pensacola, Fla., radio range and the northeast course of the Mobile, Ala., radio range.

[Amdt. 10, 13 F. R. 6146]

§ 600.660 *Blue civil airway No. 60 (Sunnyvale, Calif., to Stockton, Calif.)*. From the Moffett Field, Calif. (Navy), radio range to the intersection of the northeast course of the Moffett Field, Calif. (Navy), radio range and the west course of the Stockton, Calif., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.661 *Blue civil airway No. 61 (Springfield, Mo., to Kansas City, Mo.)*. From the Springfield, Mo., radio range station via the intersection of the northwest course of the Springfield, Mo., radio range and the southeast course of the Kansas City, Mo., radio range to the intersection of the southeast course of the Kansas City, Mo., radio range and the north course of the Joplin, Mo., radio range.

[Amdt. 13, 13 F. R. 8603]

§ 600.662 *Blue civil airway No. 62 (Ypsilanti, Mich., to Flint, Mich.)*. From the intersection of the west course of the Detroit, Mich., radio range and the south course of the Salem, Mich., VHF radio range via the Salem, Mich., VHF radio range station to the Flint, Mich., non-directional radio marker beacon.

[Amdt. 13, 13 F. R. 8603]

§ 600.663 *Blue civil airway No. 63 (Olathe, Kans., to Topeka, Kans.)*. From the intersection of the northeast course of the Lebo, Kans., radio range and the south course of the Topeka, Kans., VHF radio range to the Topeka, Kans., VHF radio range station.

[Amdt. 17, 14 F. R. 2893]

§ 600.664 *Blue civil airway No. 64 (Lebo, Kans., to Topeka, Kans.)*. From the Lebo, Kans., radio range station to the Topeka, Kans. (AFB) radio range station.

[Amdt. 17, 14 F. R. 2893]

§ 600.665 *Blue civil airway No. 65 (Garden City, Kans., to Goodland,*

Kans.). From the Garden City, Kans., radio range station to the intersection of the north course of the Garden City, Kans., radio range and the east course of the Goodland, Kans., VHF radio range.

[Amdt. 17, 14 F. R. 2893]

PART 601—DESIGNATION OF CONTROL AREAS, CONTROL ZONES, AND REPORTING POINTS

GENERAL

- | | |
|-------|--------------------|
| Sec. | |
| 601.1 | Basis and purpose. |
| 601.2 | Definitions. |

CONTROL AREAS

- | | |
|--------|-------------------------------|
| 601.9 | Extent of control areas. |
| 601.10 | Designation of control areas. |

GREEN CIVIL AIRWAYS

- | | |
|--------|---|
| 601.11 | Green civil airway No. 1 control areas (United States-Canadian Border to Forest City, Maine). |
| 601.12 | Green civil airway No. 2 control areas (Seattle, Wash., to Boston, Mass.). |
| 601.13 | Green civil airway No. 3 control areas (San Francisco, Calif., to New York, N. Y.). |
| 601.14 | Green civil airway No. 4 control areas (Los Angeles, Calif., to Philadelphia, Pa.). |
| 601.15 | Green civil airway No. 5 control areas (Los Angeles, Calif., to Boston, Mass.). |

Sec.

- | | |
|---------------------|--|
| 601.16 | Green civil airway No. 6 control areas (Laredo, Tex., to Norfolk, Va.). |
| 601.17 | Green civil airway No. 7 control areas (Nome, Alaska, to Fairbanks, Alaska). |
| 601.18 | Green civil airway No. 8 control areas (Attu, Alaska, to Northway, Alaska). |
| AMBER CIVIL AIRWAYS | |
| 601.101 | Amber civil airway No. 1 control areas (United States-Mexican Border to Nome, Alaska). |
| 601.102 | Amber civil airway No. 2 control areas (Long Beach, Calif., to Point Barrow, Alaska). |
| 601.103 | Amber civil airway No. 3 control areas (El Paso, Tex., to Great Falls, Mont.). |
| 601.104 | Amber civil airway No. 4 control areas (Brownsville, Tex., to Minot, N. Dak.). |
| 601.105 | Amber civil airway No. 5 control areas (Grand Isle, La., to Milwaukee, Wis.). |
| 601.106 | Amber civil airway No. 6 control areas (Jacksonville, Fla., to United States-Canadian Border). |
| 601.107 | Amber civil airway No. 7 control areas (Key West, Fla., to Caribou, Maine). |
| 601.108 | Amber civil airway No. 8 control areas (Los Angeles, Calif., to The Dalles, Ore.). |
| 601.109 | Amber civil airway No. 9 control areas (Charleston, S. C., to New York, N. Y.). |

RED CIVIL AIRWAYS

- | | |
|---------|--|
| 601.201 | Red civil airway No. 1 control areas (Portland, Ore., to Kansas City, Mo.). |
| 601.202 | Red civil airway No. 2 control areas (Butte, Mont., to Rapid City, S. Dak.). |
| 601.203 | Red civil airway No. 3 control areas (Phillipsburg, Pa., to Hartford, Conn.). |
| 601.204 | Red civil airway No. 4 control areas (Otto, N. Mex., to Las Vegas, N. Mex.). |
| 601.205 | Red civil airway No. 5 control areas (Sioux Falls, S. Dak., to St. Paul, Minn.). |
| 601.206 | Red civil airway No. 6 control areas (Las Vegas, Nev., to Omaha, Nebr.). |
| 601.207 | Red civil airway No. 7 control areas (Atlanta, Ga., to Greensboro, N. C.). |
| 601.208 | Red civil airway No. 8 control areas (Altoona, Pa., to Wilkes-Barre, Pa.). |
| 601.209 | Red civil airway No. 9 control areas (San Diego, Calif., to Winslow, Ariz.). |
| 601.210 | Red civil airway No. 10 control areas (Pueblo, Colo., to Charleston, S. C.). |
| 601.211 | Red civil airway No. 11 control areas (Tulsa, Okla., to Boston, Mass.). |
| 601.212 | Red civil airway No. 12 control areas (Kansas City, Mo., to Detroit, Mich.). |
| 601.213 | Red civil airway No. 13 control areas (Sunbury, Pa., to Boston, Mass.). |
| 601.214 | Red civil airway No. 14 control areas (Lone Rock, Wis., to Louisville, Ky.). |
| 601.215 | Red civil airway No. 15 control areas (Las Vegas, Nev., to Gila Bend, Ariz.). |
| 601.216 | Red civil airway No. 16 control areas (Tallahassee, Fla., to Florence, S. C.). |
| 601.217 | Red civil airway No. 17 control areas (Fort Wayne, Ind., to Baltimore, Md.). |

Sec.
601.218 Red civil airway No. 18 control areas (Indianapolis, Ind., to Washington, D. C.).
601.219 Red civil airway No. 19 control areas (Washington D. C., to Grand Rapids, Mich.).
601.220 Red civil airway No. 20 control areas (Lansing, Mich., to Washington, D. C.).
601.221 Red civil airway No. 21 control areas (Pittsburgh, Pa., to Boston, Mass.).
601.222 Red civil airway No. 22 control areas (United States-Canadian Border to Buffalo, N. Y.).
601.223 Red civil airway No. 23 control areas (United States-Canadian Border to New York, N. Y.).
601.224 Red civil airway No. 24 control areas (Amarillo, Tex., to Oklahoma City, Okla.).
601.225 Red civil airway No. 25 control areas (Tallahassee, Fla., to Miami, Fla.).
601.226 Red civil airway No. 26 control areas (Syracuse, N. Y., to Millville, N. J.).
601.227 Red civil airway No. 27 control areas (Knoxville, Tenn., to Detroit, Mich.).
601.228 Red civil airway No. 28 control areas (Rockford, Ill., to Detroit, Mich.).
601.229 Red civil airway No. 29 control areas (Rochester, N. Y., to Baltimore, Md.).
601.230 Red civil airway No. 30 control areas (Shreveport, La., to Jacksonville, Fla.).
601.231 Red civil airway No. 31 control areas (Denver, Colo., to Minneapolis, Minn.).
601.232 Red civil airway No. 32 control areas (Laredo, Tex., to Houston, Tex.).
601.233 Red civil airway No. 33 control areas (Richmond, Va., to New Hackensack, N. Y.).
601.234 Red civil airway No. 34 control areas (Pulaski, Va., to Elizabeth City, N. C.).
601.235 Red civil airway No. 35 control areas (Pueblo, Colo., to Wichita, Kans.).
601.236 Red civil airway No. 36 control areas (Rochester, Minn., to La Crosse, Wis.).
601.237 Red civil airway No. 37 control areas (Dallas, Tex., to Washington, D. C.).
601.238 Red civil airway No. 38 control areas (Big Spring, Tex., to San Antonio, Tex.).
601.239 Red civil airway No. 39 control areas (Bethel, Alaska, to Fairbanks, Alaska).
601.240 Red civil airway No. 40 control areas (Shemya, Alaska, to Anchorage, Alaska).
601.241 Red civil airway No. 41 control areas (Yakutat, Alaska, to Gustavus, Alaska).
601.242 Red civil airway No. 42 control areas (Joliet, Ill., to La Fayette, Ind.).
601.243 Red civil airway No. 43 control areas (Chicago, Ill., to La Fayette, Ind.).
601.244 Red civil airway No. 44 control areas (Bellingham, Wash., to United States-Canadian Border).
601.245 Red civil airway No. 45 control areas (Washington, D. C., to Allentown, Pa.).
601.246 Red civil airway No. 46 control areas (Aberdeen, S. Dak., to Watertown, S. Dak.).
601.247 Red civil airway No. 47 control areas (Tampa, Fla., to Daytona Beach, Fla.).
601.248 Red civil airway No. 48 control areas (Missoula, Mont., to Livingston, Mont.).
601.249 Red civil airway No. 49 control areas (Elko, Nev., to Fort Bridger, Wyo.).

Sec.
601.250 Red civil airway No. 50 control areas (Galena, Alaska, to Fairbanks, Alaska).
601.251 Red civil airway No. 51 control areas (El Paso, Tex., to United States-Mexican Border).
601.252 Red civil airway No. 52 control areas (Memphis, Tenn., to Birmingham, Ala.).
601.253 Red civil airway No. 53 control areas (Joplin, Mo., to Springfield, Mo.).
601.254 Red civil airway No. 54 control areas (Burley, Idaho, to Salt Lake City, Utah).
601.255 Red civil airway No. 55 control areas (Burlington, Iowa, to Columbus, Ohio).
601.256 Red civil airway No. 56 control areas (Red Bluff, Calif., to Whitmore, Calif.).
601.257 Red civil airway No. 57 control areas (Moline, Ill., to Youngstown, Ohio).
601.258 Red civil airway No. 58 control areas (Salinas, Calif., to Hollister, Calif.).
601.259 Red civil airway No. 59 control areas (Gage, Okla., to Oklahoma City, Okla.).
601.260 Red civil airway No. 60 control areas (San Jose, Calif., to Stockton, Calif.).
601.261 Red civil airway No. 61 control areas (Pittsburgh, Pa., to Washington, D. C.).
601.262 Red civil airway No. 62 control areas (Lansing, Mich., to Pittsburgh, Pa.).
601.263 Red civil airway No. 63 control areas (Battle Creek, Mich., to the United States-Canadian Border).
601.264 Red civil airway No. 64 control areas (United States-Canadian Border to Annette Island, Alaska).
601.265 Red civil airway No. 65 control areas (Oceanside, Calif., to Blythe, Calif.).
601.266 Red civil airway No. 66 control areas (Santa Barbara, Calif., to Los Angeles, Calif.).
601.267 Red civil airway No. 67 control areas (Crestview, Fla., to Dothan, Ala.).
601.268 Red civil airway No. 68 control areas (El Paso, Tex., to Shreveport, La.).
601.269 Red civil airway No. 69 control areas (El Paso, Tex., to Big Spring, Tex.).
601.270 Red civil airway No. 70 control areas (Midland, Tex., to Oklahoma City, Okla.).
601.271 Red civil airway No. 71 control areas (Lubbock, Tex., to Wichita Falls, Tex.).
601.272 Red civil airway No. 72 control areas (Millville, N. J., to Newark, N. J.).
601.273 Red civil airway No. 73 control areas (Baltimore, Md., to Millville, N. J.).
601.274 Red civil airway No. 74 control areas (Louisville, Ky., to Cincinnati, Ohio).
601.275 Red civil airway No. 75 control areas (U. S.-Canadian Border, Vancouver, B. C., to U. S.-Canadian Border, Abbotsford, B. C.).
601.276 Red civil airway No. 76 control areas (Williams, Calif., to Auburn, Calif.).
601.277 Red civil airway No. 77 control areas (Richmond, Va., to Millville, N. J.).
601.278 Red civil airway No. 78 control areas (Medford, Oreg., to Klamath Falls, Oreg.).
601.279 Red civil airway No. 79 control areas (Port Angeles, Wash., to Everett, Wash.).
601.280 Red civil airway No. 80 control areas (Lewistown, Mont., to Miles City, Mont.).

Sec.
601.281 Red civil airway No. 81 control areas (Parkersburg, W. Va., to Elkins, W. Va.).
601.282 Red civil airway No. 82 control areas (Skwentna, Alaska, to Anchorage, Alaska).
601.283 Red civil airway No. 83 control areas (Tucson, Ariz., to Rodeo, N. Mex.).
601.284 Red civil airway No. 84 control areas (New Orleans, La., to Biloxi, Miss.).
601.285 Red civil airway No. 85 control areas (Dayton, Ohio, to Mansfield, Ohio).

BLUE CIVIL AIRWAYS

601.601 Blue civil airway No. 1 control areas (Pendleton, Oreg., to Spokane, Wash.).
601.602 Blue civil airway No. 2 control areas (Birmingham, Ala., to Erie, Pa.).
601.603 Blue civil airway No. 3 control areas (Tallahassee, Fla., to La Fayette, Ind.).
601.604 Blue civil airway No. 4 control areas (Nantucket, Mass., to United States-Canadian Border).
601.605 Blue civil airway No. 5 control areas (Galveston, Tex., to Salina, Kans.).
601.606 Blue civil airway No. 6 control areas (Abilene, Tex., to Muskegon, Mich.).
601.607 Blue civil airway No. 7 control areas (Paso Robles, Calif., to Williams, Calif.).
601.608 Blue civil airway No. 8 control areas (Fargo, N. Dak., to United States-Canadian Border).
601.609 Blue civil airway No. 9 control areas (Columbia, Mo., to United States-Canadian Border).
601.610 Blue civil airway No. 10 control areas (Fresno, Calif., to Williams, Calif.).
601.611 Blue civil airway No. 11 control areas (Cleveland, Ohio, to Niagara Falls, N. Y.).
601.612 Blue civil airway No. 12 control areas (The Dalles, Oreg., to Ellensburg, Wash.).
601.613 Blue civil airway No. 13 control areas (Houston, Tex., to Minneapolis, Minn.).
601.614 Blue civil airway No. 14 control areas (El Centro, Calif., to Sacramento, Calif.).
601.615 Blue civil airway No. 15 control areas (Huntington, W. Va., to Erie, Pa.).
601.616 Blue civil airway No. 16 control areas (Dillon, Mont., to Helena, Mont.).
601.617 Blue civil airway No. 17 control areas (Millinocket, Maine, to Presque Isle, Maine).
601.618 Blue civil airway No. 18 control areas (Philadelphia, Pa., to Burlington, Vt.).
601.619 Blue civil airway No. 19 control areas (Miami, Fla., to Orlando, Fla.).
601.620 Blue civil airway No. 20 control areas (Atlantic City, N. J., to Allentown, Pa.).
601.621 Blue civil airway No. 21 control areas (Charleston, W. Va., to Erie, Pa.).
601.622 Blue civil airway No. 22 control areas (Memphis, Tenn., to Wichita, Kans.).
601.623 Blue civil airway No. 23 control areas (Detroit, Mich., to Flint, Mich.).
601.624 Blue civil airway No. 24 control areas (El Centro, Calif., to Riverside, Calif.).
601.625 Blue civil airway No. 25 control areas (Cordova, Alaska, to Big Delta, Alaska).
601.626 Blue civil airway No. 26 control areas (Anchorage, Alaska, to Nenana, Alaska).

Sec.		Sec.		Sec.	
601.627	Blue civil airway No. 27 control areas (Kodiak, Alaska, to Kotzebue, Alaska).	601.657	Blue civil airway No. 57 control areas (Elko, Nev., to Burley, Idaho).	601.1031	Control area extension (North Platte, Nebr.).
601.628	Blue civil airway No. 28 control areas (Charleston, S. C., to Spartanburg, S. C.).	601.658	Blue civil airway No. 58 control areas (Sioux Falls, S. Dak., to Watertown, S. Dak.).	601.1032	Control area extension (Scottsbluff, Nebr.).
601.629	Blue civil airway No. 29 control areas (Raleigh, N. C., to Lynchburg, Va.).	601.659	Blue civil airway No. 59 control areas (Pensacola, Fla., to Goodway, Ala.).	601.1033	Control area extension (St. Joseph, Mo.).

DESIGNATION OF REPORTING POINTS

Sec.	
601.4001	Designation of reporting points.
GREEN CIVIL AIRWAYS	
601.4011	Green civil airway No. 1 (United States-Canadian Border to Forest City, Maine).
601.4012	Green civil airway No. 2 (Seattle, Wash., to Boston, Mass.).
601.4013	Green civil airway No. 3 (San Francisco, Calif., to New York, N. Y.).
601.4014	Green civil airway No. 4 (Los Angeles, Calif., to Philadelphia, Pa.).
601.4015	Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.).
601.4016	Green civil airway No. 6 (Laredo, Tex., to Norfolk, Va.).
601.4017	Green civil airway No. 7 (Nome, Alaska, to Fairbanks, Alaska).
601.4018	Green civil airway No. 8 (Attu, Alaska, to Northway, Alaska).
AMBER CIVIL AIRWAYS	
601.4101	Amber civil airway No. 1 (United States-Mexican Border to Nome, Alaska).
601.4102	Amber civil airway No. 2 (Long Beach, Calif., to Point Barrow, Alaska).
601.4103	Amber civil airway No. 3 (El Paso, Tex., to Great Falls, Mont.).
601.4104	Amber civil airway No. 4 (Brownsville, Tex., to Minot, N. Dak.).
601.4105	Amber civil airway No. 5 (Grand Isle, La., to Milwaukee, Wis.).
601.4106	Amber civil airway No. 6 (Jacksonville, Fla., to United States-Canadian Border).
601.4107	Amber civil airway No. 7 (Key West, Fla., to Caribou, Maine).
601.4108	Amber civil airway No. 8 (Los Angeles, Calif., to The Dalles, Oreg.).
601.4109	Amber civil airway No. 9 (Charleston, S. C., to New York, N. Y.).
RED CIVIL AIRWAYS	
601.4201	Red civil airway No. 1 (Portland, Oreg., to Kansas City, Mo.).
601.4202	Red civil airway No. 2 (Butte, Mont., to Rapid City, S. Dak.).
601.4203	Red civil airway No. 3 (Phillipsburg, Pa., to Hartford, Conn.).
601.4204	Red civil airway No. 4 (Otto, N. Mex., to Las Vegas, N. Mex.).
601.4205	Red civil airway No. 5 (Sioux Falls, S. Dak., to St. Paul, Minn.).
601.4206	Red civil airway No. 6 (Las Vegas, Nev., to Omaha, Nebr.).
601.4207	Red civil airway No. 7 (Atlanta, Ga., to Greensboro, N. C.).
601.4208	Red civil airway No. 8 (Altoona, Pa., to Wilkes-Barre, Pa.).
601.4209	Red civil airway No. 9 (San Diego, Calif., to Winslow, Ariz.).
601.4210	Red civil airway No. 10 (Pueblo, Colo., to Charleston, S. C.).
601.4211	Red civil airway No. 11 (Tulsa, Okla., to Boston, Mass.).
601.4212	Red civil airway No. 12 (Kansas City, Mo., to Detroit, Mich.).
601.4213	Red civil airway No. 13 (Sunnyvale, Pa., to Boston, Mass.).
601.4214	Red civil airway No. 14 (Lone Rock, Wis., to Louisville, Ky.).
601.4215	Red civil airway No. 15 (Las Vegas, Nev., to Gila Bend, Ariz.).
601.4216	Red civil airway No. 16 (Tallahassee, Fla., to Florence, S. C.).
601.4217	Red civil airway No. 17 (Fort Wayne, Ind., to Baltimore, Md.).
601.4218	Red civil airway No. 18 (Indianapolis, Ind., to Washington, D. C.).
601.4219	Red civil airway No. 19 (Washington, D. C., to Grand Rapids, Mich.).
601.4220	Red civil airway No. 20 (Lansing, Mich., to Washington, D. C.).

Sec.
601.4221 Red civil airway No. 21 (Pittsburgh, Pa., to Boston, Mass.).
601.4222 Red civil airway No. 22 (United States-Canadian Border to Rochester, N. Y.).
601.4223 Red civil airway No. 23 (United States-Canadian Border to New York, N. Y.).
601.4224 Red civil airway No. 24 (Amarillo, Tex., to Oklahoma City, Okla.).
601.4225 Red civil airway No. 25 (Tallahassee, Fla., to Miami, Fla.).

OTHER REPORTING POINTS

- 601.5001 Other reporting points.

AUTHORITY: §§ 601.1 to 601.5001 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply secs. 301, 302, 307, 52 Stat. 985, 986; 49 U. S. C. 451, 452, 457.

SOURCE: §§ 601.1 to 601.5001 appear at 12 F. R. 4210 as amended by Amendment 3, 12 F. R. 6906, except as noted following sections affected.

GENERAL

§ 601.1 *Basis and purpose.* The basis of this part is found in section 308 of the Civil Aeronautics Act of 1938, as amended (52 Stat. 986, 54 Stat. 1233, 1235, 1236; 49 U. S. C. 458), and in Special Regulation No. 197 of the Civil Aeronautics Board (6 F. R. 6348). The purpose of this part is to designate control areas, airport approach zones, control zones and reporting points in order to provide for the safety of aircraft operating in interstate, overseas, and foreign air commerce.

§ 601.2 *Definitions.* As used in this part:

(a) "Control area" means an airspace of defined dimensions extending upward from an altitude of 700 feet above the surface within which air traffic control is exercised.

(b) [Unassigned.]

(c) "Control zone" means an airspace of defined dimensions extending upward from the surface to include one or more airports and within which rules additional to those governing flight in control areas apply for the protection of air traffic.

(d) "Reporting point" means a geographic location in relation to which the position of an aircraft shall be reported.

[Amdt. 3, 12 F. R. 6906]

CONTROL AREAS

§ 601.9 *Extent of control areas.* Whenever a point prescribed for the purpose of the designation of a control area coincides with a point specified in designating the centerline of an airway, except as provided in §§ 601.10-601.1155, such control area shall include all of the airway within a 10-mile radius of such point.

§ 601.10 *Designation of control areas.* The portions of the Civil Airways described in §§ 601.11-601.1155 are designated as control areas.

GREEN CIVIL AIRWAYS

§ 601.11 *Green civil airway No. 1 control areas (United States-Canadian Border to Forest City, Maine).* All of Green civil airway No. 1.

§ 601.12 *Green civil airway No. 2 control areas (Seattle, Wash., to Boston, Mass.).* All of Green civil airway No. 2.

§ 601.13 *Green civil airway No. 3 control areas (San Francisco, Calif., to New York, N. Y.).* All of Green civil airway No. 3.

§ 601.14 *Green civil airway No. 4 control areas (Los Angeles, Calif., to Philadelphia, Pa.).* All of Green civil airway No. 4.

§ 601.15 *Green civil airway No. 5 control areas (Los Angeles, Calif., to Boston, Mass.).* All of Green civil airway No. 5.

§ 601.16 *Green civil airway No. 6 control areas (Laredo, Tex., to Norfolk, Va.).* All of Green civil airway No. 6.

[Amdt. 1, 12 F. R. 6129]

§ 601.17 *Green civil airway No. 7 control areas (Nome, Alaska, to Fairbanks, Alaska).* From a line extended at right angles across such airway through a point 50 miles west of the Fairbanks, Alaska, radio range station to the Fairbanks, Alaska, radio range station.

§ 601.18 *Green civil airway No. 8 control areas (Attu, Alaska, to Northway, Alaska).* From a line extended at right angles across such airway through a point 25 miles southwest of Port Heiden, Alaska, radio range station to a line extended at right angles across such airway through a point 50 miles northeast of Anchorage, Alaska, radio range station. From a line extended at right angles across such airway through a point 50 miles southwest of the Northway, Alaska, radio range station to the Northway, Alaska, radio range station.

[Amdt. 12, 13 F. R. 5657]

AMBER CIVIL AIRWAYS

§ 601.101 *Amber civil airway No. 1 control areas (United States-Mexican Border to Nome, Alaska).* Those portions of Amber civil airway No. 1 within the limits of the continental United States, and from a line extended at right angles across such airway through a point 50 miles southeast of the Cordova, Alaska, radio range station to a line extended at right angles across such airway through a point 25 miles northwest of the Skwentna, Alaska, radio range station.

[Amdt. 12, 13 F. R. 5657]

§ 601.102 *Amber civil airway No. 2 control areas (Long Beach, Calif., to Point Barrow, Alaska).* Those portions of Amber civil airway No. 2 within the limits of the continental United States; from the Alaska-Canadian Border to the Fairbanks, Alaska, radio range station.

[Amdt. 10, 13 F. R. 4731]

§ 601.103 *Amber civil airway No. 3 control areas (El Paso, Tex., to Great Falls, Mont.).* All of Amber civil airway No. 3.

§ 601.104 *Amber civil airway No. 4 control areas (Brownsville, Tex., to*

Minot, N. Dak.). All of Amber civil airway No. 4.

§ 601.105 *Amber civil airway No. 5 control areas (Grand Isle, La., to Milwaukee, Wis.).* All of Amber civil airway No. 5.

[Amdt. 12, 13 F. R. 3657]

§ 601.106 *Amber civil airway No. 6 control areas (Jacksonville, Fla., to United States-Canadian Border).* All of Amber civil airway No. 6.

§ 601.107 *Amber civil airway No. 7 control areas (Key West, Fla., to Caribou, Maine).* All of Amber civil airway No. 7.

§ 601.108 *Amber civil airway No. 8 control areas (Los Angeles, Calif., to The Dalles, Oreg.).* All of Amber civil airway No. 8.

[Amdt. 1, 12 F. R. 6129]

§ 601.109 *Amber civil airway No. 9 control areas (Charleston, S. C., to New York, N. Y.).* All of Amber civil airway No. 9.

[Amdt. 9, 13 F. R. 3813, as amended by Amdt. 15, 7298]

RED CIVIL AIRWAYS

§ 601.201 *Red civil airway No. 1 control areas (Portland, Oreg., to Kansas City, Mo.).* All of Red civil airway No. 1.

[Amdt. 5, 13 F. R. 1227]

§ 601.202 *Red civil airway No. 2 control areas (Butte, Mont., to Rapid City, S. Dak.).* All of Red civil airway No. 2.

§ 601.203 *Red civil airway No. 3 control areas (Phillipsburg, Pa., to Hartford, Conn.).* All of Red civil airway No. 3.

§ 601.204 *Red civil airway No. 4 control areas (Otto, N. Mex., to Las Vegas, N. Mex.).* All of Red civil airway No. 4.

§ 601.205 *Red civil airway No. 5 control areas (Sioux Falls, S. Dak., to St. Paul, Minn.).* All of Red civil airway No. 5.

§ 601.206 *Red civil airway No. 6 control areas (Las Vegas, Nev., to Omaha, Nebr.).* All of Red civil airway No. 6.

[Amdt. 12, 13 F. R. 5657]

§ 601.207 *Red civil airway No. 7 control areas (Atlanta, Ga., to Greensboro, N. C.).* All of Red civil airway No. 7.

§ 601.208 *Red civil airway No. 8 control areas (Altoona, Pa., to Wilkes-Barre, Pa.).* All of Red civil airway No. 8.

§ 601.209 *Red civil airway No. 9 control areas (San Diego, Calif., to Winslow, Ariz.).* All of Red civil airway No. 9.

§ 601.210 *Red civil airway No. 10 control areas (Pueblo, Colo., to Charleston, S. C.).* All of Red civil airway No. 10.

[Amdt. 7, 13 F. R. 2649]

§ 601.211 *Red civil airway No. 11 control areas (Tulsa, Okla., to Boston, Mass.).* All of Red civil airway No. 11.

§ 601.212 *Red civil airway No. 12 control areas (Kansas City, Mo., to Detroit, Mich.).* All of Red civil airway No. 12.

§ 601.213 *Red civil airway No. 13 control areas (Sunbury, Pa., to Boston, Mass.).* All of Red civil airway No. 13.

§ 601.214 *Red civil airway No. 14 control areas* (Lone Rock, Wis., to Louisville, Ky.). All of Red civil airway No. 14.

§ 601.215 *Red civil airway No. 15 control areas* (Las Vegas, Nev., to Gila Bend, Ariz.). All of Red civil airway No. 15.

§ 601.216 *Red civil airway No. 16 control areas* (Tallahassee, Fla., to Florence, S. C.). All of Red civil airway No. 16.

[12 F. R. 4210, as amended by Amdt. 18, 14 F. R. 456]

§ 601.217 *Red civil airway No. 17 control areas* (Fort Wayne, Ind., to Baltimore, Md.). All of Red civil airway No. 17.

§ 601.218 *Red civil airway No. 18 control areas* (Indianapolis, Ind., to Washington, D. C.). All of Red civil airway No. 18.

§ 601.219 *Red civil airway No. 19 control areas* (Washington, D. C., to Grand Rapids, Mich.). All of Red civil airway No. 19.

§ 601.220 *Red civil airway No. 20 control areas* (Lansing, Mich., to Washington, D. C.). All of Red civil airway No. 20.

[12 F. R. 4210 as amended by Amdt. 15, 13 F. R. 7298]

§ 601.221 *Red civil airway No. 21 control areas* (Pittsburgh, Pa., to Boston, Mass.). All of Red civil airway No. 21.

[Amdt. 1, 12 F. R. 6129, as amended by Amdt. 22, 14 F. R. 2893]

§ 601.222 *Red civil airway No. 22 control areas* (United States-Canadian Border to Buffalo, N. Y.). All of Red civil airway No. 22.

§ 601.223 *Red civil airway No. 23 control areas* (United States-Canadian Border to New York, N. Y.). All of Red civil airway No. 23 between the intersection of the southeast course of the Toronto, Ontario, Canada, radio range and the United States-Canadian Border and the intersection of the east course of the New York, N. Y. (LaGuardia), radio range and the northeast course of the Mitchel Field, N. Y. (Army), radio range.

[Amdt. 1, 12 F. R. 6129]

§ 601.224 *Red civil airway No. 24 control areas* (Amarillo, Tex., to Oklahoma City, Okla.). All of Red civil airway No. 24.

§ 601.225 *Red civil airway No. 25 control areas* (Tallahassee, Fla., to Miami, Fla.). All of Red civil airway No. 25.

§ 601.226 *Red civil airway No. 26 control areas* (Syracuse, N. Y., to Millville, N. J.). All of Red civil airway No. 26.

[12 F. R. 4210 as amended by Amdt. 17, 13 F. R. 8604]

§ 601.227 *Red civil airway No. 27 control areas* (Knoxville, Tenn., to Detroit, Mich.). All of Red civil airway No. 27 from the Knoxville, Tenn., radio range station to a line extended at right angles across such airway through a point 25 miles northeast of the Knoxville, Tenn., radio range station and from a line extended at right angles across such airway through a point 25 miles southeast of the

Lexington, Ky., VHF radio range station to the intersection of the north course of the Toledo, Ohio, radio range and the west course of the Romulus, Mich., radio range.

[Amdt. 12, 13 F. R. 5657]

§ 601.228 *Red civil airway No. 28 control areas* (Rockford, Ill., to Detroit, Mich.). All of Red civil airway No. 28.

[12 F. R. 4210, as amended by Amdt. 22, 14 F. R. 2893]

§ 601.229 *Red civil airway No. 29 control areas* (Rochester, N. Y., to Baltimore, Md.). All of Red civil airway No. 29.

§ 601.230 *Red civil airway No. 30 control areas* (Shreveport, La., to Jacksonville, Fla.). All of Red civil airway No. 30.

[Amdt. 6, 13 F. R. 2257]

§ 601.231 *Red civil airway No. 31 control areas* (Denver, Colo., to Minneapolis, Minn.). All of Red civil airway No. 31.

[Amdt. 6, 13 F. R. 2257]

§ 601.232 *Red civil airway No. 32 control areas* (Laredo, Tex., to Houston, Tex.). All of Red civil airway No. 32.

§ 601.233 *Red civil airway No. 33 control areas* (Richmond, Va., to New Hackensack, N. Y.). All of Red civil airway No. 33.

§ 601.234 *Red civil airway No. 34 control areas* (Pulaski, Va., to Elizabeth City, N. C.). All of Red civil airway No. 34.

[Amdt. 7, 13 F. R. 2649]

§ 601.235 *Red civil airway No. 35 control areas* (Pueblo, Colo., to Wichita, Kans.). All of Red civil airway No. 35.

§ 601.236 *Red civil airway No. 36 control areas* (Rochester, Minn., to LaCrosse, Wis.). All of Red civil airway No. 36.

§ 601.237 *Red civil airway No. 37 control areas* (Dallas, Tex., to Washington, D. C.). All of Red civil airway No. 37.

§ 601.238 *Red civil airway No. 38 control areas* (Big Spring, Tex., to San Antonio, Tex.). All of Red civil airway No. 38.

§ 601.239 *Red civil airway No. 39 control areas* (Bethel, Alaska, to Fairbanks, Alaska). From a line extended at right angles across such airway through a point 25 miles southwest of the Nenana, Alaska, radio range station to the Fairbanks, Alaska, radio range station.

§ 601.240 *Red civil airway No. 40 control areas* (Shemya, Alaska, to Anchorage, Alaska). From a line extended at right angles across such airway through a point 50 miles south of the Homer, Alaska, radio range station to the Anchorage (Merrill), Alaska, radio range station.

[Amdt. 6, 13 F. R. 2257]

§ 601.241 *Red civil airway No. 41 control areas* (Yakutat, Alaska, to Gustavus, Alaska). From a line extended at right angles across such airway through a point 50 miles southwest of the Gustavus, Alaska, radio range station to the Gustavus, Alaska, radio range station.

§ 601.242 *Red civil airway No. 42 control areas* (Joliet, Ill., to La Fayette, Ind.). All of Red civil airway No. 42.

§ 601.243 *Red civil airway No. 43 control areas* (Chicago, Ill., to La Fayette, Ind.). All of Red civil airway No. 43.

§ 601.244 *Red civil airway No. 44 control areas* (Bellingham, Wash., to United States-Canadian Border). All of Red civil airway No. 44.

§ 601.245 *Red civil airway No. 45 control areas* (Washington, D. C., to Allentown, Pa.). All of Red civil airway No. 45.

§ 601.246 *Red civil airway No. 46 control areas* (Aberdeen, S. Dak., to Watertown, S. Dak.). All of Red civil airway No. 46.

[Amdt. 1, 12 F. R. 6129]

§ 601.247 *Red civil airway No. 47 control areas* (Tampa, Fla., to Daytona Beach, Fla.). All of Red civil airway No. 47.

§ 601.248 *Red civil airway No. 48 control areas* (Missoula, Mont., to Livingston, Mont.). All of Red civil airway No. 48.

§ 601.249 *Red civil airway No. 49 control areas* (Elko, Nev., to Fort Bridger, Wyo.). All of Red civil airway No. 49.

§ 601.250 *Red civil airway No. 50 control areas* (Galena, Alaska, to Fairbanks, Alaska). No control area designation.

[Amdt. 7, 13 F. R. 2649]

§ 601.251 *Red civil airway No. 51 control areas* (El Paso, Tex., to United States-Mexican Border). No control area designation.

[Amdt. 6, 13 F. R. 2257]

§ 601.252 *Red civil airway No. 52 control areas* (Memphis, Tenn., to Birmingham, Ala.). All of Red civil airway No. 52.

§ 601.253 *Red civil airway No. 53 control areas* (Joplin, Mo., to Springfield, Mo.). All of Red civil airway No. 53.

[Amdt. 15, 13 F. R. 7298]

§ 601.254 *Red civil airway No. 54 control areas* (Burley, Idaho, to Salt Lake City, Utah). All of Red civil airway No. 54.

§ 601.255 *Red civil airway No. 55 control areas* (Burlington, Iowa, to Columbus, Ohio). All of Red civil airway No. 55.

[12 F. R. 4210, as amended by Amdt. 22, 14 F. R. 2893]

§ 601.256 *Red civil airway No. 56 control areas* (Red Bluff, Calif., to Whitmore, Calif.). All of Red civil airway No. 56.

[Amdt. 1, 12 F. R. 6129]

§ 601.257 *Red civil airway No. 57 control areas* (Moline, Ill., to Youngstown, Ohio). All of Red civil airway No. 57.

[12 F. R. 4210, as amended by Amdt. 22, 14 F. R. 2893]

§ 601.258 *Red civil airway No. 58 control areas* (Salinas, Calif., to Hollister, Calif.). All of Red civil airway No. 58.

[Amdt. 4, 12 F. R. 8044]

§ 601.259 *Red civil airway No. 59 control areas (Gage, Okla., to Oklahoma City, Okla.). All of Red civil airway No. 59.*

[12 F. R. 4210, as amended by Amdt. 17, 13 F. R. 8604, Amdt. 22, 14 F. R. 2893]

§ 601.260 *Red civil airway No. 60 control areas (San Jose, Calif., to Stockton, Calif.). All of Red civil airway No. 60.*

[Amdt. 4, 12 F. R. 8044]

§ 601.261 *Red civil airway No. 61 control areas (Pittsburgh, Pa., to Washington, D. C.). All of Red civil airway No. 61.*

§ 601.262 *Red civil airway No. 62 control areas (Lansing, Mich., to Pittsburgh, Pa.). All of Red civil airway No. 62.*

[Amdt. 1, 12 F. R. 6129, as amended by Amdt. 22, 14 F. R. 2893]

§ 601.263 *Red civil airway No. 63 control areas (Battle Creek, Mich., to the United States-Canadian Border). All of Red civil airways No. 63.*

§ 601.633 *Blue civil airway No. 33 control areas (Archbold, Ohio, to Detroit, Mich.)*. All of Blue civil airway No. 33.

[12 F. R. 4210, as amended by Amdt. 17, 13 F. R. 8605]

§ 601.634 *Blue civil airway No. 34 control areas (Little Rock, Ark., to Tulsa, Okla.)*. All of Blue civil airway No. 34 from a line extended at right angles across such airway through a point 25 miles southeast of the Tulsa, Okla., radio range station to the Tulsa, Okla., radio range station.

§ 601.635 *Blue civil airway No. 35 control areas (Topeka, Kans., to Kirksville, Mo.)*. All of Blue civil airway No. 35.

[Amdt. 7, 13 F. R. 2649, as amended by Amdt. 22, 14 F. R. 2894]

§ 601.636 *Blue civil airway No. 36 control areas (Thurman, Colo., to North Platte, Nebr.)*. All of Blue civil airway No. 36.

[12 F. R. 4210, as amended by Amdt. 22, 14 F. R. 2894]

§ 601.637 *Blue civil airway No. 37 control areas (Casper, Wyo., to Rapid City, S. Dak.)*. All of Blue civil airway No. 37.

§ 601.638 *Blue civil airway No. 38 control areas (Annette Island, Alaska, to United States-Canadian Border)*. From the intersection of the south course of the Annette Island, Alaska, radio range and the United States-Canadian Border to a line extended across such airway through a point 50 miles north of the Annette Island, Alaska, radio range station. From a line extended at right angles across such airway through a point 50 miles southeast of the Gustavus, Alaska, radio

range station to the United States-Canadian Border.

[Amdt. 10, 13 F. R. 4731]

§ 601.639 *Blue civil airway No. 39 control areas (Knoxville, Tenn., to United States-Canadian Border)*. All of Blue civil airway No. 39 from the Tri-City, Tenn., radio range station to a line extended at right angles across such airway through a point 25 miles northeast of the Tri-City, Tenn., radio range station; from a line extended at right angles across such airway through a point 25 miles south of the Charleston, W. Va., radio range station; from the intersection of the west course of the Elkins, W. Va., radio range and the southwest course of the Morgantown, Pa., radio range to the United States-Canadian Border.

[Amdt. 1, 12 F. R. 6130]

§ 601.640 *Blue civil airway No. 40 control areas (Concord, N. H., to Burlington, Vt.)*. All of Blue civil airway No. 40.

§ 601.641 *Blue civil airway No. 41 control areas (New York, N. Y., to United States-Canadian Border)*. All of Blue civil airway No. 41.

§ 601.642 *Blue civil airway No. 42 control areas (South Bend, Ind., to Battle Creek, Mich.)*. All of Blue civil airway No. 42.

§ 601.643 *Blue civil airway No. 43 control areas (Birmingham, Ala., to Nashville, Tenn.)*. No control area designation.

[Amdt. 5, 13 F. R. 1227]

§ 601.644 *Blue civil airway No. 44 control areas (Advance, Mo., to United States-Canadian Border)*. All of Blue civil airway No. 44 from the Advance, Mo., radio range station to a line extended at right angles across such airway through a point 25 miles east of the Advance, Mo., radio range station; from a line extended at right angles across such airway through a point 50 miles southwest of the Evansville, Ind., radio range station to the United States-Canadian Border.

[Amdt. 22, 14 F. R. 2894]

§ 601.645 *Blue civil airway No. 45 control areas (Lake Charles, La., to Baton Rouge, La.)*. All of Blue civil airway No. 45.

[Amdt. 12, 13 F. R. 5657]

§ 601.646 *Blue civil airway No. 46 control areas (Los Angeles, Calif., to Oakland, Calif.)*. No control area designation.

[Amdt. 5, 13 F. R. 1227]

§ 601.647 *Blue civil airway No. 47 control areas (Martinsburg, W. Va., to Philipsburg, Pa.)*. All of Blue civil airway No. 47.

§ 601.648 *Blue civil airway No. 48 control areas (New York, N. Y., to New Hackensack, N. Y.)*. All of Blue civil airway No. 48.

§ 601.649 *Blue civil airway No. 49 control areas (Atlantic City, N. J., to Phila-*

delphia, Pa.). All of Blue civil airway No. 49.

[12 F. R. 4210, as amended by Amdt. 18, 14 F. R. 456]

§ 601.650 *Blue civil airway No. 50 control areas (Bangor, Maine, to United States-Canadian Border)*. All of Blue civil airway No. 50 between the intersection of the northeast course of the Bangor, Maine, radio range and the southwest course of the Pennfield Ridge, New Brunswick, Canada, radio range and the intersection of the southwest course of the Pennfield Ridge, New Brunswick, Canada, radio range and the United States-Canadian Border.

[Amdt. 1, 12 F. R. 6130]

§ 601.651 *Blue civil airway No. 51 control areas (Wendover, Utah, to Dubois, Idaho)*. All of Blue civil airway No. 51.

[Amdt. 4, 12 F. R. 8044, as amended by Amdt. 17, 13 F. R. 8605]

§ 601.652 *Blue civil airway No. 52 control area (Paso Robles, Calif., to Fresno, Calif.)*. All of Blue civil airway No. 52.

[Amdt. 4, 12 F. R. 8044]

§ 601.653 *Blue civil airway No. 53 control areas (Providence, R. I., to Hartford, Conn.)*. All of Blue civil airway No. 53.

[Amdt. 5, 13 F. R. 1228]

§ 601.654 *Blue civil airway No. 54 control areas (Salinas, Calif., to Hamilton Field, Calif.)*. All of Blue civil airway No. 54.

[Amdt. 5, 13 F. R. 1225, as amended by Amdt. 16, 13 F. R. 7400]

§ 601.655 *Blue civil airway No. 55 control areas (Crestview, Fla., to Montgomery, Ala.)*. All of Blue civil airway No. 55.

[Amdt. 6, 13 F. R. 2257]

§ 601.656 *Blue civil airway No. 56 control areas (Elizabeth City, N. C., to Washington, D. C.)*. All of Blue civil airway No. 56.

[Amdt. 7, 13 F. R. 2649, as amended by Amdt. 15, 13 F. R. 7298]

§ 601.657 *Blue civil airway No. 57 control areas (Elko, Nev., to Burley, Idaho)*. All of Blue civil airway No. 57.

[Amdt. 10, 13 F. R. 4731]

§ 601.658 *Blue civil airway No. 58 control areas (Sioux Falls, S. Dak., to Watertown, S. Dak.)*. All of Blue civil airway No. 58.

[Amdt. 12, 13 F. R. 5657]

§ 601.659 *Blue civil airway No. 59 control areas (Pensacola, Fla., to Goodway, Ala.)*. All of Blue civil airway No. 59.

[Amdt. 14, 13 F. R. 6147]

§ 601.660 *Blue civil airway No. 60 control areas (Sunnyvale, Calif., to Stockton, Calif.)*. All of Blue civil airway No. 60.

[Amdt. 17, 13 F. R. 8605]

§ 601.661 *Blue civil airway No. 61 control areas (Springfield, Mo., to Kansas City, Mo.)*. All of Blue civil airway No. 61.

[Amdt. 17, 13 F. R. 8605]

§ 601.662 *Blue civil airway No. 62 control areas (Ypsilanti, Mich., to Flint, Mich.)*. All of Blue civil airway No. 62.

[Amdt. 17, 13 F. R. 8605]

§ 601.663 *Blue civil airway No. 63 control areas (Olathe, Kans., to Topeka, Kans.)*. All of Blue civil airway No. 63.

[Amdt. 22, 14 F. R. 2894]

§ 601.664 *Blue civil airway No. 64 control areas (Lebo, Kans., to Topeka, Kans.)*. All of Blue civil airway No. 64.

[Amdt. 22, 14 F. R. 2894]

§ 601.665 *Blue civil airway No. 65 control areas (Garden City, Kans., to Goodland, Kans.)*. All of Blue civil airway No. 65.

[Amdt. 22, 14 F. R. 2894]

§ 601.666 *Blue civil airway No. 66 control areas (Bridgeport, Conn., to Poughkeepsie, N. Y.)*. All of Blue civil airway No. 66.

[Amdt. 22, 14 F. R. 2894]

§ 601.667 *Blue civil airway No. 67 control areas (Yuma, Ariz., to Las Vegas, Nev.)*. All of Blue civil airway No. 67.

[Amdt. 22, 14 F. R. 2894]

CONTROL AREA EXTENSIONS

§ 601.1001 *Control area extension (Abilene, Tex.)*. From the Abilene, Tex., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Abilene radio range, to a point 20 miles north of the radio range station.

§ 601.1002 *Control area extension (Austin, Tex.)*. From the Austin, Tex., radio range station, extending within five miles on either side of the center line of the on course signal of the northwest course of the Austin radio range, to a point 20 miles northwest of the radio range station.

§ 601.1003 *Control area extension (Beaumont, Tex.)*. From the Beaumont, Tex., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Beaumont radio range, to a point 20 miles north of the radio range station.

§ 601.1004 *Control area extension (Brownsville, Tex.)*. From the Brownsville, Tex., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Brownsville radio range, to a point 30 miles north of the radio range station.

§ 601.1005 *Control area extension (Jacksonville, Fla.)*. From the Jacksonville, Fla., radio range station extending 4 miles north and 5 miles south of the east course of the Jacksonville, Fla., radio range to a point 10 miles east of the radio range station, and extending 5 miles either side of the ILS localizer course to a point 10.5 miles southwest of the ILS outer marker excluding that portion which lies south of Latitude 30°16'45".

[Amdt. 8, 13 F. R. 3580]

§ 601.1006 *Control area extension (Lake Charles, La.)*. From the Lake Charles, La., radio range station, extending within 5 miles on either side of the center line of the on course signal of the south course of the Lake Charles radio range, to a point 20 miles south of the radio range station.

§ 601.1007 *Control area extension (Laredo, Tex.)*. From the Laredo, Tex., radio range station, extending within five miles on either side of the center line of the on course signal of the northwest course of the Laredo radio range, to a point 20 miles northwest of the radio range station.

§ 601.1008 *Control area extension (Savannah, Ga.)*. From the Savannah, Ga., radio range station, extending within five miles on either side of the center line of the on course signal of the southwest course of the Savannah radio range, to a point 30 miles southwest of the radio range station.

§ 601.1009 *Control area extension (Augusta, Ga.)*. From the Augusta, Ga., radio range station, extending within five miles on either side of the center line of the on course signal of the southwest course of the Augusta radio range, to a point 20 miles southwest of the radio range station.

§ 601.1010 *Control area extension (Charlotte, N. C.)*. From the Charlotte, N. C., radio range station, extending within five miles on either side of the center line of the on course signal of the south course of the Charlotte radio range, to a point 20 miles south of the radio range station.

§ 601.1011 *Control area extension (Daytona Beach, Fla.)*. From the Daytona Beach, Fla., radio range station, extending within five miles on either side of the center line of the on course signal of the west course of the Daytona Beach radio range, to a point 20 miles west of the radio range station.

§ 601.1012 *Control area extension (Florence, S. C.)*. From the Florence, S. C., radio range station, extending within five miles on either side of the center line of the on course signal of the east course of the Florence radio range, to a point 20 miles east of the radio range station.

§ 601.1013 *Control area extension (Fort Myers, Fla.)*. From the Fort Myers, Fla., radio range station, extending within five miles on either side of the center line of the on course signal of the southwest course of the Fort Myers radio range, to a point 20 miles southwest of the radio range station.

§ 601.1014 *Control area extension (Greenville, S. C.)*. From the Greenville, S. C., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Greenville radio range, to a point 20 miles north of the radio range station, and extending within five miles on either side of the center line of the on course signal of the south course of the Greenville radio range, to a point 20 miles south of the radio range station.

§ 601.1015 *Control area extension (Greenwood, Miss.)*. From the Greenwood, Miss., radio range station, extending within five miles on either side of the center line of the on course signal of the east course of the Greenwood radio range, to a point 20 miles east of the radio range station.

§ 601.1016 *Control area extension (Jack's Creek, Tenn.)*. From the Jack's Creek, Tenn., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Jack's Creek radio range, to a point 20 miles north of the radio range station.

§ 601.1017 *Control area extension (Reading, Pa.)*. From the Reading, Pa., ILS localizer extending 5 miles either side of the localizer course to its intersection with the east course of the Harrisburg, Pa., radio range.

[Amdt. 17, 13 F. R. 8605]

§ 601.1018 *Control area extension (Meridian, Miss.)*. From the Meridian, Miss., radio range station extending 5 miles either side of the north course of the Meridian, Miss., radio range to a point 20 miles north of the radio range station and extending from the ILS localizer 5 miles either side of the localizer course to a point 30 miles south of the ILS localizer.

[Amdt. 8, 13 F. R. 3580]

§ 601.1019 *Control area extension (Nashville, Tenn.)*. From the Nashville, Tenn., radio range station extending 5 miles either side of the northeast course of the radio range to a point 30 miles northeast of the radio range station, and from the ILS localizer extending 5 miles either side of the localized course to a point 30 miles south of the ILS localizer.

[Amdt. 19, 14 F. R. 778]

§ 601.1020 *Control area extension (Smithville, Tenn.)*. From the Smithville, Tenn., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Smithville radio range, to a point 20 miles north of the radio range station.

§ 601.1021 *Control area extension (Tampa, Fla.)*. From the Tampa, Fla., radio range station, extending within five miles on either side of the center line of the on course signal of the southwest course of the Tampa radio range, to a point 20 miles southwest of the radio range station.

§ 601.1022 *Control area extension (West Palm Beach, Fla.)*. From the West Palm Beach, Fla., radio range station, extending within five miles on either side of the center line of the on course signal of the west course of the West Palm Beach radio range, to a point 20 miles west of the radio range station.

§ 601.1023 *Control area extension (Akron, Colo.)*. From the Akron, Colo., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Akron radio range, to a point 20 miles north of the radio range station.

§ 601.1024 *Control area extension (Burlington, Iowa)*. From the Burlington, Iowa, radio range station, extending within five miles on either side of the center line of the on course signal of the south course of the Burlington radio range, to a point 20 miles south of the range station.

§ 601.1025 *Control area extension (New Orleans, La.)*. All that area within a 25 mile radius of the New Orleans, La., radio range station (located in the southeast quadrant) bounded by the southern limits of Green civil airway No. 6 and the eastern limits of Amber civil airway No. 5.

[Amdt. 22, 14 F. R. 2894]

§ 601.1026 *Control area extension (Grand Island, Nebr.)*. From the Grand Island, Nebr., radio range station, extending within five miles on either side of the center line of the on course signal of the north course of the Grand Island radio range, to a point 20 miles north of the radio range station.

§ 601.1027 *Control area extension (Kansas City, Mo.)*. From the Kansas City, Mo., Municipal Airport, extending within five miles on either side of the center line of the on course signal of the north course of the Instrument Landing System localizer (bearing 171° magnetic toward the airport), to a point 20 miles north of the Kansas City Municipal Airport.

§ 601.1028 *Control area extension (Monroe, La.)*. From the Monroe, La., radio range station extending 5 miles either side of the southwest course of the radio range to a point 20 miles southwest of the radio range station.

[Amdt. 22, 14 F. R. 2894]

§ 601.1029 *Control area extension (La Junta, Colo.)*. From the La Junta, Colo., radio range station, extending within five miles on either side of the center line of the on course signal of the northeast course of the La Junta radio range, to a point 20 miles northeast of the radio range station.

§ 601.1030 *Control area extension (Lebo, Kans.)*. From the Lebo, Kans., radio range station, extending within five miles on either side of the center line of the on course signal of the southeast course of the Lebo radio range, to a point 20 miles southeast of the radio range station.

§ 601.1031 *Control area extension (North Platte, Nebr.)*. From the North Platte, Nebr., radio range station, extending within five miles on either side of the center line of the on course signal of the south course of the North Platte radio range, to a point 20 miles south of the radio range station.

§ 601.1032 *Control area extension (Scottsbluff, Nebr.)*. From the Scottsbluff, Nebr., radio range station, extending within five miles on either side of the center line of the on course signal of the southeast course of the Scottsbluff radio range, to a point 20 miles southeast of the radio range station.

§ 601.1033 *Control area extension (St. Joseph, Mo.)*. From the St. Joseph, Mo., radio range station extending 5 miles either side of the north course of the St. Joseph, Mo., radio range to a point 20 miles north of the radio range station, and extending 5 miles either side of the south course of the St. Joseph, Mo., radio range to a point 20 miles south of the radio range station.

[Amdt. 6, 13 F. R. 2257]

§ 601.1034 *Control area extension (Springfield, Mo.)*. From the Springfield, Mo., radio range station extending 5 miles either side of the southeast course of the Springfield, Mo., radio range to a point 25 miles from the radio range station.

[Amdt. 17, 13 F. R. 8605]

§ 601.1035 *Control area extension (Little Rock, Ark.)*. From the Little Rock, Ark., radio range station extending 5 miles either side of the northeast course of the radio range to a point 25 miles northeast of the radio range station.

[Amdt. 19, 14 F. R. 778]

§ 601.1036 *Control area extension (Vichy, Mo.)*. From the Vichy, Mo., radio range station, extending within 5 miles on either side of the center line of the on course signal of the southeast course of the Vichy radio range, to a point 20 miles southeast of the radio range station.

§ 601.1037 *Control area extension (Pensacola, Fla.)*. From the Pensacola, Fla., radio range station extending 5 miles either side of the south course of the radio range to a point 20 miles south of the radio range station.

[Amdt. 22, 14 F. R. 2894]

§ 601.1038 *Control area extension (Great Falls, Mont.)*. From the Great Falls, Mont., radio range station, extending within 5 miles on either side of the center line of the on course signal of the northeast course of the Great Falls radio range, to a point 30 miles northeast of the radio range station.

§ 601.1039 *Control area extension (Portland, Oreg.)*. From the Portland, Oreg., radio range station extending 5 miles either side of the west course of the radio range to a point 30 miles west of the radio range station, and extending 5 miles either side of the ILS localizer course to a point 20 miles northwest of the ILS localizer.

[Amdt. 17, 13 F. R. 8605]

§ 601.1040 *Control area extension (Medford, Oreg.)*. From the Medford, Oreg., radio range station, extending within 5 miles on either side of the center line of the on course signal of the west course of the Medford radio range, to a point 20 miles west of the radio range station.

§ 601.1041 *Control area extension (Boise, Idaho)*. From the Boise, Idaho, radio range station, extending within 5 miles on either side of the center line of the on course signal of the southwest course of the Boise radio range, to a point 20 miles southwest of the radio range station.

§ 601.1042 *Control area extension (Cincinnati, Ohio)*. From the Cincinnati, Ohio, radio range station extending 5 miles either side of the northeast course of the Cincinnati, Ohio, radio range to the 84th meridian of west longitude.

[Amdt. 12, 13 F. R. 5857]

§ 601.1043 *Control area extension (Bowling Green, Ky.)*. From the Bowling Green, Ky., radio range station, extending within 5 miles on either side of the center line of the on course signal

of the southeast course of the Bowling Green radio range, to a point 20 miles southeast of the radio range station.

§ 601.1044 *Control area extension (Ypsilanti, Mich.)*. From the Willow Run Airports, Ypsilanti, Mich., ILS localizer extending 5 miles either side of the localizer course to a point 20 miles southwest of the ILS outer marker.

[Amdt. 5, 13 F. R. 1222]

§ 601.1045 *Control area extension (Presque Isle, Maine)*. From the Presque Isle, Maine, radio range station, within 5 miles either side of the center line of the south course of the Presque Isle radio range, extending 20 miles south of the Presque Isle, Maine, radio range station.

§ 601.1046 *Control area extension (Montpelier, Vt.)*. From the Montpelier, Vt., radio range station, within 5 miles either side of the center line of the northeast course of the Montpelier, Vt., radio range, extending 20 miles northeast of the Montpelier, Vt., radio range station.

§ 601.1047 *Control area extension (Bangor, Maine)*. From the Bangor, Maine, radio range station within 5 miles either side of the center line of the northwest course of the Bangor, Maine, radio range, extending 30 miles northwest of the Bangor, Maine, radio range station and within 5 miles either side of the center line of the southeast course of the Bangor, Maine, radio range, extending 10 miles southeast of Dow Field.

§ 601.1048 *Control area extension (Syracuse, N. Y.)*. From the Syracuse, N. Y., radio range station, within 5 miles either side of the center line of the north course of the Syracuse, N. Y., radio range, extending 20 miles north of the Syracuse, N. Y., radio range station.

§ 601.1049 *Control area extension (Utica, N. Y.)*. From the Utica, N. Y., radio range station, within 5 miles either side of the center line of the northwest course of the Utica, N. Y., radio range, extending 20 miles northwest of the Utica, N. Y., radio range station.

§ 601.1050 *Control area extension (Bakersfield, Calif.)*. From the Bakersfield, Calif., radio range station extending within 5 miles either side of the southwest course of the Bakersfield, Calif., radio range to a point 25 miles southwest of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1051 *Control area extension (Portland, Maine)*. From the Portland, Maine, radio range station, within 5 miles either side of the center line of the northwest course of the Portland, Maine, radio range extending 20 miles northwest of the Portland, Maine, radio range station.

§ 601.1052 *Control area extension (Westfield, Mass.)*. From the Westfield, Mass., radio range station, within 5 miles either side of the center line of the north course of the Westfield radio range, extending 10 miles north of the Barnes Airport.

§ 601.1053 *Control area extension (Houlton, Maine)*. From the Houlton, Maine, radio range station, within 5 miles

either side of the center line of the south course of the Houlton, Maine, radio range, extending 10 miles south of the Houlton Army Air Field.

§ 601.1054 *Control area extension (Philipsburg, Pa.)*. From the Philipsburg, Pa., radio range station, within 5 miles either side of the center line of the north course of the Philipsburg, Pa., radio range, extending 20 miles north of the Philipsburg, Pa., radio range station.

§ 601.1055 *Control area extension (Elmira, N. Y.)*. From the Elmira, N. Y., radio range station, within 5 miles either side of the center line of the southwest course of the Elmira, N. Y., radio range, extending 20 miles southwest of the Elmira, N. Y., radio range station.

§ 601.1056 *Control area extension (Wilkes-Barre, Pa.)*. From the Wilkes-Barre, Pa., radio range station, within 5 miles either side of the center line of the northeast course of the Wilkes-Barre, Pa., radio range, extending 20 miles northeast of the Wilkes-Barre, Pa., radio range station.

§ 601.1057 *Control area extension (Altoona, Pa.)*. From the Altoona, Pa., radio range station, within 5 miles either side of the center line of the north course of the Altoona, Pa., radio range, extending 20 miles north of the Altoona, Pa., radio range station; and within 5 miles either side of the center line of the south course of the Altoona, Pa., radio range, extending 10 miles south of the Altoona-Blair County Airport.

§ 601.1058 *Control area extension (Martinsburg, W. Va.)*. From the Martinsburg, W. Va., radio range station, within 5 miles either side of the center line of the southwest course of the Martinsburg, W. Va., radio range, extending 20 miles southwest of the Martinsburg, W. Va., radio range station; and within 5 miles either side of the center line of the northeast course of the Martinsburg, W. Va., radio range, extending 10 miles northeast of the Shepherd Airport.

§ 601.1059 *Control area extension (Lynchburg, Va.)*. From the Lynchburg, Va., radio range, within 5 miles either side of the center line of the north course of the Lynchburg, Va., radio range, extending 20 miles north of the Lynchburg, Va., radio range station; and within 5 miles either side of the center line of the south course of the Lynchburg, Va., radio range, extending 10 miles south of the Presto Glenn Airport.

§ 601.1060 *Control area extension (Elkins, W. Va.)*. From the Elkins, W. Va., radio range station, within 5 miles either side of the center line of the south course of the Elkins radio range, extending 10 miles south of the Elkins, W. Va., airport.

§ 601.1061 *Control area extension (Gordonsville, Va.)*. From the Gordonsville, Va., radio range station, within 5 miles either side of the center line of the southeast course of the Gordonsville, Va., radio range, extending 10 miles southeast of the CAA intermediate field.

§ 601.1062 *Control area extension (Raleigh, N. C.)*. From the Raleigh, N. C.,

ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles southwest of the ILS localizer. [Amdt. 7, 13 F. R. 2649]

§ 601.1063 *Control area extension (Roanoke, Va.)*. From the Roanoke, Va., radio range station, within 5 miles either side of the center line of the south course of the Roanoke, Va., radio range, extending 20 miles south of the Roanoke, Va., radio range station; and within 5 miles either side of the center line of the north course of the Roanoke, Va., radio range, extending 10 miles north of Woodru Field.

§ 601.1064 *Control area extension (Chicopee Falls, Mass.)*. From the Westover radio range station, Chicopee Falls, Mass., within 5 miles either side of the center line of the northwest course of the Westover radio range, Chicopee Falls, Mass., extending to a point 25 miles northwest of the Westover radio range station.

§ 601.1065 *Control area extension (Yakima, Wash.)*. From the Yakima, Wash., radio range station extending 5 miles either side of the northwest course of the Yakima radio range to a point 20 miles northwest of the radio range station.

[Amdt. 15, 13 F. R. 7298]

§ 601.1066 *Control area extension (Mitchel Field, N. Y.)*. From the Mitchel Field, N. Y., radio range, within 7 miles either side of the center line of the east course of the Mitchel Field, N. Y., radio range, extending to Fire Island, N. Y.

§ 601.1067 *Control area extension (Dayton, Ohio)*. From the Dayton, Ohio, radio range station within 5 miles either side of the west course of the Dayton, Ohio, radio range, extending to its intersection with the northeast course of the Indianapolis, Ind., radio range.

§ 601.1068 *Control area extension (Riverside, Calif.)*. From the Riverside, Calif., radio range station extending five miles either side of the southeast course of the Riverside, Calif., radio range to a point 25 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1069 *Control area extension (Santa Barbara, Calif.)*. From the Santa Barbara, Calif., radio range station extending five miles on either side of the west course of the Santa Barbara, Calif., radio range to a point 25 miles west of the radio range station, and extending five miles on either side of the south course of the Santa Barbara, Calif., radio range to a point 25 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1070 *Control area extension (Oceanside, Calif.)*. From the Oceanside, Calif., nondirectional radio beacon extending five miles either side of a track of 278° magnetic to a point of intersection with a track of 205° magnetic from the Los Angeles, Calif., radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1071 *Control area extension (Burbank, Calif.)*. From the Burbank, Calif., radio range station extending five miles either side of the southwest course of the Burbank, Calif., radio range to the intersection of the southwest course of the Burbank, Calif., radio range and the west course of the Los Angeles, Calif., VHF radio range.

[Amdt. 5, 13 F. R. 1228]

§ 601.1072 *Control area extension (Newhall, Calif.)*. From Newhall, Calif., radio range station extending five miles either side of the southwest course of the Newhall, Calif., radio range to the intersection of the southwest course of the Newhall, Calif., radio range and the southeast course of the Santa Barbara, Calif., VHF range.

[Amdt. 6, 13 F. R. 2257]

§ 601.1073 *Control area extension (Fresno, Calif.)*. From the Fresno, Calif., radio range station extending five miles either side of the northeast course of the Fresno, Calif., radio range to a point 20 miles northeast of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1074 *Control area extension (Los Angeles, Calif.)*. From the Los Angeles, Calif., radio range station extending five miles on either side of the west course of the Los Angeles, Calif., radio range to a point 40 miles from the radio range station, and extending five miles either side of the southeast course of the Los Angeles, Calif., radio range to a point 40 miles from the radio range station; from the Los Angeles, Calif., radio range station extending five miles either side of a track of 205° magnetic to a point 40 miles from the radio range station; from the Los Angeles, Calif., VHF radio range station extending five miles either side of the south course of the Los Angeles, Calif., VHF radio range to a point 40 miles south of the radio range station.

[Amdt. 6, 13 F. R. 2257]

§ 601.1075 *Control area extension (Long Beach, Calif.)*. From the Long Beach, Calif., radio range station extending five miles either side of the southwest course of the Long Beach, Calif., radio range to a point 40 miles from the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1076 *Control area extension (Phoenix, Ariz.)*. From the Phoenix, Ariz., radio range station extending five miles either side of the east course of the Phoenix, Ariz., radio range to a point 25 miles east of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1077 *Control area extension (Elko, Nev.)*. From the Elko, Nev., radio range station extending five miles either side of the north course of the Elko, Nev., radio range to a point 25 miles from the radio range station, and extending five miles on either side of the south course of the Elko, Nev., radio range to a point 25 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1078 *Control area extension (Reno, Nev.)*. From the Reno, Nev.,

radio range station extending five miles either side of the north course of the Reno, Nev., radio range to a point 50 miles north of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1079 *Control area extension (Rock Springs, Wyo.)*. From the Rock Springs, Wyo., radio range station extending five miles either side of the north course of the Rock Springs, Wyo., radio range to a point 25 miles north of the radio range station, and extending five miles either side of the south course of the Rock Springs Wyo., radio range to a point 25 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1080 *Control area extension (Louisville, Ky.)*. From the Louisville, Ky., ILS localizer extending five miles either side of the ILS localizer course to a point 13.2 miles from the ILS localizer; from the intersection of the north course of the Louisville, Ky. (Godman Army), radio range and the west course of the Louisville, Ky., radio range extending five miles either side of a track via the ILS outer marker located at Latitude 38°07'15", Longitude 85°45'30" to the intersection of the east course of the Louisville, Ky. (Godman Army), radio range and the south course of the Louisville, Ky., radio range.

[Amdt. 5, 13 F. R. 1228]

§ 601.1081 *Control area extension (Zanesville, Ohio)*. From the Zanesville, Ohio, nondirectional radio beacon extending five miles either side of a track of 360° magnetic to the southern boundary of Green civil airway No. 4, and extending five miles either side of a track of 180° magnetic to a point 20 miles south of the Zanesville, Ohio, nondirectional radio beacon.

[Amdt. 5, 13 F. R. 1228]

§ 601.1082 *Control area extension (Montgomery, Ala.)*. From the Maxwell Field radio range station, Montgomery, Ala., extending five miles either side of the northeast course of the Maxwell Field radio range to a point 20 miles northeast of the radio range station.

[Amdt. 5, 13 F. R. 1228]

§ 601.1083 *Control area extension (Memphis, Tenn.)*. From the Memphis, Tenn., ILS localizer extending five miles either side of the localizer course to a point 25 miles west of the ILS localizer.

[Amdt. 5, 13 F. R. 1228]

§ 601.1084 *Control area extension (Norfolk, Va.)*. Within a 25 mile radius centered at Latitude 36°58'00", Longitude 76°25'00".

[Amdt. 5, 13 F. R. 1229]

§ 601.1085 *Control area extension (Cherry Point, N. C.)*. Within a 15 mile radius of the Marine Corps Air Station excluding that portion within danger areas and above 10,000 feet mean sea level.

[Amdt. 5, 13 F. R. 1229]

§ 601.1086 *Control area extension (Memphis, Tenn.)*. Within a 10 mile radius of the Naval Air Station excluding

that portion which lies within Amber civil airway No. 5.

[Amdt. 5, 13 F. R. 1229]

§ 601.1087 *Control area extension (Akron, Ohio.)*. From the Akron-Canton Airport, Akron, Ohio, ILS localizer extending five miles either side of the localizer course to a point 20 miles south of the ILS outer marker, and extending five miles either side of a direct line between the Akron, Ohio, radio range station and the Brecksville, Ohio, fan marker.

[Amdt. 22, 14 F. R. 2894]

§ 601.1088 *Control area extension (Alexandria, Minn.)*. From the Alexandria, Minn., radio range station extending five miles either side of the north course of the Alexandria, Minn., radio range to a point 20 miles north of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1089 *Control area extension (Covington, Ky.)*. From the Greater Cincinnati Airport, Covington, Ky., ILS localizer extending five miles either side of the localizer course to a point 20 miles south of the ILS outer marker.

[Amdt. 5, 13 F. R. 1229]

§ 601.1090 *Control area extension (Columbus, Ohio)*. From the Columbus, Ohio, ILS localizer extending five miles either side of the localizer course to a point 20 miles west of the ILS outer marker.

[Amdt. 5, 13 F. R. 1229]

§ 601.1091 *Control area extension (Dayton, Ohio)*. From the Dayton, Ohio, ILS localizer extending five miles either side of the localizer course to a point 20 miles southwest of the ILS outer marker.

[Amdt. 5, 13 F. R. 1229]

§ 601.1092 *Control area extension (Dickinson, N. Dak.)*. From the Dickinson, N. Dak., radio range station extending five miles either side of the north course of the radio range to a point 20 miles north of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1093 *Control area extension (Fargo, N. Dak.)*. From the Fargo, N. Dak., radio range station extending five miles either side of the east course of the radio range to a point 20 miles east of the radio range station, and from the Fargo ILS localizer extending five miles either side of the localizer course to a point 20 miles south of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1094 *Control area extension (Flint, Mich.)*. From the Flint, Mich., nondirectional radio beacon extending five miles either side of a track of 344° magnetic to a point 20 miles northwest of the nondirectional radio beacon.

[Amdt. 8, 13 F. R. 3580]

§ 601.1095 *Control area extension (Fort Wayne, Ind.)*. From the Fort Wayne, Ind., radio range station extending five miles either side of the southwest course of the radio range to a point 20 miles southwest of the Markle fan marker, and from the ILS localizer extending five miles either side of the localizer

course to a point 20 miles southeast of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1096 *Control area extension (Glenview, Ill.)*. From the Glenview, Ill., radio range station extending five miles either side of the northwest course of the Glenview, Ill., radio range to a point 20 miles northwest of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1097 *Control area extension (Grand Forks, N. Dak.)*. From the Grand Forks, N. Dak., radio range station extending five miles either side of the south course of the Grand Forks, N. Dak., radio range to a point 20 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1098 *Control area extension (Grand Rapids, Mich.)*. From the Grand Rapids, Mich., radio station extending five miles either side of the southeast course of the Grand Rapids, Mich., radio range to a point 20 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1099 *Control area extension (Indianapolis, Ind.)*. From the Weir-Cook Municipal Airport, Indianapolis, Ind., ILS localizer extending five miles either side of the ILS localizer course to a point 20 miles southwest of the ILS outer marker.

[Amdt. 5, 13 F. R. 1229]

§ 601.1100 *Control area extension (Lone Rock, Wis.)*. From the Lone Rock, Wis., radio range station extending five miles either side of the west course of the Lone Rock, Wis., radio range to a point 20 miles west of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1101 *Control area extension (Madison, Wis.)*. From the Madison, Wis., radio range station extending five miles either side of the southeast course of the Madison, Wis., radio range to a point 20 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1102 *Control area extension (Minneapolis, Minn.)*. From the Minneapolis, Minn., ILS localizer extending five miles either side of the localizer course to a point 20 miles south of the ILS outer marker.

[Amdt. 5, 13 F. R. 1229]

§ 601.1103 *Control area extension (Minot, N. Dak.)*. From the Minot, N. Dak., radio range station extending five miles either side of the southeast course of the Minot, N. Dak., radio range to a point 20 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1104 *Control area extension (Rockford, Ill.)*. From the Rockford, Ill., radio range station extending five miles either side of the west course of the Rockford, Ill., radio range to a point 20 miles west of the radio range station.

[Amdt. 8, 13 F. R. 3580]

§ 601.1105 *Control area extension (Muskegon, Mich.)*. From the Muskegon, Mich., radio range station extending five miles either side of the southeast course of the Muskegon, Mich., radio range to a point 20 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1229]

§ 601.1106 *Control area extension (Whidbey Island, Wash.)*. From the intersection of the northwest course of the Everett, Wash., radio range and the southeast course of the Whidbey Island, Wash., radio range extending five miles either side of the southeast and northwest courses of the Whidbey Island radio range to a point 20 miles northwest of the radio range station, and extending five miles either side of the southwest course of the Whidbey Island radio range to the intersection of the southwest course of the Whidbey Island radio range and the southeast course of the Patricia Bay, B. C., radio range, excluding those portions which lie over danger areas.

[Amdt. 12, 13 F. R. 5657]

§ 601.1107 *Control area extension (Topeka, Kans.)*. From the Topeka, Kans., VHF radio range station extending five miles either side of the north course of the Topeka, Kans., VHF radio range to a point 20 miles north of the range station, and from the ILS localizer extending five miles either side of the localizer course to a point 20 miles northwest of the localizer.

[Amdt. 17, 13 F. R. 8605]

§ 601.1108 *Control area extension (Salina, Kans.)*. From the Salina, Kans., VHF radio range station extending five miles either side of the north course of the Salina, Kans., VHF radio range to a point 20 miles north of the radio range station.

[Amdt. 6, 13 F. R. 2257]

§ 601.1109 *Control area extension (Goodland, Kans.)*. From the Goodland, Kans., VHF radio range station extending five miles either side of the north course to the Goodland, Kans., VHF radio range to a point 20 miles north of the radio range station.

[Amdt. 6, 13 F. R. 2257]

§ 601.1110 *Control area extension (Fort Riley, Kans.)*. Within a 5-mile radius of the Marshall, Kans., AFB, via the Fort Riley (Marshall), Kans., radio range station extending $\frac{1}{2}$ mile on the west side and 5 miles on the east side of the northeast course of the Fort Riley (Marshall), Kansas, radio range to a point 20 miles northeast of the radio range station.

[Amdt. 8, 13 F. R. 3580]

§ 601.1111 *Control area extension (San Diego, Calif.)*. From the San Diego, Calif., radio range station extending five nautical miles either side of the west course of the San Diego, Calif., radio range to a point 3 nautical miles off-shore.

[Amdt. 6, 13 F. R. 2257]

§ 601.1112 *Control area extension (Seattle, Wash.)*. From the Seattle,

Wash., radio range station extending five miles either side of a true bearing of 258° from the radio range station to a point 25 miles from the radio range station.

[Amdt. 10, 13 F. R. 4731]

§ 601.1113 *Control area extension (San Francisco, Calif.)*. From a point beginning at the intersection of a line extended through the San Francisco and Moffett Field, Calif., radio ranges and a line parallel to the southwest course of the San Francisco, Calif., radio range and 5 nautical miles northwest therefrom, proceed south 36° west parallel to the southwest course of the San Francisco, Calif., radio range to a point 3 nautical miles off-shore, thence proceed in a southeasterly direction parallel to the shoreline and 3 nautical miles therefrom to the intersection of a line 5 nautical miles southeast of the southwest course of the Moffett Field, Calif., radio range and parallel thereto thence north 37° each to the intersection of a line extended through the San Francisco and Moffett Field, Calif., radio ranges, thence in a northwesterly direction through the Moffett Field and San Francisco, Calif., radio ranges to the point of beginning. All bearings true.

[Amdt. 6, 13 F. R. 2258]

§ 601.1114 *Control area extension (Chanute, Kans.)*. From the Chanute, Kans., radio range station extending five miles either side of the east course of the Chanute, Kans., radio range to a point 20 miles east of the radio station.

[Amdt. 6, 13 F. R. 2258]

§ 601.1115 *Control area extension (Dodge City, Kans.)*. From the Dodge City, Kans., Municipal Airport, extending five miles either side of a track 360° true to its intersection with the east course of the Garden City, Kans., radio range.

[Amdt. 6, 13 F. R. 2258]

§ 601.1116 *Control area extension (Hutchinson, Kans.)*. From the Hutchinson, Kans., radio range station extending five miles either side of the south course of the Hutchinson, Kans., radio range to a point 20 miles south of the radio range station.

[Amdt. 6, 13 F. R. 2258]

§ 601.1117 *Control area extension (Lincoln, Nebr.)*. From the Lincoln, Nebr., radio station extending five miles either side of the north course of the Lincoln, Nebr., radio range to the intersection of the north course of the Lincoln, Nebr., radio range and the west course of the Omaha, Nebr., radio range, and extending five miles either side of the south course of the Lincoln, Nebr., radio range to a point 20 miles south of the radio range station.

[Amdt. 6, 13 F. R. 2258]

§ 601.1118 *Control area extension (Grand Junction, Colo.)*. From the Grand Junction, Colo., VHF radio range station extending five miles either side of the north course of the Grand Junction, Colo., VHF radio range to a point 20 miles north of the radio range station, and ex-

tending 5 miles either side of the ILS localizer course to its intersection with the north course of the Grand Junction, Colo., VHF radio range.

[Amdt. 6, 13 F. R. 2258]

§ 601.1119 *Control area extension (St. Louis, Mo.)*. From the St. Louis, Mo., ILS localizer extending 5 miles either side of the localizer course to a point 20 miles northeast of the ILS localizer.

[Amdt. 6, 13 F. R. 2258]

§ 601.1120 *Control area extension (Iowa City, Iowa)*. Within a 5-mile radius of the Iowa City Airport extending 5 miles either side of a track 85° magnetic from the Airport to its intersection with the north course of the Burlington, Iowa, radio range.

[Amdt. 8, 13 F. R. 3580]

§ 601.1121 *Control area extension (White Plains, N. Y.)*. From the Westchester Airport, White Plains, N. Y., ILS localizer extending 5 miles either side of the localizer course to its intersection with the south course of the New Hackensack, N. Y., radio range.

§ 601.1122 *Control area extension (Lubbock, Tex.)*. From the Lubbock, Tex., radio range station extending 5 miles either side of the west course of the radio range to a point 20 miles west of the radio range station.

[Amdt. 22, 14 F. R. 2894]

§ 601.1123 *Control area extension (Birmingham, Ala.)*. From the Birmingham, Ala., ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles southwest of the ILS localizer.

§ 601.1124 *Control area extension (Eugene, Oreg.)*. From the Eugene, Oreg., radio range station extending 5 miles either side of the west course of the Eugene radio range to a point 25 miles from the radio range station.

[Amdt. 10, 13 F. R. 4731]

§ 601.1125 *Control area extension (Tallahassee, Fla.)*. From the Tallahassee (Dale Mabry Field), Fla., ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles southwest of the ILS localizer.

[Amdt. 7, 13 F. R. 2649]

§ 601.1126 *Control area extension (Knoxville, Tenn.)*. From the Knoxville, Tenn., radio range station extending 5 miles either side of the north course of the radio range to a point 20 miles north of the Inskip fan marker, and from the ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles southwest of the ILS localizer.

[Amdt. 17, 13 F. R. 8605]

§ 601.1127 *Control area extension (Charleston, S. C.)*. From the Charleston, S. C., ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles northwest of the ILS localizer.

[Amdt. 6, 13 F. R. 2258]

§ 601.1128 *Control area extension (Jackson, Miss.)*. From the Jackson,

Miss., ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles northwest of the ILS localizer.

[Amdt. 6, 13 F. R. 2257]

§ 601.1129 *Control area extension (Washington, D. C.)*. From a point beginning at Latitude 38°53'20" Longitude 76°40'50", thence to Latitude 38°51'17" Longitude 76°41'10", thence to Latitude 38°48'13" Longitude 76°48'37", thence to Latitude 38°49'30" Longitude 76°51'12", thence to Latitude 38°53'20" Longitude 76°40'50", point of beginning; and from a point beginning at Latitude 38°34'32" Longitude 76°41'35", thence to Latitude 38°38'10" Longitude 76°48'55", thence to Latitude 38°36'45" Longitude 76°51'35", thence to Latitude 38°27'00" Longitude 76°51'30", thence to Latitude 38°34'32" Longitude 76°41'35", point of beginning.

[Amdt. 6, 13 F. R. 2257]

§ 601.1130 *Control area extension (Spokane, Wash.)*. From the Geiger Field, Spokane, Wash., ILS localizer extending 5 miles either side of the ILS localizer course to a point 20 miles from the ILS localizer.

[Amdt. 10, 13 F. R. 4731]

§ 601.1131 *Control area extension (New York, N. Y.)*. From Latitude 40°39'50" Longitude 74°04'35", thence to Latitude 40°35'30" Longitude 74°08'00", thence to Latitude 40°35'50" Longitude 74°10'25", thence to point of beginning.

[Amdt. 10, 13 F. R. 4731]

§ 601.1132 *Control area extension (Willmar, Minn.)*. From the Willmar, Minn., radio range station extending 5 miles either side of the south course of the Willmar radio range to a point 20 miles south of the radio range station.

[Amdt. 10, 13 F. R. 4731]

§ 601.1133 *Control area extension (Idlewild, N. Y.)*. From the eastern edge of Green civil airway No. 5 at latitude 40°33'45" longitude 73°32'20", thence southeast to latitude 40°32'10" longitude 73°26'50", thence southwest to latitude 40°17'00" longitude 73°38'55", thence northwest to latitude 40°19'45" longitude 73°43'30" (point of intersection with eastern edge of Green civil airway No. 5), thence northeast following the eastern boundary of Green civil airway No. 5 to point of beginning.

[Amdt. 12, 13 F. R. 5657]

§ 601.1134 *Control area extension (Miami, Fla.)*. From the Miami International Airport ILS localizer extending 5 miles either side of the ILS localizer course to a point 30 miles northwest of the ILS localizer.

[Amdt. 12, 13 F. R. 5657]

§ 601.1135 *Control area extension (Atlanta, Ga.)*. All that area 5 miles north and parallel to the east and west courses of the Atlanta, Ga. (NAS), radio range extending from Amber civil airway No. 6 to Green civil airway No. 6 including the area south of the east and west courses of the Atlanta (NAS) radio range between Amber civil airway No. 6

and Green civil airway No. 6, and extending 5 miles either side of the north course of the Atlanta, Ga. (NAS), radio range to a point 20 miles north of the radio range station.

[Amdt. 12, 13 F. R. 5657]

§ 601.1136 *Control area extension (San Juan, P. R.)*. Within a 150 nautical mile radius from the Isla Grande Aerodrome, San Juan, P. R., excluding the mainland of the Dominican Republic and overlapping portions of existing danger areas and airspace warning areas.

[Amdt. 15, 13 F. R. 7298]

§ 601.1137 *Control area extension (Key West, Fla.)*. From the Key West, Fla., radio range station extending 5 miles on the north side and 2½ miles on the south side of the west course of the radio range to a point 20 miles west of the radio range station.

[Amdt. 17, 13 F. R. 8605]

§ 601.1138 *Control area extension (Orlando, Fla.)*. From the Orlando, Fla., radio range station extending 5 miles on the southeast side and parallel to the northeast course of the Orlando, Fla., radio range to the intersection of the northeast course of the Orlando, Fla., radio range and the northwest course of the Melbourne, Fla., radio range including all that area north of the northeast course of the Orlando radio range between Red civil airway No. 47 and Amber civil airway No. 7.

[Amdt. 15, 13 F. R. 7298]

§ 601.1139 *Control area extension (Lexington, Ky.)*. From the Lexington, Ky., nondirectional radio marker beacon extending 5 miles either side of a line 225° magnetic to a point 20 miles southwest of the marker beacon and extending 5 miles either side of a line 45° magnetic from the marker beacon to its intersection with the northwest course of the Lexington, Ky., VHF radio range.

[Amdt. 15, 13 F. R. 7298]

§ 601.1140 *Control area extension (Des Moines, Iowa)*. From the Des Moines, Iowa, ILS localizer extending 5 miles either side of the ILS localizer course to a point 20 miles southeast of the localizer.

[Amdt. 17, 13 F. R. 8605]

§ 601.1141 *Control area extension (Boston, Mass.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the southeast course of the Boston, Mass., radio range and the northeast course of the Squantum, Mass. (Navy) radio range to a circle 15 miles in radius centered at the midway point of a direct line between the intersection of the southeast course of the Boston, Mass., radio range and the northeast course of the Squantum, Mass. (Navy) radio range and the Yarmouth, Nova Scotia, radio range station to a circle 5 miles in radius centered on the Yarmouth, Nova Scotia, radio range station, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8605]

§ 601.1142 *Control area extension (Boston, Mass.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the southeast course of the Boston, Mass., radio range and the northeast course of the Squantum, Mass. (Navy) radio range to a circle 15 miles in radius centered at the intersection of the southeast course of the Boston, Mass., radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8605]

§ 601.1143 *Control area extension (Nantucket, Mass.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass., VHF radio range station to a circle 15 miles in radius centered at the midway point on a direct line between the Nantucket, Mass., VHF radio range station and the Yarmouth, Nova Scotia, radio range station to a circle 5 miles in radius centered on the Yarmouth, Nova Scotia, radio range station, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8605]

§ 601.1144 *Control area extension (Nantucket, Mass.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass., VHF radio range station to a circle 15 miles in radius centered at the intersection of the east course of the Nantucket, Mass., VHF radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8605]

§ 601.1145 *Control area extension (Nantucket, Mass.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass., VHF radio range station to a circle 15 miles in radius centered at the intersection of the south course of the Nantucket, Mass., VHF radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8605. Correction noted at 14 F. R. 336]

§ 601.1146 *Control area extension (New York, N. Y.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the east course of the New York (LaGuardia), N. Y., radio range and the northeast course of the Mitchel Field (AFB), N. Y., radio range to a circle 5 miles in radius centered at the intersection of the east course of the New York (LaGuardia), N. Y., radio range and the southwest course of the Nantucket, Mass., VHF radio range to a circle 5 miles in radius centered on the Nantucket, Mass., VHF radio range station.

[Amdt. 17, 13 F. R. 8606]

§ 601.1147 *Control area extension (New York, N. Y.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the southeast course of the Newark, N. J., radio range and the southwest course of the Mitchel Field (AFB), N. Y., radio range to a circle 15 miles in radius centered at the intersection of the southeast course of the Newark, N. J., radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways.

[Amdt. 17, 13 F. R. 8606]

§ 601.1148 *Control area extension (Millville, N. J.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Millville, N. J., radio range station and the intersection of the southeast course of the Millville, N. J., radio range and the Atlantic Ocean U. S. Coastline to a circle 15 miles in radius centered on the intersection of the southeast course of the Millville, N. J., radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet which lies outside the continental limits of the United States.

[Amdt. 17, 13 F. R. 8606]

§ 601.1149 *Control area extension (Norfolk, Va.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the east course of the Norfolk, Va. (Navy), radio range and the Atlantic Ocean U. S. Coastline to a circle 10 miles in radius centered at the intersection of the east course of the Norfolk, Va. (Navy), radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet.

[Amdt. 17, 13 F. R. 8606]

§ 601.1150 *Control area extension (Wilmington, N. C.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Wilmington, N. C., VHF radio range station to a circle 15 miles in radius centered at the midway point on a direct line between the Wilmington, N. C., VHF radio range station and the West Palm Beach, Fla., radio range station to a circle 5 miles in radius centered on the West Palm Beach, Fla., radio range station, excluding that portion below 2,000 feet and above 20,500 feet which lies outside the continental limits of the United States.

[Amdt. 17, 13 F. R. 8606]

§ 601.1151 *Control area extension (Wilmington, N. C.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Wilmington, N. C., VHF radio range station to a circle 5 miles in radius centered at Latitude 33°55'00" Longitude 77°19'00" to a circle 15 miles in radius centered at the intersection of the southeast course of the Wilmington, N. C., VHF radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet which lies outside the continental limits of the United States.

[Amdt. 17, 13 F. R. 8606]

§ 601.1152 *Control area extension (Charleston, S. C.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Charleston, S. C., radio range station and a circle 5 miles in radius centered at the intersection of the southeast course of the Charleston, S. C., radio range and the Atlantic Ocean U. S. Coastline to a circle 15 miles in radius centered at the intersection of the southeast course of the Charleston, S. C., radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet which lies outside the continental limits of the United States.

[Amdt. 17, 13 F. R. 8606]

§ 601.1153 *Control area extension (Jacksonville, Fla.)*. That area within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Jacksonville, Fla., radio range station to a circle 15 miles in radius centered on the intersection of the east course of the Jacksonville, Fla., radio range and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet and above 20,500 feet which lies outside the continental limits of the United States.

[Amdt. 17, 13 F. R. 8606]

§ 601.1154 *Control area extension (Bismarck, N. Dak.)*. From the Bismarck, N. Dak., ILS localizer extending 5 miles either side of the localizer course to a point 20 miles southeast of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1155 *Control area extension (Omaha, Nebr.)*. From the ILS localizer extending 5 miles either side of the localizer course to a point 20 miles northwest of the ILS localizer.

[Amdt. 17, 13 F. R. 8606]

§ 601.1156 *Control area extension (Albany, Ga.)*. From the Albany, Ga., radio range station extending 5 miles either side of the east course of the radio range to a point 20 miles east of the radio range station.

[Amdt. 18, 14 F. R. 456]

§ 601.1157 *Control area extension (Chicago, Ill.)*. From the Chicago, Ill., Orchard Place Airport ILS localizer extending 5 miles either side of the localizer course to a point 20 miles northwest of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1158 *Control area extension (Cleveland, Ohio)*. From the Cleveland, Ohio, ILS localizer extending 5 miles either side of the ILS localizer course to a point 20 miles southwest of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1159 *Control area extension (Moline, Ill.)*. From the Moline, Ill., ILS localizer extending 5 miles either side of the localizer course to a point 20 miles northwest of the outer marker.

[Amdt. 19, 14 F. R. 779]

§ 601.1160 *Control area extension (South Bend, Ind.)*. From the South Bend, Ind., ILS localizer extending 5 miles

either side of the localizer course to a point 20 miles east of the outer marker.
[Amdt. 19, 14 F. R. 779]

§ 601.1161 *Control area extension (Chicago, Ill.).* From the Chicago, Ill., Municipal Airport ILS localizer extending 5 miles either side of the localizer course to a point 20 miles northwest of the outer marker.
[Amdt. 19, 14 F. R. 779]

§ 601.1162 *Control area extension (Danville, Va.).* Within a 5 mile radius of the Danville, Va., Municipal Airport.
[Amdt. 21, 14 F. R. 2231]

§ 601.1163 *Control area extension (Vero Beach, Fla.).* From the Vero Beach, Fla., non-directional radio marker beacon extending 5 miles either side of a track 290° magnetic to its intersection with Blue civil airway No. 19.
[Amdt. 22, 14 F. R. 2894]

§ 601.1164 *Control area extension (Quonset Point, R. I.).* Within a 7 mile radius of the Quonset Point, R. I., Naval Air Station extending 5 miles either side of the southeast course of the Quonset Point, R. I. (Navy) radio range to a point 16 miles southeast of the radio range station, excluding that portion overlapping danger areas and excluding the area below 2,000 feet which lies more than 7 miles southeast of the Naval Air Station.
[Amdt. 22, 14 F. R. 2894]

§ 601.1165 *Control area extension (Oakland, Calif.).* All that area in the vicinity of Hayward, Calif., bounded by the eastern boundary of Blue civil airway No. 10, the southern boundary of Red civil airway No. 60 and the northern boundary of Blue civil airway No. 60.
[Amdt. 22, 14 F. R. 2894]

§ 601.1166 *Control area extension (Mobile, Ala.).* From the Mobile, Ala., radio range station extending 5 miles on the southwest side and 2 miles on the northeast side of the southeast course of the Mobile, Ala., radio range to a point 10 miles southeast of the intersection of the southeast course of the Mobile, Ala., radio range and the west course of the Pensacola, Fla., radio range.
[Amdt. 22, 14 F. R. 2894]

CONTROL ZONES

§ 601.1981 *Scope of control zones.* Each control zone shall include the navigable air space above all that area on the surface of the earth flying within the specified radius of the center points prescribed for such zone (except where otherwise described in this part), but shall not include any of the air space of an air-space reservation.

§ 601.1982 *Designation of control zones.* The portions of the navigable air space of the United States described in §§ 601.1983-601.2250 are hereby designated as control zones.

§ 601.1983 *Three mile radius zones.* Within a 3 mile radius of the following airports:

Acomita, N. Mex.: CAA intermediate field.
Altoona, Pa.: Altoona-Blair County Airport.

Baker, Oreg.: Baker Municipal Airport.
Baton Rouge, La.: East Baton Rouge Parish Airport.

Bellingham, Wash.: Bellingham Municipal Airport.

Blackstone, Va.: Blackstone AAF.

Bozeman, Mont.: Gallatin-Bozeman Municipal Airport.

Burley, Idaho: Burley Municipal Airport.

Butte, Mont.: Butte Municipal Airport.

Cochise, Ariz.: CAA intermediate field.

Columbus, N. Mex.: CAA intermediate field.

Custer, Mont.: Custer intermediate field.

Cut Bank, Mont.: Cut Bank Municipal Airport.

Daggett, Calif.: Daggett Municipal Airport.

Dillon, Mont.: Dillon intermediate field.

Drummond, Mont.: Drummond Municipal Airport.

Dubois, Idaho: Dubois intermediate field.

Endicott, N. Y.: Tri-Cities Airport.

El Dorado, Ark.: Goodwin Field.

Ellensburg, Wash.: Bowers Field.

El Morro, N. Mex.: CAA intermediate field.

Engle, N. Mex.: CAA intermediate field.

Ephrata, Wash.: Ephrata Municipal Airport.

Eugene, Oreg.: Mahlen-Sweet Airport.

Everett, Wash.: Paine Field.

Glendale, Calif.: Grand Central Airport.

Helena, Mont.: Helena Municipal Airport.

Klamath Falls, Oreg.: Klamath Falls Municipal Airport.

Lakehurst, N. J.: Naval Air Station.

Lewistown, Mont.: Lewistown Municipal Airport.

Miles City, Mont.: Miles City Municipal Airport.

Missoula, Mont.: Missoula County Airport.

Needles, Calif.: Needles Airport.

Niagara Falls, N. Y.: Municipal Airport.

Oceana, Va.: Naval Auxiliary Air Station.

Palacios, Tex.: Palacios Airport.

Pendleton, Oreg.: Pendleton Municipal Airport.

Pocatello, Idaho: Pocatello Municipal Airport.

Redmond, Oreg.: Redmond-Roberts Field.

Rodeo, N. Mex.: CAA intermediate field.

Salem, Oreg.: Salem-McNary Airport.

Santa Monica, Calif.: Clover Field.

Schenectady, N. Y.: Schenectady Airport.

Spokane, Wash.: Felts Field.

Spokane, Wash.: Spokane AAF.

The Dalles, Oreg.: The Dalles Municipal Airport.

Toledo, Wash.: Toledo Intermediate Airport.

Whitehall, Mont.: Whitehall Municipal Airport.

Willow Grove, Pa.: Naval Air Station.

Yakima, Wash.: Yakima Municipal Airport.

[Amdt. 5, 13 F. R. 1229, as amended by Amdt. 6, 13 F. R. 2259; Amdt. 7, 13 F. R. 2650; Amdt. 8, 13 F. R. 3581, 4035; Amdt. 17, 13 F. R. 8605]

§ 601.1984 *Five mile radius zones.* Within a 5 mile radius of the following airports:

Akron, Ohio: Akron-Canton County Airport.

Alexandria, La.: Municipal Airport.

Alice, Tex.: Alice Airport.

Anchorage, Alaska: Municipal Airport.

Annette Island, Alaska: Annette Island Airport.

Atlanta, Ga.: Naval Air Station.

Baton Rouge, La.: Harding Field.

Beaumont, Tex.: Jefferson County Airport.

Bedford, Mass.: Bedford Municipal Airport.

Bendix, N. J.: Teterboro Air Terminal.

Big Delta, Alaska: Big Delta Airport.

Billings, Mont.: Billings Municipal Airport.

Boise, Idaho: Boise Air Terminal.

Bridgeport, Conn.: Bridgeport Municipal Airport.

Chicago, Ill.: Orchard Place Airport.

Covington, Ky.: Greater Cincinnati Airport.

Delta, Utah: Delta Airport.

Elkins, W. Va.: Elkins Airport.

Elko, Nev.: Elko Airport.

Elmira, N. Y.: Chemung County Airport.

El Toro, Calif.: El Toro Airport.

Fresno, Calif.: Hammer Field.

Gage, Okla.: Gage Airport.

Gordonsville, Va.: CAA intermediate field.

Gustavus, Alaska: Gustavus Airport.

Great Falls, Mont.: Great Falls Municipal Airport.

Homer, Alaska: Homer Airport.

Houlton, Maine: Houlton Airport.

Idaho Falls, Idaho: Idaho Falls Airport.

Islip, N. Y.: MacArthur Field.

Juneau, Alaska: Juneau Airport.

Lake Charles, La.: Lake Charles AAF.

Langley Field, Va.: Langley Field.

Las Vegas, N. Mex.: Las Vegas Airport.

Louisville, Ky.: Standiford Field.

Lucin, Utah: CAA intermediate field.

Lynchburg, Va.: Preston Glenn Airport.

Medford, Oreg.: Medford AAF.

Memphis, Tenn.: Naval Air Station.

Merced, Calif.: Castle Field.

Midland, Tex.: Municipal Airport No. 1.

Montgomery, Ala.: Dannelly Field.

Naknek, Alaska: Naknek Airport.

Nenana, Alaska: Nenana Airport.

Newburgh, N. Y.: Stewart AAF.

New Orleans, La.: New Orleans Airport.

Northway, Alaska: Northway Airport.

Old Town, Maine: Old Town Airport.

Otto, N. Mex.: CAA intermediate field.

Philipsburg, Pa.: Black Moshannon Airport.

Phoenix, Ariz.: Sky Harbor Municipal Airport.

Port Helden, Alaska: Port Helden Airport.

Portland, Oreg.: Portland AAF.

Pulaski, Va.: Leving Field.

Reading, Pa.: Reading Municipal Airport.

Red Bluff, Calif.: Red Bluff Municipal (Bldwell Field).

Reno, Nev.: Hubbard Field.

Riverside, Calif.: March Field.

Roanoke, Va.: Woodrum Field.

Rome, N. Y.: Rome AAF.

Salinas, Calif.: Salinas Airport.

Salt Flat, Tex.: CAA intermediate field.

San Rafael, Calif.: Hamilton Field.

Santa Fe, N. Mex.: Santa Fe Airport.

Seattle, Wash.: Boeing Field.

Seattle, Wash.: Seattle-Takoma Airport.

Skwentna, Alaska: Skwentna Airport.

Spokane, Wash.: Geiger AAF.

St. Paul, Minn.: Helman Airport.

Sunnyvale, Calif.: Moffett Field.

Tacoma, Wash.: McCord Field.

Tanacross, Alaska: Tanacross Airport.

Texarkana, Ark.: Texarkana Airport.

Tucumcari, N. Mex.: Tucumcari Airport.

Waco, Tex.: Waco Municipal Airport.

Walla Walla, Wash.: Walla Walla AAF.

Wendover, Utah: Wendover AFB.

Westfield, Mass.: Barnes Airport.

Wichita Falls, Tex.: Sheppard (Kell) Field.

Wilkes-Barre, Pa.: Wilkes-Barre-Scranton Airport.

Williams, Calif.: CAA intermediate field.

Wink, Tex.: Wink Airport.

Winslow, Ariz.: Winslow Airport.

Worcester, Mass.: Worcester Airport.

Yakutat, Alaska: Yakutat Airport.

[Amdt. 5, 13 F. R. 1229, as amended by Amdt. 6, 13 F. R. 2259; Amdt. 7, 13 F. R. 2650; Amdt. 8, 13 F. R. 3581; Amdt. 12, 13 F. R. 5657; Amdt. 17, 13 F. R. 8605; Amdt. 18, 14 F. R. 456; Amdt. 20, 14 F. R. 1497; Amdt. 22, 14 F. R. 2894]

ADDITIONAL CONTROL ZONES

§ 601.2001 *Albany, N. Y., control zone.* Within a 5 mile radius of the Albany Municipal Airport and within 2 miles either side of the north course of Albany radio range extending 10 miles from the radio range station.

§ 601.2002 *Augusta, Maine, control zone.* Within a 5 mile radius of the

Augusta State Airport and within 2 miles either side of the southwest course of Augusta radio range extending 10 miles from the radio range station.

§ 601.2003 *Baltimore, Md., control zone.* Within a 5 mile radius of the Baltimore Municipal Airport extending 5 miles either side of the south course of the Baltimore, Md., radio range to a point 10 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1230]

§ 601.2004 *Bangor, Maine, control zone.* Within a 5 mile radius of Dow Field and within 2 miles either side of the northwest course of Bangor radio range extending to the East Corinth fan marker.

§ 601.2005 *Boston, Mass., control zone.* Within a 5 mile radius of Logan International Airport, within 2 miles either side of the north course of Boston radio range extending to the Peabody fan marker and within 2 miles either side of the southwest course of Boston radio range extending to the Franklin fan marker.

§ 601.2006 *Buffalo, N. Y., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the northeast course of the Buffalo, N. Y., radio range to the Walcottville fan marker, within 2 miles either side of the southwest course of the Buffalo radio range to the Angola fan marker, and within 2 miles either side of the east course of the Buffalo radio range to the East Pembroke fan marker.

[Amdt. 23, 14 F. R. 2894]

§ 601.2007 *Burlington, Vt., control zone.* Within a 5 mile radius of the Burlington Municipal Airport and within 2 miles either side of the northwest course of Burlington radio range extending to the Grand Isle fan marker.

§ 601.2008 *Concord, N. H., control zone.* Within a 5 mile radius of the Concord Municipal Airport and within 2 miles either side of the southeast course of Concord radio range extending 10 miles from the radio range station.

§ 601.2009 *Erie, Pa., control zone.* Within a 5 mile radius of Port Erie Airport and within 2 miles either side of the southwest course of Erie radio range extending to the North Springfield fan marker.

§ 601.2010 *Harrisburg, Pa., control zone.* Within a 5 mile radius of Harrisburg State Airport and within 2 miles either side of the east and west courses of Harrisburg radio range extending 10 miles east and west of the radio range station.

§ 601.2011 *Hartford, Conn., control zone.* Within a 5 mile radius of Brainard Field and within 2 miles either side of the southeast course of Hartford radio range extending 10 miles from the radio range station.

§ 601.2012 *Millinocket, Maine, control zone.* Within a 5 mile radius of Millinocket Municipal Airport and within 2 miles either side of the east course of

Millinocket radio range extending 10 miles from the radio range station.

§ 601.2013 *Newark, N. J., control zone.* Within a 5 mile radius of Newark Municipal Airport and within 2 miles either side of the southwest course of Newark radio range extending to the Metuchen fan marker.

§ 601.2014 *Norfolk, Va., control zone.* Within a 5 mile radius of Norfolk Municipal Airport and within 2 miles either side of the southwest course of Norfolk radio range extending to the Deep Creek fan marker.

§ 601.2015 *Philadelphia, Pa., control zone.* Within a 5 mile radius of the Philadelphia International Airport and within 2 miles either side of the west course of the Philadelphia radio range extending to the Boothwyn fan marker.

[Amdt. 8, 13 F. R. 3581]

§ 601.2016 *Wheeling, W. Va., control zone.* Within a 3 mile radius of the Wheeling-Ohio County Airport extending 2 miles either side of the southwest course of the Wheeling, W. Va., VHF radio range to the Wheeling, W. Va., VHF radio station.

[Amdt. 8, 13 F. R. 3581]

§ 601.2017 *Pittsburgh, Pa., control zone.* Within a 5 mile radius of the Allegheny County Airport and within 2 miles either side of the west course of Pittsburgh radio range extending to the Cecil fan marker.

§ 601.2018 *Portland, Maine, control zone.* Within a 5 mile radius of Portland Municipal Airport and within 2 miles either side of the northwest course of Portland radio range extending 10 miles from the radio range station.

§ 601.2019 *Providence, R. I., control zone.* Within a 5 mile radius of the Theodore Francis Greene Airport (excluding area which would intercept danger area in vicinity of Ohio Ledge-Gull Point, R. I.) and within 2 miles either side of the southwest course of Providence radio range extending 10 miles from the radio range station.

§ 601.2020 *Richmond, Va., control zone.* Within a 5 mile radius of the Richmond Municipal Airport and within 2 miles either side of the southwest course of Richmond radio range extending to the Chester fan marker.

§ 601.2021 *Rochester, N. Y., control zone.* Within a 5 mile radius of the Rochester Municipal Airport and within 2 miles either side of the east course of Rochester radio range extending 10 miles from the radio range station.

§ 601.2022 *Washington, D. C., control zone.* Within a 5 mile radius of the Washington National Airport (excluding portion within Airspace Reservation established by Executive Order No. 8950 as amended by Executive Order No. 9153) extending 2 miles either side of the southwest course of the Washington radio range to the Mt. Vernon fan marker.

[Amdt. 17, 13 F. R. 8606]

§ 601.2023 *Albuquerque, N. Mex., control zone.* Within a 5 mile radius of Kirtland Field and within 2 miles either side

of the south course of Albuquerque radio range extending to the Peralta fan marker.

§ 601.2024 *Amarillo, Tex., control zone.* Within a 5 mile radius of English Field extending 2 miles either side of the west course of the Amarillo, Tex., radio range to the Soncy fan marker and extending 2 miles either side of the east course of the radio range to the intersection of the east course of the Amarillo, Tex., radio range with the northwest course of the Clarendon, Tex., radio range, and extending 2 miles either side of the ILS localizer course to the ILS outer marker.

[Amdt. 17, 13 F. R. 8606]

§ 601.2025 *Big Spring, Tex., control zone.* Within a 5 mile radius of Big Spring Airport and within 2 miles either side of the west course of Big Spring radio range extending to the Stanton fan marker.

§ 601.2026 *Brownsville, Tex., control zone.* Within a 5 mile radius of Brownsville International Airport (excepting that portion of such circle which lies within Mexico) and within two miles either side of the northwest course of Brownsville radio range extending to the Los Fresnos fan marker.

§ 601.2027 *Dallas, Tex., control zone.* Within a 5 mile radius of Love Field, within 2 miles either side of the south course of Dallas radio range extending to the Duncanville fan marker, and within 2 miles either side of the north course of Dallas radio range extending to the Dallas intersection (intersection of the north course of Dallas radio range and the northeast course of Fort Worth radio range).

§ 601.2028 *El Paso, Tex., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the east course of the El Paso, Tex., radio range to the Hueco fan marker and extending 2 miles either side of the north course of the radio range to the Newman nondirectional radio marker beacon.

[Amdt. 17, 13 F. R. 8606]

§ 601.2029 *Fort Worth, Tex., control zone.* Within a 5 mile radius of Meacham Field and within 2 miles either side of the north course of Fort Worth radio range extending to the Haslet fan marker.

§ 601.2030 *Galveston, Tex., control zone.* Within a 5 mile radius of Galveston Airport and within 2 miles either side of the northwest course of Galveston radio range extending 3 miles northwest of the radio range station.

§ 601.2031 *Houston, Tex., control zone.* Within a 5 mile radius of the Houston Municipal Airport extending 2 miles either side of the southeast course of the Houston radio range to the Webster fan marker, and extending 2 miles either side of the southwest course of the radio range to the Arcola fan marker, and extending 2 miles either side of the northwest course of the radio range to the Houston fan marker.

[Amdt. 17, 13 F. R. 8606]

§ 601.2032 *Laredo, Tex., control zone.* Within a 5 mile radius of Laredo AAF Airport and within 2 miles either side of the northwest course of Laredo radio range extending 3 miles northwest of the radio range station excepting that portion of such zone that would lie within Mexico.

§ 601.2033 *Little Rock, Ark., control zone.* Within a 5 mile radius of Adams Field extending 2 miles either side of the southeast course of the Little Rock radio range to the Keo fan marker.

[Amdt. 17, 13 F. R. 8606]

§ 601.2034 *Monroe, La., control zone.* Within a 5 mile radius of Selman Field and within 2 miles either side of the southwest course of Monroe radio range extending 4 miles southwest of the radio range station.

§ 601.2035 *New Orleans, La., control zone.* Within a 5 mile radius of Moisant International Airport, within 2 miles either side of the west course of New Orleans radio range extending to the La Place fan marker and within 2 miles either side of the east course of New Orleans radio range extending to the boundary of the New Orleans Control Zone.

§ 601.2036 *Ponca City, Okla., control zone.* Within a 10 mile radius of Ponca City Airport.

§ 601.2037 *San Angelo, Tex., control zone.* Within a 10 mile radius of Mathis Field (San Angelo AAF).

§ 601.2038 *Shreveport, La., control zone.* Within a 5 mile radius of Shreveport Municipal Airport and within 5 miles either side of the northwest course of Shreveport radio range extending to the Dixie fan marker.

§ 601.2039 *Tulsa, Okla., control zone.* Within a 5 mile radius of Tulsa Airport, within 2 miles either side of the northeast course of Tulsa radio range extending to the Verdigris River fan marker, within 2 miles either side of the northwest course of Tulsa radio range extending to the Skiatook fan marker and within 2 miles either side of the southwest course of Tulsa radio range extending to the Red Fork fan marker.

§ 601.2040 *Advance, Mo., control zone.* Within a 3 mile radius of the center of the CAA intermediate field and within 2 miles either side of the center line of the south course of Advance radio range extending 10 miles from the radio range station.

§ 601.2041 *Akron, Colo., control zone.* Within a 3 mile radius of the CAA intermediate field and within 2 miles either side of the center line of the north and south courses of Akron radio range extending 10 miles north of the radio range station.

§ 601.2042 *Burlington, Iowa, control zone.* Within a 5 mile radius of Burlington Municipal Airport and within 2 miles either side of the center line of the south course of Burlington radio range extending 10 miles from the radio range station.

§ 601.2043 *Casper, Wyo., control zone.* Within a 5 mile radius of Wardwell Field

extending 2 miles either side of the east course of the Casper radio range to the Parkerton fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2044 *Cheyenne, Wyo., control zone.* Within a 5 mile radius of the Cheyenne Municipal Airport extending 2 miles either side of the northwest course of the radio range to the Silver Crown fan marker, and extending 2 miles either side of the east course of the radio range to the Hillsdale fan marker, and extending 2 miles either side of the ILS localizer course to the Hillsdale fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2045 *Colorado Springs, Colo., control zone.* Within a 5 mile radius of Petersen AAF Airport and within 2 miles either side of the center line of the north course of Colorado Springs radio range extending 10 miles from the radio range station.

§ 601.2046 *Columbia, Mo., control zone.* Within a 5 mile radius of Columbia Municipal Airport and within 2 miles either side of the center line of the west course of Columbia radio range extending 10 miles from the radio range station.

§ 601.2047 *Denver, Colo., control zone.* Within a 10 mile radius of Stapleton Field extending 2 miles either side of the north course of the Denver radio range to the Dacono fan marker, and extending 2 miles either side of the south course of the radio range to the Franktown fan marker, and extending 2 miles either side of the east course of the radio range to the Watkins fan marker, and extending 2 miles either side of the ILS localizer course to a point 15 miles northeast of the end of the Northeast-Southwest Runway.

[Amdt. 17, 13 F. R. 8607]

§ 601.2048 *Des Moines, Iowa, control zone.* Within a 5 mile radius of the Des Moines Municipal Airport extending 2 miles either side of the south course of the radio range to a point 10 miles from the radio range station, and within 2 miles either side of the ILS localizer course extending to a point 10 miles southeast of the airport.

[Amdt. 17, 13 F. R. 8607]

§ 601.2049 *Fort Bridger, Wyo., control zone.* Within a 3 mile radius of the CAA intermediate field and within 2 miles either side of the center line of the east course of Fort Bridger radio range extending 10 miles from the radio range station.

§ 601.2050 *Garden City, Kans., control zone.* Within a 5 mile radius of Garden City Municipal Airport and within 2 miles either side of the center line of the north course of Garden City radio range extending 10 miles from the radio range station.

§ 601.2051 *Grand Island, Nebr., control zone.* Within a 5 mile radius of the Grand Island AAF Airport and within 2 miles either side of the center line of the north course of Grand Island radio range extending 10 miles from the radio range station.

§ 601.2052 *Hayes Center, Nebr., control zone.* Within a 3 mile radius of the

CAA intermediate field and within 2 miles either side of the west course of Hayes Center radio range extending 10 miles from the radio range station.

§ 601.2053 *Huron, S. Dak., control zone.* Within a 5 mile radius of the Huron Municipal Airport extending 2 miles either side of the southwest course of the radio range to its intersection with the east course of the Pierre, S. Dak., radio range.

[Amdt. 17, 13 F. R. 8607]

§ 601.2054 *Hutchinson, Kans., control zone.* Within a 5 mile radius of the Hutchinson Municipal Airport and within 2 miles either side of the center line of the south course of Hutchinson radio range extending 10 miles from the radio range station.

§ 601.2055 *Joplin, Mo., control zone.* Within a 5 mile radius of the Joplin Municipal Airport and within 2 miles either side of the center line of the north and south courses of Joplin radio range extending 10 miles north of the radio range station.

§ 601.2056 *Kansas City, Mo., control zone.* Within a 5 mile radius of Kansas City Municipal Airport, within 2 miles either side of the center line of the north course of Kansas City radio range extending to the Linkville fan marker and within 2 miles either side of the localizer course (351° outbound) of the Instrument Low Approach System extending 10 miles north of the airport.

§ 601.2057 *Kirkville, Mo., control zone.* Within a 3 mile radius of the Kirkville Municipal Airport and within 2 miles either side of the center line of the southeast course of Kirkville radio range extending 10 miles from the radio range station.

§ 601.2058 *La Junta, Colo., control zone.* Within a 5 mile radius of the La Junta AAF Airport and within 2 miles either side of the center line of the northeast course of La Junta radio range extending 10 miles from the radio range station.

§ 601.2059 *Laramie, Wyo., control zone.* Within a 5 mile radius of General Brees Field and within 2 miles either side of the center line of the northwest course of Laramie radio range extending 10 miles from the radio range station.

§ 601.2060 *Lebo, Kans., control zone.* Within a 3 mile radius of the CAA intermediate field and within 2 miles either side of the center line of the southeast course of Lebo radio range extending 10 miles from the radio range station.

§ 601.2061 *Lincoln, Nebr., control zone.* Within a 5 mile radius of the Lincoln Municipal Airport and within 2 miles either side of the center line of the north course of Lincoln radio range extending 10 miles from the radio range station.

§ 601.2062 *Mason City, Iowa, control zone.* Within a 5 mile radius of Mason City Municipal Airport extending 2 miles either side of a track of 180° true from the Mason City nondirectional radio

beacon to a point 10 miles south of the radio beacon.

[Amdt. 5, 13 F. R. 1230]

§ 601.2063 *North Platte, Nebr., control zone.* Within a 5 mile radius of Lee Bird Field and within 2 miles either side of the center line of the south course of North Platte radio range extending 10 miles from the radio range station.

§ 601.2064 *Omaha, Nebr., control zone.* Within a 5 mile radius of the Omaha Municipal Airport extending 2 miles either side of the north course of the radio range to the Fort Calhoun fan marker and extending 2 miles either side of the ILS localizer course to the Fort Calhoun fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2065 *Pierre, S. Dak., control zone.* Within a 5 mile radius of the Pierre AAF Airport and within 2 miles either side of the center line of the east course of Pierre radio range extending 10 miles from the radio range station.

§ 601.2066 *Pueblo, Colo., control zone.* Within a 5 mile radius of the Pueblo Municipal Airport and within 2 miles either side of the center line of the southeast course of Pueblo radio range extending 10 miles from the radio range station.

§ 601.2067 *Rapid City, S. Dak., control zone.* Within a 5 mile radius of the Rapid City AAF Airport and within 2 miles either side of the center line of the south and north courses of Rapid City radio range extending 10 miles south of the radio range station.

§ 601.2068 *Rock Springs, Wyo., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the east course of the radio range to the Point of Rocks fan marker, and extending 2 miles either side of the ILS localizer course to the Point of Rocks fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2069 *St. Joseph, Mo., control zone.* Within a 5 mile radius of the Rosecrans Field extending 2 miles either side of the south course of the radio range to a point 10 miles from the radio range station and extending 2 miles either side of the ILS localizer course to a point 10 miles from the radio range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.2070 *St. Louis, Mo., control zone.* Within a 5 mile radius of Lambert-St. Louis Municipal Airport extending 2 miles either side of the east course of the St. Louis radio range to the Spanish Lake fan marker and extending 2 miles either side of the ILS localizer course to the Spanish Lake fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2071 *Scottsbluff, Nebr., control zone.* Within a 5 mile radius of Scottsbluff Municipal Airport and within 2 miles either side of the center line of the southeast and northwest courses of Scottsbluff radio range extending 10 miles southeast of the radio range station.

§ 601.2072 *Sheridan, Wyo., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either

side of the southeast course of the radio range to the Ucross fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2073 *Sinclair, Wyo., control zone.* Within a 3 mile radius of the Sinclair intermediate field extending 2 miles either side of the west and east courses of the Sinclair radio range to a point 10 miles from the radio range station.

[Amdt. 17, 13 F. R. 8-07]

§ 601.2074 *Sioux City, Iowa, control zone.* Within a 5 mile radius of Sioux City Municipal Airport and within 2 miles either side of the center line of the south course of Sioux City radio range extending to the Sloan fan marker.

§ 601.2075 *Springfield, Mo., control zone.* Within a 5 mile radius of Springfield Municipal Airport and within 2 miles either side of the center line of the southeast and northwest courses of Springfield radio range extending 10 miles northwest of the radio range station.

§ 601.2076 *Topeka, Kans., control zone.* Within an 8 mile radius of the Phillip Billard Airport extending 2 miles either side of the north course of the Topeka VHF radio range to a point 10 miles north of the radio range station and 2 miles either side of the ILS localizer course to a point 15 miles northwest of the ILS localizer.

[Amdt. 5, 13 F. R. 1230]

§ 601.2077 *Trinidad, Colo., control zone.* Within a 3 mile radius of Trinidad Municipal Airport and within 2 miles either side of the center line of the north course of Trinidad radio range extending 10 miles from the radio range station.

§ 601.2078 *Vichy, Mo., control zone.* Within a 3 mile radius of Vichy Municipal Airport and within 2 miles either side of the center line of the southeast and northwest courses of Vichy radio range extending 10 miles southeast of the radio range station.

§ 601.2079 *Watertown, S. Dak., control zone.* Within a 5 mile radius of the Watertown AAF Airport and within 2 miles either side of the center line of the east course of Watertown radio range extending 10 miles from the radio range station.

§ 601.2080 *Wichita, Kans., control zone.* Within a 5 mile radius of Wichita Municipal Airport, within 2 miles either side of the center line of the north course of Wichita radio range extending to the Kechi fan marker and within 2 miles either side of the localizer course (192° in-bound) of the Instrument Low Approach System extending 10 miles south of the airport.

§ 601.2081 *Coeur d'Alene, Idaho, control zone.* Within a 3 mile radius of the Coeur d'Alene Air Terminal, Coeur d'Alene, Idaho, and within 2 miles either side of the center line of the north course of Coeur d'Alene radio range, extending to the Coeur d'Alene radio range station.

§ 601.2082 *Akron, Ohio, control zone.* Within a 5 mile radius of the Akron, Ohio, Municipal Airport, extending 2

miles either side of the southwest course of the Akron, Ohio, radio range to a point 10 miles southwest of the radio range station.

[Amdt. 8, 13 F. R. 3581]

§ 601.2083 *Alexandria, Minn., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the north course of the Alexandria, Minn., radio range, extending 10 miles north of the radio range station.

§ 601.2084 *Battle Creek, Mich., control zone.* Within a 5 mile radius of Kellogg Field and within 2 miles either side of the center line of the south course of the Battle Creek, Mich., radio range, extending 10 miles south of the radio range station.

§ 601.2085 *Bismarck, N. Dak., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the east course of the Bismarck, N. Dak., radio range, extending 10 miles east of the radio range station.

§ 601.2086 *Chicago, Ill., control zone.* Within a 6 mile radius of the Chicago Municipal Airport extending 2 miles either side of the northwest course of the Chicago radio range to the intersection of the northwest course of the Chicago radio range and the northeast course of the Joliet, Ill., radio range, and within 2 miles either side of the southeast course of the Chicago radio range extending to the intersection of the southeast course of the Chicago radio range and the east course of the Harvey, Ill., radio range, excluding that portion that overlaps the Orchard Airport control zone.

[Amdt. 12, 13 F. R. 5658]

§ 601.2087 *Cincinnati, Ohio, control zone.* Within a 5 mile radius of the Lunken Airport extending 2 miles either side of the southwest and northeast courses of the Cincinnati, Ohio, radio range to the Loveland fan marker.

[Amdt. 8, 13 F. R. 3581]

§ 601.2088 *Dodge City, Kans., control zone.* Within a 5 mile radius of the Dodge City, Kans., Municipal Airport extending 2 miles either side of a track 360° from the Dodge City non-directional radio beacon to a point 10 miles north of the radio beacon.

[Amdt. 6, 13 F. R. 2259]

§ 601.2089 *Cleveland, Ohio, control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the west course of the Cleveland, Ohio, radio range, extending to the Elyria fan marker.

§ 601.2090 *Columbus, Ohio, control zone.* Within a 5 mile radius of the Port Columbus Municipal Airport extending 2 miles either side of the west course of the Columbus, Ohio, radio range to the Hillard fan marker and extending 2 miles either side of the east course of the Columbus, Ohio, radio range to the Newark fan marker.

[Amdt. 8, 13 F. R. 3581]

§ 601.2091 *Dayton, Ohio, control zone.* Within a 5 mile radius of the Municipal

pal Airport extending 2 miles either side of the west course of the Dayton, Ohio, radio range to the Verona fan marker.
[Amdt. 8, 13 F. R. 3581]

§ 601.2092 *Detroit, Mich., control zone.* Within a 5 mile radius of the Detroit City Airport excluding that portion which lies outside the continental limits of the United States.

[Amdt. 1, 12 F. R. 6130]

§ 601.2093 *Dickinson, N. Dak., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the north course of the Dickinson radio range, extending 10 miles north of the radio range station.

§ 601.2094 *Duluth, Minn., control zone.* Within a 5 mile radius of the Williamson-Johnson Airport and within 2 miles either side of the center line of the south course of the Duluth, Minn., radio range, extending 10 miles south of the radio range station.

§ 601.2095 *Effingham, Ill., control zone.* Within a 5 mile radius of the Effingham Airport and within 2 miles either side of the center line of the east course of the Effingham, Ill., radio range, extending 10 miles east of the radio range station.

§ 601.2096 *Evansville, Ind., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the north course of the Evansville, Ind., radio range, extending 10 miles north of the radio range station.

§ 601.2097 *Fargo, N. Dak., control zone.* Within a 5 mile radius of Hector Field and within 2 miles either side of the center line of the east course of the Fargo, N. Dak., radio range, extending 10 miles east of the radio range station.

§ 601.2098 *Flint, Mich., control zone.* Within a 5 mile radius of the Bishop Airport extending 2 miles either side of a track of 344° magnetic to a point 10 miles northwest of the airport.

[Amdt. 8, 13 F. R. 3581]

§ 601.2099 *Fort Wayne, Ind., control zone.* Within a 5 mile radius of Bear Field and within 2 miles either side of the center line of the southwest course of the Fort Wayne, Ind., radio range, extending 10 miles southwest of the radio range station.

§ 601.2100 *Glenview, Ill., control zone.* Within a 5 mile radius of the Glenview, Ill., Naval Air Station and within 2 miles either side of the center line of the northwest course of the Glenview, Ill., radio range, extending 10 miles northwest of the radio range station.

§ 601.2101 *Goshen, Ind., control zone.* Within a 5 mile radius of the Goshen Airport and within 2 miles either side of the center line of the west course of the Goshen, Ind., radio range, extending 10 miles west of the radio range station.

§ 601.2102 *Grand Forks, N. Dak., control zone.* Within a 5 mile radius of

the Municipal Airport and within 2 miles either side of the center line of the south course of the Grand Forks, N. Dak., radio range, extending 10 miles south of the radio range station.

§ 601.2103 *Grand Rapids, Mich., control zone.* Within a 5 mile radius of the Kent County Airport and within 2 miles either side of the center line of the southeast course of the Grand Rapids radio range, extending 10 miles southeast of the radio range station.

§ 601.2104 *Huntington, W. Va., control zone.* Within a 5 mile radius of the Mayes Airport, Chesapeake, Ohio, and within 2 miles either side of the center line of the west course of the Huntington, W. Va., radio range, extending 10 miles west of the radio range station.

§ 601.2105 *Indianapolis, Ind., control zone.* Within a 5 mile radius of the Weir-Cook Municipal Airport extending 2 miles either side of the west course of the Indianapolis radio range to the Greencastle Fan Marker.

[Amdt. 6, 13 F. R. 2259]

§ 601.2106 *Jamestown, N. Dak., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the east course of the Jamestown, N. Dak., radio range, extending 10 miles east of the radio range station.

§ 601.2107 *Joliet, Ill., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the west course of the radio range to a point 10 miles west of the radio range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.2108 *Lansing, Mich., control zone.* Within a 5 mile radius of the Capital City Airport and within 2 miles either side of the center line of the east course of the Lansing, Mich., radio range, extending 10 miles east of the radio range station.

§ 601.2109 *La Fayette, Ind., control zone.* Within a 5 mile radius of the Purdue University Airport and within 2 miles either side of the center line of the southwest course of the La Fayette, Ind., radio range, extending 10 miles southwest of the radio range station.

§ 601.2110 *Lone Rock, Wis., control zone.* Within a 5 mile radius of the Lone Rock, Wis., Municipal Airport and within 2 miles either side of the center line of the west course of the Lone Rock radio range, extending 10 miles west of the radio range station.

§ 601.2111 *Louisville, Ky., control zone.* Within a 5 mile radius of Bowman Field and within 2 miles either side of the center line of the east course of the Louisville, Ky., radio range, extending to the Eastwood fan marker.

§ 601.2112 *Madison, Wis., control zone.* Within a 5 mile radius of the Truax Airport and within 2 miles either side of the center line of the southeast course of the Madison, Wis., radio range, extending 10 miles southeast of the radio range station.

§ 601.2113 *Milwaukee, Wis., control zone.* Within a 5 mile radius of the General Mitchell Airport and within 2 miles either side of the center line of the south course of the Milwaukee, Wis., radio range, extending to the Kenosha fan marker.

§ 601.2114 *Minneapolis, Minn., control zone.* Within a 5 mile radius of the Wold-Chamberlain Airport extending 2 miles either side of the ILS course to the ILS outer marker.

[Amdt. 5, 13 F. R. 1230]

§ 601.2115 *Minot, N. Dak., control zone.* Within a 5 mile radius of the Port O'Minot Field and within 2 miles either side of the center line of the southeast course of the Minot radio range, extending 10 miles southeast of the radio range station.

§ 601.2116 *Moline, Ill., control zone.* Within a 5 mile radius of the Moline Municipal Airport extending 2 miles either side of the ILS localizer course to a point 16 miles northwest of the ILS localizer.

[Amdt. 8, 13 F. R. 3581]

§ 601.2117 *Muskegon, Mich., control zone.* Within a 5 mile radius of the Muskegon County Airport and within 2 miles either side of the center line of the southeast course of the Muskegon, Mich., radio range, extending 10 miles southeast of the radio range station.

§ 601.2118 *Pembina, N. Dak., control zone.* Within a 5 mile radius of the Pembina Airport and within 2 miles either side of the center line of the south course of the Pembina, N. Dak., radio range, extending 10 miles south of the radio range station, excluding that portion which lies outside the continental limits of the United States.

§ 601.2119 *Peoria, Ill., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the north course of the Peoria, Ill., radio range, extending 10 miles north of the radio range station.

§ 601.2120 *Rochester, Minn., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the south course of the Rochester, Minn., radio range, extending 10 miles south of the radio range station.

§ 601.2121 *Rockford, Ill., control zone.* Within a 5 mile radius of the Machesney Airport and within 2 miles either side of the center line of the west course of the Rockford, Ill., radio range, extending 10 miles west of the radio range station.

[Amdt. 8, 13 F. R. 3581]

§ 601.2122 *Detroit, Mich., control zone.* Within a 5 mile radius of the Detroit-Wayne Major Airport extending 2 miles either side of the west course of the radio range to the Saline fan marker, including the area within a 6 mile radius of the Willow Run Airport.

[Amdt. 22, 14 F. R. 2894]

§ 601.2123 *South Bend, Ind., control zone.* Within a 5 mile radius of the Bendix Airport within 2 miles either side of

the center line of the west course of South Bend, Ind., radio range, extending 10 miles west of the radio range station and within 2 miles either side of the center line of the east course of South Bend radio range, extending to the Union intersection (intersection of north course of Goshen radio range, Goshen, Ind., and east course of South Bend, Ind., radio range).

§ 601.2124 *Roswell, N. Mex., control zone.* Within a 30 mile radius of the Walker Air Force Base, Roswell, N. Mex. [Amdt. 12, 13 F. R. 5658]

§ 601.2125 *Terre Haute, Ind., control zone.* Within a 5 mile radius of Hulman Field and within 2 miles either side of the center line of the west course of Terre Haute, Ind., radio range, extending 10 miles west of the radio range station.

§ 601.2126 *Toledo, Ohio, control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the south course of the Toledo, Ohio, radio range, extending to the Bowling Green fan marker.

§ 601.2127 *Youngstown, Ohio, control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the north course of the Youngstown, Ohio, radio range, extending 10 miles north of the radio range station.

§ 601.2128 *Wilmington, N. C., control zone.* Within a 5 mile radius of the New Hanover County Airport, Wilmington, N. C., extending 2 miles either side of the northeast and southwest courses of the Wilmington, N. C., VHF radio range to a point 10 miles northeast of the radio range station.

[Amdt. 22, 14 F. R. 2894]

§ 601.2129 *Bowling Green, Ky., control zone.* Within a 5 mile radius of Bowling Green, Ky., Airport and within 2 miles either side of the center line of the southeast course of Bowling Green radio range, extending 10 miles southeast of the radio range station.

§ 601.2130 *Atlanta, Ga., control zone.* Within a 5 mile radius of the Municipal Airport, within 2 miles either side of the center line of the southeast course of the Atlanta, Ga., radio range, extending to the Jonesboro fan marker and within 2 miles either side of the center line of the northwest course of the Atlanta radio range, extending 10 miles northwest of the radio range station.

§ 601.2131 *Augusta, Ga., control zone.* Within a 5 mile radius of Daniel Field and within 2 miles either side of the center line of the southwest course of the Augusta, Ga., radio range, extending 10 miles southwest of the radio range station.

§ 601.2132 *Biloxi, Miss., control zone.* Within a 5 mile radius of Keesler Field and within 2 miles either side of the center line of the northeast course of Keesler Field radio range, extending 5 miles northeast of the radio range station.

§ 601.2133 *Birmingham, Ala., control zone.* Within a 5 mile radius of Birmingham Airport and within 2 miles

either side of the center line of the north course of the Birmingham, Ala., radio range, extending 10 miles north of the Birmingham, Ala., radio range station.

§ 601.2134 *Charleston, S. C., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the northwest course of the Charleston, S. C., radio range, extending to the Summerville fan marker.

§ 601.2135 *Charlotte, N. C., control zone.* Within a 5 mile radius of Douglas Airport and within 2 miles either side of the center line of the south course of Charlotte, N. C., radio range, extending 5 miles south of the radio range station.

§ 601.2136 *Chattanooga, Tenn., control zone.* Within a 5 mile radius of Lovell Field and within 2 miles either side of the center line of the northeast course of the Chattanooga, Tenn., radio range, extending 10 miles northeast of the radio range station.

§ 601.2137 *Columbia, S. C., control zone.* Within a 5 mile radius of Lexington County Airport and within 2 miles either side of the center line of the east and west courses of the Columbia, S. C., radio range, extending 5 miles east of the radio range station.

§ 601.2138 *Crestview, Fla., control zone.* Within a 5 mile radius of Crestview Airport and within 2 miles either side of the center line of the east course of Crestview, Fla., radio range, extending 10 miles east of the radio range station.

§ 601.2139 *Cress City, Fla., control zone.* Within a 5 mile radius of Cress City Airport and within 2 miles either side of the center line of the southeast course of Cress City, Fla., radio range, extending 10 miles southeast of the radio range station.

§ 601.2140 *Daytona Beach, Fla., control zone.* Within a 5 mile radius of Daytona Beach Airport and within 2 miles either side of the center line of the west course of Daytona Beach, Fla., radio range, extending 10 miles west of the radio range station.

§ 601.2141 *Dothan, Ala., control zone.* Within a 5 mile radius of Dothan Airport and within 2 miles either side of the center line of the southwest course of Dothan, Ala., radio range, extending 10 miles southwest of the radio range station.

§ 601.2142 *Florence, S. C., control zone.* Within a 5 mile radius of Florence Airport and within 2 miles either side of the center line of the east course of Florence, S. C., radio range, extending 10 miles southeast of the radio range station.

§ 601.2143 *Fort Myers, Fla., control zone.* Within a 5 mile radius of Page Field and within 2 miles either side of the center line of the southwest course of Fort Myers, Fla., radio range, extending 10 miles southwest of the radio range station.

§ 601.2144 *Greensboro, N. C., control zone.* Within a 5 mile radius of the Greensboro-High Point Airport and

within 2 miles either side of the center line of the northeast course of the Greensboro, N. C., radio range, extending 10 miles northeast of the radio range station.

§ 601.2145 *Greenville, S. C., control zone.* Within a 5 mile radius of the Greenville Airport and within 2 miles either side of the center line of the south course of Greenville, S. C., radio range, extending 10 miles south of the radio range station.

§ 601.2146 *Greenwood, Miss., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the east course of Greenwood, Miss., radio range, extending 10 miles east of the radio range station.

§ 601.2147 *Jack's Creek, Tenn., control zone.* Within a 5 mile radius of Jack's Creek intermediate field and within 2 miles either side of the center line of the north course of Jack's Creek, Tenn., radio range, extending 10 miles north of the radio range station.

§ 601.2148 *Jackson, Miss., control zone.* Within a 5 mile radius of Jackson Airport and within 2 miles either side of the center line of the north course of Jackson, Miss., radio range, extending to the Flora fan marker.

§ 601.2149 *Jacksonville, Fla., control zone.* Within a 5 mile radius of Municipal Airport No. 1 and within 2 miles either side of the center line of the east course of Jacksonville, Fla., radio range, extending to the Fort George Island fan marker.

§ 601.2150 *Key West, Fla., control zone.* Within a 5 mile radius of Meacham Airport and within 2 miles either side of the center line of the west course of Key West, Fla., radio range, extending 10 miles west of the radio range station.

§ 601.2151 *Knoxville, Tenn., control zone.* Within a 5 mile radius of the McGhee-Tyson Airport extending 2 miles either side of the north course of the radio range to the Inskip fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2152 *Macon, Ga., control zone.* Within a 5 mile radius of Cochran Field extending 2 miles either side of the northwest course of the radio range to a point 10 miles northwest of the range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.2153 *Melbourne, Fla., control zone.* Within a 5 mile radius of Melbourne Airport and within 2 miles either side of the center line of the north course of Melbourne, Fla., radio range, extending 10 miles north of the radio range station.

§ 601.2154 *Memphis, Tenn., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the south course of Memphis, Tenn., radio range, extending to the Nesbitt fan marker.

§ 601.2155 *Meridian, Miss., control zone.* Within a 5 mile radius of Key Field and within 2 miles either side of the

center line of the northwest course of Meridian, Miss., radio range, extending 10 miles northwest of the radio range station.

§ 601.2156 *Miami, Fla., control zone.* Within a 5 mile radius of the Miami International Airport and within 2 miles either side of the east and west courses of the Miami radio range extending west to the Krome Fan Marker.

[Amdt. 12, 13 F. R. 5658]

§ 601.2157 *Mobile, Ala., control zone.* Within a 5 mile radius of Bates Field, within 2 miles either side of a direct line between Bates Field and Mobile radio range station and within 2 miles either side of the center line of the northeast course of Mobile, Ala., radio range, extending 10 miles northeast of the radio range station.

§ 601.2158 *Mobile, Ala., control zone.* Within a 5 mile radius of Brockley Field and within 2 miles either side of the center line of the northwest course of Mobile, Ala., radio range, extending 10 miles northwest of the radio range station.

§ 601.2159 *Montgomery, Ala., control zone.* Within a 5 mile radius of Maxwell Field, and within 2 miles either side of the center line of the west course of Maxwell radio range, extending 10 miles west of the radio range station.

§ 601.2160 *Muscle Shoals, Ala., control zone.* Within a 5 mile radius of Muscle Shoals Airport and within 2 miles either side of the center line of the southeast course of Muscle Shoals radio range, extending 10 miles southeast of the radio range station.

§ 601.2161 *Nashville, Tenn., control zone.* Within a 5 mile radius of Berry Field and within 2 miles either side of the center line of the east course of Nashville, Tenn., radio range, extending to the Mount Juliet fan marker.

§ 601.2162 *Orlando, Fla., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the northeast course of Orlando, Fla., radio range, extending 10 miles northeast of the radio range station.

§ 601.2163 *Pensacola, Fla., control zone.* Within a 5 mile radius of the Municipal Airport and within 2 miles either side of the center line of the south course of Pensacola, Fla., radio range, extending 10 miles south of the radio range station.

§ 601.2164 *Raleigh, N. C., control zone.* Within a 5 mile radius of Raleigh-Durham Airport and within 2 miles either side of the center line of the southeast course of Raleigh, N. C., radio range, extending 10 miles southeast of the radio range station.

§ 601.2165 *Savannah, Ga., control zone.* Within a 5 mile radius of Hunter Field and within 2 miles either side of the center line of the southwest course of Savannah, Ga., radio range, extending to Richmond Hill fan marker.

§ 601.2166 *Spartanburg, S. C., control zone.* Within a 5 mile radius of Me-

morial Airport and within 2 miles either side of the center line of the southwest course of Spartanburg, S. C., radio range, extending 10 miles southwest of the radio range station.

§ 601.2167 *Tallahassee, Fla., control zone.* Within a 5 mile radius of Dale Mabry Field and within 2 miles either side of the center line of the northwest course of Tallahassee, Fla., radio range, extending 10 miles northwest of the radio range station.

§ 601.2168 *Tampa, Fla., control zone.* Within a 5 mile radius of Drew Field, within 2 miles either side of a direct line between Drew Field and Tampa, Fla., radio range station, and within 2 miles either side of the center line of the south course of Tampa radio range, extending 10 miles south of the radio range station.

§ 601.2169 *Tri-City, Tenn., control zone.* Within a 5 mile radius of the Tri-City Airport and within 2 miles either side of the center line of the northeast course of Tri City, Tenn., radio range, extending 10 miles northeast of the radio range station.

§ 601.2170 *West Palm Beach, Fla., control zone.* Within a 5 mile radius of Morrison Field and within 2 miles either side of the center line of the west course of West Palm Beach, Fla., radio range, extending 10 miles west of the radio range station.

§ 601.2171 *Winston-Salem, N. C., control zone.* Within a 5 mile radius of Smith-Reynolds Airport and within 2 miles either side of the center line of the southeast and northwest courses of Winston-Salem radio range, extending 10 miles southeast of the radio range station.

§ 601.2172 *Alma, Ga., control zone.* Within a 5 mile radius of Alma Intermediate Field and within 2 miles either side of the center line of the northwest course of the Alma, Ga., radio range, extending 10 miles northwest of the radio range station.

§ 601.2173 *Bakersfield, Calif., control zone.* Within a 5 mile radius of the Bakersfield-Kern County Airport and within 2 miles either side of the center line of the northwest course of Bakersfield, Calif., radio range, extending 11 miles northwest of the radio range station.

§ 601.2174 *Burbank, Calif., control zone.* Within a 5 mile radius of the Lockheed Air Terminal extending to and including a 3 mile radius of the Grand Central Airport, Glendale, Calif., and 2 miles either side of the northwest course of the Burbank radio range to a point 7 miles northwest of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2175 *El Centro, Calif., control zone.* Within a 5 mile radius of the Naval Air Station extending to and including a 2 mile radius of the El Centro radio range station and 2 miles either side of the east course of the El Centro radio range to a point 10 miles east of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2176 *Fresno, Calif., control zone.* Within a 5 mile radius of Hammer Field extending to and including a 3 mile radius of Chandler Field, and extending 2 miles either side of the northwest and southeast courses of the Fresno, Calif., radio range to a point 10 miles from the radio range station.

[Amdt. 8, 13 F. R. 3581]

§ 601.2177 *Las Vegas, Nev., control zone.* Within a 5 mile radius of McCarran Field, Las Vegas, Nev., extending 2 miles either side of the southwest course of the Las Vegas, Nev., radio range to and including a 5 mile radius of the Las Vegas, Nev., Air Force Base.

[Amdt. 22, 14 F. R. 2894]

§ 601.2178 *Long Beach, Calif., control zone.* Within a 5 mile radius of the Municipal Airport (Daugherty Field) extending to and including a 5 mile radius of the Los Alamitos Naval Air Station and 2 miles either side of the southeast course of the Long Beach radio range to the Huntington Beach fan marker.

[Amdt. 5, 13 F. R. 1231]

§ 601.2179 *Los Angeles, Calif., control zone.* Within a 5-mile radius of the Municipal Airport extending 2 miles either side of the east course of the Los Angeles, Calif., radio range to a point 6 miles east of the airport and extending 2 miles either side of the northwest course of the Los Angeles, Calif., radio range to the Burbank, Calif., control zone.

[Amdt. 8, 13 F. R. 3581]

§ 601.2180 *Oakland, Calif., control zone.* Within a 5 mile radius of the Municipal Airport within 2 miles either side of the center line of the southeast course of the Oakland, Calif., radio range, extending to Newark fan marker, within 2 miles either side of the center line of the northwest course of Oakland radio range, extending to Richmond intersection (intersection northwest course of Oakland radio range and southwest course of Fairfield radio range, Fairfield, Calif.), within 2 miles either side of the center line of the northeast course of Oakland radio range, extending to Bay Point fan marker and within 2 miles either side of the center line of the southwest course of Oakland radio range, extending 6.25 miles southwest of the radio range station.

§ 601.2181 *Ogden, Utah, control zone.* Within a 5 mile radius of the Ogden Municipal Airport (Hinckley Field) extending to and including a 3 mile radius of Hill Field and within 2 miles either side of the south course of the Ogden, Utah, radio range to the Layton, Utah, fan marker.

[Amdt. 6, 13 F. R. 2253]

§ 601.2182 *Palmdale, Calif., control zone.* Within a 3 mile radius of the Palmdale Airport and within 2 miles either side of the center line of the northeast course of Palmdale, Calif., radio range, extending 10 miles northeast of the radio range station.

§ 601.2183 *Grand Junction, Colo., control zone.* Within a 5 mile radius of the Grand Junction Municipal Airport ex-

tending 2 miles either side of the ILS localizer course to a point 10 miles northwest of the ILS localizer, and extending 2 miles either side of the east course of the Grand Junction, Colo., VHF radio range to the radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2184 *Prescott, Ariz., control zone.* Within a 5 mile radius of the Municipal Airport (Ernest Love Field) and within 2 miles either side of the center line of the southeast course of Prescott, Ariz., radio range to and including the area within a 2 mile radius of Prescott radio range station.

§ 601.2185 *Sacramento, Calif., control zone.* Within a 5 mile radius of the Sacramento Municipal Airport extending 2 miles either side of the southwest course of the Sacramento radio range to a point 10 miles southwest of the radio range station and within a 5 mile radius centered on McClellan Field and a 5 mile radius centered on Mather Field, and within 5 miles either side of a magnetic course of 40° magnetic (58° true) from Mather Field extending for a distance of 12 miles from Mather Field and within the area inside of tangent lines drawn from the circumference of the 5 mile Sacramento area to the circumference of the McClellan and Mather 5 mile areas.

[Amdt. 10, 13 F. R. 4731]

§ 601.2186 *San Diego, Calif., control zone.* Within a 5 mile radius of the Municipal Airport (Lindbergh Field), extending 2 miles either side of the north course of the San Diego radio range to the La Jolla fan marker and including a 5 mile radius of the Miramar, Calif., Naval Auxiliary Air Station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2187 *San Francisco, Calif., control zone.* Within a 5 mile radius of the Municipal Airport (Mills Field), within 2 miles either side of the center line of the southeast course of San Francisco, Calif., radio range, extending to Belmont fan marker, within 2 miles either side of the center line of the northeast course of San Francisco radio range, extending 6.25 miles northeast of the radio range station and within 2 miles either side of the center line of the northwest course of the San Francisco radio range, extending to Golden Gate intersection (intersection northwest course of San Francisco radio range and southwest course of Fairfield radio range).

§ 601.2188 *Salt Lake City, Utah, control zone.* Within a 5 mile radius of Municipal Airport No. 1, within 2 miles either side of the center line of the north course of Salt Lake City, Utah radio range, extending to Layton fan marker and within 2 miles either side of the center line of the west course of the Salt Lake City radio range, extending 10 miles west of the radio range station.

§ 601.2189 *Olathe, Kans., control zone.* Within a 10 mile radius of the Naval Air Station excluding that portion which lies within Green civil airway No. 4 and extending 2 miles either side of the south course of the Olathe, Kans., Navy radio

range to a point 10 miles south of the radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2190 *Atlantic City, N. J., control zone.* Within a 7 mile radius of the Naval Air Station extending 2 miles either side of the southeast course of the Atlantic City, N. J., Navy radio range to a point 8 miles southeast of the radio range station excluding that portion which lies within danger areas.

[Amdt. 7, 13 F. R. 2650]

§ 601.2191 *Zanesville, Ohio, control zone.* Within a 5 mile radius of the Zanesville Airport extending 2 miles either side of a track 180° magnetic to a point 10 miles south of the airport.

[Amdt. 8, 13 F. R. 3581]

§ 601.2192 *Mana, Kauai, T. H., control zone.* Within a 3 mile radius of the Barking Sands AFB extending 3 miles on the south side of the west course of the Port Allen radio range to the Port Allen radio range station, excluding that portion overlapping the Barking Sands Danger Area.

[Amdt. 17, 13 F. R. 8607]

§ 601.2193 *Kahului, Maui, T. H., control zone.* Within a 5 mile radius of the Kahului Airport extending 2 miles either side of the north course of the Maui radio range to the Maui radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2194 *Hilo, Hawaii, T. H., control zone.* Within a 5 mile radius of the Hilo General Lyman Airport extending 2 miles either side of the east course of the Hilo radio range to a point 10 miles east of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2195 *Windsor Locks, Conn., control zone.* Within a 5 mile radius of Bradley Field extending 2 miles either side of the ILS localizer course to a point 10 miles from the ILS localizer.

[Amdt. 5, 13 F. R. 1231]

§ 601.2196 *New Castle, Del., control zone.* Within a 5 mile radius of the New Castle Army Air Field extending 2 miles either side of the south course of the New Castle radio range to a point 10 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2197 *Morgantown, W. Va., control zone.* Within a 5 mile radius of the Morgantown Airport extending 2 miles either side of the southeast and northwest courses of the Morgantown radio range to a point 10 miles northwest of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2198 *Montpelier, Vt., control zone.* Within a 5 mile radius of the Barre-Montpelier Airport extending 2 miles either side of the northeast course of the Montpelier radio range to a point 10 miles northeast of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2199 *Syracuse, N. Y., control zone.* Within a 5 mile radius of the Syra-

cuse Municipal Airport extending 2 miles either side of the north course of the Syracuse radio range to a point 10 miles north of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2200 *Allentown, Pa., control zone.* Within a 5 mile radius of the Allentown-Bethlehem Airport extending 2 miles either side of the northeast course of the Allentown radio range to a point 10 miles from the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2201 *Williamsport, Pa., control zone.* Within a 5 mile radius of the Williamsport Municipal Airport extending 2 miles either side of the west course of the Williamsport radio range to the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2202 *Philadelphia, Pa., control zone.* Within a 5 mile radius of the North Philadelphia Airport extending 2 miles either side of the northeast course of the Philadelphia radio range to a point 10 miles northeast of the radio range station.

[Amdt. 8, 13 F. R. 3581]

§ 601.2203 *Martinsburg, W. Va., control zone.* Within a 5 mile radius of the Martinsburg Airport extending 2 miles either side of the southwest course of the Martinsburg radio range to a point 10 miles southwest of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2204 *Presque Isle, Maine, control zone.* Within a 5 mile radius of the Presque Isle Army Air Field extending 5 miles either side of the south course of the Spragueville radio range to a point 10 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2205 *Chincoteague, Va., control zone.* Within a 5 mile radius of the Naval Air Station extending 2 miles either side of the west course of the Chincoteague radio range to a point 8 miles west of the radio range station excluding that portion which lies within danger areas.

[Amdt. 5, 13 F. R. 1231]

§ 601.2206 *New York, N. Y., control zone.* Within a 5 mile radius of LaGuardia Field extending 5 miles to either side of the northeast course of the LaGuardia field radio range to the Port Chester fan marker.

[Amdt. 5, 13 F. R. 1231]

§ 601.2207 *White Plains, N. Y., control zone.* Within a 5 mile radius of the West Chester County Airport extending 2 miles either side of the ILS localizer course to the ILS outer marker.

[Amdt. 5, 13 F. R. 1231]

§ 601.2208 *Stockton, Calif., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the southeast course of the Stockton radio range to a point 10 miles southeast of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2209 *Tucson, Ariz., control zone.* Within a 5 mile radius of the Davis-

Monthan Army Air Field extending to and including a 5 mile radius of Tucson Municipal Airport No. 2.

[Amdt. 5, 13 F. R. 1231]

§ 601.2210 *Santa Barbara, Calif., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the west course of the Santa Barbara radio range to a point 10 miles west of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2211 *Cherry Point, N. C., control zone.* Within a 5 mile radius of the Marine Corps Air Station excluding that portion above 10,000 feet mean sea level.

[Amdt. 5, 13 F. R. 1231]

§ 601.2212 *Topeka, Kans., control zone.* Within a 5 mile radius of the Topeka Army Air Field excluding that portion which lies within the Phillip Billard Airport control zone, and extending 2 miles either side of the southwest course of the Topeka Army radio range to a point 10 miles southwest of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2213 *Fort Riley, Kans., control zone.* Within a 5 mile radius of the Marshall Army Air Field extending ½ mile west and 4 miles east of the northeast course of the Marshall radio range to a point 10 miles northeast of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2214 *Goodland, Kans., control zone.* Within a 5 mile radius of the Goodland Municipal Airport extending 2 miles either side of the north course of the Goodland VHF radio range to a point 10 miles north of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2215 *San Juan, P. R., control zone.* Within a 5 mile radius of the Naval Air Station extending 2 miles either side of the west course of the San Juan radio range to a point 10 miles west of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2216 *Seattle, Wash., control zone.* Within a 5 mile radius of the Naval Air Station extending 1½ miles either side of a track 341° true to a point 7 miles northwest of the airport excluding that portion west of a line connecting Latitude 47°44'00", Longitude 122°20'10" and Latitude 47°37'00", Longitude 122°-19'10".

[Amdt. 5, 13 F. R. 1231]

§ 601.2217 *Aberdeen, S. Dak., control zone.* Within a 5 mile radius of the Aberdeen Airport extending 2 miles either side of the south course of the Aberdeen radio range to a point 10 miles south of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2218 *Sioux Falls, S. Dak., control zone.* Within a 5 mile radius of the Sioux Falls Municipal Airport extending 2 miles either side of the northwest course of the Sioux Falls radio range to a point 10 miles northwest of the radio range station.

[Amdt. 5, 13 F. R. 1231]

§ 601.2219 *Iowa City, Iowa, control zone.* Within a 5 mile radius of the Iowa City Airport extending 2 miles either side of a track 85° magnetic from the airport to its intersection with the north course of the Burlington, Iowa, radio range.

[Amdt. 8, 13 F. R. 3581]

§ 601.2220 *Lubbock, Tex., control zone.* Within a 5 mile radius of the South Plains Army Air Field extending 2 miles either side of the east course of the Lubbock radio range to the radio range station.

[Amdt. 5, 13 F. R. 1232]

§ 601.2221 *La Crosse, Wis., control zone.* Within a 5 mile radius of the La Crosse Municipal Airport extending 2 miles either side of the northwest course of the La Crosse radio range to a point 10 miles northwest of the radio range station.

[Amdt. 5, 13 F. R. 1232]

§ 601.2222 *Austin, Tex., control zone.* Within a 5 mile radius of the Robert Mueller Airport extending 2 miles either side of the northwest course of the Austin, Tex., radio range to the Lake Travis fan marker, and extending 2 miles either side of the Austin, Tex., ILS localizer course to the ILS outer marker.

[Amdt. 6, 13 F. R. 2259]

§ 601.2223 *Charleston, W. Va., control zone.* Within a 5 mile radius of the Kanawha County Airport extending 2 miles either side of the east and west courses of the Charleston, W. Va., radio range to a point 10 miles west of radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2224 *Anderson, S. C., control zone.* Within a 5 mile radius of the Anderson Airport extending 2 miles either side of the southwest course of the Spartanburg, S. C., radio range to a point 10 miles southwest of the Anderson Airport.

[Amdt. 6, 13 F. R. 2259]

§ 601.2225 *Mansfield, Ohio, control zone.* Within a 5 mile radius of the Mansfield Municipal Airport extending 2 miles either side of a track 310° magnetic to a point 10 miles northwest of the airport.

[Amdt. 6, 13 F. R. 2259]

§ 601.2226 *Springfield, Ill., control zone.* Within a 5 mile radius of the Capital Airport extending 2 miles either side of the southwest course of the Springfield, Ill., radio range to a point 10 miles southwest of the radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2227 *Salina, Kans., control zone.* Within a 10 mile radius of the Smoky Hill Air Force Base extending 2 miles either side of the north course of the Salina, Kans., VHF radio range to a point 10 miles north of the radio range station excluding that portion which lies within danger areas.

[Amdt. 6, 13 F. R. 2259]

§ 601.2228 *Fairbanks, Alaska, control zone.* Within a 5 mile radius of the Municipal Airport (Weeks-Fairbanks), extending 2 miles either side of the west course of the Fairbanks, Alaska, radio range to the radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2229 *Fairfield, Calif., control zone.* Within a 5 mile radius of the Fairfield-Suisun Air Force Base extending 2 miles either side of the southwest course of the Fairfield-Suisun Army radio range to the intersection of the southwest course of the Fairfield-Suisun Army radio range and the northwest course of the Oakland, Calif., radio range, and extending 3 miles either side of the northeast course of the Fairfield-Suisun Army radio range to a point 20 miles northeast of the radio range station.

[Amdt. 6, 13 F. R. 2259]

§ 601.2230 *Brunswick, Ga., control zone.* Within a 5 mile radius of the McKinnon Airport extending 2 miles either side of the north course of the Jacksonville, Fla., radio range to a point 10 miles north of the airport.

[Amdt. 6, 13 F. R. 2259]

§ 601.2231 *Vero Beach, Fla., control zone.* Within a 5 mile radius of the Vero Beach Airport extending 2 miles either side of a track 290° magnetic to a point 10 miles west of the airport.

[Amdt. 22, 14 F. R. 2895]

§ 601.2232 *Norfolk, Va., control zone.* Within a 5 mile radius of the Naval Air Station excluding that portion which lies within the Norfolk Municipal Airport control zone.

[Amdt. 8, 13 F. R. 3581]

§ 601.2233 *Quonset Point, R. I., control zone.* Within a 5 mile radius of the Naval Air Station excluding that portion which lies within the Providence, R. I., control zone.

[Amdt. 8, 13 F. R. 3581]

§ 601.2234 *Miami, Fla., control zone.* Within a 5 mile radius of the Naval Air Station centered on Latitude 25°52'45", Longitude 80°15'00", excluding that portion which lies within the Miami International Airport control zone.

[Amdt. 8, 13 F. R. 3581]

§ 601.2235 *Willmar, Minn., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the south course of the Willmar radio range to a point 10 miles south of the radio range station.

[Amdt. 10, 13 F. R. 4731]

§ 601.2236 *Whidbey Island, Wash., control zone.* Within a 5 mile radius of the Naval Air Station (Ault Field) extending to and including a 5 mile radius of the Whidbey Island Seaplane Base (Oak Harbor), Wash., excluding that portion lying within danger areas.

[Amdt. 10, 13 F. R. 4731]

§ 601.2237 *New York, N. Y., control zone.* Within a 5 mile radius of the Floyd Bennett Naval Air Station extending 2 miles either side of the southeast course of the Floyd Bennett NAS radio range to the intersection of the southeast course of the Floyd Bennett radio range and the southwest course of the Mitchel Field radio range, excluding that portion which lies northeast of a straight line connecting the points of convergence with the New York International (Idlewild) control zone.

[Amdt. 12, 13 F. R. 5658]

§ 601.2238 *New York, N. Y., control zone.* Within a 5 mile radius of the New York International Airport (Idlewild), excluding that portion which lies southwest of a straight line connecting the points of convergence with the Floyd Bennett control zone.

[Amdt. 12, 13 F. R. 5658]

§ 601.2239 *Cordova, Alaska, control zone.* Within a 5 mile radius of the Cordova, Alaska (Mile 13) Airport extending 2 miles either side of the southeast course of the Cordova, Alaska (localizer) radio range to Amber civil airway No. 1 and extending 2 miles either side of the southwest course of the Cordova, Alaska (localizer) radio range to Amber civil airway No. 1.

[Amdt. 12, 13 F. R. 5658]

§ 601.2240 *Milton, Fla., control zone.* Within a 5 mile radius of North Whiting Naval Air Station extending 2 miles either side of the northwest course of the North Whiting (Navy) radio range to a point 10 miles northwest of the radio range station.

[Amdt. 15, 13 F. R. 7298]

§ 601.2241 *Macon, Ga., control zone.* Within a 5 mile radius of Robins Field (AFB) excluding that portion overlapping the Cochran Field control zone.

[Amdt. 17, 13 F. R. 8607]

§ 601.2242 *Lexington, Ky., control zone.* Within a 5 mile radius of the Blue Grass Airport extending 2 miles either side of a line 225° magnetic from the Lexington, Ky., nondirectional radio marker beacon to a point 10 miles southwest of the radio marker beacon.

[Amdt. 15, 13 F. R. 7298]

§ 601.2243 *Hempstead, N. Y., control zone.* Within a 5 mile radius of Mitchel Field (AFB) extending 2 miles either side of the southeast course of the Mitchel Field (AFB) radio range to the Babylon fan marker excluding the area within a 3,000-foot radius of Aviation Country Club Airport and the area extending 1,500 feet either side of a track 80° true from the center of the Aviation Country Club Airport to the outer limits of the 5 mile radius circle centered on Mitchel Field AFB.

[Amdt. 17, 13 F. R. 8607]

§ 601.2244 *Quantico, Va., control zone.* Within a 5 mile radius of the Marine Corps Air Station, excluding that portion overlapping danger areas.

[Amdt. 17, 13 F. R. 8607]

§ 601.2245 *Chanute, Kans., control zone.* Within a 3 mile radius of the Chanute Municipal Airport extending 2 miles either side of the east course of the radio range to a point 10 miles from the radio range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.2246 *Oklahoma City, Okla., control zone.* Within a 5 mile radius of Will Rogers Field extending 2 miles either side of the west course of the radio range to the Mustang fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2247 *Abilene, Tex., control zone.* Within a 5 mile radius of the Abilene

Airport extending 2 miles either side of the north course of the radio range to the Phantom Hill fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2248 *San Antonio, Tex., control zone.* Within a 5 mile radius of Alamo Field extending 2 miles either side of the north course of the Alamo radio range to the Cibolo Creek fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2249 *Corpus Christi, Tex., control zone.* Within a 3 mile radius of the Cliff Maus Airport extending 2 miles either side of the northwest course of the radio range to the Odem fan marker.

[Amdt. 17, 13 F. R. 8607]

§ 601.2250 *Tyler, Tex., control zone.* Within a 5 mile radius of Pounds Field extending 2 miles either side of the northwest course of the radio range to a point 5 miles northwest of the radio range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.2251 *Albany, Ga., control zone.* Within a 5 mile radius of the Municipal Airport extending 2 miles either side of the west and east courses of the Albany radio range to a point 10 miles east of the radio range station, including a 5 mile radius of Turner Air Force Base, and extending 2 miles either side of the north and south courses of the Albany radio range to a point 10 miles south of the radio range station.

[Amdt. 18, 14 F. R. 456]

§ 601.2252 *Fairbanks, Alaska, control zone.* Within a 5 mile radius of the Eielson Air Base, Fairbanks, Alaska, extending 2 miles either side of the east and north courses of the Eielson radio range to Amber Civil Airway No. 2.

[Amdt. 20, 14 F. R. 1487]

§ 601.2253 *Kenai, Alaska, control zone.* Within a 5 mile radius of the Kenai Airport extending 2 miles either side of the southeast course of the Kenai radio range to Green Civil Airway No. 8.

[Amdt. 20, 14 F. R. 1487]

§ 601.2254 *Falmouth, Mass., control zone.* Within a 3 mile radius of the Otis AFB, Falmouth, Mass., excluding that portion overlapping danger areas.

[Amdt. 22, 14 F. R. 2895]

§ 601.2255 *Aquidilla, P. R., control zone.* Within a 10 mile radius of the Ramey AFB, Aquidilla, P. R.

[Amdt. 22, 14 F. R. 2895]

DESIGNATION OF REPORTING POINTS

§ 601.4001 *Designation of reporting points.* The locations described in §§ 601.4011-601.5001 are designated as reporting points.

[Amdt. 11, 13 F. R. 5036]

GREEN CIVIL AIRWAYS

§ 601.4011 *Green civil airway No. 1 (United States-Canadian Border, to Forest City, Maine).* Millinocket, Maine, radio range station; the intersection of the south course of the Houlton, Maine, radio range and the west course of the

Blissville, New Brunswick, Canada, radio range.

[Amdt. 11, 13 F. R. 5036]

§ 601.4012 *Green civil airway No. 2 (Seattle, Wash., to Boston, Mass.).* Seattle, Wash., radio range station; Ellensburg, Wash., radio range station; Ephrata, Wash., radio range station; Spokane, Wash., radio range station; Coeur d'Alene, Idaho, radio range station; Mullan Pass, Idaho, radio range station; Superior, Mont., radio range station; Missoula, Mont., radio range station; Drummond, Mont., radio range station; Helena, Mont., radio range station; Bozeman, Mont., radio range station; Livingston, Mont., radio range station; Billings, Mont., radio range station; Custer, Mont., radio range station; Miles City, Mont., radio range station; Dickinson, N. Dak., radio range station; Bismarck, N. Dak., radio range station; Jamestown, N. Dak., radio range station; Fargo, N. Dak., radio range station; Alexandria, Minn., radio range station; Minneapolis, Minn., radio range station; LaCrosse, Wis., radio range station; Lone Rock, Wis., radio range station; Milwaukee, Wis., radio range station; Muskegon, Mich., radio range station; Grand Rapids, Mich., radio range station; Lansing, Mich., radio range station; the intersection of the north course of the Salem, Mich., VHF radio range and the east course of the Lansing, Mich., radio range; Detroit, Mich., radio range station; Buffalo, N. Y., radio range station; Rochester, N. Y., radio range station; Utica, N. Y., radio range station; Albany, N. Y., radio range station; Westfield, Mass., radio range station; the intersection of the northeast course of the Hartford, Conn., radio range and the southeast course of the Westfield, Mass., radio range; Franklin, Mass., fan type radio marker beacon or the intersection of the northeast course of the Providence, R. I., radio range and the southwest course of the Boston, Mass., radio range station.

[Amdt. 22, 14 F. R. 2895]

§ 601.4013 *Green civil airway No. 3 (San Francisco, Calif., to New York, N. Y.).* San Francisco, Calif., radio range station; Oakland, Calif., radio range station; Bay Point, Calif., fan type radio marker station or the intersection of the northeast course of the Oakland, Calif., radio range and the south course of the Williams, Calif., radio range; Sacramento, Calif., radio range station; Donner Summit, Calif., radio range station; Reno, Nev., radio range station; Humboldt, Nev., radio range station; Elko, Nev., radio range station; Lucin, Utah, radio range station; Ogden, Utah, radio range station; Fort Bridger, Wyo., radio range station; Rock Springs, Wyo., radio range station; Sinclair, Wyo., radio range station; Cheyenne, Wyo., radio range station; the intersection of the east course of the Cheyenne, Wyo., radio range and the southwest course of the Scottsbluff, Nebr., radio range; the intersection of the southeast course of the Scottsbluff, Nebr., radio range and the west course of the North Platte, Nebr., radio range; North Platte, Nebr., radio range station;

Grand Island, Nebr., radio range station; Omaha, Nebr., radio range station; Des Moines, Iowa, radio range station; Moline, Ill., radio range station; the intersection of the southeast course of the Rockford, Ill., radio range and the west course of the Chicago, Ill., radio range; Goshen, Ind., radio range station; Toledo, Ohio, radio range station; the intersection of the southeast course of the Detroit, Mich., radio range and the west course of the Cleveland, Ohio, radio range; Cleveland, Ohio, radio range station; Youngstown, Ohio, radio range station; Brookville, Pa., non-directional radio marker beacon; Philipsburg, Pa., radio range station; the intersection of the east course of the Philipsburg, Pa., radio range and the south course of the Williamsport, Pa., radio range; Allentown, Pa., radio range station; the intersection of the southwest course of the New York, N. Y. (LaGuardia), radio range and the northwest course of the Floyd Bennett, N. Y. (Navy), radio range; New York, N. Y. (LaGuardia), radio range station.

[Amdt. 22, 14 F. R. 2895]

§ 601.4014 *Green civil airway No. 4 (Los Angeles, Calif., to Philadelphia, Pa.)*. Los Angeles, Calif., radio range station; the intersection of the north course of the Los Angeles, Calif., radio range and the southwest course of the Palmdale, Calif., radio range or the Newhall, Calif., radio range station; Daggett, Calif., radio range station; Needles, Calif., radio range station; Prescott, Ariz., radio range station; Winslow, Ariz., radio range station; El Morro, N. Mex., radio range station; Acoma, N. Mex., radio range station; Albuquerque, N. Mex., radio range station; the intersection of the east course of the Otto, N. Mex., radio range and the southwest course of the Las Vegas, N. Mex., radio range; Tucumcari, N. Mex., radio range station; Amarillo, Tex., radio range station; Gage, Okla., radio range station; Wichita, Kans., radio range station; Lebo, Kans., radio range station; Kansas City, Mo., radio range station; Columbia, Mo., radio range station; St. Louis, Mo., radio range station; Effingham, Ill., radio range station; Terre Haute, Ind., radio range station; Indianapolis, Ind., radio range station; the intersection of the northeast course of the Indianapolis, Ind., radio range and the northwest course of the Cincinnati, Ohio, radio range or the Greenfield, Ind., radio marker beacon; the intersection of the west course of the Columbus, Ohio, radio range and the north course of the Dayton, Ohio, radio range; Columbus, Ohio, radio range station; the intersection of the west course of the Pittsburgh, Pa., radio range and the southeast course of the Cleveland, Ohio, radio range; Pittsburgh, Pa., radio range station; Altoona, Pa., radio range station; Harrisburg, Pa., radio range station; the intersection of the southwest course of the Allentown, Pa., radio range and the east course of the Harrisburg, Pa., radio range; Philadelphia, Pa., radio range station.

[Amdt. 15, 13 F. R. 7299]

§ 601.4015 *Green civil airway No. 5 (Los Angeles, Calif., to Boston, Mass.)*. Riverside, Calif., radio range station; Blythe, Calif., radio range station; Phoenix, Ariz., radio range station; Tucson, Ariz., radio range station; Rodeo, N. Mex., radio range station; Columbus, N. Mex., radio range station; Wink, Tex., radio range station; Big Spring, Tex., radio range station; Abilene, Tex., radio range station; Fort Worth, Tex., radio range station; Texarkana, Ark., radio range station; Memphis, Tenn., radio range station; Jackson, Tenn., radio range station; Nashville, Tenn., radio range station; Smithville, Tenn., radio range station; Knoxville, Tenn., radio range station; Tri-City, Tenn., radio range station; Roanoke, Va., radio range station; Gordonsville, Va., radio range station; Doncaster, Md., fan type marker station or the intersection of the northeast course of the Gordonsville, Va., radio range station and the south course of the Washington, D. C., radio range station; Brandywine, Md., radio range station; the intersection of the southeast course of the Baltimore, Md., radio range and the southwest course of the Millville, N. J., radio range; Millville, N. J., radio range station; the intersection of the southeast course of the Newark, N. J., radio range and the southwest course of the Mitchel Field, N. Y. (Army) radio range; the intersection of the east course of the New York, N. Y. (LaGuardia) radio range and the northeast course of the Mitchel Field, N. Y. (Army) radio range; the intersection of the southwest course of the Boston, Mass., radio range and the southeast course of the Hartford, Conn., radio range; the intersection of the west course of the Providence, R. I., radio range and the southwest course of the Boston, Mass., radio range.

[Amdt. 22, 14 F. R. 2895]

§ 601.4016 *Green civil airway No. 6 (Laredo, Tex., to Norfolk, Va.)*. Laredo, Tex., radio range station; Alice, Tex., radio range station; Corpus Christi, Tex., radio range station; Palacios, Tex., radio range station; the intersection of the southwest course of the Houston, Tex., radio range and the east course of the Richmond, Tex., radio range; Houston, Tex., radio range station; Beaumont, Tex., radio range station; Lake Charles, La., radio range station; New Orleans, La., radio range station; Mobile, Ala., radio range station; Maxwell AFB, Ala., radio range station; Atlanta, Ga., radio range station; Spartanburg, S. C., radio range station; Greensboro, N. C., radio range station; Blackstone, Va., radio range station; Richmond, Va., radio range station; Norfolk, Va., radio range station.

[Amdt. 11, 13 F. R. 5036]

§ 601.4017 *Green civil airway No. 7 (Nome, Alaska, to Fairbanks, Alaska)*. Fairbanks, Alaska, radio range station.

[Amdt. 22, 14 F. R. 2895]

§ 601.4018 *Green civil airway No. 8 (Attu, Alaska, to Northway, Alaska)*. Heiden, Alaska, radio range station; Naknek, Alaska, radio range station; the intersection of the northeast course of the Naknek, Alaska, radio range and the

southwest course of the Iliamna, Alaska, radio range; the intersection of the southeast course of the Iliamna, Alaska, radio range and the west course of the Homer, Alaska, radio range; the intersection of the west course of the Homer, Alaska, radio range and the southwest course of the Kenai, Alaska, radio range; Homer, Alaska, radio range station; the intersection of the east course of the Kenai, Alaska, radio range and the southwest course of the Anchorage, Alaska, radio range; Anchorage, Alaska, radio range station; the intersection of the northeast course of the Anchorage, Alaska, radio range and the southeast course of the Skwentna, Alaska, radio range; Northway, Alaska, radio range station.

[Amdt. 22, 14 F. R. 2895]

AMBER CIVIL AIRWAYS

§ 601.4101 *Amber civil airway No. 1 (United States-Mexican Border to Nome, Alaska)*. San Diego, Calif., radio range station; the intersection of the northwest course of the San Diego, Calif., radio range and the southeast course of the Long Beach, Calif., radio range; Bakersfield, Calif., radio range station; Fresno, Calif., radio range station; Williams, Calif., radio range station; Red Bluff, Calif., radio range station; Fort Jones, Calif., radio range station; Medford, Oreg., radio range station; Eugene, Oreg., radio range station; Portland, Oreg., radio range station; Toledo, Wash., radio range station; Everett, Wash., radio range station; Bellingham, Wash., radio range station; the intersection of the east course of the Cordova (Hinchinbrook Island), Alaska, radio range and the southeast course of the Cordova (Mile 13), Alaska, radio range; Cordova, Alaska (Hinchinbrook Island), radio range station; the intersection of the northwest course of the Cordova, Alaska (Hinchinbrook Island), radio range and the southeast course of the Anchorage, Alaska, radio range; the intersection of the northeast course of the Kenai, Alaska, radio range and the northwest course of the Anchorage, Alaska, radio range; Skwentna, Alaska, radio range station.

[Amdt. 22, 14 F. R. 2895]

§ 601.4102 *Amber civil airway No. 2 (Long Beach, Calif., to Point Barrow, Alaska)*. Las Vegas, Nev., radio range station; Enterprise, Utah, radio range station; Delta, Utah, radio range station; Salt Lake City, Utah, radio range station; Malad City, Idaho, radio range station; Pocatello, Idaho, radio range station; Dubois, Idaho, radio range station; Dillon, Mont., radio range station; Whitehall, Mont., radio range station; Great Falls, Mont., radio range station; Cut Bank, Mont., radio range station; the intersection of the northwest course of the Northway, Alaska, radio range and the northeast course of the Tanacross, Alaska, radio range; Big Delta, Alaska, radio range station; the intersection of the northwest course of the Big Delta, Alaska, radio range and the east course of the Fairbanks, Alaska, radio range.

[Amdt. 11, 13 F. R. 5037]

§ 601.4103 *Amber civil airway No. 3 (El Paso, Tex., to Great Falls, Mont.)*. Engle,

N. Mex., radio range station; Las Vegas, N. Mex., radio range station; Trinidad, Colo., radio range station; Pueblo, Colo., radio range station; Colorado Springs, Colo., radio range station; Denver, Colo., radio range station; the intersection of the north course of the Cheyenne, Wyo., radio range and the northeast course of the Laramie, Wyo., radio range; Casper, Wyo., radio range station; Sheridan, Wyo., radio range station; Lewistown, Mont., radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4104 *Amber civil airway No. 4 (Brownsville, Tex., to Minot, N. Dak.)*. Brownsville, Tex., radio range station; the intersection of the south course of the Alice, Tex., radio range and the southwest course of the Corpus Christi, Tex., radio range; the intersection of the south course of the Alamo (San Antonio), Tex., radio range and the southeast course of the San Antonio, Tex., radio range; Alamo (San Antonio), Tex., radio range station; Cibola, Tex., fan type radio marker station or the intersection of the north course of the Alamo (San Antonio), Tex., radio range and the southwest course of the Austin, Tex., radio range; Austin, Tex., radio range station; Waco, Tex., radio range station; the intersection of the south course of the Fort Worth, Tex., radio range and the west course of the Dallas, Tex., radio range; Oklahoma City, Okla., radio range station; Tulsa, Okla., radio range station; Chanute, Kans., radio range station; St. Joseph, Mo., radio range station; Sioux City, Iowa, radio range station; Sioux Falls, S. Dak., radio range station; Huron, S. Dak., radio range station; Aberdeen, S. Dak., radio range station; Minot, N. Dak., radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4105 *Amber civil airway No. 5 (Grand Isle, La., to Milwaukee, Wis.)*. Jackson, Miss., radio range station; Greenwood, Miss., radio range station; Advance, Mo., radio range station; Springfield, Ill., radio range station; the intersection of the east course of the Peoria, Ill., radio range and the southwest course of the Joliet, Ill., radio range; Joliet, Ill., radio range station.

[Amdt. 11, 13 F. R. 5037, as amended by Amdt. 12, 13 F. R. 5658]

§ 601.4106 *Amber civil airway No. 6 (Jacksonville, Fla., to United States-Canadian Border)*. Jacksonville, Fla., radio range station; Alma, Ga., radio range station; Macon, Ga., radio range station; Chattanooga, Tenn., radio range station; Bowling Green, Ky., radio range station; Louisville, Ky., radio range station.

[Amdt. 12, 13 F. R. 5658]

§ 601.4107 *Amber civil airway No. 7 (Key West, Fla., to Caribou, Maine)*. Key West, Fla., radio range station; Miami, Fla., radio range station; West Palm Beach, Fla., radio range station; Melbourne, Fla., radio range station; Daytona Beach, Fla., radio range station; Brunswick, Ga., radio range station; Savannah, Ga., radio range station; Charleston, S. C., radio range station; Florence, S. C., radio range station; Raleigh, N. C., radio range station; the intersection of

the southwest course of the Richmond, Va., radio range and the southeast of the Blackstone, Va., radio range; Washington, D. C., radio range station; the intersection of the northeast course of the Washington, D. C. radio range and the west course of the Baltimore, Md., radio range; Newark, N. J., radio range station; Hartford, Conn., radio range station; Portland, Maine, radio range station; Augusta, Maine, radio range station; Bangor, Maine, radio range station; Presque Isle, Maine, radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4108 *Amber civil airway No. 8 (Los Angeles, Calif., to The Dalles, Ore.)*. Santa Barbara, Calif., VHF radio range station; Paso Robles, Calif., VHF radio range station; Salinas, Calif., VHF radio range station; the intersection of the southwest course of the San Francisco, Calif., radio range and the northwest course of the Salinas, Calif., VHF radio range; the intersection of the southwest course of the Fairfield-Suisun, Calif., radio range and the northwest course of the Oakland, Calif., radio range; Fairfield-Suisun, Calif., radio range station; Whitmore, Calif., radio range station; Klamath Falls, Ore., radio range station; Redmond, Ore., radio range station; The Dalles, Ore., radio range station.

[Amdt. 17, 13 F. R. 8607]

§ 601.4109 *Amber civil airway No. 9 (Charleston, S. C. to New York, N. Y.)*. Myrtle Beach, S. C., VHF radio range station; Wilmington, N. C., VHF radio range station; New Bern, N. C., VHF radio range station; Williamston, N. C., VHF radio range station; the intersection of the northeast course of the Williamston, N. C., VHF radio range and the southwest course of the Norfolk, Va., radio range.

[Amdt. 11, 13 F. R. 5037, as amended by Amdt. 15, 13 F. R. 7299]

RED CIVIL AIRWAYS

§ 601.4201 *Red civil airway No. 1 (Portland, Ore., to Kansas City, Mo.)*. Pendleton, Ore., radio range station; Baker, Ore., radio range station; Boise, Idaho, radio range station; Gooding, Idaho, nondirectional radio marker beacon; Burley, Idaho, radio range station; Laramie, Wyo., radio range station; Goodland, Kans., VHF radio range station; Salina, Kans., radio range station; Fort Riley, Kans. (Marshall AFB), radio range station; Topeka, Kans., VHF radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4202 *Red civil airway No. 2 (Butte, Mont., to Rapid City, S. Dak.)*. Butte, Mont., radio range station; Rapid City, S. Dak., radio range station.

[Amdt. 11, 13 F. R. 5037]

§ 601.4203 *Red civil airway No. 3 (Phillipsburg, Pa., to Hartford, Conn.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5037]

§ 601.4204 *Red civil airway No. 4 (Otto, N. Mex., to Las Vegas, N. Mex.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5037]

§ 601.4205 *Red civil airway No. 5 (Sioux Falls, S. Dak., to St. Paul, Minn.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5037]

§ 601.4206 *Red civil airway No. 6 (Las Vegas, Nev., to Omaha, Nebr.)*. St. George, Utah, VHF radio range station; Bryce Canyon, Utah, VHF radio range station; Hanksville, Utah, VHF radio range station; Grand Junction, Colo., VHF radio range station; Eagle, Colo., VHF radio range station; Akron, Colo., radio range station; Hayes Center, Nebr., radio range station; Lincoln, Nebr., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4207 *Red civil airway No. 7 (Atlanta, Ga., to Greensboro, N. C.)*. Greenville, S. C., radio range station; Charlotte, N. C., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4208 *Red civil airway No. 8 (Altoona, Pa., to Wilkes-Barre, Pa.)*. Williamsport, Pa., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4209 *Red civil airway No. 9 (San Diego, Calif., to Winslow, Ariz.)*. El Centro, Calif., radio range station; Gila Bend, Ariz., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4210 *Red civil airway No. 10 (Pueblo, Colo., to Charleston, S. C.)*. The intersection of the southwest course of the La Junta, Colo., radio range and the northeast course of the Trinidad, Colo., radio range; Dalhart, Tex., VHF radio range station; Wichita Falls, Tex., radio range station; Dallas, Tex., radio range station; the intersection of the northwest course of the Tyler, Tex., radio range and the east course of the Dallas, Tex., radio range; the intersection of the northeast course of the Tyler, Tex., radio range and the west course of the Shreveport, La., radio range; Shreveport, La., radio range station; Monroe, La., radio range station; Meridian, Miss., radio range station; Birmingham, Ala., radio range station; Augusta, Ga., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4211 *Red civil airway No. 11 (Tulsa, Okla., to Boston, Mass.)*. The intersection of the south course of the Joplin, Mo., radio range and the northeast course of the Tulsa, Okla., radio range; Springfield, Mo., radio range station; Vichy, Mo., radio range station; the intersection of the northeast course of the Scott Field, Belleville, Ill., radio range and the northwest course of the Evansville, Ind., radio range; Evansville, Ind., radio range station; the intersection of the east course of the Louisville, Ky., radio range and the northwest course of the Lexington, Ky., radio range; Huntington, W. Va., radio range station; Elmira, N. Y., radio range station; the intersection of the northeast course of the Westover Field, Chicopee Falls, Mass., radio range and the west course of the Boston, Mass., radio range; the intersection of the east course of the Boston, Mass., radio range and the northeast course of

the Squantum, Mass. (Navy) radio range.

[Amdt. 22, 14 F. R. 2896]

§ 601.4212 *Red civil airway No. 12 (Kansas City, Mo., to Detroit, Mich.)*. Kirksville, Mo., radio range station; Burlington, Iowa, radio range station; South Bend, Ind., radio range station; the intersection of the southeast course of the Lansing, Mich., radio range and the west course of the Romulus, Mich., radio range.

[Amdt. 11, 13 F. R. 5038]

§ 601.4213 *Red civil airway No. 13 (Sunbury, Pa., to Boston, Mass.)*. Wilkes-Barre, Pa., radio range station; New Hackensack, N. Y., radio range station; Providence, R. I., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4214 *Red civil airway No. 14 (Lone Rock, Wis., to Louisville, Ky.)*. Rockford, Ill., radio range station; Chicago, Ill., radio range station; the intersection of the east course of the Harvey, Ill., radio range and the southeast course of the Chicago, Ill., radio range; the intersection of the northeast course of the La Fayette, Ind., radio range and the northwest course of the Indianapolis, Ind., radio range.

[Amdt. 15, 13 F. R. 7299]

§ 601.4215 *Red civil airway No. 15 (Las Vegas, Nev., to Gila Bend, Ariz.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5038]

§ 601.4216 *Red civil airway No. 16 (Tallahassee, Fla., to Florence, S. C.)*. Albany, Ga., radio range station; Columbia, S. C., radio range station.

[Amdt. 18, 14 F. R. 456]

§ 601.4217 *Red civil airway No. 17 (Fort Wayne, Ind., to Baltimore, Md.)*. Fort Wayne, Ind., radio range station; Findlay, Ohio, non-directional radio beacon; Mansfield, Ohio, non-directional radio beacon; Martinsburg, W. Va., radio range station; the intersection of the northeast course of the Arcola, Va., radio range and the west course of the Baltimore, Md., radio range; Baltimore, Md., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4218 *Red civil airway No. 18 (Indianapolis, Ind., to Washington, D. C.)*. Cincinnati, Ohio, radio range station; Charleston, W. Va., radio range station; Elkins, W. Va., radio range station; Front Royal, Va., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4219 *Red civil airway No. 19 (Washington, D. C., to Grand Rapids, Mich.)*. Morgantown, W. Va., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4220 *Red civil airway No. 20 (Lansing, Mich., to Washington, D. C.)*. Akron, Ohio, radio range station; the intersection of the south course of the Youngstown, Ohio, radio range and the northwest course of the Pittsburgh, Pa., radio range; the intersection of the northwest course of the Washington,

D. C., radio range and the northeast course of the Martinsburg, W. Va., radio range; the intersection of the southeast course of the Washington, D. C., radio range and the northeast course of the Patuxent River, Md. (Navy), radio range.

[Amdt. 22, 14 F. R. 2896]

§ 601.4221 *Red civil airway No. 21 (Pittsburgh, Pa., to Boston, Mass.)*. The intersection of the northeast course of the Pittsburgh, Pa., radio range and the north course of the Altoona, Pa., radio range; the intersection of the northeast course of the Allentown, Pa., radio range and the west course of the Newark, N. J., radio range.

[Amdt. 22, 14 F. R. 2896]

§ 601.4222 *Red civil airway No. 22 (United States-Canadian Border to Rochester, N. Y.)*. The intersection of the northeast course of the Buffalo, N. Y., radio range and the northwest course of the Rochester, N. Y., radio range.

[Amdt. 11, 13 F. R. 5038]

§ 601.4223 *Red civil airway No. 23 (United States-Canadian Border to New York, N. Y.)*. The intersection of the northeast course of the Allentown, Pa., radio range and the northwest course of the New York (LaGuardia), N. Y., radio range; the intersection of the southwest course of the New Hackensack, N. Y., radio range and the northwest course of the New York (LaGuardia), N. Y., radio range.

[Amdt. 11, 13 F. R. 5038]

§ 601.4224 *Red civil airway No. 24 (Amarillo, Tex., to Oklahoma City, Okla.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5038]

§ 601.4225 *Red civil airway No. 25 (Tallahassee, Fla., to Miami, Fla.)*. Cross City, Fla., radio range station; Tampa, Fla., radio range station; Fort Myers, Fla., radio range station.

[Amdt. 11, 13 F. R. 5038]

§ 601.4226 *Red civil airway No. 26 (Syracuse, N. Y., to Millville, N. J.)*. The intersection of the southeast course of the Elmira, N. Y., radio range and the north course of the Wilkes-Barre, Pa., radio range.

[Amdt. 11, 13 F. R. 5038, as amended by Amdt. 17, 13 F. R. 8608]

§ 601.4227 *Red civil airway No. 27 (Knoxville, Tenn., to Detroit, Mich.)*. Dayton, Ohio, radio range station.

[Amdt. 12, 13 F. R. 5658]

§ 601.4228 *Red civil airway No. 28 (Rockford, Ill., to Detroit, Mich.)*. The intersection of the east course of the Rockford, Ill., radio range and the northwest course of the Chicago, Ill., radio range; the intersection of the northeast course of the Chicago, Ill., radio range and the north course of the South Bend, Ind., radio range.

[Amdt. 11, 13 F. R. 5309, as amended by Amdt. 22, 14 F. R. 2896]

§ 601.4229 *Red civil airway No. 29 (Rochester, N. Y., to Baltimore, Md.)*. No reporting point designation.

[Amdt. 11, 13 F. R. 5309]

§ 601.4230 *Red civil airway No. 30 (Shreveport, La., to Jacksonville, Fla.)*. Alexandria, La., radio range station; Baton Rouge, La., radio range station; the intersection of the northeast course of the Mobile, Ala., radio range and the west course of the Crestview, Fla., radio range; Crestview, Fla., radio range station; Tallahassee, Fla., radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4231 *Red civil airway No. 31 (Denver, Colo., to Minneapolis, Minn.)*. Scottsbluff, Nebr., radio range station; Pierre, S. Dak., radio range station; Watertown, S. Dak., radio range station; Willmar, Minn., radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4232 *Red civil airway No. 32 (Laredo, Tex., to Houston, Tex.)*. San Antonio, Tex. (Kelly), radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4233 *Red civil airway No. 33 (Richmond, Va., to New Hackensack, N. Y.)*. Arcola, Va., radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4234 *Red civil airway No. 34 (Pulaski, Va., to Elizabeth City, N. C.)*. Rocky Mount, N. C., VHF radio range station; Elizabeth City, N. C., VHF radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4235 *Red civil airway No. 35 (Pueblo, Colo., to Wichita, Kans.)*. La Junta, Colo., radio range station; Garden City, Kans., radio range station; Hutchinson, Kans., radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4236 *Red civil airway No. 36 (Rochester, Minn., to La Crosse, Wis.)*. Rochester, Minn., radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4237 *Red civil airway No. 37 (Dallas, Tex., to Washington, D. C.)*. Tyler, Tex., radio range station; Little Rock, Ark., radio range station; Lynchburg, Va., radio range station.

[Amdt. 11, 13 F. R. 5309]

§ 601.4238 *Red civil airway No. 38 (Big Spring, Tex., to San Antonio, Tex.)*. San Angelo, Tex., radio range station; the intersection of the northwest course of the San Antonio, Tex. (Kelly), radio range and the west course of the San Antonio (Alamo), Tex., radio range.

[Amdt. 11, 13 F. R. 5309]

§ 601.4239 *Red civil airway No. 39 (Bethel, Alaska, to Fairbanks, Alaska)*. Nenana, Alaska, radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4240 *Red civil airway No. 40 (Shemya, Alaska, to Anchorage, Alaska)*. Kenai, Alaska, radio range station; the intersection of the northeast course of the Kenai, Alaska, radio range and the west course of the Anchorage (Merrill), Alaska, radio range.

[Amdt. 22, 14 F. R. 2896]

RULES AND REGULATIONS

§ 601.4241 *Red civil airway No. 41 (Yakutat, Alaska, to Gustavus, Alaska).* Gustavus, Alaska, radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4242 *Red civil airway No. 42 (Joliet, Ill., to La Fayette, Ind.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4243 *Red civil airway No. 43 (Chicago, Ill., to La Fayette, Ind.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4244 *Red civil airway No. 44 (Bellingham, Wash., to United States-Canadian Border).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4245 *Red civil airway No. 45 (Washington, D. C., to Allentown, Pa.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4246 *Red civil airway No. 46 (Aberdeen, S. Dak., to Watertown, S. Dak.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4247 *Red civil airway No. 47 (Tampa, Fla., to Daytona Beach, Fla.).* Orlando, Fla., radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4248 *Red civil airway No. 48 (Missoula, Mont., to Livingston, Mont.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4249 *Red civil airway No. 49 (Elko, Nev., to Fort Bridger, Wyo.).* Wendover, Utah, radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4250 *Red civil airway No. 50 (Galena, Alaska, to Fairbanks, Alaska).* No reporting point designation.

[Amdt. 22, 14 F. R. 2896]

§ 601.4251 *Red civil airway No. 51 (El Paso, Tex., to United States-Mexican Border).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4252 *Red civil airway No. 52 (Memphis, Tenn., to Birmingham, Ala.).* Muscle Shoals, Ala., radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4253 *Red civil airway No. 53 (Joplin, Mo., to Springfield, Mo.).* Joplin, Mo., radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4254 *Red civil airway No. 54 (Burley, Idaho, to Salt Lake City, Utah).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4255 *Red civil airway No. 55 (Burlington, Iowa, to Columbus, Ohio).* Peoria, Ill., radio range station.

[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2896]

§ 601.4256 *Red civil airway No. 56 (Red Bluff, Calif., to Whitmore, Calif.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4257 *Red civil airway No. 57 (Moline, Ill., to Youngstown, Ohio).* Battle Creek, Mich., radio range station.

[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2896]

§ 601.4258 *Red civil airway No. 58 (Salinas, Calif., to Hollister, Calif.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4259 *Red civil airway No. 59 (Gage, Okla., to Oklahoma City, Okla.).* No reporting point designation.

[Amdt. 22, 14 F. R. 2896]

§ 601.4260 *Red civil airway No. 60 (San Jose, Calif., to Stockton, Calif.).* Stockton, Calif., radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4261 *Red civil airway No. 61 (Pittsburgh, Pa., to Washington, D. C.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4262 *Red civil airway No. 62 (Lansing, Mich., to Pittsburgh, Pa.).* Wellington, Ohio, VHF radio range station.

[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2896]

§ 601.4263 *Red civil airway No. 63 (Battle Creek, Mich., to United States-Canadian Border).* Salem, Mich., VHF radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4264 *Red civil airway No. 64 (United States-Canadian Border to Annette Island, Alaska).* Annette Island, Alaska, radio range station.

[Amdt. 22, 14 F. R. 2896]

§ 601.4265 *Red civil airway No. 65 (Oceanside, Calif., to Blythe, Calif.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4266 *Red civil airway No. 66 (Santa Barbara, Calif., to Los Angeles, Calif.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4267 *Red civil airway No. 67 (Crestview, Fla., to Dothan, Ala.).* Dothan, Ala., radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4268 *Red civil airway No. 68 (El Paso, Tex., to Shreveport, La.).* The intersection of the south course of the El Paso, Tex., radio range and the west course of the Hudspeth, Tex., VHF radio range; the intersection of the southwest course of the Midland, Tex., radio range and the southeast course of the Wink, Tex., VHF radio range; Midland, Tex., radio range station.

[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2896]

§ 601.4269 *Red civil airway No. 69 (El Paso, Tex., to Big Spring, Tex.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4270 *Red civil airway No. 70 (Midland, Tex., to Oklahoma City, Okla.).* Childress, Tex., VHF radio

range station; Hobart, Oklahoma, VHF radio range station.

[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 17, 13 F. R. 8608]

§ 601.4271 *Red civil airway No. 71 (Lubbock, Tex., to Wichita Falls, Tex.).* Guthrie, Tex., VHF radio range station.

[Amdt. 11, 13 F. R. 5039]

§ 601.4272 *Red civil airway No. 72 (Millville, N. J., to Newark, N. J.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4273 *Red civil airway No. 73 (Baltimore, Md., to Millville, N. J.).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4274 *Red civil airway No. 74 (Louisville, Ky., to Cincinnati, Ohio).* No reporting point designation.

[Amdt. 11, 13 F. R. 5039]

§ 601.4275 *Red civil airway No. 75 (United States-Canadian Border, Vancouver, British Columbia, to United States-Canadian Border, Abbotsford, British Columbia).* No reporting point designation.

[Amdt. 15, 13 F. R. 7299]

§ 601.4276 *Red civil airway No. 76 (Williams, Calif., to Auburn, Calif.).* No reporting point designation.

[Amdt. 16, 13 F. R. 7405]

§ 601.4277 *Red civil airway No. 77 (Richmond, Va., to Millville, N. J.).* No reporting point designation.

[Amdt. 15, 13 F. R. 7299]

§ 601.4278 *Red civil airway No. 78 (Medford, Oreg., to Klamath Falls, Oreg.).* No reporting point designation.

[Amdt. 17, 13 F. R. 8608]

§ 601.4279 *Red civil airway No. 79 (Port Angeles, Wash., to Everett, Wash.).* No reporting point designation.

[Amdt. 17, 13 F. R. 8608]

§ 601.4280 *Red civil airway No. 80 (Lewistown, Mont., to Miles City, Mont.).* No reporting point designation.

[Amdt. 17, 13 F. R. 8608]

§ 601.4281 *Red civil airway No. 81 (Parkersburg, W. Va., to Elkins, W. Va.).* No reporting point designation.

[Amdt. 17, 13 F. R. 8608]

§ 601.4282 *Red civil airway No. 82 (Skwentna, Alaska, to Anchorage, Alaska).* No reporting point designation.

[Amdt. 18, 14 F. R. 456]

§ 601.4283 *Red civil airway No. 83 (Tucson, Ariz., to Rodeo, N. Mex.).* No reporting point designation.

[Amdt. 22, 14 F. R. 2896]

§ 601.4284 *Red civil airway No. 84 (New Orleans, La., to Biloxi, Miss.).* No reporting point designation.

[Amdt. 22, 14 F. R. 2896]

§ 601.4285 *Red civil airway No. 85 (Dayton, Ohio, to Mansfield, Ohio).* No reporting point designation.

[Amdt. 22, 14 F. R. 2896]

BLUE CIVIL AIRWAYS

§ 601.4601 *Blue civil airway No. 1* (Pendleton, Oreg., to Spokane, Wash.). Walla Walla, Wash., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4602 *Blue civil airway No. 2* (Birmingham, Ala., to Erie, Pa.). Erie, Pa., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4603 *Blue civil airway No. 3* (Tallahassee, Fla., to La Fayette, Ind.). No reporting point designation.
[Amdt. 14, 13 F. R. 6147]

§ 601.4604 *Blue civil airway No. 4* (Nantucket, Mass., to United States-Canadian Border). Concord, N. H., radio range station; the intersection of the southeast course of the Burlington, Vt., radio range and the southwest course of the Montpelier, Vt., radio range; Burlington, Vt., radio range station.
[Amdt. 22, 14 F. R. 2896]

§ 601.4605 *Blue civil airway No. 5* (Galveston, Tex., to Salina, Kans.). Galveston, Tex., radio range station; the intersection of the northwest course of the Houston, Tex., radio range and the northeast course of the Richmond, Tex., radio range; Bryan, Tex., radio range station.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2897]

§ 601.4606 *Blue civil airway No. 6* (Abilene, Tex., to Muskegon, Mich.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4607 *Blue civil airway No. 7* (Paso Robles, Calif., to Williams, Calif.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 16, 13 F. R. 7400]

§ 601.4608 *Blue civil airway No. 8* (Fargo, N. Dak., to United States-Canadian Border). Grand Forks, N. Dak., radio range station; Pembina, N. Dak., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4609 *Blue civil airway No. 9* (Columbia, Mo., to United States-Canadian Border). Duluth, Minn., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4610 *Blue civil airway No. 10* (Fresno, Calif., to Williams, Calif.). Los Banos, Calif., fan type radio marker station or the intersection of the northwest course of the Fresno, Calif., radio range and the south course of the Stockton, Calif., radio range; Evergreen, Calif., non-directional radio marker beacon.
[Amdt. 16, 13 F. R. 7400]

§ 601.4611 *Blue civil airway No. 11* (Cleveland, Ohio, to Niagara Falls, N. Y.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4612 *Blue civil airway No. 12* (The Dalles, Oreg., to Ellensburg, Wash.). Yakima, Wash., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4613 *Blue civil airway No. 13* (Houston, Tex., to Minneapolis, Minn.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2897]

§ 601.4614 *Blue civil airway No. 14* (El Centro, Calif., to Sacramento, Calif.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4615 *Blue civil airway No. 15* (Huntington, W. Va., to Erie, Pa.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 17, 13 F. R. 8608]

§ 601.4616 *Blue civil airway No. 16* (Dillon, Mont., to Helena, Mont.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4617 *Blue civil airway No. 17* (Millinocket, Maine, to Presque Isle, Maine). Houlton, Maine, radio range station.
[Amdt. 22, 14 F. R. 2897]

§ 601.4618 *Blue civil airway No. 18* (Philadelphia, Pa., to Burlington, Vt.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4619 *Blue civil airway No. 19* (Miami, Fla., to Orlando, Fla.). The intersection of the north course of the Miami, Fla., radio range and the west course of the West Palm Beach, Fla., radio range.
[Amdt. 15, 13 F. R. 7299]

§ 601.4620 *Blue civil airway No. 20* (Atlantic City, N. J., to Allentown, Pa.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 15, 13 F. R. 7299]

§ 601.4621 *Blue civil airway No. 21* (Charleston, W. Va., to Erie, Pa.). Parkersburg, W. Va., VHF radio range station.
[Amdt. 22, 14 F. R. 2897]

§ 601.4622 *Blue civil airway No. 22* (Memphis, Tenn., to Wichita, Kans.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4623 *Blue civil airway No. 23* (Detroit, Mich., to Flint, Mich.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4624 *Blue civil airway No. 24* (El Centro, Calif., to Riverside, Calif.). Indio, Calif., radio range station.
[Amdt. 11, 13 F. R. 5039]

§ 601.4625 *Blue civil airway No. 25* (Cordova, Alaska, to Big Delta, Alaska). No reporting point designation.
[Amdt. 22, 14 F. R. 2897]

§ 601.4626 *Blue civil airway No. 26* (Anchorage, Alaska, to Nenana, Alaska). The intersection of the north course of the Anchorage, Alaska (Merrill), localizer radio range and the southeast course of the Skwentna, Alaska, radio range; the intersection of the northeast course of the Summit, Alaska, radio range and the southeast course of the Nenana, Alaska, radio range.
[Amdt. 22, 14 F. R. 2897]

§ 601.4627 *Blue civil airway No. 27* (Kodiak, Alaska, to Kotzebue, Alaska). No reporting point designation.
[Amdt. 22, 14 F. R. 2897]

§ 601.4628 *Blue civil airway No. 28* (Charleston, S. C., to Spartanburg, S. C.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4629 *Blue civil airway No. 29* (Raleigh, N. C., to Lynchburg, Va.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4630 *Blue civil airway No. 30* (Brownsville, Tex., to Amarillo, Tex.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4631 *Blue civil airway No. 31* (New Florence, Mo., to Moline, Ill.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2897]

§ 601.4632 *Blue civil airway No. 32* (Pendleton, Oreg., to Fairbanks, Alaska). The intersection of the northwest course of the Seattle, Wash., radio range and the south course of the Patricia Bay, B. C., radio range.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 15, 13 F. R. 7299]

§ 601.4633 *Blue civil airway No. 33* (Archbold, Ohio, to Detroit, Mich.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 17, 13 F. R. 8608]

§ 601.4634 *Blue civil airway No. 34* (Little Rock, Ark., to Tulsa, Okla.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039]

§ 601.4635 *Blue civil airway No. 35* (Topeka, Kans., to Kirksville, Mo.). Topeka, Kans. (AFB) radio range station.
[Amdt. 22, 14 F. R. 2897]

§ 601.4636 *Blue civil airway No. 36* (Thurman, Colo., to North Platte, Nebr.). No reporting point designation.
[Amdt. 11, 13 F. R. 5039, as amended by Amdt. 22, 14 F. R. 2897]

§ 601.4637 *Blue civil airway No. 37* (Casper, Wyo., to Rapid City, S. Dak.). No reporting point designation.
[Amdt. 11, 13 F. R. 5040]

§ 601.4638 *Blue civil airway No. 38* (Annette Island, Alaska, to United States-Canadian Border). Haines, Alaska, radio range station.
[Amdt. 11, 13 F. R. 5040]

§ 601.4639 *Blue civil airway No. 39* (Knorrville, Tenn., to United States-Canadian Border). Syracuse, N. Y., radio range station; Watertown, N. Y., radio range station; Massena, N. Y., radio range station.
[Amdt. 22, 14 F. R. 2897]

§ 601.4340 *Blue civil airway No. 40* (Concord, N. H., to Burlington, Vt.). Montpelier, Vt., radio range station.
[Amdt. 22, 14 F. R. 2897]

§ 601.4641 *Blue civil airway No. 41* (New York, N. Y., to United States-Canadian Border). No reporting point designation.

nadian Border). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4642 *Blue civil airway No. 42* (South Bend, Ind., to Battle Creek, Mich.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4643 *Blue civil airway No. 43* (Birmingham, Ala., to Nashville, Tenn.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4644 *Blue civil airway No. 44* (Advance, Mo., to United States-Canadian Border). No reporting point designation.

[Amdt. 11, 13 F. R. 5040, as amended by Amdt. 17, 13 F. R. 8604; Amdt. 22, 14 F. R. 2897]

§ 601.4645 *Blue civil airway No. 45* (Lake Charles, La., to Baton Rouge, La.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4646 *Blue civil airway No. 46* (Los Angeles, Calif., to Oakland, Calif.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4647 *Blue civil airway No. 47* (Martinsburg, W. Va., to Philipsburg, Pa.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4648 *Blue civil airway No. 48* (New York, N. Y., to New Hackensack, N. Y.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4649 *Blue civil airway No. 49* (Atlantic City, N. J., to Philadelphia, Pa.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040, as amended by Amdt. 18, 14 F. R. 456]

§ 601.4650 *Blue civil airway No. 50* (Bangor, Maine, to United States-Canadian Border). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4651 *Blue civil airway No. 51* (Wendover, Utah, to Dubois, Idaho). No reporting point designation.

[Amdt. 11, 13 F. R. 5040, as amended by Amdt. 17, 8808]

§ 601.4652 *Blue civil airway No. 52* (Paso Robles, Calif., to Fresno, Calif.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4653 *Blue civil airway No. 53* (Providence, R. I., to Hartford, Conn.). No reporting point designation.

[Amdt. 11, 13 F. R. 5040]

§ 601.4654 *Blue civil airway No. 54* (Salinas, Calif., to Hamilton Field, Calif.). No reporting point designation.

§ 601.4664 *Blue civil airway No. 64* (Lebo, Kans., to Topeka, Kans.). No reporting point designation.

[Amdt. 22, 14 F. R. 2897]

§ 601.4665 *Blue civil airway No. 65* (Garden City, Kans., to Goodland, Kans.). No reporting point designation.

[Amdt. 22, 14 F. R. 2897]

§ 601.4666 *Blue civil airway No. 66* (Bridgeport, Conn., to Poughkeepsie, N. Y.). No reporting point designation.

[Amdt. 22, 14 F. R. 2897]

§ 601.4667 *Blue civil airway No. 67* (Yuma, Ariz., to Las Vegas, Nev.). No reporting point designation.

[Amdt. 22, 14 F. R. 2897]

OTHER REPORTING POINTS

§ 601.5001 *Other reporting points.* Whidbey Island, Wash.; Navy Radio Range.

Bass Intersection: Intersection of the east course of the Norfolk, Va. (Navy) radio range and the western boundary of the New York Oceanic control area.

Carp Intersection: Intersection of the southeast course of the Wilmington, N. C., VHF radio range and the western boundary of the New York Oceanic control area.

Cod Intersection: Intersection of the east course of the Nantucket, Mass., VHF radio range and the western boundary of the New York Oceanic control area.

East Charleston Intersection: Intersection of the southeast course of the Charleston, S. C., radio range and the centerline of the Wilmington, N. C.-West Palm Beach, Fla., Domestic control area.

East Melbourne Intersection: Intersection of the northeast course of the Melbourne, Fla., radio range and the centerline of the Wilmington, N. C.-West Palm Beach, Fla., Domestic control area.

East Nantucket Intersection: Intersection of the east course of the Nantucket, Mass., VHF radio range and the southeast course of the Squantum, Mass. (Navy) radio range.

East Norfolk Intersection: Intersection of the east course of the Norfolk, Va. (Navy) radio range and the northeast course of the Weeksville, N. C. (Navy) radio range.

Eel Intersection: Intersection of the southeast course of the Boston, Mass., radio range and the western boundary of the New York Oceanic control area.

Gateway Intersection: Intersection of the east course of the Jacksonville, Fla., radio range and the centerline of the Wilmington, N. C.-West Palm Beach, Fla., Domestic Control area.

Montauk Intersection: Intersection of the east course of the New York, N. Y. (La Guardia) radio range and the southwest course of the Providence, R. I., radio range.

North Nantucket Intersection: Intersection of the east course of the Boston, Mass., radio range and the centerline of the Nantucket, Mass.-Yarmouth, N. S., Domestic control area.

Shad Intersection: Intersection of the southeast course of the Millville, N. J., radio range and the western boundary of the New York Oceanic control area.

Seal Intersection: Intersection of the south course of the Nantucket, Mass., VHF radio range and the western boundary of the New York Oceanic control area.

South Bangor Intersection: Intersection of the southeast course of the Bangor, Maine, radio range and the centerline of the Nantucket, Mass.-Yarmouth, N. S., Domestic control area.

South Island Intersection: Intersection of the southeast course of the Newark, N. J., radio range and the northeast course of the Atlantic City, N. J. (Navy) radio range.

South Millville Intersection: Intersection of the southeast course of the Millville, N. J., radio range and the southeast course of the Atlantic City, N. J. (Navy) radio range.

South Portland Intersection: Intersection of the southeast course of the Portland, Maine, radio range and the centerline of the East Boston, Mass.-Yarmouth, N. S., Domestic control area.

Smelt Intersection: Intersection of the southeast course of the Charleston, S. C., radio range and the western boundary of the New York Oceanic control area.

Trout Intersection: Intersection of the east course of the Jacksonville, Fla., radio range and the western boundary of the New York Oceanic control area.

Tuna Intersection: Intersection of the southeast course of the Newark, N. J., radio range and the western boundary of the New York Oceanic control area.

Vineyard Intersection: Intersection of the west course of the Nantucket, Mass., VHF radio range and the southeast course of the Quonset Point, R. I. (Navy) radio range.

PART 609—STANDARD INSTRUMENT APPROACH PROCEDURE

Sec.

609.1 Introduction.

609.2 Ceiling and visibility minimums.

609.3 Directive.

AUTHORITY: §§ 609.1 to 609.3 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply secs. 601, 52 Stat. 1007, as amended by Pub. Law 872, 80th Cong.; 49 U. S. C. 551.

§ 609.1 *Introduction.* (a) The following standard instrument approach procedures (including ceiling and visibility minimums for take-off and landing at particular airports) shall be identical for all users, with the following exceptions: The minimums for take-off and landing shall not apply to (1) military aircraft, or (2) users for whom the Administrator has specifically authorized lower minimums. The minimums for take-offs

shall not apply to those users for whom the Administrator has not been authorized to prescribe take-off minimums.

(b) Initial approach altitudes are the minimum en route cruising altitudes authorized for an airport between the last radio fix and the radio range station. These altitudes are based solely on clearance above terrain and obstructions to flight. The altitudes shown for initial approach on any radio range course shall be at least one thousand (1,000) feet above all obstructions, except for those areas designated as mountainous areas. Initial approach altitudes for mountainous areas shall not be less than the published en route minimums; where no en route minimums have been established, a clearance of at least two thousand (2,000) feet over all obstructions must be provided. Unless otherwise authorized by the Administrator, these altitudes shall provide for terrain clearance in an area five (5) miles each side of the center line of the radio range course from the last radio fix (radio range station or reliable intersection) to the range station: *Provided*, That no maneuvering is contemplated for this course. Where it is anticipated that maneuvering will be necessary on any radio range course, either for holding purposes or otherwise, a minimum lateral clearance of ten (10) miles from the center line of the radio range course will be provided for the maneuvering side, and five (5) miles clearance provided for the opposite

side. Where adequate radio fixes exist, altitudes will be shown for all range courses, either on or off airways. Where no radio fix exists, the term "Minimum en route altitude" will be used for the direction involved.

(c) If the range-associated airport is more than 7 miles from the range, visual contact must be established over the range on the final approach, and visual contact complied with from range station to airport.

(d) This policy is of the same nature as that covering a multiple-airport range. This latter policy directs all traffic first to the key (range-associated) airport and thence by visual contact operations from over that airport to one or more procedure-approved airports in the same area.

(e) Because of the rugged terrain adjacent to many of these range-associated airports, the Coast and Geodetic Survey charts, especially the Approach and Landing Charts, covering the area where an instrument let-down is proposed, should be carefully studied before an approach is made.

(f) Revisions of, or additions to, these procedures will be published in the FEDERAL REGISTER and Code of Federal Regulations, and may appear in the Airman's Guide and Flight Information Manual.

[13 F. R. 1423, as amended by Amdt. 1, 13 F. R. 5312]

§ 609.2 *Ceiling and visibility minimums.* (a) Regular landing minimums

(identified by "R" in the tables) are authorized when it is necessary to circle the airport for landing. They apply to all types of aircraft except aircraft having stall speeds, as established in the Airplane Operating Manual, of 75 miles per hour or less at maximum certificated landing weight with full flaps, landing gear extended, and power off, which are authorized to operate into airports with ceiling minimums 100 feet lower and visibility minimums one-half mile less than the published regular landing minimums, but in no case less than ceiling 500 feet and visibility 1 mile, or less than the authorized straight-in landing minimums, whichever is higher.

(b) Straight-in landing minimums (identified by "S" in the tables) are authorized only when landing can be accomplished straight in from the navigational facility being used to the near end of the runway without exceeding 500 feet per minute rate of descent and without change of direction of more than 30 degrees. They apply to all types of aircraft.

(c) Alternate minimums (identified by "A" in the tables) are authorized when an alternate airport is required. They apply to all types of aircraft.

(d) Take-off minimums (identified by "T" in the tables) apply to all types of aircraft.

(e) Not authorized (identified by "NA" in the tables).

[13 F. R. 1423, as amended by Amdt. 1, 13 F. R. 5312]

§ 609.3 Directive. The following standard instrument approach procedures, including ceiling and visibility minimums, are hereby prescribed:

(a) Low frequency ranges.

Station	Min. initial appr. alt. from the direction and radio fix indicated	Shuttle	Final appr. leg	Procedure turn min. at distance from station	Min. alt. over range final appr.	Station to airport		Ceiling and visibility minimums				If visual contact not established over airport at authorized landing minimums, or if landing not accomplished—

610.106	Blue civil airway No. 6 (Abilene, Tex., to Muskogee, Mich.).
610.107	Blue civil airway No. 7 (Evergreen, Calif., to Hamilton, Calif.).
610.108	Blue civil airway No. 8 (Fargo, N. Dak., to Pembina, N. Dak.).
610.109	Blue civil airway No. 9 (Columbia, Mo., to Duluth, Minn.).
610.110	Blue civil airway No. 10 (Fresno, Calif., to Williams, Calif.).
610.111	Blue civil airway No. 11 (Cleveland, Ohio, to Niagara Falls, N. Y.).
610.112	Blue civil airway No. 12 (The Dalles, Oreg., to Ellensburg, Wash.).
610.113	Blue civil airway No. 13 (Houston, Tex., to Kansas City, Mo.).
610.114	Blue civil airway No. 14 (Mt. Laguna, Calif., to Wheeler Ridge, Calif.).
610.115	Blue civil airway No. 15 (Newark, Ohio, to Erie, Pa.).
610.116	Blue civil airway No. 16 (Dillon, Mont., to Garrison, Mont.).
610.117	Blue civil airway No. 17 (Umcolcus Pond, Maine, to Presque Isle, Maine).
610.118	Blue civil airway No. 18 (Freehold, N. J., to Burlington, Vt.).
610.119	Blue civil airway No. 19 (Melbourne, Fla., to Orlando, Fla.).
610.120	Blue civil airway No. 20 (Millville, N. J., to Allentown, Pa.).
610.121	Blue civil airway No. 21 (E. Liverpool, Ohio, to Kingsville, Ohio).
610.122	Blue civil airway No. 22 (Alzheimer, Ark., to Portland, Kans.).
610.123	Blue civil airway No. 23 (Wixom, Mich., to Flint, Mich.).
610.124	[Unassigned.]
610.125	Blue civil airway No. 25 (Cordova, Alaska, to Big Delta, Alaska).
610.126	Blue civil airway No. 26 (Anchorage, Alaska, to Fairbanks, Alaska).
610.127	Blue civil airway No. 27 (Kodiak, Alaska, to Kotzebue, Alaska).

Sec.	
610.128	Blue civil airway No. 28 (Charleston, S. C., to Columbia, S. C.).
610.129	[Unassigned.]
610.130	Blue civil airway No. 30 (Alamo, Tex., to Big Springs, Tex.).
610.131	Blue civil airway No. 31 (Monmouth, Ill., to Moline, Ill.).
610.132	Blue civil airway No. 32 (Skwentna, Alaska, to Summit, Alaska).
610.133	Blue civil airway No. 33 (Fort Wayne, Ind., to Archbold, Ohio).
610.134	[Unassigned.]
610.135	Blue civil airway No. 35 (Brookfield, Mo., to Humeston, Mo.).
610.136	Blue civil airway No. 36 (Akron, Colo., to North Platte, Nebr.).
610.137	Blue civil airway No. 37 (Casper, Wyo., to Wright, Wyo.).
610.138	Blue civil airway No. 38 (Annette, Alaska, to Whitehorse, Alaska).
610.139	Blue civil airway No. 39 (Tri-City, Tenn., to South Onondaga, N. Y.).
610.140	Blue civil airway No. 40 (Concord, N. H., to Burlington, Vt.).
610.141	Blue civil airway No. 41 (Port Chester, N. Y., to Topsfield, Maine).
610.142	Blue civil airway No. 42 (Burr Oak, Mich., to Battle Creek, Mich.).
610.143	Blue civil airway No. 43 (Garden City, Ala., to Walter Hill, Tenn.).
610.144	Blue civil airway No. 44 (Advance, Mo., to Fort Wayne, Ind.).
610.145	Blue civil airway No. 45 (St. Martinsville, La., to Baton Rouge, La.).
610.146	Blue civil airway No. 46 (Wheeler Ridge, Calif., to Morgan Hill, Calif.).
610.147	Blue civil airway No. 47 (Flintstone, Md., to North Altoona, Pa.).

DIRECT ROUTES

610.151	Northeast United States (east of longitude 97°, north of latitude 38°).
610.152	Southeast United States (east of longitude 97°, south of latitude 38°).
610.153	Southwest United States (west of longitude 97°, south of latitude 40°).
610.154	Northwest United States (west of longitude 97°, north of latitude 40°).

MAPPED AREAS

610.161	IFR altitude minimums over mapped areas.
---------	--

GENERAL

610.162	IFR altitude minimums generally.
---------	----------------------------------

AUTHORITY: §§ 610.1 to 610.162 issued under secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458. Interpret or apply sec. 601, 52 Stat. 1007, as amended by Pub. Law 872, 80th Cong.; 49 U. S. C. 551.

SOURCE: §§ 610.1 to 610.162 appear at 12 F. R. 7801, except as noted following section affected.

§ 610.1 **Definitions.** (a) "IFR" means instrument flight rules.

(b) "INT" means intersection.

(c) "FM" means fan marker.

(d) "VAR" means visual aural range.

(e) "Rbn" means radio beacon.

[12 F. R. 7801, as amended by Amdt. 2, 13 F. R. 1827]

STATED AREAS

§ 610.10 **IFR altitude minimums over stated areas.** Except when necessary for taking off or landing, no person shall operate an aircraft in accordance with IFR along the routes and below the altitudes set forth in §§ 610.11 to 610.162.

MAPPED AREAS

§ 610.161 IFR altitude minimums over mapped areas. Except when necessary for taking off or landing, no person shall operate an aircraft in accordance with IFR along any route, or portion thereof, which is not listed in §§ 610.10 to 610.154, and which is within the shaded areas shown on the map of (a) the United States entitled "Designated Mountainous Areas, Figure 1," or (b) Alaska entitled "Designated Mountainous Areas, Figure 2," at an altitude of less than 2,000 feet above the highest obstacle within a horizontal distance of 5 miles on either side of the center of the course intended to be flown.

[Amdt. 2, 13 F. R. 1829]

GENERAL

§ 610.162 IFR altitude minimums generally. Except when necessary for taking off or landing, no person shall operate an aircraft in accordance with IFR along any route for which the Administrator has not established a minimum in §§ 610.10 to 610.154 or 610.161, at an altitude of less than 1,000 feet above the highest obstacle within a horizontal distance of 5 miles from the center of the course intended to be flown.

[Amdt. 2, 13 F. R. 1829]

PART 625—NOTICE OF CONSTRUCTION OR ALTERATION

Sec.

625.1 Structures.

625.2 Landing areas.

625.3 Form of notice.

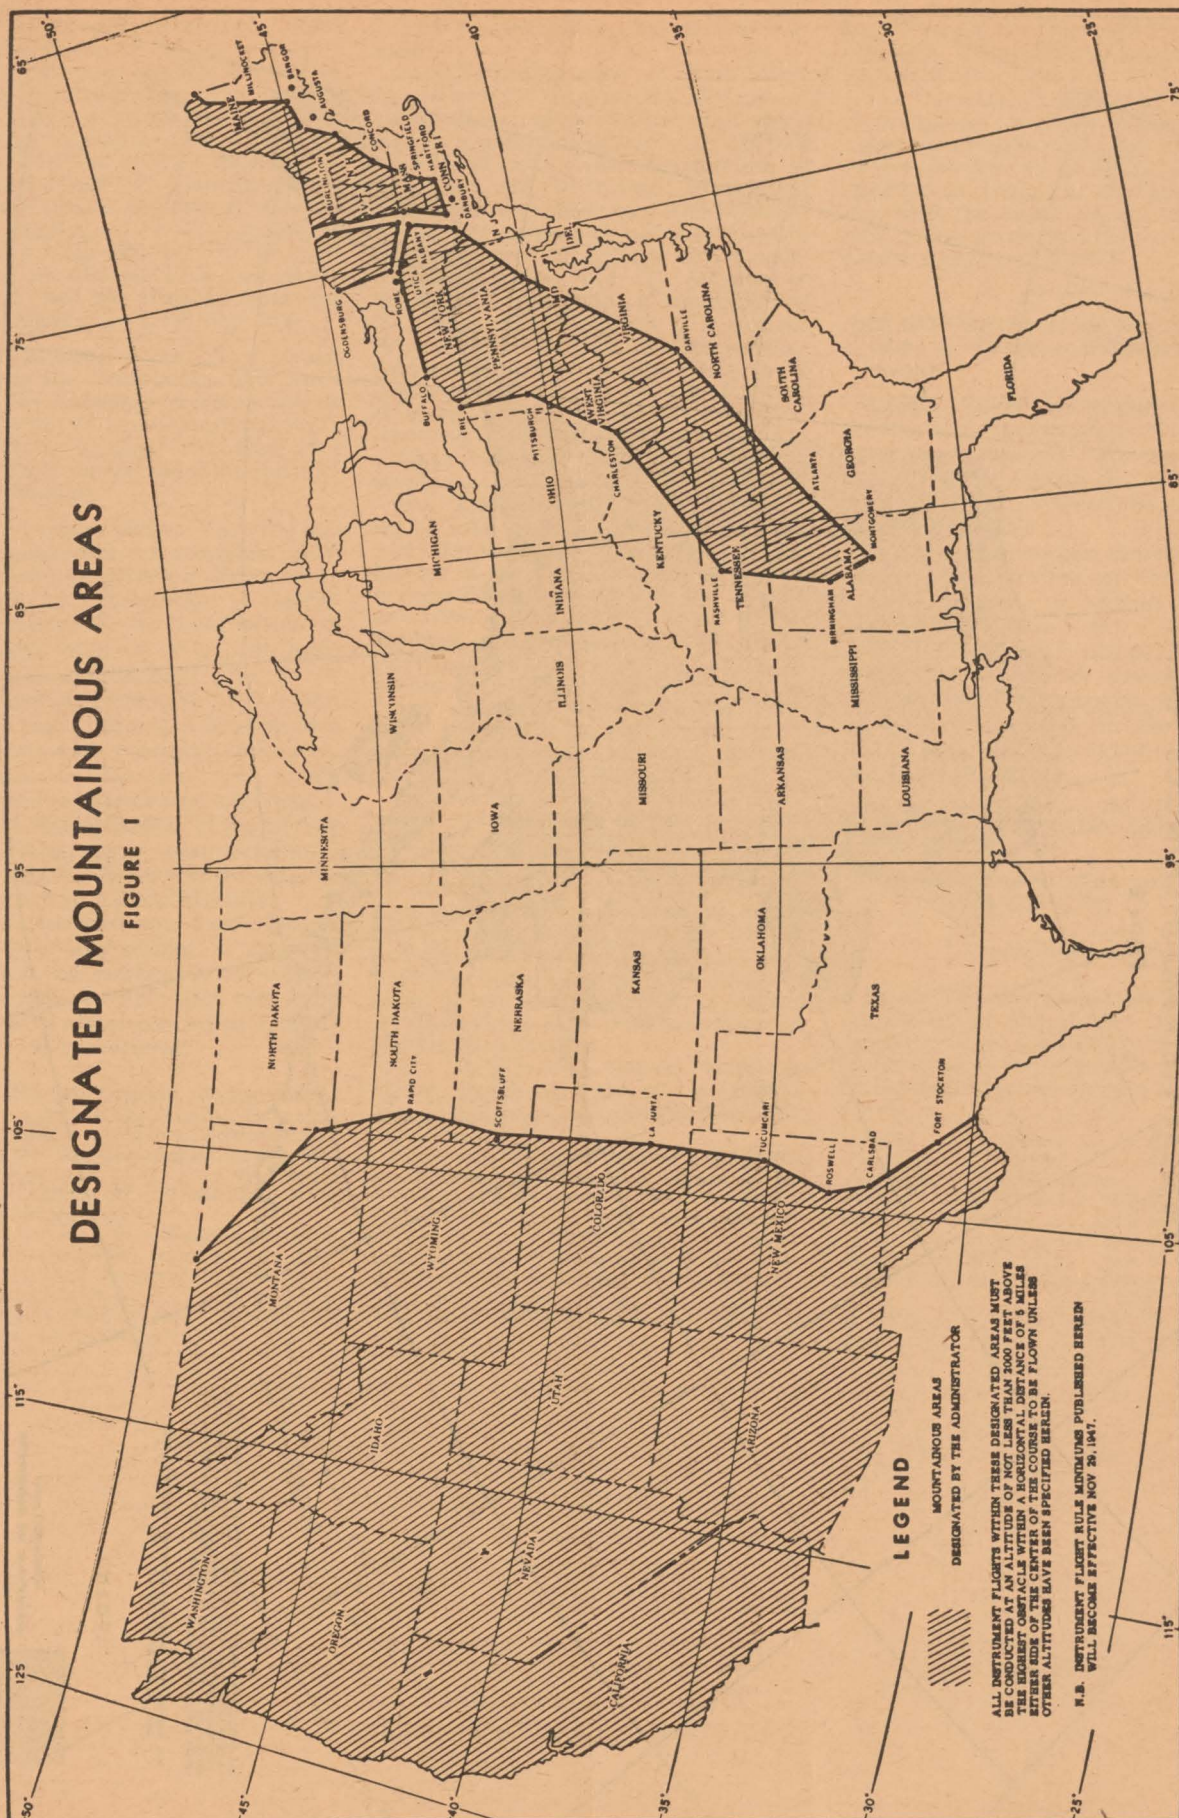

625.4 Definitions.

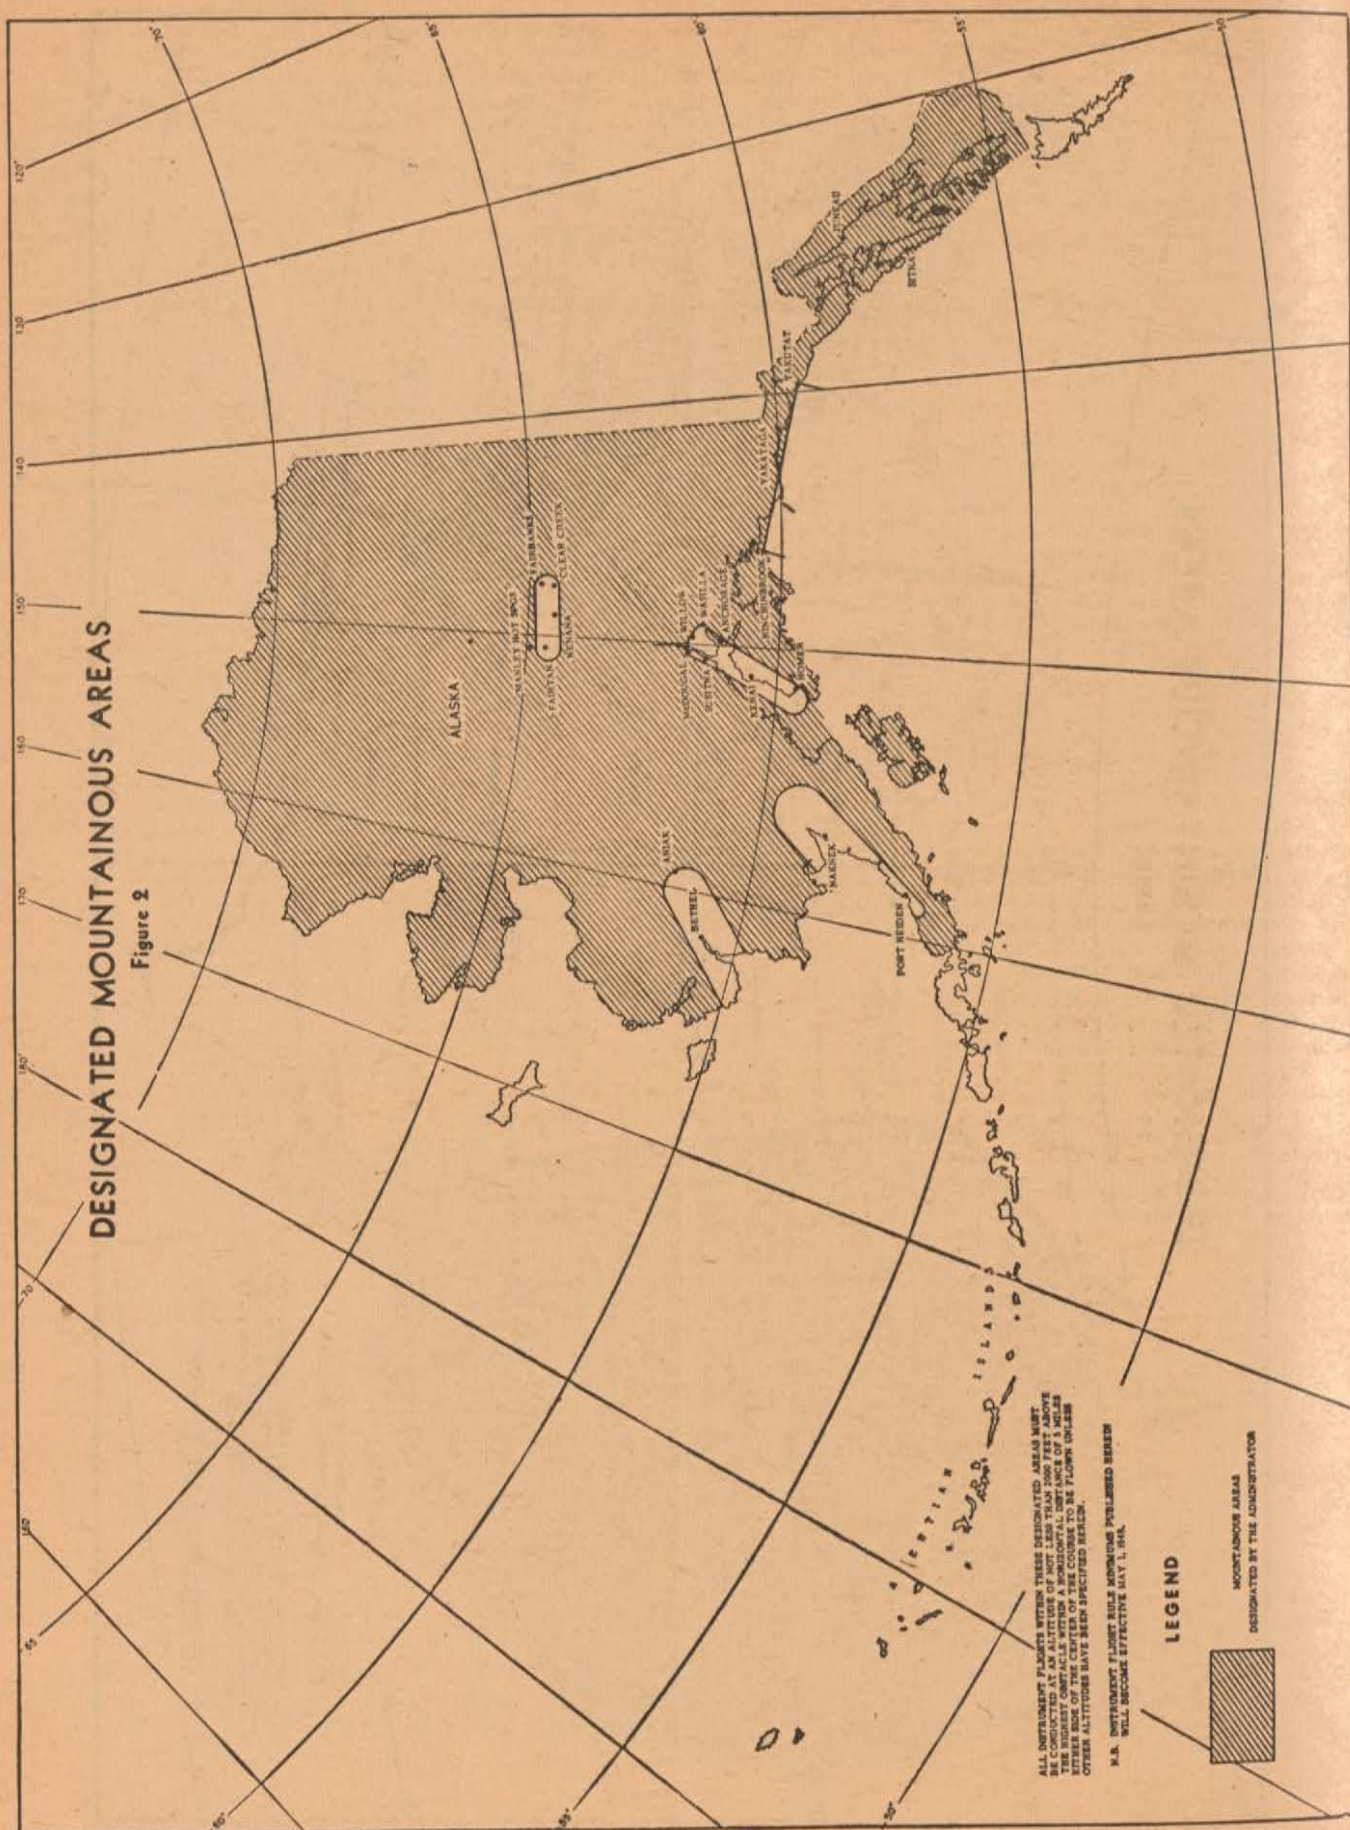

AUTHORITY: §§ 625.1 to 625.4 issued under secs. 205 (a), 308, 1101, 52 Stat. 984, 986, 1026; 49 U. S. C. 425 (a), 458, 671.

SOURCE: §§ 625.1 to 625.4 appear at 13 F. R. 3516.

§ 625.1 Structures. Any person engaging in the construction or alteration of the following structures, in other than congested parts of cities, towns, or settlements, shall give notice thereof to the Administrator of Civil Aeronautics:

(a) Any structure along, or within 20 miles of, a civil airway, the top or any part of which is, or may become, by reason of such construction or alteration, greater than 150 feet above ground level or above mean water level where the

structure is, or will be, situated in or over navigable water.

(b) Any structure within 15,000 feet of the nearest boundary of a landing area, the top or any part of which is, or may become, by reason of such construction or alteration, greater than 5 feet above ground level, or above the mean water level (where the structure is, or will be, situated in or over navigable water), for each 500 feet or fraction thereof, of the distance that such structure is, or will be, situated from the nearest boundary of a landing area.

§ 625.2 *Landing areas.* Any person engaging in the construction of a landing area any boundary of which will be within 5 miles of the nearest boundary of an existing landing area, shall give notice thereof to the Administrator of Civil Aeronautics.

§ 625.3 *Form of notice.* (a) The notice of construction or alteration shall be submitted in triplicate on Form ACA-117, "Notice of Construction or Alteration of Structures; or Construction of New Landing Areas",¹ at least 30 days, but not more than 60 days, prior to the date on which such construction or alteration is to begin: *Provided*, That in case of an emergency requiring immediate construction or alteration, such notice shall be given to the nearest representative of the Administrator in person, by telephone, telegraph, or other expeditious means, and the executed form shall be submitted within 5 days thereafter.

(b) The Administrator shall likewise be notified of any change in the date upon which the construction or alteration is to begin, or other data contained in the form of notice prescribed in paragraph (a)² of this section.

¹ Filed with the Division of the Federal Register as a part of the original document. Copies of this form may be obtained upon request to the Civil Aeronautics Administration, Washington 25, D. C., or to the nearest regional or district office of the Civil Aeronautics Administration.

² This notice may be submitted on Form ACA-117, or by letter, telephone, or telegraph to the Civil Aeronautics Administration, Washington 25, D. C., or to the nearest regional or district office of the Civil Aeronautics Administration.

§ 625.4 *Definitions.* As used in this part:

(a) "Congested parts of cities, towns or settlements" means (1) sections of those cities, towns or settlements which have a population of less than 100,000, where a structure after construction or alteration will be shielded by existing structures of a permanent and substantial character, each of which is equal to or greater than the height of the completed structure, and (2) sections of those cities which have a population of more than 100,000, where it is evident beyond all reasonable doubt that a structure will not interfere with safety in air commerce, whether or not the structure is, or will become, by reason of the construction or alteration, greater in height than that of surrounding structures of a permanent and substantial character.

(b) "Landing area" means any locality of land or water, including airports and intermediate landing fields, which is located in the United States and is used, or intended to be used, for the landing and take-off of aircraft, whether or not facilities are provided for the shelter, servicing, or repair of aircraft, or for receiving or discharging passengers or cargo: *Provided*, That this regulation shall not apply to any landing area which is not listed in the Civil Aeronautics Flight Information Manual.³

(c) "Boundary of a landing area" means (1) the limits of that part of a landing area maintained for the use of land aircraft in taking off or landing, or (2) the limits of that part of a landing area suitable for water aircraft in taking off or landing, which limits are defined as being 5,000 feet in all directions measured over open water from the principal ramp of the landing area or, if marked in accordance with standard practice, the limits so marked.

(d) "Structure", unless otherwise stated, means any form of construction of a permanent or temporary character,

³ A current list of all landing areas within the United States will be published by the Administrator in the CAA Flight Information Manual, for sale by the Superintendent of Documents, United States Government Printing Office, Washington 25, D. C. A list of the landing areas may also be obtained upon request made to the nearest regional office of the Civil Aeronautics Administration.

including any apparatus used in the construction, alteration, or repair of any such structure.

(e) "Alteration" means any change in a completed structure which (1) increases the height of the top or any part of the structure to, or above, the height specified in § 625.1, or (2) increases or decreases the height of the top or any part of the structure which is above the height specified in § 625.1.

PART 635—REPRODUCTION AND DISSEMINATION OF CURRENT EXAMINATION MATERIALS

§ 635.1 *Prohibition against the reproduction and dissemination of current examination materials.* No person shall use, reproduce, publish, or disseminate in whole or in part, without the consent of the Administrator:

(a) Any examination questions in use by the Administration for the examination of applicants for airman or ground instructor certificates, or

(b) Any material which purports to be a key sheet of specific answers to any multiple-choice examination paper in use by the Administration for the examination of applicants for airman or ground instructor certificates.

(Secs. 205 (a), 308, 52 Stat. 984, 986; 49 U. S. C. 425 (a), 458) [8 F. R. 830, redesignated by Amdt 1, 13 F. R. 3045]

[F. R. Doc. 49-5876; Filed, July 15, 1949; 9:06 a. m.]
